16511. We have had evidence that that combination has done a great deal of good for your district. Do you agree with that?—They do not seem to have done a great deal of good up to the present.

16512. What have you to complain of?—Well, they have not reduced the rates.

16513. Have they increased them?—Well, they have increased one rate for goods.

16514. Tell us in your own words what have you got to complain of?—There used to be a rate of 6*s.* 8*d.* per ton for herrings from Glenties to Derry, and that rate has been increased to 10*s.* per ton.

Mr. Healy, K.C.—That is not so, sir. That will be cleared up. He is quite mistaken.

Witness.—No; I have paid it myself, and I have asked for a refund and I have not got it.

16515. *Chairman.*—Perhaps it is coming?—I hope so.

16516. When did this transaction take place?—It took place in the beginning of January or the end of December.

Mr. Healy, K.C.—If the gentleman has been overcharged, he will get his money back.

16517. *Chairman (to Witness).*—You hear that?—Yes.

16518. Then you don't want to say another word about it. You are perfectly satisfied now with all your arrangements in the County Donegal?—Yes; we complain of want of through rates.

16519. From where to where?—From Glenties to the principal stations in England, that is, for live stock.

16520. Did you apply for them?—We applied for them under the old Donegal Railway.

Chairman.—The Joint Committee must have been at work now for twelve months.

Mr. Healy, K.C.—This is the reason—we are trying to arrange with the English companies, and in a short time we hope to have the matter completed. We have only recently taken over the line.

16521. *Chairman.*—I need not ask that question. You heard that, and you don't want to say anything further about that?—No.

16522. You are quite satisfied?—Yes, quite satisfied.

16523. You have a long proof with reference to a subject that we have discussed over and over again. I will ask you about it very shortly. Have you considered the question of the purchase of the Irish railways by the State?—Yes.

Mr. Michael M'Nelis, J.P., Clerk of the Glenties Rural District Council.

16524. And do you agree with it?—Yes, I think that it would be for the mutual benefit of the people of Ireland that the railways should be vested in the State.

16525. Have your Council considered the subject?—They have.

16526. Is that their opinion too?—Yes.

16527. Is it pretty generally the view of the district with which you are acquainted?—The district that I am acquainted with is the Rural District of Glenties, which represents a population of about 34,000, and there are fifty-seven representatives on the Board, and I can safely say that we are all of one opinion—that the railways of Ireland should be vested in the State, and should be managed by a committee representative of trade and commerce in Ireland.

State ownership of Irish Railways under an Irish Committee advocated.

16528. And you think that that would tend to the development of industry in Ireland and promote the welfare of the country?—That is the general feeling. There is another matter. I want to mention about the rates. There is a service for fresh fish from Glenties to Glasgow, direct, at 35*s.* per ton. There is a better service from Glenties *via* Belfast and Ardrossan to Glasgow, which would catch the market earlier, and would be very valuable to our part of the country. The people in our part of the country almost entirely depend upon the fishing industry, and if we could get a rate of about 35*s.* or even 37*s.* 6*d.* per ton, we would be quite willing to pay the difference between the two in order to get a better service.

Need of improved facilities for fish traffic to Scotland.

16529. *Mr. Healy,* K.C.—That statement is well founded. The fault is not ours. It rests with the steamship companies. We are trying to get Messrs. Burns to agree. There is a long correspondence in progress.

Witness.—It would be an immense boon to the fresh fish industry in our part of the country.

16530. *Chairman.*—Can you give us any idea what amount of fish is sent from Glenties?—I can give you an idea of the amount of money that is paid out for fish in our part of the country—the amount of cash that is paid for herrings. I cannot give you the exact tonnage.

Value of Glenties herring trade and duration of fishing season.

16531. Do they catch anything but herrings?—Chiefly herrings.

16532. Is there a special rate for herrings from Glenties to Glasgow?—Yes.

16533. Not for general fish?—Principally herrings.

16534. That is only a season traffic. Herrings are not caught all the year round?—They are practically caught all the year round along the Donegal coast, because they start in May, and they are caught up to the end of January. There is practically only a close season from January to March.

16535. *Mr. Healy,* K.C.—It is only a few months' fishing?—No; it is four months of heavy winter fishing. At present they are being caught in large quantities at Killybegs, and shipped over the Donegal Railway.

Chairman.—That is in course of correspondence, and will probably be arranged.

Mr. Healy, K.C.—We will be very glad to arrange it if Messrs. Burns will come to an understanding with us.

The District Council and the Glenties District in favour of State purchase.

16536. *Chairman (to Witness).*—I asked you your views on State purchase. You say that not only you, but the whole of your district represented on the District Council are in favour of State purchase?—Yes. There is another matter with regard to the

Apr. 24, 1907.

Mr. Michael M'Nelis, J.P., Clerk of the Glenties Rural District Council.

Donegal railways. The carriages are very badly lighted during the winter, and it is very inconvenient for passengers to have to sit long weary hours on winter nights in darkness.

Chairman.—Surely that is a little matter that can be dealt with by the railway company.

Mr. Healy, K.C.—There is some ground of complaint. We have only just taken the line over. We admit that these things will be arranged after a little time.

Complaint as to rate for hosiery, Glenties to Dublin.

Witness.—There used to be a rate for hosiery *via* Derry, Heysham, and Dublin of 30*s.* per ton; and the rate direct to Dublin *via* Strabane is 38*s.* 9*d.* There seems to be a certain amount of disparity between these two rates.

16537. *Chairman.*—Is that a book rate?—It is a rate that we have paid ourselves. We think that the Great Northern of Ireland and the Joint Committee should be in a position to give us a rate equal to the rate *via* Derry and Heysham to Dublin *via* their direct service.

16538. Have you brought it under their notice?—It has been under their notice in this way that they have given a rebate of 3*s.* 9*d.*

16539. And you have had a rebate?—I didn't get it. Others got it.

16540. Do you mean to say that the rebate is not given to all the people who have that traffic?—No.

16541. Do some people pay more than others?—So it would appear.

16542. Are you speaking from your own knowledge? Yes.

16543. *Mr. Healy,* K.C.—Give an instance, Mr. M'Nelis. I am told it is inaccurate?—At any rate the fact remains that the rate *via* Heysham and Derry to Dublin is 30*s.* The rate has been raised since the Joint Committee came in.

16544. *Mr. Healy,* K.C.—That is a steamer rate?—It is part railway and part steamer, and the direct rate from Glenties to Dublin is 38*s.* 9*d.*

Chairman.—I don't see the connection between the two.

16545. *Mr. Sexton.*—The route from Glenties to Dublin *via* Derry and Heysham is almost wholly a sea route?—It is.

16546. And the other is entirely a land route?—It is entirely a land route.

16547. Looking at it as a whole you say that the rate to Dublin is too high compared with the other taking into account the different circumstances?—Yes, I think they should give an equal rate of 30*s.* per ton direct.

16548. *Chairman.*—Have you asked the railway company to consider that. Have you brought it under the notice of the railway company?—No, I have not.

16548A. Then we must leave it there.

Colonel Hutcheson Poë.—I don't propose to ask this gentleman anything, seeing that this system has only been recently taken over by the Midland and Great Northern, and that they are now trying to remedy the state of things that he complains of.

Examined by Mr. SEXTON.

Suggested constitution of the Controlling Body under a system of State ownership.

16549. Would you develop a little your view upon State purchase. I think you said you would like some sort of committee representative of Irish interests?—Yes.

16550. Suppose there was an authority established in Ireland—an elective authority with financial functions and powers, do you think that that would be the proper authority in the case?—Yes, it would; but it would be useful to have some representative of Irish trade and commerce on that committee of management.

16551. Well, it would be a matter of arrangement?—Yes.

16552. It would be within the power of the elective body to associate the representatives of the different interests?—Yes.

16553. And you would be quite satisfied with that?—Yes, quite satisfied with that.

16554. You speak of rates given to some and not to others. Have you any evidence?—No, I have not.

16555. Of course no real weight can be given to statements unless they are sustained by facts. What do you say here about owner's risk?—We find a difficulty in getting any claims from the railway companies for goods sent under the owner's risk rate. I sent some large quantities of salmon to England some two years ago, and I had considerable claims, and I put them before the then Donegal Railway Company, and they refused.

16556. *Mr. Healy,* K.C.—This has nothing to do with the present state of facts.

Witness.—They refused on the ground that I had sent them at owner's risk rate, and that consequently they were not liable.

16557. *Mr. Sexton.*—What was the nature of the damage of which you complained?—The fish were not iced.

16558. Had you given instructions on the forwarding note?—Yes, marked on each forwarding note, "to be iced."

16559. Was it because of the want of through booking that the thing was not done?—There was through booking for fish—for salmon; but they held that inasmuch as I had sent at owner's risk rate they were not liable. Of course they say that they gave no undertaking to ice, that it was the Great Northern Company and the Northern Counties Committee and the Midland Railway Company who had given the undertakings to ice. I approached both companies, and the Great Northern agreed to pay portion of their claim, and the Midland didn't pay anything.

16560. *Mr. Healy,* K.C.—Are your claims now fairly met?—The Midland portion of it is not met.

16561. *Mr. Sexton.*—What the owner's risk rate note does is to exonerate the company from the results of anything except wilful misconduct on the part of their servants. In this case you say you gave instructions that the salmon should be iced?—Yes.

16562. It seems to be difficult to understand how the owner's risk arrangement could be brought to bear upon the failure to carry out that instruction?—It is their plea of justification.

16563. Do you know that there is a Bill reported from the Grand Committee of the House of Commons to substitute for the words "wilful misconduct" the words "gross negligence" in the owner's risk note. What do you say about canals?—The canal from Strabane to Derry has been very useful in our part of the country.

16564. You found the canal a useful help?—Yes; in getting reduced rates.

16565. You would say, generally, about the canals that even if the railways were unified and managed by the public, the canals would still be very useful for cheap heavy traffic not requiring quick transit?—Yes, certainly.

16566. At lower rates?—At lower rates.

16567. You say the passenger fares are too high?—Yes, they seem to be rather high.

16568. Do you consider that if there was a substantial reduction in the passenger fares there would be a remunerative increase in the passenger traffic in the country?—Oh, yes, I think so.

16569. This goods rate that was raised from Derry to Glenties; was it an increase upon a single kind of goods or upon a whole class?—It was a single class—Donegal herrings—cured herrings.

16570. And we are given to understand that it is now under consideration?—Yes.

16571. Do the railway companies claim the right to give or withhold through rates in any case? Are through rates given or withheld as the railway companies think convenient without reason assigned?—They do not assign any reason for not giving us through rates on live stock, or at least they did not assign any reasons.

16572. Do you consider that there is any reason why through rates should be withheld?—No, I don't. There is a considerable amount of traffic.

16573. Is there a considerable amount of traffic for which you ask a through rate?—Yes.

16574. And where there is a substantial amount of traffic you think a through rate should be given, as a matter of course?—Yes.

Mr. Healy, K.C.—The witness is under a mistake with regard to a few points. We will have a few points cleared up.

Mr. W. T. GREEN examined by the CHAIRMAN.

Apr. 24, 1907.

Mr. W. T. Green, President of the Incorporated Chamber of Shipping and Commerce, Cork, and Harbour Commissioner.

16575. Mr. Green, I think you are connected with the Incorporated Chamber of Shipping and Commerce of Cork?—Yes, sir. I am President for this year of that body. I have also been President twice previously, and before that I was Honorary Secretary for ten years; so I have some acquaintance with the subject.

16576. Are you a Harbour Commissioner?—I am also a Cork Harbour Commissioner.

16577. Then you are identified generally with the trade and commerce of Cork?—That is so, and personally also.

16578. Now, your Council have had under consideration the question of the working of the Irish railways?—Yes.

16579. They have passed a resolution on the subject?—Yes; they have considered the matter carefully. I have not brought the text of the resolution, but I can give you the complete substance of it. The Council of this Chamber, as a body, have become quite convinced on the point on which we believe that the Commission has already had sufficient evidence. We do not wish to take up their time by repeating the evidence that has been given by other witnesses, or giving exactly similar cases. But we take it that the Commission must be convinced as we are that the cost of moving Irish produce to the seaboard for export, and from one part of the country to another, as also the cost of moving from the ports to the interior the grain, flour, coal, and other necessaries, are, on the whole and on the average so high, as to constitute a serious impediment to the prosperity of the country. Our Council have considered the matter as carefully as possible before they have arrived at that conclusion.

16580. Would you tell us just for information what does your Council consist of?—Our Council consists of twenty-six members of the Chamber of Commerce, including an honorary secretary and an honorary treasurer. Our Council consists of representatives of all the important wholesale firms in Cork and the district immediately surrounding it—the usual constitution of a Chamber of Commerce.

16581. In other words, they are identified practically with trade themselves?—Entirely. They represent every branch of any importance in the country. They have become so strongly convinced on this point that although they know that there are a great number of special grievances under the existing system such as have been brought up by other bodies, they really consider all these of small importance in comparison with the great question of how that general excess of rates can be rectified. They think they are reasonable business men with some knowledge of the country and the railways, and they are convinced that under the present system of individual railways, or even under one joint company, as long as that was worked solely or chiefly for profit, as it would be, it would be impossible to make much improvement. To develop traffic properly in this country we think such reductions are necessary, as no company could afford to make in justice to its shareholders, but which, we think, the State might very fairly make, in the belief that an absence of adequate profit, or even, if necessary, a small loss, at the beginning would be compensated for afterwards, not only in increased prosperity for the country, but probably also, as happened in other places, in increased railway receipts. The more my Council have considered the matter, the more certain have they felt that any remedy short of State purchase would be merely tinkering with the question. We assume that you have already had quite sufficient evidence that the movement of traffic in Ireland is hampered by excessive rates, and that the rates in Ireland, on the whole, are unduly high as compared with those of other countries, with whose produce Irish produce has to compete in the markets of England, and sometimes even in our own markets. We do not want to waste the time of the Commission by repeating instances brought forward by other witnesses, nor by producing just similar instances; neither do we think it necessary to furnish to a Commission of railway experts, like you, gentlemen, particulars with which you are doubtless better acquainted than we are, as to the cheaper rates and greater facilities enjoyed in various countries with State-managed railways, like Belgium, Sweden, Austria-Hungary, the Indian Empire, and many others. We merely wish to say that we have not arrived at our opinion as regards Ireland without considering as much evidence as we were able to procure as to what happened in countries comparing, or competing in any way, with Ireland. We hear it said of Belgium that the Government always treated the question of earning a profit as a measure for lowering rates and fares and increasing facilities for trading. You cannot expect private companies, nor an amalgamation of private companies, to look at it in that light. Of course, we know, but you know better than we do, that the passenger rates in Ireland are most excessive in comparison with other countries, and all traders know that the man who cannot move about freely at reasonable rates can neither dispose of his produce to the best advantage, nor procure what he must buy on advantageous terms. These statements seem like platitudes, but such platitudes seem to require a great deal of repetition. As to the question of savings that might be effected under State ownership in the immense number of directors, officials, and multiplication of management expenses, I am sure the Commission have already had plenty of evidence. These savings no doubt would enable reductions to be made, but, as we think, not nearly sufficient. That is why we think an amalgamation of all the companies would be only a small improvement on the present system. Such an amalgamation would still work to make all the immediate profit it could for its shareholders. Its general manager would still look upon all traffic from the point of view of how much the traffic would bear, that is, how much may be squeezed out of it without killing it. altogether. This is the principle upon which, we believe, speaking generally, the railways have always been worked, and it is a natural and inevitable principle.

State ownership of the Irish railways to develop the industries of the country urged on behalf of the Chamber.

16582. I understood you to make a remark about the company's maximum powers, beyond which they could not go?—I don't think that maximum rate is a fair rate, but we do not wish by any means to make a general indictment against the Irish railway companies. The same state of things exists in England, and the people there we know suffer greatly from what they in some parts consider high railway rates, and the action of the companies. But England generally is so rich and prosperous that she can bear up against and even prosper under conditions which weigh so heavily upon Ireland, a poor country with no coal or iron, and in the South at all events depending upon agriculture and a few little manufactures.

The maximum rates as authorised by the Act considered unfair.

16583. May I ask this. You have impresed this upon us very clearly. Do you represent in that evidence the opinion of the Council, or are they your views; do their views correspond to yours?—Yes, my views and the views of the Council are these, and we are practically unanimous. They considered this evidence at various meetings, and having discussed it fully, we were practically unanimous.

16584. You have, of course, noticed that in recent years English railway companies have taken an interest in certain districts in Ireland?—Quite so.

16585. Do you look upon that with favour?—No, sir. On the whole we don't look upon it with favour, and in Cork more especially. In Cork perhaps we have more reason to come to the conclusion, and we do feel the need of one broad and general impartial management such as we think might be expected under State ownership, more perhaps than it is felt elsewhere, owing to our peculiar position. We are down there, in the South of Ireland, in a corner of Ireland with practically one connection with the rest of the world, that is the Great Southern and Western. Two or three times there seemed a prospect of an effective competing route, but since the Dungarvan and Waterford line was acquired by the Great Southern this chance has gone. But even if there were competing companies I am afraid these competing companies would probably soon come to an agreement about the traffic. Still competition would have been welcome in Cork as possibly they might in some instances have been better served as regards a matter that has long been ventilated—the want of wagons for traffic. In some periods of the year Cork has suffered extremely from this. We have often had to point out to the Great Southern and Western the serious want of wagons. Orders have been cancelled from this cause,

The influence of English railway companies in the management of Irish railways considered a disadvantage to Ireland.

Frequent scarcity of wagons at Cork a source of loss to traders.

Apr. 24, 1907.

Mr W. T. Green, President of the Incorporated Chamber of Shipping and Commerce, Cork, and Harbour Commissioner.

and steamers would not charter to Cork, except at excessive freights. The company has replied that it is doing its best with the resources at its command, and we have no reason to doubt that it is the fact, but it is not much satisfaction for the loss of our small trade. Also there is a strong feeling in Cork that Cork is not fairly treated in regard to traffic as compared for instance with Dublin. Here I would like to say that a witness who had this matter in hand cannot be here. I have some instances of it, and there were others, which he intended to bring forward, and which were put down upon the precis of the evidence which was to have been given by Alderman Dale on behalf of the Chamber. Unfortunately he is ill, and unable to come up to-day.

16586. *Mr. Sexton.*—Will he come later?—He is willing to come later if you require it, and he is also willing that I should mention these points which he was to make; they are not very numerous; in addition to those I was asked to bring forward originally. The reason I mention it at this point is that these are bearing upon the question of favouring Dublin as compared with Cork, which were to have been brought forward by him.

16587. *Chairman.*—Supposing we begin with your own proof, some of the rates included in that relate to that question?—Not on that point.

Complaint as to preferential cross-Channel through rates.

16588. Well, on that point can you just give a few instances to explain what you want to bring forward?—Quite so. We also considered that as the result of the increasing influence of the English companies in Irish railway affairs there is an unreasonable and unfair disproportion in favour of through rates as against local rates. That is one point on which there is a general and strong feeling in Cork, although, in some cases, there is a certain justification on the part of the railway company. Take, for instance, the rates for flour from Liverpool to Tralee compared with Cork.

Flour rate, Liverpool and Tralee, instanced.

16589. *Chairman.*—That is an old story?—It has a great deal of effect upon the traffic. Although an old story it is a very hard story on behalf of those Irish millers who have kept the industry going there under very great disadvantages. They have to bring wheat into Cork, and grind wheat in Cork, and send flour on to Tralee. They have to pay more for the wheat, a great deal more than Liverpool, and if the industry is to have a chance in the South of Ireland the rates from Cork should be sufficiently low to give it a chance. The rate from Cork is not a fair one, and in justice to Cork and to the Irish milling trade they should have a fair rate to a place like Tralee.

16590. Will you mention the figures?—Liverpool to Tralee for flour, 10*s.* a ton. That is 365 miles, and works out at ·33*d.* per mile.

16591. That is all by water, is it?—Oh, no; Liverpool to Tralee, *via* Cork. Cork to Tralee, 7*s.* 6*d.* a ton, 82 miles, 1·1*d.* per mile.

16592. *Mr. Healy,* K.C.—The steamer carries it for 8*s.* a ton the whole way?—Of course we are quite aware the steamer carries it, and that accounts for so low a rate. But it is very low, and we have considered that we must bring it forward as a great hardship upon Cork. Another of these is Liverpool and Fermoy, 16*s.* 6*d.* a ton; Cork and Fermoy, 4*s.* 2*d.* Liverpool to Charleville is 15*s.* 10*d.*; Cork to Charleville, 5*s.*

Private arrangements between railway and shipping companies as to certain fixed rates condemned.

16593. *Mr. Healy,* K.C.—That is the differential?—My impression of this, and it is the experience of the Council, that it is owing to some private arrangement between the railway and shipping companies by which traders are deprived to some extent of the advantages they would otherwise gain by competitive rates. It was brought forward by one of our members, Mr. Dynan, who is managing director of Eustace and Company, one of the largest timber merchants outside of Dublin.

16594. *Chairman.*—This bears upon the particular point. You had better read that. Do you know the date of that?—I don't know the date, but it came into my possession within the last couple of months.

16595. Then we will take it as recent?—(*Reads*). "There is also another grievance which I think most materially affects the trade of Cork, that is a combination of fixed rates which undoubtedly exists between the Great Southern and Western and the Clyde Shipping Company. Take Waterford, which is within easy reach of cross-Channel ports, from which its supplies are largely had. Quite recently my firm had an order for 100 tons of goods for delivery there."

16596. From Cork?—From Cork he meant. (*Reads*). "The rail freight is 10*s.*, and by the Clyde steamer 8*s.* After considerable negotiation they simultaneously reduced their rates by 12½ per cent. The 8*s.* Clyde rates, when you add the loading and unloading charges, etc., is about equal to the rail freight. If genuine competition existed between these two companies a larger trade might be secured to Cork, with a corresponding increase of traffic to the carrying companies."

16597. *Mr. Healy,* K.C.—They complain that we reduced our rates?—I think that owing to the recent railway amalgamations in the South of Ireland, Cork is, under the present arrangement, permanently deprived of any prospect of lower rates through any system competing with the Great Southern Company whatever chance they had previously. That, of course is another strong reason in favour of State ownership in Ireland.

16598. *Chairman.*—Surely, in the interests of trade, granting that the Great Southern Company does make an arrangement with these carrying companies, these rates being fixed, put the whole of the parties in the same position—one is not unduly favoured at the expense of another?—We should not advocate that any of the parties should be unduly favoured. We fancy that if there was free competition, without an arrangement previously made between the railway company and the shipping company, we, that is the traders, might get some benefit out of that competition.

16599. All the traders; some traders might. Would it not be better for the trade of the district if an arrangement is made whereby rates are fixed?—I am speaking of reasonable rates.

16600. Would it not be better that the traders should really know what the rates are? That must be an advantage. The only thing is whether the rates are reasonable?—That is my point. It would if they were low enough. We think they are too high. We want them fixed generally.

16601. I don't think they could put them too low for you?—

16602. *Mr. Sexton.*—He says the rates are too high?—They have agreed upon a rate to suit themselves, not for the benefit of the trader.

16603. *Chairman.*—Maximum powers are fixed, and the company has to fix reasonable rates within the maximum?—If we were all agreed that the rates fixed by Parliament are fair and reasonable, it appears to me very little use for any of us coming to this Commission.

16604. *Mr. Healy,* K.C.—You asked for a Commission to fix the rates. We fought for the Cork differential for you, and we succeeded?—Of course, that is quite right.

16605. *Chairman.*—At any rate, you don't come here to put forward any particular grievance?—We don't come here to attack them.

16606. What you did say, very emphatically and clearly, was this—In your judgment and the judgment of your Council representing the principal merchants of Cork, you are all strongly in favour of the railway companies being purchased by the State?—That is so.

16607. And being under State control?—Yes.

16608. The details of which, I suppose, you have not gone into?—Yes. On the complaints of rates I have some more instances. These refer to the general question of rates. I personally am a member of a firm engaged in the importation of foreign grain into Cork and its distribution into the districts naturally supplied from Cork. A short time ago we wanted to send some maize from Cork to Kilrush.

16609. *Mr. Healy,* K.C.—Sea competition again?—Maize is the cheapest feeding grain, and is used largely in Ireland for feeding cattle and pigs. We inquired from the Great Southern and Western Company what it would cost to send it from Cork, and this was the reply. (*Reads*)—"March 13, 1907.—Dear Sir,—In reply to yours of this date, our rate for above in wagon loads at owner's risk, loading and unloading, *via* Ennis, is 12*s.* 11*d.* per ton. There is no through rate *via* Limerick and steamer to Kilrush in force, but if consignment is handed to us, and no particular steamship company mentioned to Kilrush, we will forward *via* Limerick, and only charge at rate in operation *via* Ennis." They would send it first by rail to Limerick, and then by the small boat to Kilrush, but we were only charged at

the same rate by either of these two high-class competitive routes which you may see on this map. This maize had just come to us from the Danube, and on getting this letter I sent for the bill of lading for the steamer, and I found the freight from the Danube to Cork was 8*s.* per ton. I recognise that this rate is by water. Still, is it not absurd.

16610. What are the distances?—One way it is about 80 miles—the other 60 miles or so.

16611. Is there not a change to a narrow gauge line?—By rail it is a good way round. The railway company by this arrangement would have made use of the little boat from Limerick. They would have taken it all round the country, and charged it on the narrow gauge at 12*s.* 11*d.* a ton. But because they felt obliged to charge that they have cornered, so to speak, this little boat, have taken Limerick into competition, and still charge 12*s.* 10*d.* a ton.

16612. What is the Clyde Shipping Company's charge for taking it round?—They don't go by steamer from Cork to Kilrush.

16613. What is the local rate to Limerick?—5*s.* a ton for 50 ton loads.

16614. *Mr. Healy, K.C.*—What was the amount of tonnage from the Danube?—4,000 tons. Of course, every trader is aware that the steamer rate is not a fair test of competition. But I simply mention this to the Commission to show that it is discouraging to find this extreme discrepancy. I say it is very startling—8*s.* from the Danube and 12*s.* for a little bit of Ireland.

16615. *Chairman.*—Was it 4,000 tons landed at Cork?—Yes; the whole of the cargo. Something like 100,000 tons of maize are landed per year in Cork on the average.

16616. It is the principal port for maize—Cork?—It is brought into all the ports. Cork is one of a number of ports for maize.

16617. The date is 13th March this year?—Yes, the other day.

16618. *Mr. Healy, K.C.*—You paid £1,300 for the freight. I think it was a very good thing for them?—The other case was this—flour milling.

16619. *Chairman.*—Flour milling has been brought before us, and we thought it was rather successful?—It has survived in spite of competition with American flour and English flour, and there has been made in the ports, more especially about Cork, a brave stand, and is carried on with fair success at present, but the small mills in the interior of the country have had to shut up everywhere. They depended upon a local supply of wheat which it no longer pays the farmer to grow in Ireland, and they could not afford to bring all their wheat from the ports. Well, a small mill of this kind existed at Croom, on the way from Cork to Limerick. Lately an enterprising trader in Limerick took up this mill again, seeing some chance of working it successfully. To do so he would have to draw some of his wheat supplies from Cork. The railway rate from Cork to Limerick, passing Croom on the way, is 5*s.* per ton in 50 ton lots. He asked for a rate from Cork to Croom of 4*s.* to 4*s.* 6*d.*, which would have been fair in proportion. He came to Dublin, saw Mr. Neale specially upon the point, but the company would not grant him a lower rate than 5*s.* 9*d.* to Croom.

16620. *Mr. Healy, K.C.*—We would be charged with giving an undue preference to Limerick as against Cork?—It is not giving him a fair chance. It is not the way to revive the languishnig industries of the country.

16621. *Chairman.*—What is the distance?—About 50 miles; Limerick is 62 miles. It must be ten or twelve miles outside Limerick.

16622. That is, ten or twelve miles shorter than Limerick?—It is about that. I believe, although for this case there may be some reasons, that if there was a general State authority which wanted to try and revive the industries, as it undoubtedly would try, it would give a chance in such a case. I may say this, if you will allow me, that I am personally acquainted with the business, and it struck me as it did persons acquainted with other Irish industries in the neighbourhood of Cork in this way, because in other cases the management of the Great Southern and Western, the goods manager, has undoubtedly done everything possible that he could for these industries to give them a fair chance, and has given them fair rates in connection with other industries coming in.

16623. About this particular case, if he was able to get a rate of 4*s.* 6*d.* could this mill have been re-established?—It depended a good deal on that whether it could be successfully re-established. I think it would have had a better chance of progressing. There is no chance without a large import of wheat and competitive rates from the ports to the mills. This man has been partly induced to take it up on account of the movement in favour of home industry, and through that he might get a little better price.

16624. Where a mill is successful is where the work is carried on near the ports?—Broadly. But there are other cases.

16625. In Belfast it is very prosperous—what about Belfast?—I think you will find that the industry in Cork is better than in any other part of Ireland, and on the whole better than Belfast.

16626. *Mr. Healy, K.C.*—Maize goes into Limerick practically by the same rate as Cork. It is twelve miles from Limerick to Croom. We charge 2*s.* 3*d.* If we give Croom a cheaper rate from Cork than Limerick they would take us before the Commission. They have in another case?—We don't suggest a cheaper rate. We suggest 4*s.* 6*d.* against 2*s.* 3*d.* The rates must be proportionate to be fair. I think that would be considered fair, on the basis of the 5*s.* from Limerick to Cork.

Mr. Healy, K.C.—The sea—Waterford competition.

16627. *Chairman.*—I think you have anticipated what you intended to say upon the great general question, and you have explained why you wished to bring before us these details of rates?—We really do not regard these details as part of the great question, because we think that any reduction they could possibly make would do nothing compared with the general question.

The majority of Cork traders in favour of State purchase of the railways.

16628. Independent of the Council of the Chamber of Commerce, can you tell us whether there is a general feeling in your district in favour of what you have been advocating—State purchase?—I think so. It was brought before the Council of twenty-six members, and the resolution was passed in favour of this Chamber appearing before the Commission to give evidence in favour of State purchase. It was brought forward in a general meeting, at which most of the representative traders of Cork attended, and there was not a dissentient voice. And I think there would be very few dissentients in the country if you take the people who have troubled to look into it. Outside of these there are many personally interested, for some reason or other, who object to it. But there are very few who won't be in favour of it there, and those who have not had time or inclination to consider its effect upon the conditions of the country and its requirements.

16629. The people with commercial interests are all in favour of it?—Certainly.

Examined by Mr. Sexton.

The relation of maximum rates to the actual rates charged.

16630. You have been asked as to the maximum rates, whether they are fair and reasonable. We must ask ourselves what they were meant for. Were they meant for application to ordinary circumstances? You can hardly answer the other question without considering what they were meant for, can you?—No.

16631. We know that the companies, or some of them, endeavoured in 1893 to raise the actual rates to the maximum, and they were restrained by statute?—Yes.

16632. And we know that a rate, even if it is below the maximum rate, can be impeached before the Railway Commission if it is higher than the rate was in 1892——

Mr. Healy, K.C.—I am instructed that the Irish companies made no such attempt.

Mr. Sexton.—I did not say the Irish companies made any such attempt.

Mr. Healy, K.C.—This is an Irish inquiry.

Mr. Sexton.—The maximum rates apply to the two countries.

Mr. Healy, K.C.—I thought we were in Ireland. We have sins enough of our own to answer for without bearing the sins of others.

Mr. Sexton.—The system of maximum rates applies to both countries, and they form part of the same system in English and Irish legislation.

Mr. Healy, K.C.—But this is an Irish inquiry.

Apr. 24, 1907.

Mr. W. T. Green, President of the Incorporated Chamber of Shipping and Commerce, Cork, and Harbour Commissioner.

16633. *Mr. Sexton.*—At any rate, it bears upon the question in this way, that the companies, whether British or Irish, were not allowed to raise the rates to the maximum rates, and that proves that these rates were not intended for ordinary use. I was passing on to say that a rate may be impeached before the Railway Commission, even though it is below the maximum, if it is higher than it was in 1892. Are you aware of that?—I believe so.

16634. Well, then, these maximum rates in England or in Ireland were devised after long inquiry and investigation, and enacted by a very elaborate system of statutes, and we would infer from that that they were intended to continue for a long time in force—not to be soon or easily altered?—I have not considered that question.

16635. At any rate, would you say they are intended to include a margin of charge so that they might continue to be applicable under extreme circumstances?—Yes.

16636. Suppose there was a coal famine, or a great strike of workmen, or anything which would put the railway companies in straits; you said you thought these maximum rates would be intended to apply in such cases, because they could not be exceeded. Hence they could not have been intended for use in ordinary circumstances?—That is the view usually taken by traders.

16637. You, I believe, attribute the unfavourable effect upon Irish industries of the proportion between through rates into Ireland and local rates in Ireland to the influence of the English companies?—Partly.

Disapproval of the acquisition of Irish lines by English railway companies.

16638. Are you opposed to the purchase of Irish lines by the English companies?—Yes.

16639. An English company not owning an Irish line has, in a through rate, an interest, limited, of course, by the proportion of its mileage; it is not receiving revenue from the Irish mileage. An English company which buys an Irish line, testing the matter on ordinary commercial principles, would have an additional motive for desiring to limit the growth of Irish industry. It would have both the English and Irish mileage upon such goods as it might import into Ireland from England?—That is so.

16640. We have seen that when an English company buys an Irish line it not only endeavours to stimulate the traffic from England into Ireland, but to direct the traffic by its own particular Irish line?—Certainly.

16641. And if the purchase of Irish lines by English companies continued, and by the operation of commercial principles the import of English goods into this country was stimulated, the production of Irish goods must be discouraged—do you think that would leave any real chance for the development of Irish industries?—No.

16642. Would you say that one effect of a number of private railways existing is to lead to the enactment of a number of statutes, public and private, containing clauses for the protection of interests, which complicate the law?—Undoubtedly.

Private lines burdened with heavy Parliamentary and legal costs under present system.

16643. You have seen a case lately in which a tribunal was occupied for weeks at great cost in the investigation of questions between companies, which the judges confessed to be of extreme difficulty?—Yes; I said that in some cases it leads to the increase of the burden of Parliamentary costs on small Irish lines which, perhaps, eventually must be added to the capital and require extra rates in some cases to pay for this extra large amount of costs for which no permanent value is received.

16644. Under public ownership the railway legislation would be a matter that would be conducted by public Bills without expense?—Yes.

16645. In the case to which I have referred it has been necessary, after elaborate argument by the ablest counsel, to reserve judgment for a month?—So I have seen.

16646. In order that the questions at issue might be considered?—Yes.

Advantages arising from uniformity in rates and facilities under State control

16647. I see a note in your reference to public administration to the effect that the questions involved in the management of transit are comparatively simple?—Yes; they could be easily carried on on fixed principles like the Post Office in these countries.

16648. A public authority knows what it may do, and the trader knows what he may claim or expect. That would be a great advantage?—Certainly.

16649. You have said that having regard to the economic condition of Ireland, the lowest possible rates of transit are essential?—Yes.

16650. And your Chamber consider that the effect upon the staple industries of Ireland, the agriculturaland pastoral industries, is really one of comparison of through rates outward to Great Britain and the rates from competing countries on the Continent?—They have taken that into consideration.

16551. The exports from those countries to Great Britain have enormously increased in recent years, and those of Ireland have in some cases declined?—Yes.

16652. Is it not vital to Ireland, and, looking at her position in regard to England, has she not a right to expect to be able to retain a share of that supply to England?—That is our strong opinion.

16653. Essential to her interest that she should?—We think so.

16654. If this country could supply England even with a minor share of what is now supplied by these Continental competitors, would it not contribute greatly to make this a prosperous country?—Undoubtedly.

16655. We have heard from a witness that these outward rates require in many cases to be reduced by from one-third to one-half. That applies to many rates from different parts of Ireland. Would you infer that the financial scope of the question is large?—I think that applies almost to the whole, and on the average.

16656. Does the staple traffic from Ireland outward to England supply a large part of the revenue of the Irish railways?—I should say so. I don't know what proportion.

16657. Nor I. It would be a large proportion. The requisite reductions upon so large a part of the revenue would have to be a large sum?—Yes.

16658. Then the effect of the through rates inward from England cobined with the higher local rates has been to repress the development of home industry?—Undoubtedly.

16659. It is not so much the amount of the rate, whether inward or outward, but the comparison between the rate and what it competes with—between the outward rate and the rate from the Continent, and the inward rate and the local Irish rate. If we consider that the amount of the imports into Ireland is over fifty millions a year, and that these low through rates—low relatively to the inland rates—apply to the rest of that traffic. It is perfectly obvious that the required reduction would mean a very large sum per annum. So that in order to meet the claims of public opinion, as expressed in the evidence here, it would be necessary, for a time at least, to devote a very considerable part of the present Irish railway revenue to effecting these reductions?—I think so.

16660. Now, Mr. Green, will you consider for a moment the finances of the railway companies. Their annual net revenue, speaking broadly, is something over one and a half millions per annum. We know that the ordinary capital is about fourteen millions, and we know the average rate of dividend upon it, and it follows that the ordinary dividends take about half a million of the net revenue. Do you think that any adequate impression could be made upon the system of rates by a less reduction than about half a million. Their total traffic receipts are four millions. Do you think that this question of the rates outward and the high inland rates could be amended in any sufficient manner by the concession of less than half a million off the rates?—Half a million off four millions would hardly be an adequate concession.

16661. Of course the through rates inward would require no reduction. It is the through rates outward and the inland rates that repress the development of industry and would require reduction. That is only part, and half a million would make a good beginning?—Probably.

16662. In order to make that beginning the railway companies would have, for a time, and pending the development, broadly speaking, to sacrifice the ordinary dividends?—Yes.

16663. Could they be expected to do anything of the kind?—Certainly not.

16664. Would it be a practicable proposal to suggest that they should be obliged to anything of the kind?—Quite impracticable.

16665. Does it not seem, therefore, that this question is determinable upon large considerations?—These are the views I gave.

16666. Not upon minute points of argument?—Entirely so.

16667. If the railway companies cannot do it, how is it to be done?—It may be said by means of a subvention from public funds to the railway companies, but do you think that in the present development of local government such a proposal as that would be entertained?—I think not.

16668. You may pay money away, but the return would be questionable; for instance, there would be nothing to prevent a further reduction of the through rates inward which might counteract the effect of the subvention you were giving for reduction of local rates?—Quite so.

16669. Would you say that the only practicable system would be to buy the lines, and instead of laying a burden upon the public taxes for the purpose of making the reduction, procure it by the savings through purchase, and the great and various economies of working which would be thereby secured?—Very well secured.

16670. In one case there would have to be a subvention from the public purse. In the other case the economies would produce the necessary fund?—The economies would perhaps be sufficient to make a beginning. It is the only practicable means to try. It is quite possible that the State at the outset should be willing, in view of the state of the country, to work the railways without a profit for a short time, if it were convinced that there might be some hope of recoupment. In Austro-Hungary the State set out expecting to make a loss, but the first year they were agreeably disappointed. I wish we were warranted in making a similar estimate. But we would be warranted in hoping that the proportion of the loss would be turned into an adequate profit in time.

16671. Let the saving by purchase be what it may, there would be a large saving, certainly, from the economy of working and the relief from such charges as Parliamentary costs. You would at the outset have provided a fund, even if it might be inadequate, a substantial fund by which the policy of the reduction of rates could be at least initiated. Then the public might judge by experience what would be the proper measure of reductions?—Yes.

16672. I mean they could judge by results, whether they would be content merely to allow the economy to operate in reduction, or make the larger venture, and look to the future to repay?—That would be a good idea.

16673. As to the form of management, considering the circumstances which you have detailed in your evidence, do you think an Imperial Department could really be expected to deal with this question as it requires?—I think they might at first, at all events. Our idea is that the original purchase ought to be by the British or Imperial State, inasmuch as it might be reasonably expected that they could buy the railways on more economical terms on account of their stronger financial position. But, this matter has not been gone into by my Chamber, and personally I see no reason when the arrangements have been made, why they might not devolve it on a local authority, provided always, that there were railway experts at the head of it, with full powers responsible to Parliament, or some Parliament, for the rates that they were to make. We presume that if the Government bought these railways that they would have the most careful inquiries made into the various systems of management of State-owned railways in foreign countries, as well as India and the British Colonies, and that they would apply to Ireland the system which they found best calculated to develop the traffic of a poor country, taking broad and liberal views as to the necessity for an immediate return on the capital invested. We are convinced that in that way it might result in great benefit to this country. Beyond that we have not thought it within our province to discuss the details or management, or how it might be done.

16674. So far as the question of the efficient working of the system is concerned I think there is no dispute that it should be committed to the hands of a body of practical experts?—That is our idea.

Apr. 24, 1907.

Mr. W. T. Green, President of the Incorporated Chamber of Shipping and Commerce, Cork, and Harbour Commissioner

Constitution of the Irish Controlling Body under State ownership.

16675. Beyond and above that, having regard to the nature of the grievances and needs that require attention and amendment, would you say the most hopeful form of control would be one amenable to Irish public interest and opinion?—I should think it should be amenable to Irish public opinion and interest, but whether the working should be entirely committed to a local Irish body to start with I am not in a position to say.

16676. Well, if you assume that an Irish authority is established with financial resources and that much of the work now done by Imperial departments were committed to that authority, would it not be anomalous that the work of the Irish railways should remain in extern hands, if so much of the work of the country were confided to the Home authority?—Well, it might, but I think we are almost bound to see the work of the country confided largely to the Home authority before we say that the work of the railways should be committed to a similar authority. I don't like to give my individual opinions on any of these matters, for I may say that everything I have said so far expresses, I know, the opinion of the body that I am here to represent, and this body has never considered the matter so far from the point of view of State purchase and of subsequently examining into the question of the exact control of these railways. I go so far with you as to say that it would be impossible to have a management that would properly develop the traffic of Ireland without its being worked by people who were not only experts, but who either of themselves or by instructions were also disposed to be entirely sympathetic as to the needs of the country.

16677. Of course the most effective operation of the opinion of the country would be found in an elective body responsible to the country?—No doubt.

Examined by Colonel Hutcheson Poë.

16678. It has been urged as an argument against State ownership of railways that as a consequence of it all competition would cease, and that traders would be injuriously affected by the absence of competition. Is it your experience that owing to the understanding or agreements which are more or less arrived at by the carrying companies of this country that competition, even where it is supposed to exist is really more apparent than real?—I think that that is so, undoubtedly. I think that the argument that there would be an absence of competition if the railway companies were owned and managed by the State is of no weight whatever, because I think that it would be the business of the State to make such rates as they consider would develop the traffic of the country, and to make them in an impartial manner which we consider an important matter for all parts of the country, and I see no more reason why the absence of competition should be urged by traders as an argument against State purchase than I see why the absence of competition should be used by traders against the working of the Post Office, for instance, by the Government.

16679. In other words, where the State owns the railway lines presumably the first and primary object would be to develop the country by largely reducing the rates and charges, and the necessity for competition would cease?—Undoubtedly. Whatever body were to control the railways would certainly be amenable to the public opinion of this country, and possibly also to England, and I think that that would be sufficient, as it is sufficient in the case of the Post Office. I think that that is an absolutely parallel case so far as competition goes. Nobody says there should be competition with the Post Office in order to get cheaper postage or telegrams because they feel that sufficient public opinion can be brought to bear on the Post Office authorities, so that they are bound if they have a revenue to reduce the rates sufficiently, and to give sufficient facilities, and it seems to me that the same argument would apply to railways.

The absence of competition not an objection to State purchase in the matter of rates.

16680. Your Chamber of Commerce did not entertain any objection to State purchase on these grounds?—We think these grounds have no weight.

16681. I understood you to say that the Chamber of Commerce did not consider the exact form that the

Apr. 24, 1907.

Mr. W. T. Green, President of the Incorporated Chamber of Shipping and Commerce, Cork, and Harbour Commissioner.

administration of the State railways, assuming that they are purchased by the State, should take?—No, we don't consider that we have a machinery to deal with and consider that properly, and we think that the proper people to consider it, assuming that there is State purchase, are the Government of the country.

16682. Do I understand that they contemplated, after State purchase, an administration by an Irish Government department somewhat analogous to one of the departments at present n the country?—They consider the management might be made similar to, or modelled on some of the various systems of State railways of which they have seen accounts as to the working in other countries. In Germany, I understand, there is one head of a department over each, and a body of twenty-one experts to arrange the traffic in the different parts of the country, and they have seen the systems in Belgium, Switzerland, and India, and the places where railways are satisfactorily managed by the States, and they would assume that whatever Government arranged to purchase the railways would endeavour to get the best possible means of management, and they don't think that a body like ourselves should be called on to put forward any scheme.

16683. But, at the same time, what I wish to ascertain is whether your Chamber of Commerce had excluded the possibility of the State being prepared to hand over the administration of the railways, assuming that some radical change is brought about as the result of this Commission, whether it would exclude the possibility of the State being prepared to hand them over to some local or national authority?—I can't say that my Chamber of Commerce has considered the subject at all.

16684. They have not taken up the position that they would only be satisfied if the administration was in the hands of a Government department?—No.

Cross-examined by Mr. HEALY, K.C.

16685. Is there any difficulty about giving us the text of the resolution?—None whatever.

16686. You were asked if you object to the purchase of railways in Ireland by English companies: can you point to any outburst in the Press or Parliament in reference to the recent purchase by the Midland Company of England of a large Irish railway company?—No. I am afraid my knowledge is extremely local, and I am not concerned myself with what happens in the North of Ireland.

Alderman B. COLLERY, of Sligo, examined by the CHAIRMAN.

Alderman B. Collery, High Sheriff, County Sligo, and representative of the Sligo County Council.

16687. I believe you are the High Sheriff of the County of Sligo?—Yes, sir.

16688. And you appear on behalf of the Sligo County Council?—Yes.

16689. Are you a member of the County Council?—I am.

16690. And you are thoroughly acquainted, at any rate, with the railway accommodation at Sligo?—Well, pretty thoroughly acquainted with it, sir.

16691. Now, do you appear here to make any general complaint against the railway company?—Not exactly, sir; not exactly to make complaints, but to give evidence that I think myself there is room for improvement in the railway system in connection with Sligo, and in connection with the country altogether. As to railway extension, of course——

16692. That is another question. Speaking of the existing railway and the accommodation afforded by that railway?—Yes.

Complaint as to rates for "smalls."

16693. You are of opinion, I think, that for small consignments of goods the rates are excessive?—That is one of the complaints, of course, in connection with the railway system; the charges upon small goods to small traders are excessive.

16694. Excessive as compared with what?—Well, what I mean by that is as compared with the larger quantities, for instance, taken altogether that the charges upon goods in small quantities that small traders have to buy are excessive. No doubt the larger traders, particularly in Sligo. We have, I am glad to say, competing railways. We have two or three railways coming into Sligo, and those engaged largely in trade are able to make better terms, and the result is, of course, that the small traders cannot make those terms.

16695. Are you acquainted with what we call the small parcels scale rate for small parcels up to 300 lbs.?—Not exactly as to the actual rate.

16696. Do you know that the same scale is in operation in England as well as in Ireland?—I think it is all the worse, because I think the rate in England is equally excessive for small goods. Perhaps I am digressing in making a reference to a bill which I received for a small quantity of goods from Northampton. I can tell you the rate, but I think the gentleman sent me the railway bill or note. It was a very extraordinary charge, and small traders suffer considerably owing to the excessive rates. This (*produced*) is the one that he sent me, I think. There are boots, say, for instance, from Northampton, and for three quarters and twenty-one pounds the charge is 5*s.* 3*d.*

16697. *Mr. Healy*, K.C.—How much a boot, Alderman, would that be?—That is put on by the English company and of course they charge a proportion of it, I suppose, to the Irish company.

16698. Is it a penny for every boot?—Yes; I think so.

Mr. Croker Barrington, Solicitor.—Nothing of the kind.

Mr. Healy, K.C.—A pair of boots does not weigh two pounds.

16699. *Chairman.*—That is under the small parcels scale. You say the trade of your particular district is done in such small quantities that it would be an immense advantage to the small traders if the small parcels scheme was reduced?—Well, as a matter of course, don't you think that is an excessive rate, 5*s.* 3*d.* for three quarters of a cwt. That is the way to look at it. If you calculate that per ton——

16700. But you must not do that. You have admitted that the rate for ton lots is not unreasonable?—It is not necessary to give the exact tonnage.

16701. You are acquainted with the district around Sligo?—Take, for instance, the case from Leeds, 63*s.* 9*d.* per ton by the steamer *via* Liverpool.

16702. Yes. The rate from Leeds per steamer from Liverpool is 63*s.* 9*d.* per ton; that is steamer from Liverpool into Dublin?—No, direct to Sligo, *via* Liverpool to Sligo. We have a direct steamer between Liverpool and Sligo.

16703. Well, if that is the rate by sea, 63*s.* 9*d.*, I see the steamer rate from Liverpool to Sligo is 37*s.* 8*d.* per ton?—No.

16704. It says so on the document?—That includes the railway rate above, without the steamship rate.

16705. No. Liverpool to Sligo 37*s.* 8*d.* per ton?—I daresay it is.

16706. That seems a very excessive rate?—It is. I equally complain of it, but it is not your province to inquire into it.

16707. Now have you anything to suggest with reference to the district round Sligo which has not yet been served by any railway?—Oh, yes, we have. Of course I do not come here to blame the railway companies, particularly the Midland Railway, who practically serve Sligo. The Midland Railway is hardly capable of raising funds to extend her communications, and it is a great pity she would not, and on any occasion I got into communication with any of the Midland Railway people, I more than once conveyed to them the necessity, for instance, to extend the railway to Rosses Point, only five miles from Sligo, one of the most beautiful bathing places perhaps on the West Coast of Ireland, or any part of the United Kingdom, a most beautiful shore, a level shore practically a mile long.

16708. You don't suggest that a railway to that place *per se* would pay?—Most decidedly I do. I say that the Midland Railway Company, if they had the capital, I daresay they would have been inclined to extend the railway down to Ross's Point. People who know the place like it, and we want to have it better known. It has improved and increased enormously within the last twenty years, and there are now golf links at it, and it is largely resorted to from the different parts of the country, and to give

you an idea of that, as soon as the railway communication was run from Enniskillen to Bundoran we got less people at Ross's Point because they have got no railway communication to it.

16709. What is the distance?—Five miles.

16710. You brought that under the notice of the Midland Great Western Company?—Yes.

16711. They favour the scheme, but cannot raise the money?—I daresay they would be inclined, but it would not be easy for the company now, I suppose, to raise the money unless the Government came in and advanced it at a cheap rate. Of course there are other districts about Sligo that need improvement.

16712. Is there any other district near Sligo needing improvements of the kind?—There is a line proposed at present, and the promoting company are actually in existence, to make a line from Arigna by Riverstown and Collooney, and there is a new project for a line from Collooney to Belmullet.

16713. Are these independent schemes?—They are independent of each other, one from Arigna, which would connect Sligo with the coal mines there *via* Riverstown and Collooney, and there is a promoting company formed for the last two or three years of which I am a member, but I don't see much prospect of succeeding with it.

16714. Is not that the district where some parts of the county want a railway in one way and some in another?—Such a dispute arose.

16715. Did not that stop the scheme?—It did to a certain extent. They were trying to make a railway, I think, from Arigna to Dromahaire.

Colonel Hutcheson Poë.—Yes. The Cavan and Leitrim Councils threw it out.

16716. *Chairman.*—It is in abeyance because of the dispute with the County Council?—No, that is the line from Arigna to Leitrim running to Dromahaire.

16717. *Colonel Hutcheson Poë.*—And the coal mines?—But the one I am speaking of to Arigna by Riverstown and Coollooney and Ballyfarnam, that is a different line, and was taken up as a new project to make a line from Sligo to Ballina and thence to Belmullet. The object of that line was for the introduction of transatlantic steamers into Belmullet Harbour, to run on to Collooney *via* Enniskillen, Belfast, and Larne, across to Stranraer, and then the best and shortest route to London.

16718. *Chairman.*—That is a big scheme?—Yes, a very big scheme. As to the contemplated line from Arigna *via* Riverstown and Coollooney, they were going to oppose the scheme, as they wanted the Belmullet Company to make their line to go *via* Arigna and Belturbet.

16719. There is a squabble amongst the Councils about it?—Yes, but they are not persevering about it.

16720. Have you anything to say with reference to the present management of the Irish railways?—I think the management of them could be largely improved. There is no doubt about it, but at the same time I am not at all in favour of taking the railways out of the hands of the present management, because I think that when the railways are kept in the hands of various companies we would have an open door. If you put the management of the railways into, say, one whole system we have no appeal from it, but supposing the Government took up the railway system in Ireland I am greatly afraid that they would manage it on the principle they do the Post Office, and that is rather a beggarly principle, for they both starve the system and starve their officials.

16721. That is a rather strong view?—You may think I am making use of strong language, but you need not be surprised when I tell you, perhaps I am digressing, when I tell you that at the present moment the carriage of the mails from Sligo to Rosses Point is carried on a donkey with two creels across his back.

16722. *Mr. Healy,* K.C.—You evidently live there, Alderman?—Yes, if that is not a beggarly system I don't know what it is. That is a fact. The poor man should carry it on his back, and they have given him a concession by allowing him to hire a donkey. Public carriers are running to the place, but they would not allow them to carry the mails.

16723. *Chairman.*—What have you to say with reference to the combination amongst railway companies?—There is no combination amongst traders.

16724. But I am looking at your draft?—I did not say traders, I said railway companies.

16725. That is what I say?—I thought you meant traders.

16726. Oh, no, traders may combine, what do you say about railways?—I say that it is very injurious to the trade of the country.

16727. What is?—That they are capable of combining to charge certain rates.

16728. Let me have your views upon it: what do you mean by it?—My view is this, that railway companies combine together to charge certain rates in many instances, I don't say in all instances, but both railways and steamboat companies have combined to charge certain rates.

Combination of railway and shipping companies in fixing rates condemned.

16729. Is that wrong?—I say that the combination is injurious to the general trade of the country, or, in other words, it prevents the open principle being carried with free and open competition.

16730. Would you have rates varying from day to day or week to week?—No, I would not. I don't say varying, but I would have the railway companies to have the same opportunity that every other trader in the country has to push his wares, and I would not allow them to be able to combine to put on an excessive rate.

16731. Do you know the point of the railway companies is that they do not combine to put on an excessive rate, but that the rates that you call excessive are fair and reasonable?—Well, that may be, but have not the railway companies a fixed rate for certain goods.

16732. Certainly. Is not that an advantage to the public, is not it an advantage that the public should know what the rates are?—That may be, but if the public were capable of making them take a lower rate it would be better for the public.

16733. Even that the railways should carry at a loss?—Oh, no; but the railways are capable of taking care of themselves. Traders very often have to trade at a loss, but what privileges should railway companies have any more than individuals.

16734. I don't know that we need carry that any further?—I am not prejudiced against the railway companies at all; on the contrary, I don't wish to see the railway system even taken out of their hands.

A central authority in Dublin with limited control of all Irish railways recommended.

16735. But you approve of a central body in this country becoming the owners of the railways?—I would approve of a central body not having absolute control of the railways, nor the management of the railways, but I would approve of their having a certain control and regulation. For instance, instead of the present crude system of applying to the Railway Commission if you have a complaint, I think if you had a central body in Dublin, as I hope we may have sometime, I would give that body a certain control over the railway system.

16736. Without having any monetary interest in them?—Oh, yes; with no money interest in them whatever.

16737. Would you like that central body, whatever it is, to become the owners of the railways in this country?—No, not the owners of the railways, but I think they might have a certain control over them, and regulate them under certain conditions in the same way as Parliament now makes Railway Bills, for instance, or passes Railway Bills. What I mean is by a central body that they could decide matters in connection with the railway company without appealing to Parliament or anything of that kind, and also would decide disputes between the railway companies themselves, and between the public and the railway companies instead of the present system. If, you appeal at present to get redress from the Railway Commission you will grow considerably older before you get a decision, to begin with.

Complaints as to high rates for cattle, Sligo to Dublin

16738. Are there any local industries in Sligo?—Oh, yes. Very few local manufactures, but, of course, there is local industry to a considerable extent, and then you have a very large agricultural country surrounding it and that is a point that I think I should have mentioned—the traffic of live stock, I think, is exceptional. You have in Dublin the best market in the United Kingdom for cattle, but it is a prohibitive rate to send cattle to Dublin from Sligo. I sent some from there, and I found it took the cream off them at the rate to Dublin.

Local industries described.

16739. The local manufacturing industries are not considerable?—well, we have local manufacturers in Coollooney, and we have a very small manufactory—a shirt factory—in Sligo. It is very little. Of course we have extensive milling operations in Sligo—very extensive.

Apr. 24, 1907.

Alderman B. Collery, High Sheriff of County Sligo, and representative of the Sligo County Council.

16740. Such as they are, are they developing or going back?—Oh, no; they are improving and developing, and the harbour of Sligo is improving.

16741. There has been evidence here to the effect of the Great Northern rates from Belfast to places in the vicinity of Sligo crippled the import trade of Sligo?—Well, it did that for a short time, but I think it curtailed the importation of corn, either less or more, but I don't see any reason why if the public at large are benefited and if cheaper rates and better fares are to be had by competition, I don't see any reason why we should complain of that competition.

Effect of the railway rates on the development of local industries and the traffic of Sligo Port.

16742. Well, of course, you might have such a thing as a temporary establishment of very low rates in order to get rid of an opponent, and when the opponent is got rid of you return to the high rates—you get rid of the competition?—That sometimes occurs, but it did not occur in that case with us. There is no doubt that there was some temporary cutting of rates between Belfast and Sligo, but I think they found it did not pay, and I think there is as much corn now being imported as ever.

16743. Is it not a dangerous thing to allow such a system of railway rates as might extinguish sea competition. Is it not very important to Ireland that sea competition should be maintained?—I do not think that the railway rates in a case of that kind would extinguish sea competition.

16744. Or embarrass it—cripple it?—It might more or less affect, but don't you see that all companies are subject to fluctuations in their profits just in the same way as the railways themselves are. Companies have no more reason to complain than anyone else of a change either in the times or circumstances that surround them.

16745. It appears to be a question of degree. Of course there is a limit beyond which if railway rates are reduced in the vicinity of a port, the port may be destroyed. You think a limit should be observed within which a port would be allowed to have a trade?—Well, of course, if it was carried to a very large extent it might affect the port. There is no doubt, for last year it did affect the port of Sligo, less or more. I daresay there was eight or ten thousand tons less of corn brought in than in other years, but that has its benefits in other directions. Suppose that competition cut in that way, but that competition brought flour and other articles into Sligo cheaper for the general public at large, though the individual merchants may have suffered, the public at large were the gainers.

16746. But if competition went so far as to cause a loss and caused steamers to cease coming into Sligo, the consumer would be at the mercy of the railway?—I do not think there is any chance of that so far as the importation of grain or corn is concerned, because we could not get the grain by railway communication. I am not a bit afraid of Sligo Harbour that any competition of railway systems will affect it. One article may be down one year and another will be up. We may not have such large shipments of cattle one day and more another, but the harbour of Sligo is still going on, and I don't think railway competition in the end will affect it.

16747. I am very glad to hear you say so. Do you think it would be desirable that there should be fair play between one port and another on the part of the railway companies?—I think there should be. I do not think railway companies should give any preference.

16748. To one port above another?—No, I should think not.

"Smalls" rates discussed.

16749. You have been asked about the small parcels scale. I would ask you about that, whether you think that the mere facts that a scale suits England, or is in force there, proves at all that it would be suitable to this country. Does it prove it would be suitable here because it is in force in England? For instance, small parcels rates exist equally in both—might not Ireland require some different treatment?—I think Ireland would, because she is a poorer country than England, and has a smaller population to contribute towards the support of the railways.

Railway combinations objected to.

16750. About your remarks on railway combinations—you object to it. I understood your meaning to be that you like competition in transit and other things, and that in proportion as combination between companies proves effective in the settlement of rates, in that proportion the public lose the benefit of the competition?—That the companies try to settle the rates—that is what I mean.

16751. You know the country very well. Do you think that a large reduction, a well-judged reduction, of rates and fares would bring about such a development of traffic as might pay for itself or even give a profit in course of time?—Not alone that, but I believe a reduction of the rates and fares would be the making of the railways in Ireland and largely improve them. It is a very extraordinary anomaly when I tell you that I travelled—I don't know if there is a gentleman here knows it—by Bianconi's coach from Sligo to Dublin before we had railway communication—not direct to Dublin. I came to Mullingar on the old coach, and from there by tram; and you could get from Sligo to Dublin at the same rate I have to pay to-day in the railway carriage—enclosed behind four spanking horses in a decent coach. For five-and-twenty shillings you would get to Dublin, and if you want to travel first class to-day on the railway you pay the same money.

16752. How long ago is that?—I would rather you would not ask me that.

16753. *Chairman.*—How long did the journey take?—Well, only twelve hours. It left Dawson-street in Dublin at eight o'clock in the morning, and arrived in Sligo at ten at night, and changed horses ten times on the journey.

16754. That is fourteen hours?—You could get an inside seat if you wished for £1 5*s.*, and if you want an inside seat in a first class carriage to-day you will pay the same money to Sligo.

16755. But you can get an inside seat in a third class carriage?—What I mean is if the railway systems reduced their fares they would have twice as many people travelling as they have, on the principle of the penny postage stamp. For instance, there are fifty times as many letters posted now as when we had to pay 2½*d.* or 3*d.* for a stamp.

Examined by Mr. Sexton.

16756. Do you think a reduction of rates on food products would stimulate and extend our exports to England?—I think it would. Of course the only export trade in a great measure we have is to England. The principal things we export all go to England, and the charges on them are very excessive.

16757. Looking at the state of the country as a whole, and the fact that the land is passing into the hands of the tenants, and that industry will be thereby stimulated, do you think that if they were assisted at this crisis by a reduction of rates there would be a development of trade in the country?—I think that is exactly what they want. I believe a reduction of the rates would largely stimulate industry in the country and encourage tillage in the country.

16758. And might pay for itself and leave a profit before many years had passed?—And pay the railway companies also.

16759. When a railway company comes to a certain point, when it makes a certain profit and pays a certain dividend—do you see a very great difficulty in the administration of the railway in the way of running any risk? Suppose they had to wait five years or ten years for a profit, what board of directors could stand before their shareholders for that time?—Well, but don't you see an individual trader in the country meets with the same disaster occasionally, and after a time he recovers himself. Take last year, we had less corn coming in and this year we have a great deal more. Everything like that finds its own level, and if a railway company goes down I have no more pity for it than an individual.

16760. They have pity for themselves. You do not expect them to be indifferent to their own fate?—They do their best to stem the torrent.

16761. Would you expect them to expose themselves to risk?—But if the circumstances compelled them.

16762. But no circumstances can compel them to reduce the rates unless they wish?—But circumstances may compel them not to pay a dividend.

16763. What I submit is they are not likely to bring about that state of affairs of their own motion?—I quite agree not if they can avoid it, but by lowering the rates and giving greater privileges and greater facilities to the agricultural people of the country and to the agricultural produce that has to be exported to England they would not create that state of things for themselves. On the contrary, they would improve their position.

16764. They would apprehend, rightly or wrongly, that the time they would have to wait for the recoupment of the loss might be too long. I think, from your remarks about the Post Office and mails to Rosse's Point, you were driving at the Imperial Government?—I was as a matter of course. Because the suggestion made by various witnesses here was that the Imperial Government should buy over the Irish railways, and I maintain that if they did they would do the same thing that they have done with the Post Office.

16765. You think there should be an Irish authority over Irish railways?—I would have an Irish authority with some control over them.

16766. Of course it must be the Imperial or the Irish—which would you have?—I think you need hardly ask me.

16767. I would like your answer?—I am after stating I would like to see an Irish authority that we are likely to have constituted have control over Irish railways—not the management exactly.

16768. But the policy. A control analogous to that which the Imperial Parliament now exercises by legislation?—I would give the Irish authority more control over the Irish railways. All the Imperial Parliament at present does is to pass Acts of Parliament and let the railway companies do what they like in a great measure.

16769. Your object would be that the controlling authority should be one that would respond to the opinion and the needs of this country?—The controlling authority, as I take it—I may as well speak broadly. We anticipate a Devolution scheme. If that authority is established in Dublin it should have a certain control over the railways, not exactly to be injurious to the railway system nor to prevent the present owners of the railways from managing them in the best way they possibly could, but I would have control over them in the interests of the Irish public, so that no injustice could be done to the public, and that no excessive rates should be charged that would be injurious to the general interests of the country.

16770. But if the financial question could be arranged, would you not be in favour of allowing the central authority in Ireland to become owners of the railways?—It is a question I would hardly like to commit myself to.

16771. You say here, "I would approve of the central body becoming owners of the railways"?—I think that was a mistake. I did not intend to say that they should become the owners. I meant that they should have control. I would not give any central body the power to become owners, because I am entirely against what is called municipalisation. That is a misprint.

16772. That is nationalisation?—Not that they would become the owners, but that they would to a certain extent be the controllers. If they became the owners they would have to invest funds as a matter of course in it?—I don't mean that.

16773. They would not have to invest any funds; they would borrow them?—That is a mistake; if you say so, I accept it.

16774. In order to reduce rates and fares you have to make some economy that the existing companies are not able to effect. But if you allow the railways to become the property of a national authority, the economy due to single working will be available as a fund to enable reduction of rates and fares?—It is very problematical that the central body would be so able to manage the railways as that they could do that without calling upon the ratepayers of the country. If the central body had possession of the whole of the Irish finances, then they might buy up the railways, and, of course, if they would have the power to tax the people and all that sort of thing, they could manage the railways then to advantage. But if the central body had to work the railway system in the same way as in a measure they are worked now, without any aid from any extra funds, it is very problematical whether they would work them to greater advantage than the present companies.

16775. We assume the case of a central authority which would have financial resources?—I am assuming that it would have financial resources, but these financial resources could not be used for the purpose of aiding the railway companies.

16776. Certainly not. No doubt, you are aware that the net profits of the railways at present will be more than sufficient to transact purchase upon the basis of State credit. Assuming, then, that State purchase would leave a margin out of the present profit of the railways, and also assuming that single management would make great economy in working, with one central board instead of twenty-five or thirty, would you be in favour of using the fund so saved for the purpose of reducing rates and fares?—Most decidedly.

16777. Then, as to the working of the railways (apart from policy), would you be in favour of handing over the actual working of the system to a body of the best practical experts that could be found—say, for instance, the most capable present railway managers and experts—handing over the management of the railways to them under the direction of the superior body?—I think that would be a very good idea. I would not like to do away with the whole of the Irish railways as a body. You must recollect that the great individual railway companies give a lot of employment; and if you narrow the area of management of all these companies you do away with a vast amount of employment—not alone labour, but clerks and officials of every kind. I think the more money that is diffused through the country among officials of every kind the better.

16778. Yes, but if this diffusion of money causes the crippling of the industry and trade of the country, don't you think that the development of them is the first consideration that ought to appeal to every citizen?—Of course, that is another view to take of it.

Examined by Colonel HUTCHESON POË.

16779. Am I correct in saying that when you speak of a controlling body over the railways you mean that the railways should be carried on as at present, subject to the appointment of this controlling body as a sort of Railway and Canals Commission for the purpose of settling disputes, and for initiating reductions in rates and fares in such directions as this controlling body may think desirable?—Yes, but with extended powers.

16780. I understood that you meant that?—Yes, in a great measure.

16781. Do you think that such a system of control would conduce to the harmonious working of the railway systems in this country? Do you not think that the directors, who are subject to the opinion of a large number of shareholders who are interested in looking for their dividends—do you not think that they would resent the establishment of such a controlling body, that they would not object to have the rates and fares reduced at the beck and call—I will not say of some political body—but of a body not in sympathy with the shareholders, and whose object would be to cut down rates and fares to vanishing point—do you think that would conduce to harmonious working, or would such a system be tolerated at all by the railway companies or the shareholders?—Well, I suppose, the shareholders and the railway companies would resent it, less or more, unless they saw it was to their own advantage.

16782. How could it be to their own advantage?—It might be, because anything that would develop the resources of the country must benefit the railway companies.

16783. That is problematical?—Everything is problematical.

16784. I put it to you, do you think it at all desirable or possible—believing, as you do, that the railways should exist as at present—that the State should call in this external authority and entrust them with the very drastic powers of compelling a reduction of rates and fares?—I would not say that the controlling body should compel the reduction of rates and fares, but this controlling body should have power to make the companies have equitable charges, and it should also have power to regulate the general management to a large extent. I do not say that the controlling authority should go to such and such a railway and say "You must fix such and such a rate for this article"; but the body should have power to control any differences that might arise between the railway companies and manufacturing bodies.

16785. If you confined the powers or functions of the controlling body to those of the Railway and Canals Commission, there might be some advantages, but I understood you to go further than that?—I would give them extended powers. What good would

Apr. 24, 1907.

Alderman B. Collery, High Sheriff of County Sligo and representative of the Sligo County Council.

Suggestion to place the existing railways under the control of an authority, with powers to regulate their general management.

Functions and powers of the controlling authority.

Apr. 24, 1907.

Alderman B. Collery, High Sheriff of County Sligo and representative of the Sligo County Council.

it be for a trader in Sligo, say, to go before the Railway and Canals Commission at present with a complaint?—He would get no redress.

16786. I think we are all satisfied on that point about the Railway and Canals Commission, and we need not follow it any further. Now, I have another question to ask you; it is about the Arigna Extension. Isn't it a fact that two years ago a grant of £24,000 was actually sanctioned, and the consent of the Treasury obtained by the Chief Secretary, for the extension, subject only to the proviso that, in the event of the grant not being sufficient to provide for the contemplated extension, the County Council would guarantee to find whatever difference was required?—That was in Leitrim, sir; not in Sligo.

Grant for the proposed Arigna extension of the Cavan and Leitrim Railway: Action of the County Council which prevented expenditure of the money.

16787. Yes, in Leitrim; and consequently, through the disinclination of the County Council to give such a guarantee, the whole matter has been hung up?—I am not an authority upon Leitrim matters; but I think it arose in this way—that the County Council was called upon to provide a certain amount provided the grant of £24,000 was given.

16788. They were called upon to guarantee the remainder if the grant was not sufficient?—Yes, and the grant fell through; but that is not in connection with the railway system as far as Sligo is concerned.

16789. But the terminus of the Cavan and Leitrim Railway is at Arigna?—Yes, I think so.

16790. Where do you start the line you are now advocating?—The contemplated line I was dealing with would start from Arigna and would go in a different direction.

16791. Wouldn't it go to the coal mines in the first instance?—It would go from Ballyfarnon.

16792. The other is a line that runs from Arigna to connect with the Sligo, Leitrim and Northern Counties Railway, connecting the coal mine?—Yes.

16793. Was there to be no through connection with the Cavan and Leitrim Railway on the east?—They could come on to Collooney.

16794. It is the other direction I am talking about?—Yes, at Enniskillen.

16795. It would be a continuation of the Cavan and Leitrim system—we appear to be discussing the same point in only different ways?—Perhaps so.

Chairman.—Alderman Collery, we are very much obliged to you for your evidence.

The Commission then adjourned till the following morning.

TWENTY-NINTH PUBLIC SITTING—THURSDAY, 25TH APRIL, 1907,

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners Present:—Sir CHARLES SCOTTER, Chairman; Sir HERBERT JEKYLL, K.C.M.G.; Lieutenant-Colonel WILLIAM HUTCHESON POË, C.B.; Mr. THOMAS SEXTON;

Mr. GEORGE E. SHANAHAN (Secretary.)

Chairman.—Perhaps it is better to announce that the Commission have decided this morning that the next sitting of the Commission will be in London on Monday, Tuesday, and Wednesday, 13th, 14th, and 15th of May. It may be convenient for parties to know it. *Apr.* 25, 1907.

Alderman MATTHEW A. BALLANTINE, J.P., examined by the CHAIRMAN.

Alderman Matthew A. Ballantine, J.P., ex-Mayor of Derry, and representative of the Londonderry Corporation.

16796. Mr. Matthew A. Ballantine, you are a Justice of the Peace?—Yes.

16797. And an Alderman of Londonderry Corporation?—That is so.

16797A. And I think you are an ex-Mayor of Derry?—I was Mayor, and am now ex-Mayor of Derry.

16798. Have you any connection with the Londonderry Chamber of Commerce?—Yes; I am a member of the Londonderry Chamber of Commerce.

16799. And one of the Vice-Presidents?—One of the Vice-Presidents.

16799A. Do you appear before us at the request of the Corporation?—At the request of the Corporation.

16800. I think we were to have had the honour of the presence of the Mayor, but he is not able to attend?—The Mayor is not able to attend.

16801. Now, will you tell us what particular business you are personally interested in?—I am in the milling business and grain trade.

16802. Have you been long in that business?—Oh, for forty years.

16803. Forty years. I suppose that your Corporation feel that the prosperity and the welfare of the city is bound up with the welfare of the port?—Yes, altogether bound up with the welfare of the port. It is essential.

16804. Yes; now tell us, first of all, what railways serve Londonderry?—The Great Northern Railway and the Northern Counties Committee of the Midland Railway are the two principal lines. We have the Donegal Railway now, which has been bought over by the Northern Counties Committee.

16805. They have a station in Londonderry?—Yes, and also the Lough Swilly Company.

16806. Three railways?—Yes, three railway companies.

16807. Three?—Yes.

16808. What is the population of Londonderry?—Forty-two thousand.

16809. Then with regard to traffic to and from England, of course you have a direct sea route?—We have a daily sailing to a Lancashire port, two in the week to Liverpool, two to Heysham, two to Fleetwood. That works out a steamer daily.

16809A. You have a sailing every day in the week?—Yes.

16810. Heysham, the new Midland port?—Yes.

16811. Practically you have a daily sailing by sea to and from England?—Yes, a daily service.

16812. Well, now, have you anything to tell us with reference to the rates in operation by the various railway companies?—Well, there is a system of through rates throughout all Ireland to England, which the Derry Corporation, my Corporation, and the Harbour Board consider that we should have, and I might say say that we opposed the sale of the Donegal Railway Company to the Great Northern Railway Company and the Midland Railway Company, and went in for special terms and special rates. We consider that from the long sea voyage, and from the short railway carriage by this route, that we should get a differential rate of 2*s.* 6*d.* per ton, and also 10*s.* a wagon on cattle.

Claims for differential rates on cross-Channel traffic *via* Derry.

16813. From where and to?—From the North of Ireland, from the County Donegal. We went in for that protection in the sale of the Donegal Railway, and I may say we got that protection from the House of Commons in 1905, and the railway company refused to take the bill.

16814. That was the first Bill?—The first Bill.

16815. Very well, then. The Midland Railway have refused to take the Bill?—The Great Northern Railway and the Midland both refused to take that Bill.

16816. Were the Great Northern Railway in that first Bill?—Yes. The Great Northern Railway and the Midland went together for powers to acquire the Donegal Railway, and we opposed them.

16817. One minute, Colonel Plews, I was under the impression the Midland had the first Bill. It was in my mind.

Colonel Plews.—No, it was a combined Bill from the first.

Witness.—I may say that the Midland went in for their own Bill to acquire the Belfast and Northern Counties when they came in first.

Chairman.—Yes, that was what I am confounding.

Colonel Plews.—They are separate lines.

Witness.—We got from the Midland Railway, too, all we asked, the protection of 2*s.* 6*d.* a ton, and also a protection in the cattle the same as we asked from the Donegal Railway Company from the Midland. They granted that.

Differential clause inserted in the Great Northern and Midland Companies Bill, which was dropped in consequence.

16818. *Chairman.*—In the House of Commons when the Bill was first in you got a clause, but in consequence of that clause the promoters withdrew the Bill?—Yes.

16819. What took place in the next session?—They promoted a new Bill.

16820. Next session?—Yes, in the House of Lords.

16821. The Bill began in the House of Lords?—First in the Commons, and we got all the protection we asked for from the Commons. The Great Northern Railway and the Midland refused to take the Bill; then they promoted a new Bill next session in the House of Lords.

Fresh Bill promoted following year.

16822. Well, I mean sometimes these private Bills begin in one House and sometimes in another?—The second Bill began in the Lords.

16823. Yes; did you get a clause in the Lords?—No; we did not succeed there.

16824. Then did you oppose in the Commons?—We opposed again in the Commons.

16825. You did not get it there?—No.

16826. And you have not got it?—We got a small clause in. We made the best bargain we could.

Apr. 25, 1907.

Alderman Matthew A. Ballantine, J.P., ex-Mayor of Derry, and representative of the Londonderry Corporation.

16827. You got a clause which satisfied you?—Well, we were not satisfied. We made the best bargain we could.

Colonel Plews.—The clause they got was a clause voluntarily given by the company, not imposed by the committee.

Witness.—It was not voluntarily given by the company, because the company agreed to give us more, and I must correct Colonel Plews. He drew back in his promise, and we had to take what we got. We got a protection from Strabane, some miles from the city.

Amended differential clause inserted as a compromise.

16828. *Chairman.*—Not the protection clause you got in the Belfast and Northern Counties Bill?—Not that. We have not got what we got over the whole Donegal system.

16829. I am quite aware of that. You have not got that?—We never got that.

16830. Well, now, have you anything to say with reference to the local rates from and to Londonderry in Ireland?—Confined to Ireland?

16831. Yes, local rates?—We complain that we have no through rates from the North of Ireland to the South of Ireland. We have no through local rates.

Through interior Irish rates with Derry alleged to be excessive and a handicap to trade.

16832. Just give an illustration of what you mean—no through rates from Londonderry to Cork, for instance?—No local through rates that we could accept. The staple trade of the city is the shirt trade.

16833. Yes?—Well, the freight in bale goods such as shirts to Cork is 66*s.* per ton; to Waterford it is 51*s.* 3*d.* a ton; to Limerick it is 53*s.* 6*d.* a ton; for the same goods to London it is 43*s.* 4*d.*; to Edinburgh, 27*s.* 6*d.*

16834. Yes. What you say is that the local rates, I suppose, *pro rata*, are considerably higher than the through rates for towns in England?—Yes, and we say that if the railway company could give us a cheap local rate through not only to Cork, Waterford, and Limerick, but to the inland towns in the South, it would be so much money in the pockets of the railway company, and I believe trade would develop that would pay the railway company.

16835. Turn your attention to your own particular business, the milling business—what have you to say about that—the rates for your traffic?—We have very little trade in the grain trade between the South and North of Ireland.

16836. Oh, yes. I quite understand that. The South would supply the South, the North the North?—In some cases.

16837. But I mean the rates—where do you mill, Londonderry?—Londonderry.

16838. Then you send your traffic, flour and so on, at any rate within a reasonable distance from Londonderry inland?—Yes. I am not in the flour trade, though.

16839. What is included in the milling trade?—Oatmeal and Indian meal, and feeding stuffs.

16840. Yes, maize, for instance?—Yes.

16841. Into Londonderry?—Yes.

16842. And you send it to inland stations in Ireland?—Yes.

Local rates generally alleged to be excessive.

16843. Are the rates in your judgment satisfactory?—Well, I think the rates are rather heavy.

16844. Rather heavy?—Yes.

16845. You have not any particular rate in your mind that you consider heavy?—I have not.

16846. On the whole?—On the whole.

16847. You have not much to say against these particular rates?—There is not much, but I think it would be for the benefit of the port if there was a slight reduction. We are pretty well handicapped to go to Enniskillen. We have Sligo to contend with; Belfast to contend with; Newry to contend with.

16848. Is there milling industry at Sligo?—Yes.

16849. Just the same as at Londonderry?—Yes.

16850. And at Belfast?—Yes.

16851. But that particular industry is rather prosperous in Ireland?—Well, on the whole it is.

16852. Yes; then it has not been retarded by any action of the railway companies?—I don't believe it has.

16853. It goes without saying that whatever your rate is you would like some reduction, and any reduction would be of so much benefit to yourself?—And the country.

16854. Primarily to yourself?—Primarily to myself.

16855. And then generally to the country?—Generally to the country.

16856. Do you consider that any undue preference is given by the Great Northern Railway Company, who are both at Londonderry and Belfast, to Belfast?—I have not the slightest doubt that there is a preference given to Belfast merchants. They can send their goods further away from Belfast than we possibly can from Londonderry, and we buy them on as good terms in Londonderry.

16857. Is it because the railway company put lower rates in operation from Belfast than from Londonderry?—I believe they give lower rates, that they give rebates that we cannot get at from Belfast.

16858. Do you know this of your own knowledge?—Well, I thought that you would take the evidence given some time ago by Mr. Heyn, of Belfast. He said that in his own office, without leaving his own office, by telephone, he could get a special rate from Belfast to anywhere in Ireland.

16859. Could you not if you had a special quantity?—If we wanted any special rate we would require to write to Belfast or Dublin and wait for a week.

16860. Because you have no telephonic communication?—We have, but no one in the City of Londonderry has any power to do anything.

16861. That is the official responsible for quoting these rates is at Belfast, and not Londonderry?—Or Dublin.

16862. They can't have chief officials at all places?—Well, I think we should have the same power in Londonderry as they have in Dublin or Belfast. I think Londonderry is the third best feeder of their system on the Great Northern Railway.

16863. Yes, of course they can't have what we call chief officials in every town on their system?—Well, so far as the Corporation I represent, all merchants of Londonderry, and my own feeling is concerned, I believe his evidence. I believe in Belfast they get draw-backs. We can't get them.

16864. Yes?—We can't fathom it. It can't be done unless some Commission of some kind, as a Railway Commission, is appointed to have access to the Clearing House and the audit office of the railway company, and to see that these undue preferences are not given to one place over another.

16865. You can give us no particular instance of what you call undue preference given to Belfast?—It would be impossible to get them, for us to get them.

16866. Have you raised that question direct with the Railway Company, with the General Manager of the Railway Company?—Raised what?

16867. This question of undue preference?—It has been raised often, but we can make nothing out of it.

16868. Recently?—Yes, for years. We could make nothing out of it. We cannot get at the bottom of it. The fact remains that the Belfast merchants can go further away from Belfast and send their goods where we cannot touch.

16869. Is it probably due to the traffic, whatever it may be, being brought at a less cost into Belfast than into Londonderry?—I don't think that would affect it; that would not affect it. We can get goods into the city and port of Londonderry by our own cross-Channel steamers as cheap as they can.

16870. But maize doesn't come by the cross-Channel steamer?—We import the maize direct from America and the Argentine and the Black Sea.

16871. Is the rate the same?—We buy on the same terms through London. The grain is brought from the Baltic in London.

16872. The Derry merchants can buy maize in London as cheap as the Belfast merchant?—Maize is a fluctuating article. You may be safe to-day and away to-morrow, or the price may be over.

16873. I assume that the *modus operandi* of your business is, a ship arrives off the coast of Ireland, and it is telegraphed your buyer has bought it?—We generally buy the ships in direct to Derry.

16874. Do you take a full cargo to Londonderry?—Yes, 4,000 tons. We have a splendid harbour, a splendid river; a vessel can come up and discharge 4,000 tons.

16875. Deep water?—Yes. The rebates I complain about are more in the grocery line of business.

16876. Oh?—Not in my business. The fat of that trade in Londonderry is being got at by the Belfast merchants. They give an undue preference.

16877. You can't give an instance?—No.

Mr. Healy, K.C.—The gentleman's surmise is quite incorrect.

Witness.—We can't get at them.

16878. *Chairman.*—At any rate we have no proof of it. Have you anything to suggest as a remedy for this sort of thing? First of all, do you agree that it is in the interests of the country that railways should be privately owned, and that there should be a large number of different railway companies in the country?—The feeling in the Corporation of the City of Londonderry is that such railways as the Great Northern and Midland should remain as they are. We are well served with the railways.

16879. You are well served?—Yes. I believe that all the leading lines should remain as they are: such lines as the Sligo and Leitrim, I think, it would be an improvement if it were bought by the Great Northern Railway; but I believe all the large railways, the Great Northern Railway, the Great Southern and Western Railway, and the Midland should remain as they are.

16880. You think that there should be three or four or five main systems in the country?—Yes.

16881. And that the large railways should absorb the small?—Yes.

16882. How would the Great Northern Railway absorb the Lough Swilly Railway if the Lough Swilly objected? How do you suggest that would be done?—Well, so far as the Lough Swilly Railway is concerned——

16883. I mention it as an instance?—I don't think we would touch the Lough Swilly. It is a railway which has no connection with any other railway in Ireland: it goes right down through Inishowen, and it is practically a Londonderry railway. It brings all its goods into the port.

16884. In your judgment, it would be better for Ireland if there were three or four main line systems in the country?—Yes, for instance, the Belfast and Northern Counties. I mean the Midland Committee. I think that they work all the railways put into their system in the Counties Antrim and Londonderry. They work all the railways.

16885. You think it has been an advantage to Ireland the introduction of the Midland Railway Company of England to Ireland?—I believe it has been an advantage to Derry.

16886. And the district?—I do. I believe it has been an advantage to the district. I am in a position to say it has been an advantage to the City of Londonderry. The Midland has treated Londonderry well, both as regards exports and imports since they took over the line.

16887. Do you think the absorption of the Donegal Railway has rendered any benefit to that district by the Great Northern Railway and Midland? Do you think it has benefited the district?—On that question we believe it won't be a benefit to the City of Londonderry.

16888. I would ask you as to the district served by the railway, do you think it has been a benefit to the district served by the railway, which, if I remember rightly, was in the hands of two original companies?—We found that the Government were anxious for the two original companies to take over the Donegal Railway.

16889. I put it——?—I believe it will be in the long run a benefit: it will not be a benefit to the port of Londonderry.

16890. Do they favour any other port?—No, but we had a differential rate—2*s.* 6*d.* a ton—over the whole system which we have lost.

16891. You enjoyed that?—We enjoyed that from the Donegal Railway Company.

16892. And you don't enjoy it now?—No.

16893. And to that extent it has not been a benefit to Londonderry?—No: our cross-Channel trade to England: we have a sailing every night: and they have a miserable fight for their existence.

16894. Then I gather from your evidence that you are against the State purchase of railways?—Yes.

16895. And is that the view of your Corporation?—That is the view of the Corporation and leading citizens of Londonderry at present.

16896. Has it been before the Corporation?—Well, I have spoken to all the leading members.

16897. Has it been formally brought before them?—It has not been formally brought.

16898. By resolution?—No, it has not; but I know it is the feeling of the Corporation and merchants of Londonderry that we are better as we are. We look upon the two railways that we have in the north as being well managed. Nothing could be better.

16899. I gather——?—To put it into a nutshell, the only thing we complain about in Londonderry is that we don't get fair play from the Great Northern Railway Company with the heavy goods traffic to the port of Londonderry for England. We don't want, nor we don't expect, the perishable goods through the port of Londonderry. We don't want them.

Complaint as to unfair treatment of Derry by the Great Northern Railway Company.

16900. It is the bulk?—The bulk. We are entitled to the heavy traffic, for instance, goods shipped from Enniskillen to Liverpool, by sea to England, or ports in England, would require to be loaded in Enniskillen the night before. The Great Northern Railway Company will take goods every day in the week by passenger trains to the seaports—Larne, Belfast, Greenore, and North Wall at goods rates.

16901. And they don't do the same to Londonderry?—They don't.

Mr. Healy, K.C.—I think the witness is incorrect—he is not correct.

16902. *Chairman.*—We will just take the evidence for what it is worth. The railway companies will answer it. Then in that respect you think Londonderry is slightly handicapped as compared with those other ports?—As compared with other ports. I might just say that we get the best of fair play from the Great Northern Railway with the Scotch traffic.

No complaint as regards Scotch traffic from the Great Northern Railway.

16903. Yes?—We have nothing to complain about our Scotch traffic, but we have to complain about the English traffic.

16904. Well, but the senders of that traffic, say, from Enniskillen, don't they direct the route by which the traffic should go?—It is very hard to direct the route when they have plenty of canvassers looking after them, when they give facilities.

16905. Supposing I am at Enniskillen, and I have goods for England, don't I put on my consignment note which way they are to go?—Yes, you can do that if you wish.

16906. Don't you in Londonderry?—I think they can for through rates.

16907. There are through rates from all the ports?—All that we have got to complain about is, we are not getting fair play for the English traffic.

16908. And that is confined only to what you call miscellaneous traffic, not to the bulk traffic?—To the heavy traffic.

16909. The undue preference you say is in connection with the smaller traffic?—No; we don't want to compete for the smaller traffic. The Great Northern Railway Company have the best system that could possibly be got *via* Greenore, for perishable goods and small parcels. That we don't want to interfere with.

16910. A daily service?—Yes. That we don't want to interfere with.

Necessity for a cheaper and more convenient tribunal in lieu of the Railway and Canal Commission Court urged.

16911. A little further with regard to State purchase, have you formed any opinion as to whether there should be some control by any central body in Ireland over the railways?—I think we should have some board which the grievances could be put before. For instance, supposing we go to the Railway and Canal Commission. There is no private individual could go there, and if a public body go there it is fraught with a great deal of expense.

16912. There is no expense going to the Board of Trade?—We don't consider the matter at all satisfactory. We believe that there should be some central establishment or tribunal.

16913. An Irish body?—An Irish body in London, with full power to go into the Clearing House in London and see what portion of the through rates the railway company gets, and also be able to go into the Audit Office.

16914. They could go into the Clearing House in Dublin?—Well, in Dublin or London, I don't know. I thought the Clearing House was in London altogether.

16915. No, no?—Also to have full power to go into the railway audit offices and see as to the rebates for undue preferences are given in Ireland.

16916. Have you formed any opinion as to what that body should be, how it should be elected?—I should say a few experts and one or two leading merchants with an experience of railway business.

16917. A permanent body?—I think so.

Apr. 25, 1907.

Alderman Matthew A. Ballantine, J.P., ex-Mayor of Derry, and representative of the Londonderry Corporation.

16918. Paid by the State?—I should think so. I think it would be a very satisfactory thing both for the merchants and railways if we had a cheap tribunal of that kind, then all those things would be adjusted.

16919. Well, now, I suppose, to put it in short language, what you mean is that there should be some easy, cheap tribunal in Ireland itself where complaints of the traders could be adjusted or inquired into?—That is what I mean—exactly what I mean.

16920. Without the intervention of lawyers?—If possible, without lawyers.

Mr. Healy, K.C.—It is impossible.

16921. *Chairman.*—What have you got to say about Letterkenny Railway?—Sir Henry Miller will give evidence on that.

Thank you, Alderman.

Examined by Mr. SEXTON.

Present system of reference to the Board of Trade under the present law as well as the Railway and Canal Commission Court considered unsatisfactory.

16922. You consider that the reference to the Board of Trade under the present law is of no practical use to Irish traders?—I don't think it is.

16923. And you think that the Court of the Railway Commission, although the fees of the Court are low, yet in the incidents of a trial before it is so expensive as to be out of the reach of the traders?—Yes. I think we had some experience of that in Londonderry.

16924. These matters have been under consideration for the past fifty years, and various efforts have been made to adjust the system to the satisfaction of the public, but the reference to the Board of Trade and the Railway Commission is all that has been devised up to the present?—That is all.

16925. That seems to indicate that the application of effectual remedies of the grievances of traders is slow?—Yes, it is very slow; and if you put the machinery in force once it will be a long time before you go to use it again.

16926. The experience after so long a time of these means to secure redress is not encouraging?—No.

16927. Not encouraging?—No; it is not.

16928. After so long a time, to have been able to do so little effectual, is not encouraging?—No; it is not.

Powers to be conferred on the suggested Board of Control.

16929. Well, you propose to establish a Board of Control—a permanent Board of Control?—Yes. With full powers to control and regulate the railway rates so far as they can, to be approached by merchants or any public body. I think it would be satisfactory to the public and to the merchants.

16930. Would you give them power to reduce the railway rates where they cut away the profit?—Well, I would give them certain power to arrange with the directors.

16931. The power must rest somewhere. Would you give them power to reduce the rates where you think it requisite?—I don't think I would. The only thing we want is the power to give us redress if we believe anywhere undue preference is given in carrying goods at undue rates to places in Ireland at a higher sum than from their own port. Through rates are always cheaper. The railway companies get less money than they would charge for the same goods coming from London to Enniskillen than from Enniskillen to Belfast.

The inequality between cross-Channel through rates and local rates discussed.

16932. You entertain a strong view that the inland rates in Ireland ought to be reduced, so that the railways would accept the same remuneration for services to local traffic that they accept out of the through rate for similar traffic?—Certainly.

16933. That would involve considerable reductions on large masses of rates?—They carry the goods in any case.

16934. I know; but in order to reform the local rates as you think requisite, many of them would have to be greatly reduced?—Yes, down to the same level as through rates.

16935. To the corresponding charge for the same service in through rates?—Yes.

16936. That would be a very large reform. Would you give your Board of control power to effect that reform?—Certainly in that case I would.

16937. You say that the prosperity of Derry (and the fact is apparent indeed) depends upon its port?—Certainly.

16938. Situated as Derry is can it give the principal companies as long a haulage upon traffic outward from Ireland as some of the eastern ports can give them?—No, shorter.

16939. Then there are several railway ports also on the east coast?—There are—small ports.

16940. Well, judging the matter by ordinary commercial principles is it not inherent in the system of private companies that they should favour the ports which gave them the longest haulage?—That railway companies should.

16941. According to ordinary commercial principles should you expect that they would be disposed to favour the ports that give them the longest haulage, that is, the largest share of the through rates?—I don't think it is fair to the smaller ports in Ireland. I don't think it is giving fair play to the smaller ports in Ireland. If you want to make congested ports of all the smaller ports the railway company might do that.

16942. I am putting it to you—would you think it likely to do this, or is it what in fact they do?—The railway companies at present try to carry all the traffic they can for these two ports.

16943. They try to get the longest haulage?—Yes, all the English traffic for these two ports.

16944. Does that involve a preference to the ports which give the longest haulage; the companies try to get the longest haulage?—They do.

16945. That prefers the port which gives the longest haulage?—Quite so, because they go with the interests of the system.

16946. Yes, but your view, as strongly expressed here, is that so far as possible each port, whether small or large, or no matter where situated, ought to be secured as far as possible in the traffic of the surrounding districts?—Yes, the heavy traffic.

16947. The heavy traffic?—Yes, we don't want to go in for it, because it would not be fair to go in for perishable goods. We don't want to interfere with them in any way.

16948. How are you to get the interests of the different ports served in that way under a system which makes it in the interest of each private company to give the traffic, to attract the traffic, to draw the traffic to the port which gives it the largest haulage?—I don't understand your question.

16949. I understand from you that you are of opinion that the eastern ports afford the railways the longest haulage?—Certainly, from the North of Ireland. Take, for instance, from Enniskillen. I would say from Enniskillen to Belfast would be about ninety miles.

16950. It is obvious from a glance at the map that a port situated as Derry is cannot give these railways as long a haul as a port on the eastern shore for the bulk of their traffic?—No.

16951. Is it not inherent in the present system of private companies and divided ownership that Derry cannot have as good a chance of light or heavy traffic as the ports that give a longer haulage to the companies?—I don't think it is fair for the companies not to encourage every port on their system. I don't think it is fair for the Great Northern Company to put their foot down on the English traffic to the port of Londonderry. I think it would be in the interests of the Great Northern Company to try to develop the city of Londonderry. The more that we can increase in population and business, so much the better for the Great Northern Company.

16952. I gather from you that you are of opinion that it is not for the good of the country that there should be concentration in two, or three ports, and that the other ports on the Northern, Southern, and Western coasts should be starved in consequence?—Certainly.

16953. I agree with you. How do you propose to get what you want?—I suppose that is for the Railway Commission to try and devise for us.

16954. But if you had a united system of railways in Ireland under public management there would be no temptation then to favour the ports that give the longest haulage. The management would have no temptation?—That is to nationalise the railways?

16955. Well, owned by the public and managed on the part of the public?—I think it is very far off. I doubt that it is desirable.

16956. I know; but I am putting a limited question to you. If there were a united system of railways under public management, would there not be a better chance for a port like Derry of getting the traffic of the surrounding district—the heavy traffic of the surrounding district—would the direction of such a system be to give inducements to prefer a

port—say, an eastern port, because it gave a longer haulage—would not such a direction impartially consider the claims of the port of Derry?—To some extend it would; but I believe if you nationalise the Irish railways, and don't nationalise the whole of the railways of Great Britain, you won't have the whole of it affected at all, for I don't see why we should have the Irish railways nationalised, and not the railways on the other side.

16957. That transaction would be of very great magnitude. You are aware of the capital of British railways—£1,200,000,000?—I know.

16958. The transaction of nationalising such a colossal mass of capital is one that, perhaps, the British people, wealthy as they are, would hesitate to undertake?—I suppose they would. It would be a very hard job.

16959. But then in Ireland the capital is only about £40,000,000, smaller than the capital of any one of several of the English railways; the circumstances and demands are also very different; and why then, supposing the thing were good in itself, why should Ireland for a transaction of manageable size wait until the trend of opinion and state of circumstances led England to adopt the same principle? Why should not Ireland be served upon the Irish merits?—I think we could be served better by establishing this Board of Control in Ireland and keep the railways as they are. That is my answer to the question. So far as I know about the management of the Belgian railways, I don't think people here would put up with it. I believe they are slow and unsatisfactory. It is too large a question for me to go into. I am not an expert.

16960. It is too large a question? Would you allow me to ask you whether your study of the system in railways in other countries has led you to arrive at the opinion that they cause dissatisfaction to the people in these countries?—From what I have read I believe the Belgian railways are very slow in the transit of goods.

16961. Do you think the Belgian people would allow of a reversion to the system of private railways?—No.

16962. You have no reason to think they would?—No; I have never been there.

16963. What is your view about the export rates—the rates to Great Britain on our staple products—agricultural and pastoral products. There is a body of evidence here to show that Irish exporters suffer in the British markets as against Continental exporters by reason of transit disadvantages; that the latter are more favoured. Would you be in favour of revision of those rates in the interests of Irish agriculture and the cattle trade?—To some extent I would. We have a very good system of through rates from Ireland to England; but I think they might in some cases be reduced to the advantage of the railway company, where it could be pointed out that they would get a return. They would get the benefit of increased traffic.

16964. When you find that the exports from Denmark, Belgium, and other Continental countries to English markets have vastly increased in the last thirty years, although Ireland is much more advantageously situated for supplying England, and when you find transit conditions in this country unfavourable, don't you think a case has arisen for trying to put the Irish agriculturist upon an equal footing with the Continental?—I am afraid the Irish agriculturists to a great extent are to blame themselves. They have not the same butter as the Danish butter, and there are many things in which they are behind. There are a great many things connected with agriculture before you take into consideration a matter of the kind.

16965. They are doing their best, I suppose, to improve. Would you consider that, even though their products may not be as thoroughly finished as those of other countries, that would be any reason for imposing unequal transit conditions? Would it not be a reason for trying to give them an equal footing, so far as transit is concerned?—I really can't go into that. I have not the statistics.

16966. You think that no local rate in Ireland should be in excess of the rate for which the company is prepared to give the same service to through traffic?—I think that that should be adopted.

16967. The revenue of the railways from the inland traffic of Ireland forms a very large part of their whole revenue. What you ask could not be done without for a time, at any rate, causing a very heavy reduction in the revenues and profits of the railways. Would you propose that the rates should be reduced at the risk of the railways?—I would not go so far as that. It could be met in one way. The companies could get extra traffic by allowing local rates from different places, all to be on the same law. They are carrying the goods now.

16968. An eminent railway manager has expressed himself very strongly on the subject?—For instance, you can only go into cases such as flour, tea, or some of these kinds of things conveyed to the market; but there are other articles not carried from the other side, such as meat and other products, that are never brought over at all, that there are no through rates on. All we want is to get the reductions on these articles on which the rates are charged that interfere with the local merchants.

16969. You think that the local rates in Ireland should be reduced?—To local industries.

16970. The rates in these cases in which a relatively low through rate from England competes with goods which are produced, or could be produced, in Ireland?—Yes.

Problem of how to meet the deficit which reduced rates would entail.

16971. That would involve a considerable reduction of revenue?—They would get the goods all the same. They are carrying the flour, and the local flour mills are doing nothing.

16972. But it might be hoped that after a time the traffic would be so increased by the establishment and development of industries—a slow task, necessarily—that they would be recouped for the reduction, but in the meantime would not the railway companies pass through a very troubled and difficult period whilst they were endeavouring to make up the profit they at present have?—I don't think that it would involve a very great outlay for the railway companies—a very large amount.

16973. Have you formed any idea of the reduction that would be required?—I have not. We can't form any idea of what they get of the through rates. We have no way of finding out what portion of the through rates the Great Northern Railway Company or any railway company in Ireland get.

16974. Do you think that proportion ought to be shown?—I think it would be well to be known.

16975. But the evidence here before us, the evidence of many witnesses, is that there is a much less proportion available to the Irish Company out of the through rate than the amount of the local rate?—That we don't know.

16976. You dislike the idea of public ownership of the railways, but may I ask you whether in case public purchase of the railways by the use of State credit left a large balance out of the present profits, and if the economy of working caused also a further large saving, would it not be very important to the public that there should be that fund for the purpose of giving the reduction in local rates which you think essential to the welfare of the country?—I don't know; I can't give you an answer to that. We are pretty well served at present as we are, and we think that the large railway companies we have in the North of Ireland are a benefit to the country.

Board of Control for the settlement of grievances against the Railway Companies suggested.

16977. Do you think the railway companies would agree to a Board of Control, which would have power to reduce their rates?—Oh, I don't want the Board of Control to have full power to reduce all their rates.

16978. To reduce their rates as might be thought requisite. You must have some means of reducing them?—I want a Board of Control before which we could bring our grievances and have them agreed upon. There is no going before the Board of Trade or the Canal Commission; it is too expensive.

16979. I understand you to have expressed very clearly the view that the local rates in Ireland require to be reduced so as to put them on a level with the corresponding charges in the through rates. I suppose you would provide some means of reducing them?—Yes; that is what I mean.

16980. By this Board of Control?—Yes.

16981. But do you think that the railway companies would assent to a proposal to reduce their rates without any indemnity to them—to throw the risk of the reduction upon them?—Oh, I don't know that. That is a question for the railway companies. I think the railway companies should look after their own interests in that way.

Apr. 25, 1907.

Alderman Matthew A. Ballantine, J.P., ex-Mayor of Derry, and representative of the Londonderry Corporation.

16982. I think you may depend upon them to do that. Now, may I ask you this. Assuming that the public purchase and public management of the railways in Ireland were to produce a large surplus out of which reductions in rates could be guaranteed, would you rather go on under the present system without reductions in rates than obtain them by means of the public ownership of the railways?—Well, as I have answered you before, we are perfectly satisfied in the North of Ireland with the railway system that we have at present, if we could get those two or three items of grievances that I have put before you remedied. We are perfectly satisfied with the present railway system. The railways are well managed in the North of Ireland; they could not be better. I don't know much about the Southern railways.

16983. Is there any probability that a proposal to make large and general reductions in railway rates in Ireland without indemnity to the railways, is likely to be carried into law?—We don't want to go into very large reductions, only what is an actual grievance to the manufacturers of Ireland.

16984. You know there are a large number of through rates from England to Irish stations in general, which do send in goods that are produced or might be produced in Ireland at a lower charge for transit than the corresponding charge for the Irish local service?—Well, then, if we had these goods produced in Ireland the railway companies would lose nothing by it. They could give the same rate.

16985. But they insist upon charging a higher rate for the carriage of the local goods?—I don't think it is fair to the Irish manufacturers.

Suggestion that the country is not ripe for State ownership.

16985A. Assuming that you cannot get adequate reductions under the present system, would you rather go on as you are than accept a general reduction of rates under a system of State ownership?—Well, I don't think the country is ripe for State ownership.

16986. Very well. Thank you.

Examined by Colonel Hutcheson Poë.

16986A. With regard to the question of the through rates, there is a great difficulty in determining what portion of the through rate is obtained by the Irish carrying company?—We cannot say what portion.

Method of of remedying the disparity between through and local rates.

16987. Yesterday we had a highly interesting example. In the case of flour carried from Liverpool to Tralee *via* Cork, the through rate on it was 10*s.*—the local rate on flour from Cork to Tralee was 7*s.* 6*d.* Mr. Healy informed me that although the through rate was 10s., 8*s.* represented the sea carriage. If that is a correct representation, that only left 2*s.* for the carriage of the flour from Cork to Tralee, as against 7*s.* 6*d.* That, I presume, is a great disparity, out of all proportion to the merits of the case. I understood you to say that the Board of Control to which you propose to give powers of enforcing lower rates on the railway companies, so as to bring them more into conformity with these through rates, would have the effect in such a case of bringing down the local rate of 7*s.* 6*d.* to something more nearly approaching a few shillings. Would that be your view?—Oh, no, because in point of fact I think two shillings too small.

16988. But the railway company carries it at 2*s.* They would presumably not make much out of it; but they must make something. You are dissatisfied with the disparity between the local rate and the through rate, and you would give this Board of Control power to bring the two rates into conformity?—Yes.

16989. Probably that 2*s.* was an extremely low rate. But your proposition would have the effect of compelling the railway company to bring their local rates down to some figure somewhat approaching it?—Well, I don't think you could get any other place in Ireland where it would vary so much as that. I don't think that that is a case that you could take up. There must be something radically wrong in that.

16990. No doubt it is an exceptional case, I presume; otherwise the railway company could not live at all. At any rate, from your point of view you say that the through rates compare very unfavourably with the local rates?—Yes, but not to such a large extent as that. There might be a difference of 1*s.* or 1*s.* 6*d.* or 2*s.*, but I don't think more, if you take all the rates together.

16991. At any rate, you would give the Board of Control power to force some reduction upon the railway companies?—I would give the Board of Control power to put local industries almost on the same footing.

16992. That would be by a reduction of rates?—Yes.

16993. The Railway and Canal Commissioners have no power to bring about any reduction of rates. In the event of any complaint of an increase of rates they have power to determine and lower the rates; but while they have power to prevent a rate from being increased—they have no power to enforce a reduction of rates. You are aware of that?—Yes; I am aware of that.

16994. So that this Board which you propose should be given this power would have to get powers from Parliament to carry out these reductions of rates. And, as Mr. Sexton pointed out, do you think it at all probable that the railway companies would quietly acquiesce in such powers being given, powers greater than are at present given to the Railway and Canal Commissioners, or to any other authority?—I am not prepared to answer that question, because I don't know how it would affect the companies as a whole.

16995. You know that the dividends that they return are very small, under 4 per cent., and any appreciable reduction which would sensibly benefit the country would involve certain loss to the railway companies?—Well, I would hope that there would not be a loss to the railway companies. I think they would get local traffic where they are not getting local traffic now. I think the traffic would increase.

16996. Where is the local traffic going now?—The flour trade is nothing in this country.

16997. It would lead to a development of the flour trade?—Probably.

16998. At any rate, the development would be gradual, and probably for some years it would entail a loss upon the revenue of the railway companies?—Well, that is so.

16999. You admit that?—I do; and I think the Railways Commission here should go in for some Board of Control, not giving them full power, but giving them power to arrange with the railway company as far as possible to meet those things.

17000. No matter what powers you gave them you admit that it would entail some loss for a greater or lesser period on the railway companies. And do you think it reasonable to expect that the shareholders would quietly acquiesce in such a loss?—I don't think it is probable.

17001. Under such circumstances, then, do you consider that reduction should be obtained by some other means? You say that you are tolerably well satisfied with the Port of Derry under the present circumstances?—Yes, with the exception of certain grievances that I put before you here to-day.

17002. But looking at it from the broader point of view of the whole country, and not from your own, perhaps rather narrow standpoint—you are a man of business experience, and have travelled probably through the country—do you think that there is general satisfaction with the rates or fares throughout Ireland; is it the general view that they are satisfactory so far as that no reduction is essential to the development of the country?—My opinion is that they will reduce the goods fares if they see that they can increase the traffic to meet the reduction.

17003. Assuming that the railway companies are animated by the most beneficent intentions, which, I think, all the evidence here before us shows that they are, is it in their power, with the small volume of trade in the country, to submit to a probable loss for a longer or lesser period on the assumption, under present conditions, that it would develop trade. They are only human beings; they have to earn dividends, to look to their shareholders, to answer to them. Is it likely that under existing conditions a railway company, however anxious it might be to promote the trade of the country, can make such reductions experimentally as will involve it in some loss?—I don't think it would be fair to ask the directors to do so.

17004. I quite agree with you. How, then, do you propose to get it?—What I propose is to get up this Board of Control, so that we might have some cheap way of getting at those grievances that we complain of. I don't want to give them full power to insist upon what would not be right.

Alderman Matthew A. Ballantine J.P., ex-Mayor of Derry and representative of the Londonderry Corporation.

17005. I think you might put a Board of Control out of the question, because nobody would recommend it so long as the railways are in their present state. If you recommend an amalgamation of the railways, with Government subsidies to indemnify the shareholders against loss, such a Board might be established. But I submit to you, as a man of business, that, under existing circumstances, to propose such a Board would be absolutely futile?—I think such a Board would be of service to the country even if you didn't give them full powers to reduce rates.

17006. You mean a Board with absolutely no power over the rates, but with powers to inquire into grievances?—Yes.

17007. That would be a step in the right direction. I think you went further. I understood you to say that a general appreciable reduction of rates was desirable?—I don't think I gave that evidence.

17008. You said you thought that, though satisfied as a whole in Derry, in other parts of the country the rates did press heavily on them, and could be reduced with great benefit?—Well, I don't know that they could be reduced very much. I say that we have a very good system of through booking to England. There may be some cases where the railway companies should reduce their rates and recoup themselves by getting back extra traffic.

17009. I understood you to say that the Midland Company, since they took over the Northern Counties have benefited the Port of Derry?—I have seen some of the statistics for the Port of Derry, and they have done so.

17010. And the Great Northern?—The Great Northern Company treat us well with regard to the Scotch traffic; and if we got the same treatment with regard to our English traffic we have nothing to complain of.

17011. You get the bulk of the heavy traffic?—All the heavy Scotch traffic, or the great portion of it.

17012. And the English traffic?—We would like to have our share of it.

17013. You spoke of Enniskillen and the traffic for that direction. Would not the port of Sligo be entitled to it. It is nearer to Enniskillen than Derry?—They have no facilities there.

17014. If they had?—They would not have the traffic.

17015. It is the much shorter carrying distance, and the nearest?—They are carrying it away west.

17016. It is the longer route by sea; but that would not affect the question?—Derry would be the natural port for them.

17017. They get none of the bulk of the traffic at present?—They get the local traffic.

17018. Then, does the bulk of the traffic from Enniskillen go around to Belfast by the Great Northern?—The English traffic.

17019. Does any portion of the bulk of the traffic of the County Derry come to Derry by the Midland?—All that they could expect to get they are getting. We could not expect to go to the other side of the Bann, because Coleraine is an established port. We get it from a radius of about twenty miles around Derry.

17020. You get the bulk of the traffic for a radius of fifteen or twenty miles?—Yes.

17021. You spoke of the Lough Swilly Railway as not affecting the question of amalgamation very much. Is there any considerable danger, when this new connection is made from Strabane to Letterkenny, that any considerable portion of the traffic which now goes over the Lough Swilly line to Derry will be diverted and go by Strabane to Dublin and other parts?—There is considerable feeling to that effect.

17022. Do you entertain that feeling?—Yes.

17023. Would not that affect the Lough Swilly Co. very seriously?—It will affect the Letterkenny Railway Company.

17024. And naturally if it affects the Letterkenny Co. it will affect the Lough Swilly Co?—Certainly, to some extent.

17025. Would not that be an argument in favour of some kind of amalgamation of the Lough Swilly Co. with the Midland or the Great Northern?—I don't think so.

17026. If such a state of things as we assume goes on, the Company will be starved out of existence?—You may starve them out of the Letterkenny traffic.

17027. It is a very important traffic. The traffic of the Burtonport Extension is very much the heaviest portion?—To a very great extent it is a traffic in perishable goods, and we cannot ask for facilities as regards that. It goes right through by Greenore and Larne. We do not want to touch that traffic. We are too slow for doing that. Our sea passage is too long. Our sea passage is something like fifteen or sixteen hours to Liverpool.

17028. Is it your opinion that the tendency of the policy of these large systems in the North of Ireland is to divert traffic, from your port for instance, to perhaps other ports—to the port of Belfast?—Not only to Belfast, but to Greenore and Larne, and the North Wall over their own system—that is, their English trade.

17029. The policy of those two companies is in that direction?—Decidedly so; yes.

17030. Is it in the interest not only of Derry, but in the interests of the whole country generally that the traffic should be diverted from the natural output to the unnatural output, that is, the more distant one?—It is against the interests of the port of Derry. That is all the answer I can give you.

17031. Don't you think that if the railways were put under one central administration, under some form of State or National control that such a diversion of traffic would not take place, and that the interests of your port and other ports, would all be considered impartially and fairly, and would benefit you accordingly?—That is State purchase?

17032. State or National purchase?—Well, the feeling in Derry is that we are just as well as we are; and I don't think we are ripe yet for State purchase. I have not gone into that.

Country not ripe for State purchase.

Examined by Sir HERBERT JEKYLL.

17033. I should like to know more clearly what kind of authority you have in your mind, Alderman. I anticipate that you do not contemplate that your Board of Control should be invested with statutory powers to fix rates and impose them upon the railway companies. That is not your idea?—No; I would not go so far as that. We would like to have a cheap tribunal where they could investigate those grievances and see what could be done.

An inexpensive Board of Arbitration suggested to replace existing Court of the Railway and Canal Commissioners.

17034. Is it only to investigate and negotiate with the railway companies?—Yes.

17035. Don't you know that the Board of Trade can do that now?—If you can set the machinery in motion; but it is very hard.

17036. Have you ever tried?—I think we have tried in Derry the Railway and Canal Commission. It cost a lot of money.

17037. That is a legal tribunal. But would this be a legal tribunal which would be empowered to settle disputes between traders and the railway companies?—I think so—a Board of Arbitration, as it were, that we would come to without any expense.

17038. A Board of Arbitration to arbitrate between traders and the railway companies?—Yes.

17039. You would exclude counsel?—I think so. Counsel is too costly.

17040. Would the Board of Arbitration have power to impose its decision upon the parties?—On both parties?

17041. On both parties?—I don't know whether I would give them full power.

17042. We often hear about the need for a cheap tribunal, but a cheap tribunal is not an easy thing to devise?—I cannot devise a cheap tribunal.

Cross-examined by Mr. HEALY, K.C.

17043. Are you aware, Alderman, that the traffic from Enniskillen is all consigned traffic?—Consigned by the Enniskillen merchants.

Routing of Enniskillen cross-Channel traffic.

17044. Yes?—I don't know as to that.

17045. And that it is the consignees who select the route and the port?—I don't know much about Enniskillen now. For thirty years I had gone there every day. But for the last twenty years I was not there.

17046. You selected Enniskillen?—Yes, I did, for one of the places.

17047. Do you think Derry would be the natural port for live stock from Enniskillen. Is it the longer sea carriage to Liverpool?—My answer to that is that I have been speaking to a great number of cattle dealers, and to a very great extent they would prefer the short railway carriage. They don't object to their cattle being on board the steamer for twelve or fourteen hours.

Apr. 25, 1907.

Alderman Matthew A. Ballantine, J.P., ex-Mayor of Derry and representative of the Londonderry Corporation.

17048. Why don't they consign their cattle *via* Derry?—I don't know. I cannot answer you that question. The only reason I can give you is that all the railway companies have canvassers in all the provincial towns——

17049. And kissing goes by favour?—I suppose so, to a great extent.

17050. You have spoken about preferential rates. Didn't the Derry authority take the Great Northern Company before the Railway and Canal Commission?—Well, I believe they did.

17051. What was the result?—I cannot tell you. If you ask Dr. Reid, who will be examined afterwards.

17052. The matter was threshed out, and a decision given?—I believe it was; but I don't know. Dr. Reid will give you information upon that. I cannot do it.

Sir F. Henry Miller examined by The Chairman.

Sir F. Henry Miller, Town Clerk and ex-Mayor of Londonderry.

17053. You are Town Clerk of Londonderry?—Yes.

17054. Before being appointed Town Clerk were you a member of the Corporation?—I was, sir.

17055. Have you been Mayor of the City?—For two years—1900 and 1901.

17056. I think your object in coming here this morning was to bring some facts in connection with the Letterkenny Railway under our notice?—That is so, sir.

Promotion of the Letterkenny Railway.

17057. Before reading the resolution passed by the Corporation will you just give us a few facts and figures in connection with the railway?—Well, sir, I think you have heard the history of the origin of that railway, and, with your permission, I will just deal with the finance of it as it affects my city and my Corporation. The railway was originally promoted by shareholders in the County Donegal.

17058. I think we had all this before?—And I don't wish to repeat it. If you take that in evidence I adopt it so far as it appertains to the Letterkenny Railway.

17059. It will shorten the proceedings. Do you agree with the evidence given by Dr. Todd with reference to the Letterkenny Railway?—So far as it refers to the Letterkenny Railway I agree with him. I adopt his evidence and Mr. Hanna's.

Earnings of the Letterkenny line since 1890.

17060. Give us some figures in connection with the working of that railway?—Very well, sir. I will give you the earnings of that railway from the year 1890 down to last year, as returned in the accounts. Of course, you know that the railway is in the hands of the Board of Works as mortgagees, and it is worked on lease by the Lough Swilly Railway Company. They get so much for the working of it. In the year 1890 the gross receipts of the Letterkenny Railway were £5,593 15*s.* 1*d.*; the working company were paid out of that £3,747 16*s.* 3*d.*, leaving a net balance of £1,845 18*s.* 10*d.* And under Section 6 of the Letterkenny Act of 1876 those net earnings were to be applied in payment of the interest in the first instance of the first mortgage, and, if a balance was left, secondly, of the second mortgage, and so on.

Amounts of first and second mortgages on line.

17061. I think you had better tell us what was the amount of the first mortgage?—£50,000.

17062. And of the second?—£35,000.

17063. The surplus revenue was to go in reduction of the interest?—In reduction of the interest on those mortgages.

17064. I think we might jump from 1890 to 1900?—Yes. In 1900 the gross receipts amounted to £6,952 2*s.* 4*d.*; the working company were paid out of that £4,479 13*s.* 10*d.*, leaving a balance of £2,472 8*s.* 6*d.*

Agreement with Lough Swilly Company, who work line for a percentage of the receipts.

17065. May I ask just to get it on the notes, do the working company work the line for a percentage? I think it is—I am not quite sure—but I believe it is about £3 10*s.*

17066. It is a fixed sum per mile?—I would not like to say definitely.

17067. *Mr. Sexton.*—A sliding scale on the receipts—60 to 67 per cent.?—Yes, I believe that is correct, Mr. Sexton.

17068. *Chairman.*—Those figures that you have already given—1890 and 1900—show that there has been—I won't say a considerable—but that there has been an appreciable increase?—It is considerably above what had been earned previously on the working of the line.

17069. Would you go to last year?—The gross earnings returned for 1906 were £8,566 6*s.* 9*d.*; the working company were paid £5,396 15*s.* 9*d.*, leaving a net surplus of £3,169 11*s.* 0*d.*

17070. That is an increase of the net result of £1,845 in 1890?—Quite so, sir.

17071. So that there again it is nearly double?—Very nearly double.

17072. Now, then, perhaps you had better explain in your own words about the loans. How were the loans to be paid. I suppose the money was advanced by the Board of Works?—By the Treasury through the Board of Works. And the first mortgage was a mortgage of £50,000. The interest originally was five per cent. That was subsequently reduced to four per cent. The second mortgage was a mortgage of £35,000 advanced again by the Treasury through the Board of Works repayable in forty yearly instalments of, roughly speaking, £1,750. The payment of those instalments was guaranteed at the rate of four per cent. interest and one per cent. sinking fund by the City of Derry, and certain portions of the County Donegal through which the railway passed and that it would serve. Provision was made under the Act for recoupment of any sums paid by the ratepayers when the line became a paying concern.

17073. Let us go by steps. The revenue of the line, I suppose, has been insufficient to pay the working expenses and the interest on the first mortgage?—Yes, that is so.

17074. The arrears of interest have had to be paid by the City of Derry?—The City of Derry have not to pay arrears of interest, but they suffer by having to continue the payments of the yearly instalments until the arrears of interest that had accumulated on the first mortgage were discharged out of the surplus earnings.

17075. How much have they paid under that?—The arrears of interest at one period, I believe, amounted to a sum of over £8,000. But on the 30th of June last year the arrears of interest on the first mortgage amounted to the sum of £7,348 16*s.* 2*d.* The result of that, I would like to point out, is that of course from the start down to the present day the City of Derry and that portion of the County of Donegal have had to meet the whole liability in respect of the yearly instalments on the second charge, and the result is that the City of Derry has up to the present paid a sum of £24,538, and we remain liable to pay £19,397. The County of Donegal has paid £19,397 and remain liable to pay £10,856.

17076. The Corporation that you represent consider that their portion is considerably altered by some new line being authorised to be constructed as a competitive line to this Letterkenny line?—That is so, sir.

17077. What is that line?—It is a line in the course of construction at the present time, running from Strabane to Letterkenny.

17078. Was that line authorised by Act of Parliament or by your Council?—It was authorised by Act of Parliament. In the year 1903 the line was promoted.

17079. Who promoted that line?—Well, sir, I had the honour to be the solicitor who promoted it. It was promoted by some landowners and some merchants principally in the County Donegal.

17080. Did the Corporation of Londonderry oppose it?—They didn't oppose it in the first or second year. They didn't oppose that line directly.

17081. Although they were seriously affected by it?—It was opposed by the Derry Harbour Trust.

17082. And the Corporation, notwithstanding their liability under the arrangement, allowed the Bill to pass without opposition?—Well, sir, they were satisfied to come in under the opposition of the Harbour Trust, with a view to economy, I take it.

17083. Are the Harbour Commissioners members of the Corporation?—Well, there are some.

17084. It is an independent body?—It is an independent body.

17085. A Councillor or Alderman might be a member of the Harbour Board?—Yes, they are separate bodies.

17086. At any rate, the Corporation didn't oppose it?—That is so.

17087. Why do they object to it now. You are in a different position now?—Yes, sir, I come here as Town Clerk.

17088. *Mr. Healy*, K.C.—He was solicitor for the Bill?—I stated so, Mr. Healy.

17089. *Chairman.*—Now he is advising the Corporation?—That is so, sir.

17090. What have you got to say on behalf of the City of Derry against this particular line?—I hand in, sir, a copy of the resolution passed by the Corporation at their last Council meeting on the 18th of April. The resolution was as follows:—"Whereas this city has already paid the sum of £24,538 1*s.* 11*d.* on foot of its guarantee for the repayment of the loan of £35,000 advanced by the Commissioners of Public Works for railway development in the County Donegal by means of the Letterkenny Railway Company, and still remains liable for the payment of a further sum of £19,397 on foot thereof; and whereas the City of Derry was requested to join in this guarantee, and did so join, on the grounds that the traffic from the districts served by the railway would flow through the City of Derry; and whereas the recent returns of the Letterkenny Railway have held out hopes, not only of relief to the city from further payments on foot of their liability, but of ultimate recoupment in respect of the sums already paid; and whereas in the Parliamentary Session of 1904 an Act was passed sanctioning the construction of a line from Letterkenny to Convoy connecting with Strabane, which railway when constructed must divert a large proportion of the traffic at present passing over the Letterkenny Railway, thereby destroying any chance of future relief to the City of Derry; and whereas the Government of the day, as represented by the then Chief Secretary of Ireland, appeared before the Committees of both Houses to advocate the construction of this railway in the interest of the further development of the County Donegal. Now, we, the Mayor, Aldermen, and Burgesses of the City of Londonderry, hereby resolve that the policy of the Government in Ireland, as hereinbefore referred to, in assisting in promoting a competing line to the Letterkenny Railway (of which they were at the time mortgagees in possession) justifies us in now requesting the Government to relieve us from all further liability on foot of our guarantee, in respect of the second mortgage debt of the Letterkenny Railway; and we respectfully request the Commissioners of Public Works to take such steps as may be necessary to obtain such relief. And we direct a copy of this resolution to be forwarded to the said Commissioners; and we further direct the Town Clerk to appear before the 'Viceregal Commission on Irish Railways,' and submit this resolution for their consideration, and to give evidence as to the facts involved, and invoke their assistance in obtaining the relief sought."

17091. What action do your Corporation want us to take in reference to this line?—It is set out in the resolution.

17092. Read the clause, if you please?—The resolution recites the financial position and the operative part of it, and proceeds—"Now, we, the Mayor, Aldermen, and Burgesses of the City of Londonderry, hereby resolve that the policy of the Government in Ireland, as hereinbefore referred to, in assisting in promoting a competing line to the Letterkenny Railway (of which they were at the time mortgagees in possession) justifies us in now requesting the Government to relieve us from all further liability on foot of our guarantee, in respect of the second mortgage debt of the Letterkenny Railway; and we respectfully request the Commissioners of Public Works to take such steps as may be necessary to obtain such relief. And we direct a copy of this resolution to be forwarded to the said Commissioners; and we further direct the Town Clerk to appear before the 'Viceregal Commission on Irish Railways,' and submit this resolution for their consideration, and to give evidence as to the facts involved, and invoke their assistance in obtaining the relief sought."

17093. It appears to me that it is rather late in the day?—Well, sir, of course it is expected now that the line will be opened for working some time in the coming summer. It is perfectly true that opposition was offered to the acquisition of the Donegal line by the joint companies—the Great Northern and the Midland—that you have already heard of during the past few years—joint opposition by the Harbour Commissioners and the Corporation. There was a joint petition to both Houses of Parliament.

17094. What I want to know is why didn't the City of Derry take action, which they now suggest should be taken, when the Bill was before Parliament?—The Harbour Trust did take action.

17095. Not the Corporation. The Harbour Trust has nothing to do with this guarantee?—Well, not directly as a body. They were satisfied, I presume, that their interests would be put forward by the Harbour Trust.

17096. *Mr. Sexton.*—Might they have supposed that the House of Lords would again limit the line to Convoy, as they did the previous year?—Yes.

Bill for construction of Strabane and Letterkenny Railway opposed by Harbour Trust, who also voiced the opposition of the Corporation.

17097. The Corporation were willing to have their work done by the Harbour Board?—The interests of the Corporation were directly represented by the Lough Swilly Company who opposed the promotion of the line. They succeeded in their opposition the first year in limiting it to Convoy.

17098. The Corporation perhaps thought that their interests would be subserved by the other opponents?—Yes; the Lough Swilly opposition was identical with ours. You see we are a small community and do not wish to put up our rates by more financial obligations than we can avoid. It cost us £2,000 the last two years opposing the promotion of other lines.

17099. *Chairman.*—Of course, looking at it on the map I think probably you have serious grounds for your apprehensions as to the diversion of the traffic?—Of course, sir, there is no doubt that the opposition of the Lough Swilly Company and the Harbour Trust in the first year that the Strabane and Letterkenny line was promoted, succeeded in stopping the promotion of that line at a place called Convoy—a place half way through. An Act was granted for the promotion of the line from Strabane to Convoy. That was on the opposition of the Lough Swilly Company.

Only a section of the line authorised the first year, but the remainder approved in the following session.

17100. If the line was stopped there, there would be no danger to Derry?—No.

17101. It is the extension from Convoy to Letterkenny that makes it a competitive line?—Yes; that is so, sir.

17102. Then your Corporation thinks that under the special circumstances the Board of Works or whoever arranges these matters should give you some relief?—Yes. The Chief Secretary in the year 1904, Mr. Wyndham gave evidence on behalf of the promoters that he thought it was in the interest of the County of Donegal that a link should be made between Convoy and Letterkenny. And what the Corporation feel is that if in the interests of the large County of Donegal that that link should be granted as it was granted, that at least the Government should relieve the City of Derry from the liability they are incurring for several years. They consider that they should not be asked to continue to pay for the benefit of the County of Donegal as they thought originally that the promotion of the Letterkenny line would bring traffic through the City of Derry.

Evidence in support of whole scheme given by Mr. Wyndham, the late Chief Secretary.

17103. From what I have heard since I have been here in Dublin, it seems to me that the County of Donegal has been very highly favoured all round?—There is no doubt that the promotion of those lines has been of incalculable benefit to the district.

17104. You have explained it in a manner that we fairly understand?—I would like to say, if there is an impression on your mind that the Corporation should have taken direct action the first year in opposing the promotion of the line, or perhaps that has passed from your mind——

17105. It has passed from my mind. I merely asked the question because it occurred to me that if they were so deeply interested they ought to have appeared in opposition to the Bill?—What I was going to say is—I did mention it casually—I said the interests of the Lough Swilly Company who worked the line were identical with the Corporation interests.

17106. And you relied upon them?—The Corporation did rely on them and on the opposition of the Harbour Commissioners.

Apr. 25, 1907.

Sir F. Henry Miller, Town Clerk and ex-Mayor of Londonderry.

17107. Did the Corporation subscribe to the expense?—No; they didn't. The Harbour Commissioners have a very strong financial position in the City of Derry. It is a small community dependent more or less on one industry, and we try to economise as much as we possibly can. The expenses of the City in connection with railway matters have been very excessive in recent years. I take it that that was one of their reasons for not opposing it.

Examined by Mr. Sexton.

17108. What was the date of the Treasury advance?—It was the year 1883.

17109. About the year 1883?—I think that was the year the first re-payment instalment was due.

17110. Of course, the advance was made before that?—Yes.

Conditions under which the Treasury loans were advanced for Letterkenny line.

17111. For the first mortgage the Treasury was content to take simply the security of the line?—That is so.

17112. And in case the surplus of the line should fall below the interest on the first mortgage the Treasury would be the loser?—No, sir. If the line eventually became a paying concern, and in case the arrears of interest had accumulated, the Treasury would be entitled to any surplus towards the arrears before the second mortgagees could obtain any relief.

17113. For the time, at least, they would suffer?—That is so.

17114. And if the surplus did not reach an amount sufficient to meet the interest due to the Treasury, the Treasury would lose part of the interest on the first mortgage?—That is so.

17115. It appears that the Board of Works and the Chief Secretary directly supported the competing line against the traffic interest of the line of which they were mortgagees?—They did in the general interest of Donegal.

Guarantee given in expectation of increased traffic through Derry.

17116. What was the interest for which the City of Derry gave the guarantee—what was the consideration?—The City of Derry believed, and I hope they will be justified, that the ordinary traffic would pass through the City of Derry, hence the reason for giving the undertaking they did.

17117. Yes. The Burtonport line did not exist at that time?—It did not.

17118. The idea was to get the traffic on this Letterkenny line—the traffic from the westward—or from any further line that might be constructed?—Oh, no. I think you will find in that traffic there is a great proportion at present of it coming over the Burtonport line even up to Letterkenny, and that prospect is increasing as the line is being made. There is a very large proportion.

17119. In your reading of it, the consideration, when the guarantee was contemplated, was a flow into Derry of the traffic brought by the Letterkenny line?—Yes, to my mind. We understand such was the intention when it was promoted and constructed.

17120. Upon your understanding of the consideration existing at the time the guarantee was given, did that understanding include traffic from any line westward, or was it limited to the traffic on the Letterkenny line itself?—Oh, no. It took in the district behind Letterkenny. A large proportion of that traffic would naturally find its way across Channel, but the other would pass through Letterkenny and be sent through the city of Derry.

17121. Does the construction of the Burtonport Railway alter the equitable claim you make to have the traffic from westward of Letterkenny?—We were entitled to any accruing benefits coming into the district.

17122. The second guarantee was £35,000. That was on a different plan?—Yes.

17123. It was secured upon the rates?—Yes.

17124. It includes a provision for the repayment of the principal?—Yes.

17125. Is there any provision for the repayment of the principal on the first mortgage?—Not that I am aware of.

17126. It may remain a debt for ever?—So far as I am cognisant of the Act.

Present position of Derry with respect to the mortgages.

17127. How much remains due at the present time?—We are liable, the city itself is, liable for £19,397.

17128. I look at it from the point of view of the creditor. There is owing to the creditor the whole principal sum of the first guarantee and £2,000 arrears of interest?—There is more than that—about £6,000. There is the arrears of interest on the first mortgage.

17129. And the sinking fund of the second mortgage has paid off about £13,000 of principal?—Yes.

17129A. The debt remaining amounts to £78,000 including arrears of interest. That is to say, £50,000 on the first mortgage; £6,000 arrears of interest; and £22,000 the principal of the second mortgage. That is £78,000?—Yes.

17130. They charged 5 per cent. on the first mortgage of £50,000, for how long, for some years?—Yes.

17131. And 4 per cent. since?—Yes.

17132. And there is 4 per cent. interest on the second mortgage?—Yes.

17133. They were able to borrow at 3 per cent. all that time?—Yes.

17134. They have had a profit of £800 a year, or £20,000, by way of excess interest up to the present time?—That would be so.

17135. That would entitle you under the circumstances to lenient treatment from the Treasury?—We thought so, and did make application to the Treasury on the subject, but without avail.

17136. Did you remind them of that profit they had made?—I was not on the deputation.

17137. Perhaps you thought is was more judicious to keep clear of that part of the subject?—Well, if we had got the advantageous terms since given for land purchase, and such like, if we had been treated in a similar way, there would not have been a penny of liability left on the foot of the second charge.

17138. Your claim is that this expenditure is closely connected with the schemes for developing those poorer districts?—On that consideration, among others, we thought ourselves justified in going to the Board.

17139. Now, with respect to the diversion of the traffic, a good deal of the traffic from the Western Peninsula would be perishable and would find its way by the shortest sea possible, and would be diverted from the port of Londonderry?—That is conceded on all sides, and it was said in the Houses of Parliament when the Bill was going through.

17140. The significance of this return you have handed in is shown in the fact that the gross receipts within the period increased by £3,000 a year, and the working expenses only increased by £1,600, so that the net increase in the surplus is about £1,400 a year. That is an increase of from £1,800 to over £3,000?—If interest had been charged at the rate I have mentioned we would have been nearly recouped by this time.

17141. If the Treasury had been content to lend the money in 1883 at about the same rate as they borrowed it this debt would have disappeared by now?—I think it would have been repaid by this time. If the rate of interest had been reduced, even to what it has been reduced in recent times for land purchase, when the money was advanced at 3¼ per cent. per annum, or so, I think we would be in the same happy position.

17142. If the Treasury had charged 3 per cent. interest the surplus last year would have been sufficient to pay the interest on the first mortgage and the interest on the second mortgage, and to leave a balance. You would add £800 to the amount of £3,169. I consider you have a strong equitable claim, and that the Treasury had no right to make a substantial profit out of such a transaction?—I am very glad to hear you say so, sir.

17143. Now, the construction of this new line alters the position in which you stood when you gave the guarantee. That position has been altered by the direct influence of the Government. You say there is no chance of any surplus arising beyond the interest on the first mortgage?—Obviously, taking all these figures.

17144. And you pray to be relieved of the balance of liability?—We ask this Commission to say whether it could see its way to adopt our view and make an interim representation in connection with it. This new line will be working in the summer, and I don't know how long this Commission may be sitting before it is able to report, and in the meantime the city of Derry will be paying that charge, and there is also the proportion from the County Donegal. If it is possible, I would ask you to consider whether you could not do so.

17145. What is the amount of the two balances added together—the city of Derry and the county of Donegal?—About £30,000. If you take into account the £20,000 profit, it is only £10,000.

17146. On this question of the recoupment clause. it provides that after you had fully discharged your liability under the mortgages, principal and interest, if at any time there was a surplus the annual payments from the first would have to be given back to you. I have the section here?—That is so.

17147. In that case would not the line really remain in a state of very embarrassing liability for a long time. The capital of the line, I think, was £50,000?—Yes; you should add to that what was borrowed from the State.

17148. As to the £70,000, has the mortgage provision the effect of doubling the amount borrowed?—The mortgage clause has that effect. Assuming we have paid the £35,000, plus interest, that is £70,000, we come into the position of the Board of Works; we will, instead of the Board of Works, be entitled to be repaid our £70,000.

17149. That is the full amount of the annual payments?—Precisely.

17150. However, if you think the line will not pay interest on the second mortgage, there is really very little prospect of the recoupment clause turning out of any practical advantage?—Afterwards there is a possibility that the line may be acquired by a larger line, and if that should be so, I fancy the Houses of Parliament will take into consideration any amount outstanding, and what the liabilities against the line really are.

17151. It ought to be remembered, of course, that the original offer to construct this line was made by a number of people in Derry and Donegal, who raised a sum of £50,000—the capital?—They were doing then what the Government is doing now. That was done, and it ought to be remembered.

17152. Did the Corporation favour the offer made by the Lough Swilly Company to purchase this line from the Board of Works?—They did at the time. I have a resolution referring to it.

17153. I just wanted to know why they were in favour of it; have you any correspondence?—It was before my time, and I would have to refresh my memory. Here is an extract I will give you from a report made in the year 1899. There was a Committee appointed to approach the Treasury with a view of getting a reduction on the interest, and it was unanimously agreed by those present—"That it was extremely desirable that vigorous and combined action should be taken by your Corporation and the bodies named"—the Londonderry Chamber of Commerce and the Donegal County Council, these were the bodies—"for the purpose of having the taxpayers of Derry and Donegal relieved of the burden of this tax at the earliest possible moment, and of securing, if possible, a better railway service between Derry, Letterkenny, and Burtonport. It appeared to your Committee as well as to the representatives of the bodies named that the best, if not the only feasible means of attaining this object would be to request Her Majesty's Treasury and the Chief Secretary to sell the Treasury mortgages on the Letterkenny Railway to the Lough Swilly Railway Company; to accept the price thereof, or such lesser sum as the Treasury can be induced to accept in full discharge of these mortgages, and to release the taxpayers of Derry and Donegal from any further payments on foot of the second mortgage. Your Committee is of opinion that the Treasury should consent to the moneys received by the Treasury on the sale of the Letterkenny Railway being apportioned between the Treasury and the contributing areas in proportion to the debts due to them respectively."

17154. What Committee is that?—It is the Committee of the Joint Committee of the Londonderry Chamber of Commerce, the Londonderry Corporation, and the County Council of Donegal.

17155. And fully representative of local opinion?—Absolutely so.

17156. Considering that the balance due to the Treasury, with arrears of interest, amounts to a total of £78,000, was it not rather a good offer to say: "We will give you a lump sum of £70,000, and if you do not accept that we will agree to a valuation by expert engineers, and pay the amount of the valuation"?—It looked like it.

17157. Of course, the entire transaction being viewed, they would lose nothing?—They did not agree.

17158. *Chairman.*—Who was "they"?—The Treasury.

17159. *Mr. Sexton.*—They conceded something in other cases. On the sale of the Limavady line to the Midland Company I think there was a balance remitted. The annual report of the Board of Works shows a number of cases in which the Treasury remitted a part of the balance due?—Mr. Stevenson, who gave evidence before the Commission, expressed himself to the effect that the rate of interest was too high. They did not go quite so far as we asked.

Concessions by the Treasury in the case of mortgages on lines sold to other companies

17160. Did this offer include that the line would be so relaid so as to give a service equal to the Lough Swilly line?—That was only one of them. It was costing the ratepayers of the city of Derry 3*d.* in the pound, which we could devote to more necessary things in the city.

17161. And the Lough Swilly Company are willing to give any guarantee which the Government may require for a satisfactory service on the whole system?—I think that was so.

Possibility of the acquisition of the Letterkenny line by a larger company and a recoupment to Derry of the monies paid under guarantee.

17162. Does it occur to you that this offer might afford a satisfactory way out of this very ugly difficulty?—Yes, sir. Certainly if I were advising the Corporation, in view of the remark I made about the possible acquisition of this line at some future date by a larger company, I would not like to see the city of Derry sacrificing the prospect of an arrangement in which all the moneys that have been paid should be repaid. However, it does seem that if your suggestion were adopted and the Lough Swilly got it for that money they would not get consideration for more than they paid.

17163. Looking to this diversion of traffic, and the probability that it may increase even in the near future, would not the Corporation of Derry be wise to accept the cancellation of the liability and say nothing about the recoupment?—I would sooner wait and see what in a couple of years will be the result of the competition.

17164. Have you finished your answer?—It just occurred to me that, having regard to the remark that Mr. Stevenson made, that he has really admitted to the Commission that the rate of interest is high, at least at the present time——

17165. *Chairman.*—What is the rate?—4 per cent. We thought that one of the reasons why we should ask the Commission if it could see its way in the near future to make some recommendation. We must go on paying in the meantime.

Purchase proposal of the Lough Swilly Company not before the Corporations since 1899.

17166. *Mr. Sexton.*—If you go on claiming and reserving the right to this possible recoupment, and are not willing to take things as they stand and accept relief from your liability, you complicate the question?—That is the position of the Corporation to-day. I do not think this purchase scheme has been before my Corporation since 1899, and that is a reason why I hesitate to give any expression of opinion or appear to bind them by any expression.

17167. Being in an official position, and having to submit this question to the Corporation, you do not care to give an expression of opinion?—That is the case.

Examined by Colonel Hutcheson Poë.

Rates of interest on Treasury loans.

17168. With regard to this four per cent. interest. You are aware the Board of Works is prohibited from lending money at any lower rate of interest to railways, and yet they are not prohibited, they are permitted, to lend money on the security of other undertakings at 3 per cent. and a sliding scale. Does it not seem to be rather incongruous; lending money on the security of undertakings of hardly equal value at a lower rate; and prohibited by Act of Parliament from lending to railways at the same rate?—That is what we said. We think the Board of Works or the Treasury might have power to lend the money at least at the same rate.

17169. To lend money at the same rate to you as to other undertakings?—Yes.

Arrears of interest due on first Letterkenny Railway loan.

17170. I think you said that a sum of £7,000 was due as arrears of interest on the first mortgage, and I think the net earnings after payment of the interest on the first mortgage charge would admit of the redemption of those arrears at the rate of about £1,000 a year?—There is the charge as well.

Apr. 25, 1907.

Sir F. Henry Miller, Town Clerk and ex-Mayor of Londonderry.

17171. It would seem from that that it would be seven years before the arrears of interest on the first mortgage are liquidated?—It would appear so from that. You can see what has been done. If you look at the figures in our resolution you will see that from the year 1899 there has been a steadily increasing surplus. Now, under a section of the Act of 1876, when that mortgage was secured that surplus should have gone to the reduction of our liability. That has not been done, and the amount has been placed in a suspense account. We have only discovered this recently ourselves. Personally I am only three years in office as Town Clerk, and we have only discovered this. You will see that for the last four years there has been a surplus of £1,000 a year, and under this section we believe we are entitled to claim that that £4,000 should have gone towards the reduction of the liability on the second loan. I say that to the best of my knowledge.

Arrears of interest due on first Letterkenny Railway loan.

17172. To relieve the second loan. That is a rather important point, Mr. Chairman. The profits for the last four years, the surplus of £1,000 a year, should go towards the payment of the second loan; it should be placed to their credit under the first mortgage, and should be allocated towards the reduction of the interest and instalment on the second loan; and that has never been done?—It has been placed in a suspense account, and we have had no benefit therefrom. The arrears have not been reduced, as would appear from the account. Of course pending what may happen here we are not moving in the matter at the present.

No prospect of relief to guarantors under the second loan under existing circumstances.

17173. However, even upon that estimate there is still very little prospect of any relief to the county or to your city of the burden under the second loan under existing circumstances?—Oh, no. On the assumption that on the surplus for the past four years, it should be decided we were entitled to get credit for £1,000 each year, there would be £4,000 standing to our credit. If there were lower terms of interest during the next three years the arrears would be wiped out and we would be entitled to relief.

17174. But in any probability, it is very unlikely in view of the Strabane connection that the net earnings, the present surplus of the earnings of the Letterkenny line will be maintained?—I fear so.

17175. In these circumstances the chances are that the guarantors will remain liable for an indefinite period of time?—There is no doubt of that unless something else turns up.

17176. It might be thought a well-advised course for the Corporation, as Mr. Sexton suggested, provided you could get relief under this second mortgage to forego the claim that you have in regard to the sum payable in respect of any future recoupment. It would be a simpler problem if you abandoned that claim?—Yes, sir, but I am simply here as an official. I don't like to say anything that might bind the body I represent hereafter.

Cross-examined by Mr. HEALY, K.C.

17177. Do you agree with other witnesses, with the last witness, that the management of the Great Northern and Midland Companies is satisfactory?—As an official of the Corporation I have its interests to represent, but personally, I have no hesitation in saying that the management of these companies in the interest of the shareholders could not be better.

Mr. JOHN KELSO REID, LL.D., was examined by the CHAIRMAN.

Mr. John Kelso Reid, LL.D., representative of the Londonderry Port and Harbour Commissioners.

17178. You are solicitor of the Londonderry Port and Harbour Commissioners?—Yes.

17179. How long solicitor to that body?—About nineteen years.

17180. Do you appear before us by any resolution of the Commissioners?—I do; but in the first place I wish to say that the Chairman, Mr. Cooke, has instructed me to apologise for not being able to attend personally. He met with a severe accident sometime ago and the doctor does not allow him to go out of the house yet. Mr. Cooke was expected to attend, but in view of this I was appointed by resolution on the 12th instant to attend and give evidence in his stead.

17181. Very well. You appear to speak on behalf of the Harbour Commissioners?—Yes.

17182. Would you mention the several points you wish to give evidence upon. First, as to the port of Londonderry. Of course you are directly interested in the sea traffic to and from Londonderry?—Yes.

Complaint of diversion of traffic to Eastern ports from Derry route.

17183. Is it your opinion, or the opinion of the Commissioners, that the port of Londonderry is under a disadvantage as compared with other ports in Ireland?—We have always found it so, as compared with the different ports on the east coast, such as Larne, Belfast, Greenore, and, to a lesser extent, Dublin.

17184. This disadvantage you attribute in some degree to the action of the railway companies?—We do.

17185. Why do you think the railway companies should favour Belfast, for instance, any more than Londonderry?—Of course from the geographical situation of Londonderry, lying so much to the westward of Ireland, the railway companies get a longer haulage for themselves on the traffic in our neighbourhood of the north-west by taking it through the east coast ports. They get a longer haul that way than by taking it through the more accessible ports.

17186. If they get a longer haul and a larger proportion of the through rates it is an inducement to them to take traffic to the eastern ports as against Londonderry?—We think so. That influences their action in doing so.

17187. The rates in most cases through any port to England are practically the same?—Practically the same.

17188. Say from inland places in Ireland near Londonderry to London?—Take Strabane. The case of Strabane is a special one.

17189. These are the Greenore and Liverpool rates?—In practice I believe these rates are the same, but I don't know if it is so to-day. Up to a short time ago there was a differential rate shown in the rate books of the company by which the route *via* Derry was slightly cheaper than the route *via* east coast ports.

Mr. Healy, K.C.—Strabane is one of the places that has a differential by statute.

Colonel Plews.—It was given voluntarily.

Witness.—I don't want to come to a discussion on the matter with Mr. Plews. It was a matter of terms.

Mr. Healy, K.C.—It was given voluntarily.

Colonel Plews.—It was not imposed by the Parliamentary Committee. It was offered on going into Committee. That is the 2*s.* 6*d.* differential on Strabane traffic.

17190. *Chairman.*—That was a clause submitted in some Bill in Parliament?—Yes, 2*s.* 6*d.* It appeared on the books of the company long before the clause was given, and had been given for a great many years.

17191. At any rate the Bill was in Parliament and that clause was inserted?—Yes.

17192. With regard to Scotland. I suppose the arrangements there are more favourable to Derry than to other ports?—They are satisfactory. Of course, the same geographical question does not arise.

17193. There is a service of steamers from Derry to Scotland?—Yes, a daily service.

17194. *Mr. Healy,* K.C.—They are the shortest route to Scotland, and they command the traffic?—Yes.

17195. *Chairman.*—In addition to the daily service to Scotland what steamer services are there between Derry and England?—We have a daily service to England also; twice in the week *via* Heysham, twice in the week *via* Fleetwood, and twice in the week to Liverpool.

17196. I think we had that evidence this morning. Of course you have no personal knowledge of the rates to and from Derry and places in the interior of Ireland?—No, sir, I have no personal knowledge of the actual figures.

17197. Have you any personal knowledge of any particular complaint from the Harbour Board as to the service or as to railway conditions generally?—Except with regard to the question as to the comparative

amount of the through rates through English ports as compared with the port of Londonderry.

17198. The question of a differential rate through Londonderry has often been raised by the Harbour Board?—It has often been a question of discussion.

17199. But speaking generally, you are not here to complain of either the rates or facilities granted by the railway companies to Londonderry?—I have no specific instructions on that point.

17200. You are not here to complain about it?—I have no instructions upon that. There are certain minor details I know there is dissatisfaction on.

17201. Nothing of a substantial character?—Nothing that my Commissioners thought it necessary to bring before you to-day.

17202. In other words, they do not think they were of sufficient importance to trouble us with them?—The main trouble about it arises from the scarcity of wagons, the difficulty the merchants have in getting a sufficient supply of wagons to deal with the cargoes that are being discharged at the quays.

17203. I suppose that is exceptional?—Well, I believe it is considered usual about this time of the year, and is not confined to any one particular railway company. There seems to be a general deficiency of wagons to cope with the spring traffic.

17204. In all ports, not only in Ireland, everywhere now and then there are gluts of traffic from the abnormal arrival of ships?—I understand this is more or less chronic in the spring.

17205. Can you give us any details?—I cannot speak from personal knowledge. Generally the traffic over the railways in the spring is larger than at other times of the year. It is a busy time with farmers and others for seed and so on.

17206. Have you any specific instances to bring under our notice even of that?—No, I have not any details. I produce no details, only the general statement that there is a deficiency. It is not individuals; there is a general complaint that there is a scarcity of wagons at Derry, that the railway stock is not sufficient to cope with the traffic in the spring.

Mr. Healy, K.C.—It is practically caused by the detention of our wagons at the ports, the needless detention of our wagons. They are ordered to wait for vessels coming in—particularly at Derry, too.

17207. *Chairman.*—It must occur. Have you or your Commissioners considered the question of the amalgamation of these Irish railways?—Our Commissioners did.

17208. Are the Commissioners an elective body?—They are.

17209. Are they elected by the ratepayers of the town?—Yes, with a certain rating qualification.

17210. I assume that the Commissioners are interested in the traffic of the port and the city?—Very largely. They comprise nearly all the principal merchants in the town.

17211. They considered this question of the amalgamation of the railway system in this country into three or four large companies. They have considered that question?—They did.

17212. Are they in favour of it?—No, sir.

17213. Are they in favour of the purchase of the railways by the State?—They are not, sir. May I explain.

17214. Oh, yes, I want you to explain?—Their view is that with the railways under private ownership, as it is to the interest of the companies, there is a certain amount of competition, and they fear that that benefit would be lost in case of State ownership. The only benefits they consider that could come from State ownership would be any such economy resulting as would enable them to make a general reduction of rates, or that if the State ownership would so manage the railways as not to run them to the greatest commercial benefit but with a due regard to the interests of each different locality, preserving the local interests and safeguarding them.

17215. Do I understand you to mean, the Commissioners to mean, that if these private railways were worked for the general interest of the country, and the surplus profits were used for the reduction of rates, you and your Commissioners would be in favour of the State purchasing the railways?—I don't think that is quite accurate. They don't believe any economies would be effected to such an extent as would give us the amount of the rates conceded to afford a reduction. If such a reduction could be effected and if local interests were all safeguarded I think the Commissioners would be in favour of State amalgamation.

17216. I accept your statement. This subject has been discussed and considered, and that is the conclusion which you have gathered they have arrived at?—That is so. *Apr.* 25, 1907. —— Mr. John Kelso Reid, LL.D., representative of the Londonderry Port and Harbour Commissioners.

17217. Now, I suppose, several witnesses have objected to the present constitution of the Railway Commissioners' Court. Are your Commissioners in favour of that Court?—No, sir.

17218. They have had some experience of it?—They had.

17219. How long ago?—In the year 1886.

17220. In 1886, twenty-one years ago, were you engaged with it then?—Not personally.

17221. Do you know anything about it, what the action was?—I do, something.

17222. Was it against the railway company?—It was against them. Petitions were instituted by the Harbour Commissioners against the Great Northern and the London and North-Western and a small company that owns the connecting line between Greenore and the Great Northern main line—I forget the name. Dissatisfaction with the Railway and Canal Commission Court expressed.

17223. *Colonel Plews.*—The Dundalk, Newry and Greenore line?—Yes.

17224. *Chairman.*—Well?—It was bought to seek relief from what the Harbour Commissioners contended was undue preference by these companies to the port of Greenore over the port of Londonderry.

17225. What was the cost to the Harbour Board?—Approximately £4,000.

Mr. Healy, K.C.—Because they had to pay our costs. Action instituted by the Derry Harbour Commissioners instanced.

17226. *Chairman.*—Had you to pay the costs of both sides?—Part of the costs of both sides was what we had to pay.

17227. In other words, you failed in the action?—We failed in part and succeeded in part. The general costs of the action were borne by us; the costs of one portion of the action on both sides had to be paid by us; but not the entire costs.

17228. Was it tried in Dublin?—No, partly in Londonderry and partly in London.

17229. *Mr. Healy*, K.C.—A day there and two or three days here?—Yes.

17230. *Colonel Plews.*—The major portion was in Londonderry, five days. And then one day's sitting in London?—Yes, I think that was it.

17231. *Chairman.*—From the experience of those who have gone to the Court we may say it is not a satisfactory way of dealing with disputes between traders and railway companies. Have you any opinion about the substitute that would be applicable?—They would be very anxious to find a cheap tribunal that would easily deal with them.

17232. I remember when that Commission was agreed to it was considered cheap. That was one of the advantages claimed for it?—It has not proved to be so.

17233. *Mr. Healy*, K.C.—Take it to the Agricultural Board and conduct it at the public expense?—If it was a public case.

17234. *Chairman.*—There must be a public case. Have you formed any idea about the tribunal. First, it should be in Dublin?—Yes, it should be a permanent tribunal sitting in Dublin. Suggestions as to another tribunal.

17235. The Railway Commissioners' Court is a permanent tribunal in England?—But that is one of the elements that makes it so expensive.

17236. The expenses of the Court are very trifling. The expenses are in connection with the witnesses and counsel and so on, and the preparation of a good case. Would it be a court without counsel or lawyers?—I don't think it would be practicable.

17237. As a solicitor I thought you would say that. What is a cheap tribunal?—I would say a tribunal composed of a representative of the railway interest and a representative of the general trade interest, with possibly a lawyer at the head of it, sitting here in Dublin as a permanent tribunal, like one of the Courts of Justice.

17238. Are they to be paid?—The officials would be paid by the State.

17239. The persons forming the tribunal, are they to be paid?—Paid by the State.

17240. The same as the Railway Commissioners?—Yes.

17241. Where does the cheapness come in?—The cheapness comes in in this way. First of all, this court should have at their command, I would suggest, a staff of inspectors who would be available as a preliminary. If any *prima facie* case were made or any complaint made against the railways these would be available to investigate the facts and ascertain them, and report them to both parties, both the railway company and the complainant.

Apr. 25, 1907.

Mr. John Kelso Reid, LL.D., representative of the Londonderry Port and Harbour Commissioners.

Mr. Healy, K.C.—This is the body that was so anxious upon bringing Sir Ralph Littler at great expense. A cheap tribunal!

Witness.—In the majority of cases the report of the inspector would settle the matter one way or the other.

17242. *Chairman.*—That can be done to-day by communication with the Board of Trade?—I don't think they have power to investigate the facts.

17243. Certainly, they have power. They do investigate. They communicate with representatives from both sides?—My Commissioners think it is desirable there should be inspectors with powers such as the railway companies themselves voluntarily give to inspectors at their own conference to enable them to trace out railway transactions, with full powers of inspection, to see how traffic is worked, to inspect books and follow out charges through the different companies.

Suggestions as to a tribunal to replace the Railway and Canal Commissioners Court.

Mr. Healy, K.C.—To hold an inquisition.

Witness.—They should be in a position to ascertain the rates and what are actually charged, whether the rates in the rate books were strictly or were not strictly adhered to. Further, that the railway companies should disclose in the rate book the full details of how their rates were composed, and what the receipts in respect to them were, both through rates and local rates.

Examined by Mr. SEXTON.

Necessity for fuller information in railway rates books.

17244. What particulars of the rates do you say should be given in the rate-book?—With regard to local rates a full analysis showing the rates for conveyance, and the station, terminal charges, and the different component items of which they are made up.

17245. How much for conveyance, how much for station accommodation, and how much for station services?—Yes, loading or unloading, and so on.

17246. And collection and delivery, would you say?—I would.

17247. In the case of a through rate you would show the portion of the rate received by each of the carrying companies parties to the rate?—Quite so, sir.

17248. Also any temporary rate or rebate, or allowance, if any whatever?—Yes, sir.

17249. So that the amount paid by the customer should exactly correspond to the entry in the book, and that nobody should pay anything different to the payment by anybody else for the same service?—Yes.

17250. No doubt such information would tell the public much more than they know at present, but after all the main question is that the rates themselves should be suitable to the circumstances of the country?—Yes.

17251. I doubt whether your objection to the Board of Trade has been made quite clear. I understood, however, that you think the fault of the Board of Trade is that it has no power?—Quite so, sir; the Board of Trade is very useful in bringing about a friendly agreement in some cases, but it has no power to enforce a decision.

17252. *Chairman.*—To enforce a decision?—Yes.

17253. *Mr. Sexton.*—Their function is to persuade?—Yes.

Chairman.—That is right.

Inability of the Board of Trade to enforce its decisions a drawback to its utility.

17254. *Mr. Sexton.*—They are very far away; take a trader or a body of traders going to London. They may be fated to find that the Board of Trade has no power to help them. That reduces the influence of the Board of Trade to a nullity in the minds of the those who are concerned with railway transit in Ireland?—It is a tribunal my Commissioners don't make use of on account of its lack of power to enforce any decision that it thought right.

17255. Then you believe that the tribunal which has power to enforce its views is in effect and practice too costly for use?—Quite so.

Cost of appearing before the Railway and Canal Commission Court excessive.

17256. We have often heard in the course of this inquiry that the fees of that court are light, but the fees are a negligible item in the cost of the proceedings?—If any side, any party to any litigation before the Railway Commissioners wanted their case to get a full hearing, I think they would find it necessary to employ some of the counsel who are in a certain sense specialists in that court?—(No answer).

17257. The railway companies are wealthy corporations, or, at any rate, corporations which for purposes of this kind, in defence of their interests, have practically unlimited funds for engaging the most eminent special assistance. Does that impose on the other party the practical obligation of securing assistance equally efficient?—It does.

17258. And the net result is, no matter how low the court fees may be, that the litigation before this tribunal is most expensive, perhaps as expensive as any in the country?—That is so.

17259. What do you think of the suggestion that a tribunal could be so constituted as to interpret the application of statutes on this complicated matter of railway traffic, that a tribunal could be constituted of laymen depending simply on lay assistance, and that the railway companies should be prohibited from engaging legal assistance if they desired to do so; is that a practical suggestion?—In my own individual opinion it would not be.

17260. I fear you must invent something else. Does it occur to you that the only way out of this sort of difficulty, and of the expense in litigation between the railway corporations and individuals would be to try to bring about a state of affairs in which there would be less necessity for resorting to law?—I would not despair that a tribunal might be so established here in Dublin, at which the average Irish barrister would be the usual practitioner which could not be and would not be more expensive than any other tribunal in this country.

17261. But the railway company can make the pace; if they insist on engaging the most eminent men at the Bar, you will feel yourself ill-equipped before that tribunal unless you have a man of equal position?—Well, speaking as a lawyer, I would say that I would like to have a barrister accustomed to practice before the court in which the case was coming on for hearing.

17262. If one litigant is willing to engage an expensive Bar the other litigant will feel that he is taking a risk if he has not equally efficient advocates. How can you keep down the standard; so long as there is a system in force which necessitates resort to a legal tribunal—how can you prevent that from being expensive?—Unfortunately the fees at the Bar in Ireland do not rank at anything like such a good or large scale as the fees in England, and once you eliminate the enormous special fees that have to be paid to specialists in England you would very much reduce the cost of the tribunal, and bring it down possibly from thousands to hundreds.

17263. But for a trial of any considerable length, I imagine that the cost, even in Ireland, would run to a considerable amount—into four figures, at any rate?—That, of course, would depend very much on the nature of the case.

17264. Do you share the views of Alderman Ballantine as to the desirability of reducing the local rates in Ireland, so as to have the service performed for the same amount that the company take for similar service in the case of imported goods?—I think, roughly speaking, that they should be brought into some close parity, that there should not be such a wide discrepancy as there is in some cases.

17265. Would you give the Board of Control power to reduce the rates?—I would.

17266. That would apply to a very great part of the internal traffic of Ireland, to everything except the through traffic from Great Britain, and would, or might, involve a very heavy reduction for the time of the revenue of the railway companies if applied to all the cases in which high local rates, as compared with relatively low through rates from England, impede the development and establishment of industries in this country?—I have not considered the figures at all.

17267. Taking a general view of the subject, I think you will admit that the reduction of those rates on the principle stated by Alderman Ballantine and by yourself would cause such a diminution of the revenue and still more of the profit of the railway companies as might leave most of them without any ordinary dividend?—I am afraid I can only repeat my answer. I have not studied the figures, and don't know what amount of money would be involved at all.

17268. Do you think there would be any practical use in making a proposition that any tribunal be instructed to make such reductions without any indemnity to the companies?—I would not propose to

lay down any hard and fast line to the tribunal as to what the rate should be. I think each rate probably would be considered in its own special circumstances.

17269. With a general view to reduction?—We hope that it would tend to reduce the rates.

17270. The object would be to reduce the local rates to a parity with the through rates?—Well, you can hardly carry that out—in all strictness you can hardly carry that out—it would not be practicable.

17271. No, but approximately?—What is running through my mind is the case mentioned in evidence this morning of the rate to Tralee. I don't think it would be reasonable to reduce the local rates to the share that the railway company actually received out of the through rate there.

17272. That is the suggested share—the share suggested?—I understood 2*s.* was the rate that the railway company got in the Tralee case.

17273. I doubt if they admit that?—It was only from what I heard in this room that I mentioned the case.

17274. Well, but do you think it practicable to establish any tribunal with such large functions as a general revision of rates, and to impose the result of the revision upon the railway companies?—I see no reason why it should not be so.

17275. In the first place they would not accept it?

17276. *Mr. Healy*, K.C.—That would be 90 per cent. of the rates. Through traffic represents only ten per cent.?—Naturally I would expect that the railway companies would not voluntarily accept it.

17277. *Mr. Sexton.*—They would resist it?—They would resist it.

17278. What do you think would be the prospects of such a proposal?—I take it that that would be a question for Parliament to consider.

17279. I ask you for your opinion, so that we may be able to consider it, and in connection with our report obtain the best available guidance?—I think it would be fair to have some such tribunal to adjudicate on the fairness and the reasonableness of the rates.

17280. Well, in the present financial position of the Irish railways there is a profit of a million and a half a year, about half a million of which goes to the payment of the ordinary dividends. Do you think that you can make a proposition to take away perhaps that half million, or the greater part of it and let the railway companies wait for a future in which those reductions might be partly or wholly recouped by development of traffic—is that a practicable proposition?—I think so. I think if the Irish railway companies can make out the case that the present rates are fair and reasonable, that these rates should be maintained, and it is only in cases where the plaintiffs make out the case that they are unfair or unreasonable that they should be interfered with.

17281. Our whole case is proceeding on the hypothesis in which, as I understand, you agree with Alderman Ballantine that the local rates should be reduced to the proportion of the Irish share of the through rates on goods which might be or are produced in Ireland—is not that your general position?—Roughly speaking, that is so.

17282. But that involves a large interference with the revenue?—As I said before, I cannot give you the figures.

17283. Well, you have stated that fairly. Now, as to the long haulage, does it appear to you that the favour given by a particular railway to a particular port is inherent in the system of private companies—that a railway with an interest limited to its own revenue will, as a matter of fact, favour the port which gives the longest haulage?—I think that unless it is restrained in some way a railway company will always work for what will give it the largest return in money. It is only natural and reasonable that it should do so.

17284. Therefore, under the present system a port like Derry, or any other port with a short railway mileage to the place of destination or point of despatch, will not attract the railway company so much as a port that affords a longer haulage?—Not unless the question of the comparative cost of the route is to be an element in the settlement of the amount of the rate. While the law stands as it does now I don't see that ports like Derry and other western and southern ports can expect——

17285. What do you say would be the effect on that state of things of a united system of railways worked from the public point of view—what effect would it have on that particular part of the question?—I presume if there was a State Department that the State Department would want to make it as profitable as possible.

17286. Not necessarily. I should say the first object of a State Department would be to develop industry and trade, and that profit, or rather avoidance of loss, would arise only in the second place?—If the State managed the railways, having regard to local interests in the first instance, rather than with regard to pecuniary advantage, I think there would be some benefit from that.

17287. You realise that a private railway company has, almost necessarily, a special interest in some particular port, that is to say, in the port that gives the longest haulage to the traffic?—That is so.

17288. That is adverse to your interest in Derry?—Yes.

17289. But a public department managing the railways of the whole country could regard impartially the different ports and districts?—I am afraid the pecuniary interest would be the same. Whether the pecuniary interest would come first would be a different question.

17290. The tendency of a State Department would be to send the traffic by the shortest route, and not by the longest. While there are private companies the longest and the most circuitous route will be selected, as the divisions of the through rate are proportionate to the mileage?—That is so; but so far as the money interest is concerned, it seems to me to be the same whether it is a State-owned railway or privately owned. There is a possibility that the State might put some other interest in front of the pecuniary interest, but the pecuniary interest would always be the same.

17291. You see the working of the traffic of a number of railways along routes some of which are long and circuitous, is on the whole a costly service compared with a service under a system whereby the traffic would be brought by the shortest and most convenient route. There would be that set off against any loss of revenue due to the despatch of the traffic by the shortest route. Traffic could e dispatched by the short route more cheaply than by the long one; the working expenses are less?—That is so.

17292. And if there were resources in the hands of a public authority, that authority might be disposed to use them on this principle, that it is not well for the country as a whole that particular places should be fostered at the expense of other communities, not so important perhaps, but having an equal claim upon the attention of those who act for the country as a whole?—I am afraid I don't quite follow your question.

17293. Well, let us suppose that the administration of the railways was in the hands of an authority with some financial resources, and with economies effected, and able to surrender a part of the revenue in what they might consider the public interest, they would be in a position, to which no private company could ever attain, to allow advantages to the smaller ports in the country, advantages which the present system denies; first, they would have no prejudice in favour of any port?—They would have no prejudice.

17294. And then they would have by economy resources which the private companies have not, and they could surrender a part of their revenue for the sake of impartial treatment of the different ports and districts?—If they were prepared to surrender part of their pecuniary advantages of course they would be in a position to give the smaller and more distant ports the protection that they now want.

Mr. Healy, K.C.—Protection.

17295. *Mr. Sexton.*—You are in favour of public ownership on two conditions: first, that a general reduction should be made in local rates, and the second that the local traffic should be conserved to each district. You will admit, at any rate, that the public administration of the railways would have no disposition to favour one port at the expense of another?—Apart from the pecuniary interest, they would not.

17296. And that the pecuniary interest would be somewhat narrowed by the fact that the despatch of

Apr. 25, 1907.

Mr. John Kelso Reid, LL.D., representative of the Londonderry Port and Harbour Commissioners.

The probability of fair treatment to all ports under State management of railways.

Apr. 25, 1907.

Mr. John Kelso Reid, LL.D., representative of the Londonderry Port and Harbour Commissioners.

traffic by the shorter route would reduce the expenses of working?—Well, I really cannot say that there would be any difference in that respect between the present ownership and State ownership.

17297. If a certain bulk of traffic, instead of being despatched in each case by the shortest route, is being despatched without regard to convenience by long circuitous routes, because particular companies favour particular ports, I think the amount of the working expenses at the end of the year must be much larger than in a case where all the traffic was sent by the shortest and most convenient routes?—I cannot see that there is any reason why the railway companies should not send the traffic by the shortest route instead of by the longest.

17298. Because the company that has the longer route wants to use it?—Take both routes in the possession of the same company.

Suggested economies under State working by forwarding goods by the shortest routes.

17299. No; I am thinking of the case where there is a competing route in the possession of one company?—Then I misunderstood you. The case I was referring to was a case like what we were just talking about, from any point on either the Great Northern or the Midland system near Derry. I cannot see why the State should have any pecuniary inducement to send or derive any benefit from sending traffic through Derry that the present companies do not have. One motive that the State might have that the present companies have not would be that it might put the general interests of the country above the amount of the earnings from the railways.

17300. You seem not to agree with the suggestion which I will only mention once again, that a united system of management whereby traffic was despatched by the most convenient and shortest routes would, upon the whole, at the end of the year, entail much less working expenses than a system of a number of private companies each taking as much traffic as it could by its own route no matter how long or how circuitous?—I think that would be so.

17301. That is what I was suggesting?—But the community would lose the benefit of competition.

Question of the loss of competition if railways were State owned.

17302. Oh, competition. Well, what is the competition now? Is there any competition now as to rates?—No.

17303. Let us look for a moment at the elements of competition as they exist. You have competition by sea?—Yes.

17304. That would continue to exist, of course?—That would be a common factor.

17305. Precisely. Where two companies run between two towns, you have also competition, and that settles itself by the rule which is invariably or almost invariably, adopted, that the rate by the shorter route is accepted by the longer?—That is so.

17306. What competition as to rates is there outside these two?—I think that competitions as to rates is almost a negligible quantity.

17307. I thought you would say so?—But there is competition in other respects—competition of facilities and services.

17308. There is competition of facilities and services. But if a system were in force whereby traffic were sent as a rule by the shortest route, do you not think that a united management, tending to bring the whole service up to a level of efficiency, coupled with the despatch by the shortest route, would be a very good equivalent?—I don't think that anything would ever make up to the trader for the benefit of having an alternative company to deal with, so that if he was dissatisfied with his treatment by one company he has another string to his bow. I think it is the most effective weapon he can have.

17309. You cannot have everything under any one system. But is there anything in the experience of those countries served by a public system of railways which would lead you to think that public control is less efficient in the despatch of traffic than private control?—Personally I know nothing of the railway systems abroad; but I have heard great complaints of delay in some of them.

17310. Well, we have complaints of delay ourselves. Do you think that an administration of the Irish railways, subject to be influenced by public opinion, and to be censured by public opinion, would not be really a very effective agency for such a matter as the working of the traffic of the railways?—Other things being equal, I should prefer competition between the railway companies themselves.

17311. Competition simply as to facilities?—That is all we have at present.

17312. Well, if you put that competition as to facilities, which is all you have at present, against a general reduction of rates which a State Department would be established to obtain, which would you prefer—the former or the latter?—If a general reduction of rates was secured, and if fair treatment was secured, I think State ownership would make up then for the loss of the advantages that we have at present from competition.

17313. Well, assuming now that the application of public credit to the finance of the question, to the capital of the Irish railways, were to lead to a substantial balance out of the present net revenue, have you any doubt that that substantial balance could be further greatly increased by the economic working of the Irish railway systems as one?—I have never gone into or studied the amount of saving that would be effected by such an amalgamation.

17314. Well, I shall not press you on the point. But, assuming that the saving were such as to provide a fund which would enable a good beginning to be made upon a reduction of rates so as to put the Irish agriculturist on an equal footing with the Continental one in Great Britain, and to give the Irish manufacturer at home a chance of reaching the Irish markets, would you consider that a conclusive reason for establishing public ownership of the lines on that assumption?—Well, not conclusive; but certainly it would go a long way.

Mr. Sexton.—Very well. I accept that answer. Thank you very much.

Examined by Colonel Hutcheson Poë.

17315. With regard to the tribunal which you would like to see substituted for the Railway and Canal Commission, it would be largely composed of laymen?—Yes, with a lawyer.

17316. That is because of your legal training?—I suppose it is to some extent because of my legal training; but I think it would be difficult to get coherence in the judgments given by such a body unless they were subject to legal influence.

17317. I have a great admiration for the legal profession so long as it does not involve any law costs; but would not a tribunal composed of one railway expert and two men of acknowledged business and commercial experience be capable of dealing with nine-tenths of the complaints that come before the Railway and Canal Commission at present—isn't it possible to imagine that such a tribunal would naturally be inclined (leaving out the legal aspects of the case) to consider the general bearing the case might have on the country; that they would regard the equities of the case rather than the legalities; that those are the considerations which would operate in the minds of a lay tribunal, and that they would be able to deal with a great number of the cases that come before the Railway and Canal Commission in a quicker manner, not being tied down by legal rules, but acting in a purely administrative capacity?—I think if the actual facts could be ascertained before a tribunal of that shape, that in four cases out of five a decision would be arrived at without the aid of lawyers at all. It would be only in one case out of five that legal assistance would be necessary. But the difficulty is to ascertain the facts; and that is the difficulty traders have in getting local rates reduced.

17318. In this case you would have the advice of the railway expert, who would be able to meet the railway people on their own ground, and who would act in the interest of the complainant, so to speak?—I think the Commission should have power, through their inspectors, to get all information as to the facts.

17319. You are aware that it is in the power of any trader receiving goods on through rates to obtain the items from the railway company—he can do so now if he asks for it?—There is a very great difficulty at present in ascertaining an analysis of the rates.

17320. Have your Commissioners applied for an analysis of the rates?—Yes.

17321. With what result?—They were refused, on the ground that they were not interested in the rates.

17322. *Chairman.*—Quite so, if they were not interested.

Witness.—The difficulty is that when a trader applies for an analysis of the rates in which he is interested, he does not get the information that he wants. Take, for instance, the case of a trader in

Belfast and a trader in Derry competing for business in a town like Enniskillen—what the trader in Derry requires is not merely an analysis of the rate between Derry and Enniskillen, but also an analysis of the rate between Belfast and Enniskillen, and the same is the case with the Belfast trader; and at present there is no machinery by which the trader can get that information.

17323. The railway company will not, I presume, give an analysis of the competitive rate?—Well, my opinion is that the Belfast and the Derry trader ought to be put in the same position as competitors.

17324. If a trader has any reason to feel aggrieved he can bring his complaint before the Railway and Canal Commission?—The difficulty is to get at the facts.

17325. Have you had any experience of the Department of Agriculture taking any action with regard to complaints of this kind?—So far as I am aware they have not been approached locally, in Derry.

17326. Don't you think that is possibly because the fact that the Department has this power is not appreciated or is not well known?—I think it is well known; but there is the expense.

17327. There is no expense in the case of the Department dealing with such a complaint?—There is a feeling that they would be very slow in taking up any small case.

Mr. Healy, K.C.—They intervened successfully in Kerry against the Great Southern Railway.

Colonel Hutcheson Poë.—That was a large and important case.

Mr. Healy, K.C.—Yes; it is about three years ago.

17328. *Colonel Hutcheson Poë*.—You are opposed to State purchase and control because you don't anticipate that economies could be effected which would give a reduction in rates. I don't know if you are aware that a great railway expert, Sir George Finlay, considered that at least 20 per cent. reduction in working expenses would be effected by a united management, to say nothing of the economies that might be effected in other directions?—I didn't express the opinion that no economies could be effected, but I did not think that such economies could be made as would enable a general reduction of rates to be effected.

17329. If you got a reduction in the staff and in working expenses and in management—would not these go a considerable way towards effecting a reduction in rates, which would be desirable if brought about?—I think a reduction of rates would be desirable.

17330. If the railways were under one control, with the purpose not of earning dividends, but of developing the industries and trade of the country, there would be no reason why the east coast ports should be favoured at the expense of the west or south or north coast ports—it would be a matter of indifference to them which way the traffic went—and, again, they would only want to pay a fair interest on the actual cost and anything beyond that would go to reduce rates?—That might be.

17331. Unless the effect of a change would be to secure reductions in rates, I suppose we would all be content to go on as we are; but if it is taken for granted that a reduction in rates would necessarily follow single control of the railways, you would then be satisfied with some system of State, or national, control?—Provided it gave us the two advantages that were mentioned.

17332. Did I understand you to say that you had nothing to complain of with regard to the existing railways that are connected with Londonderry—one point I want to ask you about is in relation to Sir Henry Miller's evidence with regard to the projected route between Letterkenny and Strabane; did your Commissioners take any action in connection with that?—Yes, we did apply to Parliament for protective clauses in the second year that the Bill came before Parliament—not the first year.

17333. And are the Commissioners satisfied with the existing state of things and of the possible effect of the line that is about to be opened?—They are much dissatisfied with the whole system of rates between Derry and the east coast ports.

17334. But are they satisfied that the opening of this Strabane and Letterkenny branch may possibly divert traffic from Londonderry?—I think it will divert traffic from it.

17335. Are your Harbour Commissioners satisfied about it?—They appeared before Parliament and asked for a protective clause in the same way as in the case of the purchase by the Midland Railway of the Donegal Railway; but they did not succeed in getting the clause.

17336. You think you will lose a good deal of traffic?—We will undoubtedly.

17337. Are your Commissioners interested as a body in the matter of the mortgage on the line?—Individually the members are largely, but not as a body.

17338. You think some relief is very desirable if it can be obtained?—Yes, we are suffering a great injustice.

17339. On that point you hold the same views as expressed by Sir Henry Miller?—Yes.

Apr. 25, 1907.

Mr. John Kelso Reid, LL.D., representative of the Londonderry Port and Harbour Commissioners.

Relief sought in respect of mortgage on Letterkenny line.

Examined by Sir HERBERT JEKYLL.

17340. What powers would you confer upon the proposed tribunal?—I would give it the power to adjust rates, to hear complaints, and to raise or lower rates, according to what it might consider reasonable.

17341. You would invest them with a statutory power to fix rates?—Yes.

17342. Are you in favour of conferring powers on the statutory body to fix the price of commodities?—Yes, I think so. I think in the case of bodies like the railway companies, who have a monopoly and get a monopoly from the State, that the State has a right to interfere and to control them, and to see that the powers which are given to them are reasonably exercised.

Powers to be conferred on the proposed new tribunal discussed.

17343. You would go far beyond the powers now exercised by the Railway and Canal Commission?—Yes.

Cross-examined by Mr. HEALY, K.C.

17344. Are you aware that the Great Northern line is worked at a smaller figure than that given by Sir George Finlay?—I have no knowledge of it whatever.

17345. Is the Great Northern traffic at the port of Derry increasing and has it increased year by year?—Yes; the great bulk is the Scotch traffic.

17346. Because being the nearest route to Scotland it commands the Scotch traffic, and being one of the most distant ports from England it cannot command the English traffic; the nearer ports command the latter—doesn't that explain the matter?—Not altogether, because although further away from the English ports, the port of Derry is a cheaper port, and should have a cheaper rate.

Question of Derry's claim to differential rates on through traffic with England discussed.

17347. Aren't all rates the same—where is the cheapness?—It is cheaper for the companies to work.

17347A. As the traffic is a consigned traffic, why don't people consign their English traffic through the port—why is 98 per cent. of it sent through other ports?—I suppose, the prices being equal, the goods will be sent by the quickest route.

17348. As soon as you are able to provide as good a route you will get the service?—What we complain of is that the route which is cheaper to work is made as expensive to the trader as the alternative route.

17349. Isn't the case that the men who consign the goods labels them with the name of the route by which they are to be sent—isn't that so?—That may be; but the railway company will not point out to them the route that would be cheaper than the route chosen by the party consigning the goods.

17350. In fact, you want a preferential rate for Derry?—We want a cheaper rate for a port where the traffic can be worked cheaper by the carrying companies.

17351. From time to time now, how do you suggest that Derry would be the cheapest route?—I could give you distances.

17352. Take any English town—London, Birmingham, Manchester, Liverpool—and take any other port in Ireland and show me that Derry would be the cheapest?—I would say from Strabane to Leeds, *via* Derry, goods could be carried cheaper that way than by any other route.

17353. You have got half a crown differentiation?—Yes.

17354. And you are not satisfied?—Omagh is the same thing.

17354A. Look at the map—do you say from Omagh to Leeds is the same?—I would say it would be cheaper to work the traffic from Omagh *via* Derry than *via* Greenore.

Apr. 25, 1907.

Mr. John Kelso Reid, LL.D., representative of the Londonderry Port and Harbour Commissioners.

17355. The foolish Omagh people didn't think so, and they have it in their power to route the traffic as they like?—I say they should get a cheaper route *via* Derry.

17356. You want us to give you the preference?—Yes.

17357. As to wagons, haven't there been considerable complaints by us against you for storing up our wagons time after time when other people were crying out for them?—I believe there were a great many complaints as to wagons from the railway company and against the railway company; but I cannot give you the details.

17358. Haven't you been in the habit of getting wagons a week or a fortnight in advance of a ship being due to arrive in the port, and keeping the wagons lying there?—I never heard of it.

17359. You are the solicitor to the Commissioners?—I am; I don't think that has happened.

17360. I think we have been too indulgent with you about demurrage—that is possibly the reason.

Mr. William H. M'Cowen, Tralee, examined by the Chairman.

Mr. William H. M'Cowen, representative of the Tralee Urban District Council and Harbour Board.

17361. You live at Tralee?—Yes.

17361A. You are a member of the Urban District Council?—No, but of the Harbour Board.

17362. What is the local authority in Tralee?—The Urban Council.

17363. Do you appear here on their behalf?—I do.

17364. You are engaged in business in Tralee?—Yes. It is a general business—we have fifteen different departments.

17365. What is your general trade?—Millers and general merchants.

17366. I think you have been Chairman of the Tralee Harbour Board?—Yes, for the two previous years.

Extent of witness's traffic.

17367. Do your firm carry on a large business at Tralee?—Yes; we imported about 35,000 tons last year by sea and rail.

17368. Through the port of Tralee?—Through the port at Fenit, which is connected with Tralee by rail of eight miles.

Mr. Healy, K.C.—They are practically the largest merchants in Kerry.

Chairman.—So I would imagine from the large tonnage they deal with.

17369. I suppose Tralee is a distributing centre for that part of Kerry?—Yes.

Extent of the accommodation for ships at Fenit Pier.

17370. And your port is Fenit?—Yes; it is a deep-water port.

17371. You can bring large ships there?—Yes, 5,000 tons. There is twenty-three feet of water.

17372. Is there any other industry at Fenit?—Yes; mackerel fishing.

17373. That is only a season traffic?—Yes, for two months of the year.

17374. There is the fishing industry as well as the general traffic?—Yes.

17375. Of course, the whole of the traffic from this place (Fenit) is worked by the Great Southern and Western Company?—Portion is worked up to the canal basin by lighters and small ships; but the bulk of the traffic is worked by the Great Southern Railway.

Present satisfactory working of traffic from Fenit to Tralee by railway company.

17376. Speaking generally, are you satisfied with the way the Great Southern work the traffic?—Yes, very well satisfied. Before 1900 the railway to Fenit was worked by the Waterford and Limerick Railway Company.

17377. It was then an independent company?—Yes.

17378. And it was taken over by the Great Southern Railway Co.?—Yes. In the old days I saw 1,000 tons of corn piled up on the pier with no shelter, waiting for wagons, and I have seen uncleansed cattle trucks used for the conveyance of fresh fish; but since the Great Southern and Western took over the line we have had nothing to complain of—everything has been satisfactorily worked. The Joint Committee of the Harbour Board and the Urban District Council consider that they had a complaint in the matter of rates, but they had no complaint to make as to the working of the line.

17379. You are the most exceptional witness we have had before us?—We are exceptionally situated in Kerry. Before the amalgamation the railways were cutting rates, and by the Amalgamation Bill the old rates were maintained, so that is how we are situated.

17380. To put it shortly, you haven't the least complaint to make against the Great Southern Railway about rates or facilities?—Not about management or facilities, but we have a few complaints to make about rates that are not governed by the Amalgamation Bill.

Rates from Fenit to inland towns considered excessive as compared with other ports.

Mr. Healy, K.C.—No rose without a thorn.

17381. *Chairman.*—Is there any particular rate that you object to?—We object to rates from Fenit to some inland towns when compared with Waterford, Cork, and Limerick.

17382. Have you raised this question with the railway company?—We have.

17383. What was their answer?—That owing to the long distance they could not reduce the rates.

17384. And you are not satisfied with that answer?—We are not.

17385. Why?—We considered that under the amalgamation we should get the same advantages as Waterford, Limerick, and Cork enjoy.

17386. Although a longer distance?—A proportionate rate is what we want.

17387. Give one or two examples?—The rate for coal from Waterford to Newcastle West—104 miles—is ·6761 of 1*d.* per ton. From Fenit to Newcastle West—fifty-seven miles, or half the distance—it is 1·0769*d.* per ton.

17388. Practically a penny?—Yes.

17389. Give us an instance of a town where the distance is about the same in both cases?—Under the Act we were to have been treated in the same way as the harbours that were likely to enter into competition with us.

17390. *Mr. Healy,* K.C.—That is not the phrase. What the Act says is, "All reasonable facilities as to rates." The Waterford rate is stereotyped and we could not alter it.

Witness.—We want you to alter the Fenit rate.

17391. *Mr. Healy,* K.C.—They are all on a scale. Give us a comparison in a place that is 104 miles from Waterford?

Chairman.—I asked for that. I don't think it is fair to give us one place 104 miles and compare it with another that is fifty-two miles?—I have similar distances. From Cork to Abbeyfeale (eighty-nine miles), the rate for coal is ·8977*d.*; from Fenit (thirty-seven miles), 1·2162*d.*

17392. Give us the rate from Cork to a place thirty-seven or thirty-eight miles away?—I haven't got that. I expect they are on a scale. Limerick to Abbeyfeale (forty-one miles), the rate for coal is 1·0869*d.*; from Fenit to Abbeyfeale (four miles less), practically 1½*d.*

17393. What you ask for is that you think under the Amalgamation Act you are entitled to the same mileage rate as from Limerick?—Yes.

17394. That is your contention?—Yes.

17395. You have been in communication with the railway company on the subject?—Yes. From Cork to Killarney (sixty miles), the rate for coal is about 1*d.*; and from Fenit to Killarney (for half the distance), it is over 1½*d.*

17396. Mr. M'Cowen is taking the double rate, and working it out on a mileage basis, whereas you and I would deduct the terminals, then the percentage would not be unfair. Mr. M'Cowen, do you follow what I said? If you take threepence off each end for terminals and then work out your mileage, you will find these figures will show very different results?—I suppose the terminals would count in the short case.

17397. Yes, but terminals in a short distance and in a long distance would seriously affect the result?—Oh, yes—the Mallow rate——

17398. What is that?—That is a special rate that is in existence between Mallow and Killarney, Killorglin, and Castleisland— a special rate of 4*s.* 6*d.* per ton for breadstuffs.

17399. *Colonel Hutcheson Poë.*—What is the distance?—The distance from Mallow to Killarney is forty miles; Mallow to Killorglin 58 miles; Mallow to Castleisland 58 miles.

17400. Then, Tralee to Killarney?—Tralee to Killarney 21 miles; Tralee to Killorglin 19 miles; Tralee to Castleisland 12 miles. There is a uniform rate from Mallow to these three towns of 4*s.* 6*d.* The

rate from Tralee to Killarney for the same article is 4*s.* It is 3*s.* 6*d.* to Killorglin and 2*s.* 3*d.* to Castleisland.

17401. *Mr. Healy,* K.C.—The Railway Commissioners would not allow them to be altered. We made rates at the time to keep the Irish merchants on their legs, and when they came before the recent Commission the Agricultural Board interfered, as Mr. M'Cowen knows, and these rates are now stereotyped, and cannot be altered.

Chairman.—They cannot be advanced.

Mr. Healy, K.C.—We tried to advance them, and the Agricultural Board interfered by counsel. I was counsel against the company at the time.

17402. *Chairman.*—You know that, Mr. M'Cowen?

Witness.—I do, sir; but we want to get a reduction against these rates, because we consider it a very unfair rate coming into our county from another county.

17403. Now, what about this Tralee and Dingle Light Railway. It is between Tralee and Dingle, I suppose?—That runs through the Dingle promontory from Tralee.

17404. Is it an independent concern?—No. It is one of the Government narrow-gauge railways. The management has been taken over by the County Council.

17405. Recently?—Within the last four or five years.

17406. *Mr. Healy,* K.C.—State management?—Not State management.

17407. *Chairman.*—Not State management?—Under the County Council. It is County Council management.

17408. There has been money advanced, I believe, to put it right?—There is an annual claim of £5,000 a year on the county for that railway. It is not able to pay the working expenses. While on taxation, I may mention Kerry is notorious for being the heaviest taxed county in Ireland for railways. Between the different railways and the pier at Fenit it is taxed to the extent of £20,000 a year.

17409. What is the population of the county—I don't know whether it is a large or small county?

Mr. Healy, K.C.—It is a large impoverished county—nearly all mountains.

Witness.—The valuation is £300,000. I have not got the population.

17410. *Chairman.*—What do you say with reference to the through rates from Liverpool to Dingle and from Cork and Limerick to Dingle?

Mr. Healy, K.C.—The population of Kerry is 179,091.

Chairman.—Then it is a large county.

Sir Herbert Jekyll.—It is one of the biggest in Ireland.

17411. *Chairman.*—What do you say about these rates?—We complain that the through rates between Liverpool and Dingle are detrimental to the trade of Tralee. The local rate from Tralee to Dingle for bread stuffs is 4*s.* 10*d.* Of the through rate the Dingle railway only gets 2*s.* 6*d.*, and that rate has to be made up by the ratepayers, of whom the merchants of Tralee are interested largely. These are rates fixed before the County Council took the line over.

17412. And they have no power to alter it?—Oh, I should think they have power to alter it. They are not bound down by any clause in that way.

17413. Give us one or two instances, if you like; say for flour?—From Liverpool to Dingle the rate is only 13*s.* per ton.

17414. That is direct by water?—By steamer to Cork, rail to Tralee by the Great Southern, transfer at Tralee into the narrow-gauge trucks and rail to Dingle.

17415. That is from Liverpool?—Yes. From Cork the rate is 7*s.* 6*d.*; the same as the rate from Cork to Tralee.

17416. I suppose Dingle is a very small place as compared with Tralee?—It is principally a small fishing town

17417. And all comparatively small when you take up Fenit?—Yes.

17418. There seems to be an enormous trade done at Fenit?—There is a large trade.

17419. You gave an instance of 6,700 tons brought to Fenit in fourteen days?—Yes, and handled by the railway company.

17420. From the 14th to 28th February 6,700 tons of goods were handled by the Great Southern Company at Fenit?—To Tralee.

17421. Is that handled to your satisfaction?—Yes, sir.

17422. And that state of things could never occur under the old system, the old ownership of the Waterford and Limerick Company?—No; we ran the risk of having to pay demurrage on ocean steamers.

17423. You began by saying that so far as the working was concerned you had no complaint to make?—No complaint.

17424. Let us go on to the general subject. Are you in favour of the amalgamation of the railways of this country?—I am.

Amalgamation of the railways of Ireland into one or two systems under present management advocated.

17425. Into one or two or three or four?—Two or three.

17426. Why do you draw the line at two or three?—It would take in the principal companies.

17427. If two why not one?—Well, if not two one would be satisfactory, I should think.

17428. Then have you considered the question, or given any attention to the question as to how that should be carried out?—I should think in the first instance the Government should come in and take over these railways, and then hand them over to an existing company or companies. Some of these companies have not paid dividends for years, and never will pay them, and the shareholders will only be too anxious to part with their shares at a smaller figure than they paid for them.

17429. Then you agree that it would be an advantage to Ireland if the railways were owned by the State?—Not by the State; I would prefer to have them worked under one or two companies.

17430. You said one just now?—Yes, one company or two companies; I am not in favour of State purchase.

Government to purchase the lines in the first instance.

17431. Who is to purchase these railways?—Well, the Government could come in, in the first case and take them over, and the railway companies would issue capital to float them after.

17432. If the Government took them over by compulsion, do you mean?—I should think by arrangement.

17433. Then they would have to purchase?—They would have to purchase in the first case.

17434. That would be State purchase?—You might call it that in one way, but they would treat with the railway companies.

17435. Why take them over and hand them back again?—I think it would be better for the railways if they were under one or two companies.

17436. That is, to have the country divided into two parts, and one large company for the North, and another large company for the South. General amalgamation, that is what you mean?—Yes.

17437. On the whole, I understand you are perfectly satisfied with the arrangements made by the Great Southern for your district?—Yes, sir.

Examined by Colonel HUTCHESON POE.

Railways to be leased to one or two companies after purchase

17438. With regard to amalgamation, do I understand you to mean you would be in favour of the State purchasing the railways, and then leasing them to one or two companies?—I did not really go into how it should be done, but in that way.

17439. Assuming that they are leased to one or two companies, would not that be open to even more serious objection than the present system; if you had lessees of one or two companies they would have to be rich capitalists or a joint stock syndicate; they would have to pay a certain rent per annum to the Government, and have to look to the earnings of the lines to enable them to pay that rent and also to pay a fair rate of interest to themselves for the trouble of working it. Again they would have a lessened sense of responsibility in looking after the property which did not belong to themselves as against the greater sense of responsibility which directors under the existing systems have. The property is their own; they are answerable for the management to the shareholders, and they have a certain defined responsibilty. In a case such as you seem to contemplate you have lessees who would be working property which was not their own out of which they would get the largest possible amount of profit. Such a system, moreover, would necessitate careful supervision on the part of the Government as to the way the line was maintained, its upkeep, and so on. Don't you foresee all kinds of difficulties?—I would not propose to lease them. I would propose to absorb them with the help of the Government.

Apr. 25, 1907.

Mr. William H. M'Cowen, representative of the Tralee Urban District Council and Harbour Board.

17440. How do you mean?—Two companies to absorb all others.

17441. What would become of the two companies?—They would work them as their own.

17442. Would you leave it to the two companies to carry out their absorption of the others voluntarily, or to absorb them compulsorily if they could not come to terms?—That would be a matter of arrangement.

17443. It would be a very difficult matter of arrangement. You would be in favour of State purchase?—I mean the State would assist the companies to purchase.

17444. Then if they did that, and if the difficulties I pointed out occurred, the State assumed control, and that, I understand, you are averse to—you appear for the Harbour Board and Urban Council?—Yes.

17445. Has this matter of control, possible control either by the State or by a national authority, been considered by the council?—Yes. It came before the committee, and we were divided on it. Some of the committee were in favour of the nationalisation of the railways, and others in favour of amalgamation.

17446. Amalgamation into one or two systems?—One or two systems. They were in favour of some change in the existing state of things.

17447. What does your Urban Council consist of?—There are only six on the committee. Two were in favour of amalgamation, and four in favour of the other.

17448. It was not considered by the whole Council?—No, the whole matter was referred to a joint committee.

Tralee and Dingle Railway: Baronial liabilities,

17449. With regard to the Tralee and Dingle railway, the barony is under a heavy contribution?—Yes.

17450. Something like £2,400 a year?—Some years it ran up to £7,000 or £8,000.

17451. They are liable for any deficit for working as well?—Yes.

17452. The baronial guarantee is what?—£2,400.

17453. And the average they have to pay is something like £4,000?—£5,000.

17454. I believe there were several proposals for the Great Southern and Western taking over the line?—Yes.

Grant from the Ireland Development Grant for improvement and equipment

17455. Which has resulted in a grant being made from the Ireland Development Grant of £24,000?—Yes.

17456. Part of which has been already expended, and next year there is a provision for something like £12,000 for the further purposes of properly equipping the line?—I am not aware of that.

17457. I think so. With regard to the Amalgamation Act between the Great Southern and the Waterford and Limerick, were these towns along the Tralee and Fenit railway excluded from the operations of that Act?—Oh, no, they were brought in; the Tralee and Fenit line was absorbed.

17458. I mean the Tralee and Dingle?—They were not affected.

17459. And in consequence of that these very low through rates are possible to be charged?—Yes.

17460. What proportion of that 35,000 tons of general goods goes by sea and rail?—Something like 30,000 tons by sea.

17461. The greater proportion would be by sea?—Yes.

17462. And, as a matter of fact, in distributing that through small areas such as between Limerick and Fenit a farthing per mile would make a considerable difference in the profits?—Yes.

17463. I see you say the undertaking given under that Amalgamation Act has not been carried out?—That is with reference to the rates.

17464. *Chairman.*—The rates you have been explaining?—Yes. Every other undertaking has been carried out.

17465. I understand Mr. Healy said these towns were excluded from that.

Mr. Healy, K.C.—The wheat rate. We were not allowed to raise the rate for wheat. There is a great deal in what Mr. M'Cowen says. It is unfair to him.

17466. *Colonel Hutcheson Poë.*—And you would be satisfied with some reasonable reduction?—Proportionately.

Cross-examined by Mr. HEALY, K.C.

17467. Surely with regard to the rate of which you complain—2*s.* 6*d.* to Dingle—you must see that if the Dingle Company did not take that raffic for 2*s.* 6*d.* it would not get it at all?—The Tralee merchants would get it.

17468. Let us take wheat, Liverpool to Dingle, if that did not come to Tralee on the 2*s.* 6*d.* rate for the land carriage, it would go direct by sea, and there would be no land carriage, and no 2*s.* 6*d.*—is not that so?—That is so.

17469. Then is it not a case of beggars cannot be choosers as regards the Dingle Company?—I do not think it is a fair rate to the traders of Tralee, who are heavy ratepayers. They are charged 4*s.* 10*d.* for the same traffic.

17470. Is not the answer to that, if the Dingle Company did not do it the stuff would go the whole way by water?—It would go from Tralee to Dingle by rail.

17471. Take Cork or Liverpool. Cork and Limerick merchants have steamers of their own—would they not send it direct to Dingle by water instead of by Tralee?—I suppose they would if they had to pay a much higher rate.

17472. Is not that an answer to your complaint?—It is not an answer to the Tralee complaint. It might be to the Great Southern complaint. It is not a fair rate to the ratepayers of Tralee, who have to pay some portion of the loss on that rate.

17473. I agree, but if you did that they would not get the traffic?—The Dingle railway would be better without it.

17473A.—It is better to carry it for 2*s.* 6d. than not to get it at all.

The Commission then adjourned till the following morning.

THIRTIETH PUBLIC SITTING—FRIDAY, APRIL 26TH, 1907.

At the Reception Room, Royal Dublin Society, Leinster House, Dublin.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Colonel WILLIAM HUTCHESON POË, C.B.; and Mr. THOMAS SEXTON;

Mr. GEORGE E. SHANAHAN (Secretary).

Alderman WILLIAM REIGH examined by THE CHAIRMAN.

Apr. 26, 1907.

Alderman William Reigh, Dublin.

17474. Mr. William Reigh?—Yes.

17475. I believe you are an Alderman of the City of Dublin?—Yes.

17476. Have you been connected with the Corporation for many years?—About six years now.

17477. But you don't appear as a representative of the Dublin Corporation?—No, the Dublin Corporation did not offer evidence.

17478. You appear in your individual capacity?—Yes, as a shareholder.

17479. A railway shareholder?—Yes.

17480. And interested in public affairs?—Very much. I have written down some evidence I propose giving.

17481. We shall get on all right. I understand you are not here to go into any question of the rates and fares in detail?—No.

17482. But principally to give evidence on the general principles we are inquiring into?—Yes, and the development of the country, together with the benefit of the railways.

17483. Have you formed any opinion as to the principal reasons why the railway systems through the South and West of Ireland are not properly developed?—Yes.

17484. Tell us what you have got to say bearing on that question?—I have long been a convinced believer in the policy of the State taking over the control and management of the Irish railways, and it is as such that I desire to lay before the Commission figures which, to my mind, clearly establish the soundness of the proposition, and facts which point to its absolute necessity in the general interests of the country. The Commission have already received evidence from Mr. Malone, representing the Dublin Port and Docks Board, to the effect that there are at the present time in Ireland about twenty railway companies, having a total train mileage of eighteen millions annually, while there are no less than eight of the great English railway companies having individual train mileages exceeding the whole of the combined Irish railways, the average of the eight being about thirty million miles annually. The total capital value of the twenty Irish railways is only 38½ million pounds, the full capital, and then off that there is dead capital of practically £2,896,428, which leaves a paying capital of £35,568,447.

17485. Very well?—Which is less than one-third the capital value of the London and North-Western Company, one of the eight great English companies to which I have referred. The proposition for the State purchase of the Irish railways is, therefore, not one of such magnitude as might at first be supposed.

17486. Yes, of course, that is practically true, the whole of the railways in Ireland are not as large as one railway in England?—Not one-third of the London North Western Railway. The whole of the lines are less than one-third of the London North Western Railway Company. I am not in a position to offer to the Commission evidence in relation to the financial position of all these Irish railways. I am interested in but two of the companies—the Great Southern and Western and the Midland Great Western—and it is in reference to these companies only that I wish to give information.

17487. What is the capital of these two companies?—They represent together a capital value of nearly twenty millions, which is over half the total of all the Irish railways. In the Great Southern and Western there is a 4 per Cent. Debenture Stock of £3,974,834, paying a dividend of 4 per cent., amounting to £158,993 7*s.* 2*d.* There is a 4 per Cent. Guaranteed Stock of £2,776,184, receiving a dividend of £111,047 7*s.* 2*d.* There is a 4 per cent. preference Stock of £1,194,272, receiving dividends of £447,570 17*s.* 2*d.*, and there is Ordinary Stock of £5,325,520, receiving for the year's dividend at the rate of 4 per cent. all round—3¾ for one half-year, 4¼ for the other—which makes the dividend 4 per cent. for the year, and amounting to £213,020 16*s.* The total capital of the company being £13,270,810 and dividends paid, amounting to £530,632 7*s.* 10*d.* That is the Great Southern. Now the Midland Great Western Company.

The total capital—class of stock and dividends paid by the Great Southern and Western and Midland Great Western Railway Companies.

17488. With regard to the Midland, of course, these figures are abstracted from the half-yearly reports?—Yes.

17489. I think it would answer all purposes if you could give us the total, not the detail, the total capital and the total amount paid in interest in dividend?—Yes. There are 4 per Cent. Debenture Stock, 4 per Cent. Guaranteed Stock, 4 per Cent. Preference, 4½ per Cent. Debenture Stock, 4½ Debenture Stock, 4 per Cent. Debenture Stock, 4 per Cent. rent charge, 5 per Cent. Preference Stock, 4 per Cent. Preference Stock, and the Ordinary Stock. There are several kinds of stock in that and the Ordinary Stock. The total amount of the Midland capital is £6,510,511. They paid dividends of £242,632 5*s.* 2*d.* The gross then of the two together—M.G.W. and G.S. and W.—is £19,781,321, and they have paid dividends of £773,284 13*s.* 7*d.*

17490. You have given us from the public accounts the total capital and the total amount paid in interest and dividend on these two railways. Now then, I think you wish to make some comparison as to what could be done supposing the railways were purchased by the State?—Yes.

17491. Of course, this is your own idea?—This is my own idea, but the calculations I think are correct.

17592. Of course?—I had them checked carefully. I have a second schedule showing the saving which could be effected by the State purchase of the Great Southern and Western and the Midland Great Western of Ireland. The total present capital as shown on the former schedule was £19,781,321; amount paid in dividends, which I have referred to, £773,280. Well, the interest on that capital at 3 per cent. of Government Loan Stock to the amount of the full capital would be £593,439, showing a saving on the dividends of £179,845, which capitalised value on this saving at 3 per cent. would free for development purposes £5,994,833.

Alleged savings that could be effected on the dividends paid under State purchase scheme based on Government Loan Stock at 3 per cent.

17493. A little explanation is necessary. What do you suggest?—I think the next one, if you take it up, will explain. This is only the actually paid bill; it is not earning—the earning I have calculated as well.

Apr. 26, 1907.

Alderman William Reigh, Dublin.

17494. We will deal with the first. I want to clear up this first. I put it to you—do you think, as a man of business, that a shareholder in the Midland Great Western Railway Company or in the Great Southern and Western Railway Company receiving 4 per cent., now practically secured, would be satisfied to take 3 per cent. of Government stock?—Well, I would say so, because all these preference stocks are more or less trustees securities, and I see the vast majority of such people invest their money in secured Government 3 per cent. in comparison with the number that invest in the railway 4 per cent. There is the inference of greater security.

Probable attitude of railway shareholders towards a State purchase scheme.

17495. I understand you to say you are a shareholder in these two companies?—Yes.

17496. I don't want to be inquisitive, but do you own debentures or ordinary stock?—Ordinary stock—5,000 in the Midland and 2,000 in the Southern.

17497. I don't want to know the quantity, but people holding debentures in the Great Southern and Western Company get 4 per cent. for their investment. Do you think that they would be satisfied to take 3 per cent.?—No; but I do not think that that consideration should be an obstacle if the benefit of the country was concerned. They could invest their money in something else if they could get security to invest their money.

17498. Confine yourself to my question. Are the debenture holders of the Great Southern and Western getting 4 per cent. practically secured as an income bound to take only 3 per cent. stock and make a sacrifice of 25 per cent. of their income?—No. I should not suggest that; but if they get the capital money—Government stock would be capital money—they could invest it where they liked.

17499. One question about capital money. I suppose originally 4 per Cent. Debenture Stock would be issued at par; but in the fluctuations of the market, and the price some years ago I know 4 per Cent. Debenture Stock was about 125. These people who gave £125 for that 4 per cent., do you suggest that they should be compelled to take Government 3 per Cent. Debenture Stock?—No. I have prepared the present value of the stock, and treated of that matter in a further shcedule (3) here in this proof. I have treated that in my further schedule. That will explain itself, schedule No. 3.

Probable savings in net revenue.

17500. Perhaps you had better go on with the statement, with the second part—net revenue?—Yes, net revenue, excluding the baronial guarantees and exceptional items for the year, I think the exceptional items would on both sides balance each other. They would complicate the case, so it was not worth bringing them in. The Great Southern and Western Railway Company earned £582,268; the Midland earned £249,499.

17501. Net revenue?—The net revenue available to be handled as dividend if they were willing to deal with it in that way, amounted altogether to £831,767. Well, the Government stock on the same amount of capital at 3 perr cent. would be £593,439, which shows a surplus revenue or a net saving of £238,328. The capitalised value of the surplus at 3 per cent. would amount to £7,977,800, which could be utilised for the benefit and development of the country and the reduction of fares. If you refer to schedule 3 I think I have dealt with the matter you were speaking of. I take a date. You must, of course, take some date to start your figures upon. I take a date from the Stock Exchange. Mr. John J. Ryan, of 24, Anglesea-street, one of the stockbrokers in Dublin, has published a book which shows the stock deals, the price of the stock on the 23rd March. So, therefore, all my figures are dated from that.

17502. Yes?—Well, now, on that—the Southern—I suppose it is too heavy to enter upon. The amount, in the first place, the full amount which is the market value.

Present prices of Great Southern and Western and Midland Great Western Railway stocks.

17503. Can you give the market value?—The market value of the Great Southern and Western 4 per cent. Debenture Stock stands at 109⅞; 4 per Cent. Preference, 105; 4 per Cent. Guaranteed, 105½; Ordinary, 85¼. In the Midland they have a great variety of stock. The 4½ Debenture Stock stood at 120½; 4¼ Debenture Stock, 115; 4 per Cent. Debenture Stock, 105; 4 per Cent. Rentcharge, 104; 5 per Cent. Preference Stock, 123½. Of course that is a very small amount, only £300,000—123½; 4 per Cent. Preference Stock, 101. Within the last year they would even be under par, and the Ordinary Stock is only 63. Well, then, I have calculated the amount which that would yield at these prices on total value of the railways—at these prices it would be £19,110,000, which original capital was £19,780,000, so that really there is a loss at present on these two railways of £670,000: that is on the present showing on the present capital of the two railways.

17504. The market value?—And the original price.

17505. The full value?—Yes. The market value of the local stock.

17506. What local stock?—The Government Stock, Local Loan Stock, £62,408,768 of which has been issued, was 96 per cent. on 23rd March, on the basis of these prices, the amount of Government Stock at 3 per cent. required to be issued to produce £19,110,587 would be £19,906,861, so that you see altogether at present even on the Local Loan Stock, which is at 96, there would be only a surplus of less than £200,000 in the Government taking it over at present, even on the Local Loan Stock, so that shows the feasibility of the principle. Well, I proceed then with the other.

17507. Let us see where we are. That deals now with these figures?—Would you like to look at this?

17508. Thank you?—These schedules show that the security of the State would be perfect, because it showed a surplus on these two railways alone of nearly £8,000,000 of money.

17509. It goes without saying that the Government Stocks will fetch a better price in the market than any railway stocks?—But the security would be very great, because it would have a surplus on this showing of eight millions of money as a scope in their favour.

17510. That is assuming that the railways were purchased at your price?—The market price. We must take some status to go on. That is a status we have.

17511. Of course you don't suggest the railways should be taken over at the market price without some percentage for compulsory purchase?—I would not suggest that. You must take a status. I would not suggest that.

17512. You would not suggest that anything should be done by any Government unfairly treating the existing railways in the country?—No. I am really personally more interested in the railway companies than in the interests of the country; but I am interested in the country as an Irishman, and I want to make both interests combine together for their mutual good and for the interests of the country as well.

17513. I think you have formed some idea as to the ability or otherwise of the present railway companies to find further capital for railway extensions?—Yes.

17514. You have come to the conclusion that they are not in a position to do so?—They are not in a position to do so.

17515. So as properly to develop the industries of the country?—Yes; they can't do it. At present their system is ruin to the ordinary shareholders, and a thorough stoppage in the development of the country. I have instanced the Post Office service. You see in the Post Office service, which was taken over by the Government, there are certain districts, as we all know, that are worked at a great loss, and if it were not for that the country would be cast back; and every Government business is the same. The railway companies, unfortunately, have to raise the capital for development purposes at 4 per cent., which for an immediate return of money is nearly impossible to earn, and not only do they do that, but they give a preference charge over the heads of the ordinary shareholders, which is reducing the value of the ordinary shareholders altogether. And they appear to have no discrimination at all in making the preference charges, because even for temporary expenditure, for things that represent temporary expenditure, they make a permanent capital charge.

17516. That is all within the discretion of the directors of the company?—But it is ruinous to the interests of the ordinary shareholders.

17517. But don't you think the directors are the best judges of that?—I don't think so—I can show their whole interest is at present to try and keep up the dividend.

17518. And if that is so, surely they devise the best means of raising capital?—Yes, and they have no other means of raising capital, for the Ordinary Stock goes down so low. The ordinary shares are only 63. They would have to raise the money at the rate that this is—it would be 5 per cent.

17519. And therefore they are justified in raising it as preference capital?—I submit that they have no right to charge this expenditure on permanent capital as they do.

17520. I think we are getting beyond our province. Are the railway companies' accounts not audited?—Yes, by private auditors.

17521. And if there were anything wrong the auditors would point it out?—It is the principle which is established. I am going to show the result of that principle is that all the railway companies not only in Ireland but in England have run down their ordinary capital. I will show on this list of ordinary shares dealt with in the Dublin market that there are fifty-one, and of them thirty-seven ordinary shares are under par. It shows seventy-five per cent. of the ordinary shares. In principle this is a very bad arrangement in the finance of the country. The Government, as well as developing the country, would look to protect private investors. I myself sold some of my shares which I see are now quoted at eighty-four, when I was building some houses about twenty-three years ago, at 127. I sold Midlands, which are now quoted at sixty-three, for 114. You see the principle of issuing the capital has ruined the ordinary shareholders. That is my point. It is not doing good to the country.

Mr. Healy, K.C.—What about Consols?

17522. *Chairman.*—I think we had better get on now with your general view. In what respect has the present system failed in the development of the resources of the country?—The want of capital. Development has been stopped. Except they are sure of making practically five per cent. no railway will do any development, because they first put a preference charge over the heads, and except they make more than four per cent. on the preference it is a mistake for the ordinary shareholders to put a preference charge over their heads. The management and ownership of the railways are in the ordinary shareholders' hands. At the Great Southern and Western it is the ordinary shareholders that elect the directors. In the Midland ordinary and preference elect directors. The directorate and management being in the hands of the ordinary shareholders, it would be suicidal for them to spend money that would give a permanent charge over their heads—money that they would not earn anything out of.

17523. What is your suggested remedy?—The State taking over the railways, as I said, because they would practically be able to get the money at a certain price, and have a fine scope for development.

17524. You have formed the opinion that the real remedy is that the State should take over the Irish railways?—The only remedy—the only possible for development. We have the Midland line running up there to the North, Kingscourt. There was a proposition made to run from Kingscourt, which is the end of the line, a line on to Castleblaney, Armagh, and Keady, and the whole scheme did not go on, and even the portion of the scheme from Castleblaney to Armagh was taken up by a private company, authorised by Parliament. Even the private company could not raise the capital. The experience, not only of the small Irish railways throughout the country, was, nobody put money into it, they lost the capital, and then the big railways had to buy them out at a discount. This left from Kingscourt to Castleblaney undeveloped, and the Midland were anxious to do it, had there been no opposition to their Bill, and they saw there was no present profit to be earned at four per cent.—they would have to raise—therefore it was stopped, and that would be the shortest route to Belfast, I believe. Well, now, the same thing occurs with these coal fields in Arigna, in the North of Ireland. The railway companies cannot see their way to invest capital at four per cent.

17525. Arigna?—Yes, Arigna. The same thing occurs throughout the West and the North. All the railways in the West of Ireland, Athenry and Tuam, and so on, they were built by small companies, and they could not work, and finally the Waterford and Limerick bought them out at a discount, and then the Southern came in and bought them out at a discount. There is no encouragement for capital.

17526. In your judgment, there are many districts in Ireland where industries could have development if there were railway communication?—Yes.

Necessity for State purchase of the railways urged.

17527. But it is not possible to provide railway communication by the existing railway companies, because they could not get immediate return for the capital outlay, and the remedy you suggest is that the State should take over the whole of the Irish railways, and that would result in great benefit to the country?—That would result in great benefit to the country.

17528. Shortly, that is what you mean?—And at the same time save the ordinary shareholders from destruction, which it is coming to. That is one of the principal reasons—save them from certain destruction. The shares are going down all over the country.

17529. That is not confined to Ireland?—It is in England the same way. In the railway system there is no provision made for depreciation or for a sinking fund. In ordinary companies, trading companies, it is necessary to put one per cent. aside on leasehold buildings and ten per cent. on machinery as depreciation fund. Now, it is not so on the railways, and the whole stock is going down.

17530. I think we need not discuss that. Railways are maintained in an efficient state out of the current revenue of the company?—Well, now, I would not think so, as far as those balance-sheets show. They commence by charging the small things on the capital, which should be paid out of revenue—new weigh-bridges and little extensions.

17531. Surely that is a matter for the directors of the company, not for us?—But you see it is a principle that is ruinous to the ordinary shareholders..

I think I will leave it there.

Examined by Mr. SEXTON.

17532. You have a considerable personal interest in the stock of some of the railways?—I have.

17533. And you have been led by this circumstance to regard the questions from a shareholder's point of view?—I have.

Financial aspect of the proposed State purchase scheme discussed.

17534. You have given some details of present capital and dividends, and of the cost of making good these dividends by the issue of public stock, but may I ask you generally whether you have any doubt, from your study of the subject, that the use of public credit would allow of the purchase of the railways either at a premium over the market value of the stock or at a liberal rate of purchase of the present net profit, and yet leave a substantial balance out of the net profit available for the reduction of the rates?—Yes, I have made that calculation eight millions of money of a scope—the capitalised value of that scope to deal with.

17535. You take it only on the market value?—Yes.

17536. But I am suggesting to you that if the policy of State purchase were adopted it would be practicable to give even a liberal premium upon the present market value of stock by the use of the public credit, and yet to leave out of the present net revenue a substantial balance to use in reduction of the rates?—I believe so.

17537. Or if the mode of purchase indicated in the Act of 1844 were adopted, which would leave the amount of the capital out of view, and take the net revenue as the test, do you think that the State could afford to give such a number of years purchase of the net profits as would be attractive to shareholders and yet leave a balance of the future net profits for use in reduction of the rates?—I do.

17538. It seems to follow, therefore, that if the public credit were used for the purpose the terms of purchase might be such as would be favourable to the shareholders from a financial point of view, and yet would give to State ownership of the railways resources for the reduction of rates which the private companies do not, and cannot, possess?—Most decidedly.

Further railway extension in Ireland considered necessary in the public interests.

17539. Do you consider that numerous railway extensions are required?—I do. I consider a great number of extensions required. I think the immediate want of the numerous extensions might not be so apparent; but if the country wants to be developed, if the development of the country wants to be encouraged, I think it is very necessary. I consider the railway service as at present is as

Apr. 26, 1907.

Alderman William Reigh, Dublin.

necessary to the public trading as even the Post Office is.

17539A. Many extensions are required in the public interest, but would you say that few of them would be lucrative at first?—Not at first. Several of them might not be lucrative at first, but I think there would be a great saving on the present railway system by them, because shorter routes could be run and a great saving of train mileage would thus be effected instead of going roundabout different places. Short routes could be run, and thereby there would be a great saving.

The probability of further extensions of railways becoming paying lines.

17540. Do you think that under a system of rates and fares favourable to the public interest, most of these extensions would improve in point of revenue as time went on?—I do with the development of the country, as instanced by the colonial improvements.

17541. And that most of them would eventually become valuable, not only to the districts through which they are run, but that they would probably give a profit in the double aspect, firstly, their own traffic, and secondly as feeders of the trunk lines?—An all-round system would be. There would be a great saving in the train mileage from running about traffic, and would, of course, subsidise the other lines as a whole. It will pay, as the Post Office, as soon as the system was in full working order.

17542. You think that a policy of extension would pay in the end?—I do.

Cheaper passenger fares all round advocated.

17543. Having regard to the circumstances of Ireland, the incomes of the different classes of the people, do you consider that the passenger fares might well be reduced?—I think it is necessary in several places. Yes. I have been considering that on several points as to each class. There are several scales, and there is even discussion among our own shareholders on the different class fares. It has been debated.

17544. I know it has been often debated?—To dispense with second class. The general tone of things even at the shareholders' meeting is that the fares are all detrimental to the traffic.

17545. We have heard that the fares are lower in England?—Reduction of passenger fares would produce not only an extension of traffic, but give actual improvement in receipts and of net revenue thereby.

17546. If third-class passengers were more considerately treated?—I think all round, through Ireland, cheaper, and no preference one place over another. It would disperse the traffic better, and there would be more traffic.

Necessity for cheaper rates for Irish produce to British markets urged.

17547. As to rates, do you think it vital to the interests of this country that the rates upon export traffic, on food products to the British markets, should be so reduced as to give the Irish agriculturists a fairer chance against the Continental competitor, and to enable him to recover the ground which he appears undoubtedly to have lost?—If you want to keep the country as an agricultural country. It will go, it is going, to grass. There is no hope for the agriculturist if you don't do something like that to assist him, and thus enable him to market the produce he grows to the best advantage. Produce is coming over cheaper from America and Australia, where there is little or no rent to be paid and large machinery, farms worked on an extensive scale. There is no hope for the Irish agriculturist—the tendency is to let the land run to grass.

17548. If Ireland, by better conditions of transit by rates comparing better with those available to the continental producer, had been able to seize—or might now recover—even a part of the tens of millions per annum of British money that go to Denmark, Belgium, and other European countries, would it not go far to make Ireland prosperous?—I should think so.

17549. Well, then, would you say that the inland rates in Ireland, relatively high as compared with the corresponding portion of through rates on imported goods, require to be generally reduced in order to give some home manufactures a chance of development, and others a chance to come into existence?—I saw so much evidence coming from the different districts I really did not go into the subject. Local people appear to have taken up that question very generally, and in my opinion they have shown many grievances on the point. I believe the Corporation would have given evidence if it was to put them. It is rather too much to take up at a jump; otherwise, they have not prepared evidence. The subject is very large. I did not go into the rate question much.

17550. Do you think the evidence of those who are engaged in these trades and industries, and have personal experience of what they say, is worthy of attention?—Very much. I have followed it very closely.

17551. You say, though not raising any question whatever of the good intentions of the companies, that they are unable, from financial conditions, to do what is required?—Yes.

17552. The position, as you state it, if I rightly understood your evidence, is that the residue of net profits which is now available for ordinary shareholders allows generally only of the payment of such moderate dividends that the companies cannot or cannot be expected to engage in enterprises or to grant reductions which would risk that margin of profit and probably entail delay in recovering what might be lost?—It is even more serious than that, because in order to keep up that price of the preference stock they must keep up the three per cent. on the ordinary, lest the preference stock would cease to be a trust stock, and if they did, all the Irish railway would be much under par, and they must keep up; that is the reason, I assume, they have been charging so much to capital. They must keep up the three per cent., and in fact they are very close to it. The Great Southern and Western Company run very close. The Midland are barely on it—it is only one half-year with the other they do it; each individual half-year can't do that.

17553. You have referred to the custom which I believe is usual with English companies also?—Yes.

17554. To charge to capital account expenditure, not upon extensions, but upon improvements of the line, which do not return new or additional income?—And permanent improvements. Dealing with public business there are different scales. The Local Government Board have, for instance, concrete. On foot of that it would be only seven years' loan, four-inch pavement 20, electric light stations 20 years' loan. But these are not permanent; a sinking fund has to be established for them, weigh-bridges, and small extensions; they are not permanent, and it is only getting the ordinary capital into a state of thorough decay. We have the instance of the Dublin, Wicklow and Wexford Railway, where ordinary capital is practically wiped out by the preference. That is what I fear on every railway.

17555. However useful or however necessary these improvements may be in themselves, or however warrantable it may be by practice to charge them to the capital account, I understand you confine yourself to the point that the effect of making this expenditure, and so charging it, is this, that unless a development of net profit from some new source arises, the interest of the ordinary shareholder in the line must necessarily be diminished?—Killed; because there is a permanent charge put over his head even with a temporary prosperity. If a reaction comes, you have a preference charge over your heads. At the reaction time the ordinary shareholder gets killed.

17556. It is a case of a choice of evils, for if the expenditure be necessary, and if the income be such as will not allow the expenditure to be charged to it without cutting away the dividends, that would be one evil; the other evil is to charge the expenditure from year to year to capital and create a class of preference charges which reduce the residue for ordinary dividends, and may eventually extinguish it?—No, but the ordinary capital, if these preference charges are made over its head, although they get a temporary payment of a little more dividend, their dividend is more than eaten up by the depreciation of their stock because of the preference charge over their head. If you are getting one per cent. more as your earnings, whilst at the same time the market value of the shares falls 3 points, you are at a net loss of two per cent. So it is a foolish principle. They are not considering that. You should consider. This is what the shareholders do. They grasp for the little present day and forget the charge that they are allowing to grow over their heads, which will finally kill the capital. But every investor sees the fluctuations. You may say the investor does not, and won't, give the price.

17557. In the case of a company paying between three and four per cent. on the ordinary capital now—a company with a small reserve and a narrow margin of profit—if they were to go on making most necessary expenditure on improvements and issuing preference capital to pay for that expenditure, the effect

might very soon be that the ordinary dividend would fall below three per cent.; and then in that case, for ten years, the debentures and all the pre-ordinary shares would fall out of the category of trust securities?—I notice in going over the lists of debenture and preference shareholders a large quantity is investments of banks and insurance companies—the people named wherever you see two names is a trust security. I suppose fully half the stock is so held. It would be a very serious matter.

17558. When once the pre-ordinary stocks all round fall out of the category of trust securities they cannot recover that rank until the ordinary dividends are kept up to three per cent. for ten successive years?—I believe so.

17559. The inference you draw from this is, not that the expenditure is unnecessary or that it is against practice to charge it to capital, but that going on so charging it—issuing preference securities for it when there is no new profit to pay for these securities, in the case of such a line as I have instanced the effect might be to drive the ordinary dividend below three per cent., and this might cause a calamitous loss in the value of the pre-ordinary stocks by reason of the loss of their position as trust securities?—Even as trust securities, barely over par, shown by the present market price, they have ceased to be trust securities in England. They are much under par at present in Ireland.

17560. You say generally that the existing financial conditions place it out of the power of the companies either to make the necessary extensions or to give what you regard as indispensable reductions in rates and fares?—That is so.

17561. Can these things be done if the lines are acquired by the public?—I think so.

17562. First you expect that there would be, if purchased by the use of the public credit, a surplus left out of the present net revenue available for reduction of the rates?—Yes. In these two railways I suppose £238,328 surplus.

17563. Then would you anticipate a large saving through single working as compared with plural?—A very large saving and a combined board. Instead of having twenty boards have only one board—a national board. I have suggestions to make about it, too.

17564. These two savings put together would form a fund by which a very good start could be made in the reduction of rates and fares without imposing any burden on the public?—Emphatically so.

17565. But suppose even for the purpose of giving adequate reductions in rates and fares—such reductions as would stimulate agriculture and develop manufacturing in Ireland—do you think that a part of the public resources of Ireland could possibly be better invested than in bringing about such reduction—do you think it would reap an adequate benefit in the end?—I do, but I think that could be done by a national control, because if the Government were to give a subsidy to the present railway companies in reduction of their fares as private companies, it would tend, I am afraid, to extravagance and dilatoriness of them if they had the security of a sinking fund on rates for private purposes. I am afraid it would not be for the public good; but if the railways were commanded by the State, the State could reasonably, as in the Post Office, temporarily subsidise the different positions.

17566. I am speaking of the case of public ownership, and I am suggesting that possibly the savings might be sufficient, but if they were not, a moderate share of the public resources could not be better applied?—No.

17567. Considering the declining population of Ireland, the insecure condition of the staple trade, the cattle trade, the growth of Continental competition in the food market of England, and the almost absolute want of organised industry in this country, what do you say of the prospects of the Irish railways if they continue to be managed under the present system? They are awful. There is no encouragement to invest money. And even Irish-Americans, who are anxious to assist the country with their savings, would not be encouraged to start manufactories in this country, except they were assured of good railway assistance to develop them, and market their manufactures. We have only two great large centres in Ireland, Dublin and Belfast. It would be madness for a manufacturer to start in Ireland if he had not the security of good railway system.

17568. With the continued management of the railways by separate ownerships, and the system of high passenger fares and of rates which appear to cramp the interests of Ireland in the British markets, and to repress home manufactures, you think the prospects are not encouraging?—No.

Apr. 26, 1907.

Alderman William Reigh, Dublin.

17569. Do you think, then, as a shareholder, that the shareholders would in their own interest as well as in that of the public do well to avail themselves of the opportunity of public purchase if those who have the power to do it were inclined to put that policy into effect?—I think that every man who is really an Irishman certainly wishes for the interests of the country, and, as long as he would not suffer himself, he ought do everything for the interests of the country without making a sacrifice. Nobody asks them to make a sacrifice. He gets his money and can invest in something else if he doesn't like Government Stock.

State purchase alleged to be in the best interests of the shareholders themselves.

17570. Of course, in the event of public purchase, the future direction of the railways would have to be regulated by Statute?—Oh, yes, I submit.

17571. You have spoken of Government Stock. Suppose an Irish authority were created with funds at its disposal, and that it could give security acceptable to the Treasury for the needful advance, do you consider, having regard to the nature of what is suffered, to the interests that are damaged by the present system, that it would be better that the control of policy as to the amounts of rates and fares and the reductions should be in the hands of some authority responsible to the people of Ireland?—Oh, yes.

Necessity for a responsible Irish authority to control the railways if State-owned.

17572. And in the details of practical management they would act through a board of practical railway experts?—My suggestion of a board is this—a board of fifteen members be formed, five members to be nominated by Government, including a civil engineer and a mechanical engineer with extensive railway and general experience; four members to be nominated by the present railway directors, say one each from the Great Northern, the Great Southern, and the Midland Boards, and one elected from the boards of the remaining companies; four members to be elected by the County Councils, one from each province; two members to be elected by the City Councils of Dublin and Belfast, one from each to look after trade interests. Out of this board a chairman and vice-chairman could be elected, and those two gentlemen along with the expert engineers, included under paragraph (1) should be required to devote their entire time to the railway service during their term of office, and to hold no other appointments or directorships whatsoever or engage in business. The Government age limit of sixty-five years should apply without exception to every member of the board. In the case of the four railway directors when they dropped out, I would suggest that the vacancies should be divided amongst the provinces, and should be filled by the County Councils, for instance, for a Great Southern and Western director a member for Munster, and for a director representing the Midland Railway Company, a member for Connaught.

Suggestion as to the composition of a Board to undertake the practical management of the railways.

17573. The case I am putting to you regards the subject from a somewhat different point of view. I am suggesting an elective authority, responsible to the Irish people, and with powers over such departments as the Board of Works and the Agricultural Department, which now have functions connected with the railways, and with funds at its disposal, and which could satisfy the Treasury as to the security for the advances made. Would you be satisfied that such a body should have the control of the Irish railways?—Of course I would be satisfied. That would be the true spirit of Irish development.

17574. Subject to that authority, such a committee or board as you speak of might be created to act in matters of detail?—It should be under Irish management. It is to our interest not to allow English interests to predominate.

17575. And apart from that board, for the mechanical work, the technical and expert working of the lines, a body of the best available railway experts should be appointed. Do you approve of that?—I think that under that board there should be three special committees—a finance committee, a traffic committee, and a works committee—as all public boards are worked.

Apr. 26, 1907.

Alderman William Reigh, Dublin.

17576. You would require also, would you not, in addition to any such public committees as you mention, a body of experts,—locomotive engineers, traffic managers, permanent way engineers—for the purpose of assuring that public control of the lines did not involve or imply any failure to bring the best expert skill to bear on all the details?—Yes.

17577. You say that the prospect before the railways under the present system is not encouraging?—No.

The advantages generally to be expected from State ownership summarised.

17578. Do you think that if the public acquired the railways, and by a judicious system of extensions and by well-judged reductions of rates and fares developed the resources of the country, they would make more of the railways for the public benefit than the present companies can?—Oh, yes, and more for the country. Even the manufacture of rolling stock would give employment, and be a very beneficial thing. I understand that in the manufacture of rolling stock 50 per cent. goes in wages and 50 per cent. for material. We suffer an immense loss from not having our own rolling stock manufactured here. The Great Southern and Western Railway Company gives a great deal away; the Great Northern do not manufacture their own locomotives, but only their carriages; the Midland only manufacture in a small way; and the other companies all send away; and a great loss is sustained in that way by the country. A large general workshop would be very necessary.

17579. And do you think that though an adequate reduction of rates and fares might restrict the revenue for a time, it would eventually have the effect of securing larger traffic receipts?—Yes; and the present companies cannot afford to risk that.

17580. You have said so. And that ultimately the public ownership of the lines would secure a larger net profit than private ownership can secure?—Yes; the same as the Post Office.

Examined by Colonel Hutcheson Poë.

The adoption of the Continental railway policy as regards low export rates a necessity for Ireland.

17581. Reference has been made to foreign competition. You are, no doubt, aware that in most Continental countries, where the railways are State owned, the policy of the Government, with a view to stimulating the industrial resources and the agricultural industries of the country, has been to grant exceptionally low export rates?—Yes.

17582. So low, indeed, that in many cases, I think, experience has shown that they leave no margin of profit over the working expenses, and in some cases actually involve a loss. You are aware of that?—I am.

17583. If such a policy is justifiable in the interest of Continental countries, whose natural resources are infinitely superior to those of Ireland, is it not your opinion that such a policy is infinitely more justifiable in the case of a country like this, where our industries are languishing and our trade declining? If the Government want to assist manufactures at all and develop them, it is the only means. It is an absolute necessity.

Effective reduction in rates only possible under State ownership.

17584. Another step. Such a policy naturally could not be initiated under the existing system—a wholly commercial undertaking, answerable to their shareholders, and, of course, administered on purely commercial lines. The only possible authority that could grant such a reduction as might involve a loss would be the State authority?—Yes; they could do it. The average working cost of a line is from 50 to 60 per cent., so that they would have a scope of between 40 and 50 per cent., if there was no profit wanted for subsidising. You could hardly ask private companies to do that. We are not public philanthropists.

17585. That is a further argument in favour of State purchase?—Yes.

Any consequent loss justifiable if it had the effect of promoting

17586. And I suppose one might even go so far as to say, even assuming that no return at all was made for some time on the State-owned system, that a loss would be justifiable if it had the effect of promoting the prosperity of the country and the development of its industries?—Yes; the same as the Government do in the case of the Post Office, or the telephone, or anything—just for the public benefit.

Cross-examined by Mr. Healy, K.C.

17587. If the railway outlook is so black, and the income from the ordinary shares so precarious, why do you maintain your investments in it?—My investments are from my father.

17588. I won't say you; but why does anybody?—Well, I believe if you look at the stocks list you will see that more or less they yield a certain percentage; and people, unfortunately, go for a certain percentage.

17589. I am satisfied. You got your percentage. I took up an ordinary daily paper of this morning while you were giving your evidence about the effect of the through rates in the country, and I see that in Liverpool, which is, I suppose, a good centre for butter, the price of Danish butter (choicest) per 112 lbs. was 102*s.* to 106*s.*, and that of Irish creameries, which is the corresponding quality, 93*s.* to 96*s.* Now, I will take the rate from Limerick to Liverpool. It is 30*s.* a ton; and the Irish percentage of that is 10*s.* a ton. Supposing that the Irish percentage of that were reduced by one-half, what relief would it give the Limerick farmer so as to enable him to compete with the Danish butter maker? It would give him about 3*d.* a cwt., and the difference in price is 9*s.* a cwt.?—I have not studied that subject.

17590. Ought we not come down from the clouds? Has Denmark, say, over Limerick any special advantage?—Of course. Colonel Hutcheson Poë says if the Government should confer a bounty of the railway fare or anything, we cannot compete unless we give a bounty ourselves. There is no other way of competing with it.

17591. But if this butter was carried by the railway companies for nothing, that is to say, by the Irish company, it would not be sufficient apparently. What is the explanation of it?—That has nothing to do with the railways. It is an agricultural question altogether.

17592. But if you take the County Limerick and the County Cork, is not butter a tremendous product? You see it is not the railways that are in fault, at all events. It is not the railways that are making this disease. Is not that self-evident on the figures?—I think they are ceasing to encourage and develop the traffic. In Belgium and those countries where the railways are State owned when a new industry starts they give encouragement to it.

17593. I take a particular product, and I get no answer. Then, I will ask you another question. You say the railways would make a profit if they did certain things as the Post Office does. Is it your impression that the Post Office in Ireland is a profitable thing?—No; I don't think it is. But as to the Post Office system all round there is a large net earning.

17594. The Post Office in Ireland is a loss?—Yes. In some of the smaller districts the railways of Ireland might be a loss; but under a general system worked hotch-pot it would all pay.

17595. But the Post Office is worked hotch-pot?—It is worked as a general system for the United Kingdom; it is not worked as a separate system in Ireland.

17596. It is a loss on the Irish figures?—So I understand.

17597. You have spoken of the development of the country. Will you mention to me any town in Ireland with 2,000 inhabitants that has not got a railway?—I am not prepared to answer that question.

17598. Well, now, you have spoken about the way in which the Irish railway directors raise capital by putting preference shares before the ordinary stock. Are you aware that there is a smaller percentage of preference stock to ordinary stock in Ireland than in England and Wales in spite of the difficulty of raising capital in Ireland?—No; but that would have no effect.

17599. England is a rich country and easily able to raise capital. Ireland is a poor country, and the difficulty of raising capital here is very great; and yet the fact remains that there is a smaller percentage of preference stock in Ireland than in England. It is two per cent.

Chairman.—Roughly, in England, it is about one-third.

17600. *Mr. Healy,* K.C.—The figures for England and Wales are—Pre-ordinary stock 63 per cent.,

ordinary 37. The figures for Ireland are—Preordinary 61, and ordinary 39.

Witness.—I suppose in Ireland the ordinary stock was put at the price which they thought would be able to work the country. But the extensions in Ireland have not been so successful as they have been in England, and more stock has been issued in England. Unfortunately our population is going down, though our preference stock is increasing.

17601. *Mr. Healy,* K.C.—Would you be prepared to put the Irish railways under a body elected as the Dublin Corporation is?—No, not elected. I have suggested what I would put them under. I would not have a body directly elected by the people, but a body elected on a certain representation from the provinces by the County Councils and a certain representation by the Government, who guaranteed the stock.

Apr. 26, 1907.

Alderman William Reigh, Dublin.

Mr. Healy, K.C.—That is all I ask you.

Chairman.—Thank you, Alderman.

Mr. W. T. TRENCH, D.L., J.P., examined by the CHAIRMAN.

Mr. W. T. Trench, D.L., representative of the Tipperary (North Riding) County Council and Nenagh Urban District Council

17602. I believe you have been asked by the County Council of the North Riding of Tipperary to give evidence before this Commission?—Yes.

17603. Are you a member of that body?—No; I am not a member.

17604. Are you a Deputy Lieutenant of the County?—Yes.

17605. And a magistrate?—Yes. May I also mention that the Urban District Council of Nenagh have also asked me to represent them.

17606. Have you been long connected with that part of the country?—Yes, I may say I have been all my life.

17607. Well, now, is it your opinion that the progress and prosperity of the country is handicapped by the existing railway system and the rates and fares in operation?—Yes, I think it is very seriously.

17608. Well, now, just tell me in your own words do you consider the goods rates now charged excessive?—Yes, I think I may say that I do certainly. Perhaps you would allow me to say that I have for some years past looked into this question in a general way as to the effect that the policy of the railway companies has had upon the progress and the prosperity of the country, and I have come to the conclusion, rightly or wrongly, that under the present system the progress of the country is very seriously handicapped and impeded. And I should also wish to say that the dissatisfaction which exists throughout the country, and of which I have got ample evidence, is, I may say, universal. I do not know that I have ever met anyone who stands up in defence of the present system of Irish railways.

17609. Stop a minute, now. First of all, what is the main industry of the North Riding of Tipperary?—In the first paragraph of the abstract I have mentioned that agriculture is the main industry of the North Riding.

17610. When you say agriculture do you include live stock?—Yes, sir.

17611. Large quantities of cattle are produced in that county?—Yes.

17612. And is grain grown to any large extent?—Yes; the North Riding of Tipperary is particularly well known as a barley-producing district.

17613. Then if the barley is produced in that particular district, are there any malting industries?—Yes; there are three or four. I think it is the best industry in the North Riding.

17614. Successful?—Successful.

17615. In spite of the railway rates?—Yes, in spite of the railway rates.

17616. Where are they situated?—There are two at Nenagh. One has been lately started there. There is another in Birr, which is really in the King's County, but it borders Tipperary; and there is another at Banagher, which is not very far from the North Riding.

17617. Is there any other industry in the district except agriculture and live stock?—No, with the exception of the slate quarries at Killaloe.

17618. Are the slate quarries worked?—Yes, they are.

17619. Are they served by a railway?—No, there is no railway nearer than Killaloe.

17620. Where is the slate carted to?—To Killaloe and Birdhill.

17621. What is the distance?—It must be some three or four miles.

17622. Of course, then, that particular traffic, which cannot bear a very high rate for carriage, is seriously handicapped?—Yes. They have water also for the Killaloe quarries three or four miles distant. They have Lough Derg.

17623. Have they to cart to the water?—Yes.

17624. What is the railway?—The Great Southern and Western.

17625. What are the rural districts that comprise what you call the North Riding of Tipperary?—Nenagh, Thurles, Roscrea No. 1, Birr No. 2, and Borrisokane.

17626. You said just now that the rates are too high?—Yes.

17627. Upon what basis do you form that opinion?—The numbers of complaints that I have had from traders and from individuals, and from the constant complaints that have appeared for years and years in the newspapers.

17628. I suppose there is nothing in the rates beyond the powers of the company?—In some cases they are.

17629. Have you got a case of that sort?—Yes, I have got one case. It is not very easy to know them, but I have got one case. I have got a newspaper reference to it here. Traders in the town of Borrisokane who got their goods from the Cloughjordan Station were charged a lower rate to Cloughjordan than the Cloughjordan traders were charged.

17630. Ah. I asked you whether you had any case where it was alleged that the railway companies exceeded their maximum powers?—Oh, I beg your pardon, I thought you referred to undue preference.

17631. Oh, no?—I am not aware that there are any.

Chairman.—Then whether the rate is excessive or reasonable is a matter of opinion.

Mr. Healy, K.C.—Ask him for the particulars. We would like the particulars. He says the Borrisokane traders were charged lower than the Cloughjordan traders.

Alleged undue preference by the Great Southern and Western Railway Company in the matter of rates on goods for Borrisokane.

17632. *Chairman.*—We will come to that. I asked a question whether there is any complaint from the traders that the rates were beyond the powers of the company, and he said he had one. (*To the witness*)—Now you say you have not any case?—I misunderstood.

17633. I thought my question was very plain. You have a case of alleged undue preference. Can you explain in a few words what that case is?—I believe the cause of it was that there was competition with the Canal as regards Borrisokane, and there was no competition as regards the Canal with Cloughjordan.

17634. Surely that seems to me to justify a difference in rate where there is water competition?—Yes, but this was a rate to the same station.

17635. Have you got it there?—I have got it here. It will take me some little time to find it.

17636. If it is not handy I don't think I will delay?—I think I am prepared to substantiate from evidence here all those cases; and I shall be quite prepared to do so.

17637. *Mr. Healy,* K.C.—I would be very anxious if he gave us the facts of this case. It is a specific statement and it ought to be proved.

Witness.—This is a pamphlet which I published periodically some little time ago at different periods, and I quote in this pamphlet any cases which appeared in the newspapers or any cases which were communicated to me personally. I published this, and I advertised that I was prepared to send this pamphlet to anybody who desired to have one without charge; and as a matter of fact, I used to send it to anybody who applied for it and to my friends generally. And this is the case that I speak of. The date on which this leaflet was published was the 1st of August, 1898. (*Reads.*) "A correspondent writes: 'It is a fact that the Great Southern and Western Railway have two distinct rates for goods consigned to Cloughjordan and Borrisokane, and that the latter are lower.'" That is the case.

17638. *Mr. Healy,* K.C.—You may take it from me that there is not a word of foundation for it?—I have the reference.

17639. *Chairman.*—That publication was in '98, did you say?—Yes.

17640. The correspondent writes about a case that

Apr. 26, 1907.

Mr. W. T. Trench, D.L., representative of the Tipperary (North Riding) County Council and Nenagh Urban District Council.

may have occurred years before?—I think not. I had a letter a short time ago from a Cloughjordan trader complaining of the same state of things.

Mr. Healy, K.C.—Let us have the letter. Let us get the facts.

Chairman.—I think, Mr. Healy, I will go on.

Mr. Healy.—I beg your pardon, sir.

17641. *Chairman (to the witness).*—I don't understand where the undue preference comes in. Can you explain that?—I was under the impression that undue preference consisted of different rates for similar services. The two services were alike. They were to the town of Cloughjordan.

17642. Can you give us a concrete case? What was it? Was it a ton of goods or a cwt. of goods? You don't know?—I don't know.

17643. We will pass from that. You have some remark to make with reference to the through rates as compared with the inland rates?—Yes.

17644. What do you say about that? You mean the through rates from England?

Rates complained of generally as being excessive for a country like Ireland.

17644A. Yes?—I think you have had it in evidence that the through rates from England to all the inland towns in Ireland are lower judged by mileage than the rates between the inland towns in Ireland.

17645. Well, we have had abundant evidence upon that point. We shall hear the railway explanation of it when their time comes. What about the local rates? Confine your attention to the local rates. What have you to say about those?—The local rates in many cases appear to me to be much too high.

17646. Yes. But what is your standard of measurement? How do you measure whether they are high or low?—Well, as near as I can by what the charge ought fairly to be, assuming that they are carried at the lowest paying rate.

17647. At the lowest paying rate?—Yes.

17648. Who are the best judges of that—you or the railway company?—Well, I think to a certain extent that I am as good a judge as the railway company.

17649. Do you say so?—I do, in some cases. Let me say that I am not giving my own opinion, but I am giving the opinion of very much greater authorities than I am. And I have the evidence of those authorities here.

17650. Yes. But can you fix that upon any particular article between any particular place?—Yes.

Instance:—Feeding stuffs, etc., Dublin and Nenagh.

17651. Can you give us one instance?—Well, I will give you an instance of a very important industry, which is the conveyance of feeding stuffs and manures from Dublin.

17652. Let us hear your proof as to the rates being excessive. First of all, from Dublin to what place?—Say from Dublin to Nenagh.

17653. Very well. Now, then. What is the distance from Dublin to Nenagh?—100 miles.

17654. What is the rate for feeding stuffs?—I may say that there are complaints from all the stations. Traders have sent me in their complaints from all the stations.

17655. Give us any one case you like. Select your own case?—Here is a letter which has been forwarded to me by the Secretary of the Nenagh Urban District. Here are feeding stuffs 8*s.* a ton to Nenagh from Dublin.

17656. *Mr. Healy*, K.C.—That ought to be 7*s.*?—I beg your pardon. 7*s.* a ton, 100 miles.

17657. *Chairman.*—Let us follow that out. That is 7*s.* a ton from Dublin to Nenagh, 100 miles?—Yes.

17658. That is less than a penny per mile, including terminals. What is there unreasonable about that?—They are charging more than that to other stations in the same neighbourhood. I mentioned that as the lowest rate, and the reason it is so low is because the Canal competition comes in there.

17659. I asked you to give me any case you liked?—I think that is too high.

17660. Well, what would you make it?—I think it might very well be reduced to one-half.

17661. Then I, as an expert, should say that it would be carried at an absolute loss. Is it your opinion that it should be? Should it be carried at an absolute loss?—No, certainly not. I hope I shall make it clear that I do not think that the railway companies ought to be asked to carry things at a loss. I think that would be a most monstrous doctrine to put forward.

17662. Then I tell you that at 3*s.* 6*d.* a ton it must be carried at an absolute loss. You said that 7*s.* was a low rate. I quite agree that it is a low rate for feeding stuffs. I asked you to mention one typical case. Is there any typical case that you wish to bring under our notice now showing, in your judgment, either undue preference or unfair rates in a particular case?—I should say that is the only case that I had of undue preference—the one I mentioned. With regard to unfair rates, I have no reason to think that any rate is beyond the maximum. I have no reason to think that at all. But my complaints of the fares and rates being too high I might say are grounded upon three authorities much higher than I can lay any claim to be. One of those is the Allport Commission, which decided that the rates and fares generally in Ireland were much higher than were necessary.

17663. That is a general statement?—Well, it is the general statement I wish to deal with, because the authorities on the general position are, I consider, very overwhelming, very strong.

17664. That is one authority?—Yes. I have here a leaflet which was published some years ago by Sir Alexander Rendal, who is engineer for the State Railways in India. He went into the comparison between the rates in India and the rates in Ireland and as compared with the London and North-Western in England; and he arrived at the conclusion that the rates in Ireland were far too high. I believe he had some experience in Ireland before he went to India.

17665. I don't think that he knew much about rates myself. He was consulting engineer?—The leaflet which he published is here.

Mr. Healy, K.C.—All the rates in Ireland have been revised and reduced since the Allport Commission.

17666. *Chairman.*—Well, now, Mr. Trench, I am quite prepared to accept your statement that, considering the circumstances of the trade of this country compared with England, it is a retail trade in Ireland as compared with a wholesale trade in England—that is to say, that the average consignments in this country must be very small—small as compared with England?—Yes, certainly.

17667. And that with that in view, and considering the circumstances of the country it would be an immense benefit to the country generally if all the rates were reduced?—Yes.

17668. That is your view?—Yes.

17668A. You admit that they are not above the maximum?—I have no reason to think that they are above the maximum.

17669. And you do not know whether they are fair and reasonable except that you say that it would be a great advantage to the country if they were reduced?—Yes. May I mention that Mr. Thomas Robertson, late chairman of the Great Northern Railway Company, when he was applying in 1891 to the Board of Trade for powers to raise the rates with regard to live stock, appeared before Sir Michael Hicks-Beach, and he stated that the rates for Ireland had always been higher than the rates in England. That was in the newspaper report.

17670. Yes, but that was years ago; and the rates have been revised since then. The powers of the companies have been revised since that. Do you know that?—I was aware that there had been a great many changes.

17671. Lord Balfour of Burleigh was over here revising the rates, and Sir Courtenay Boyle?—Yes.

17672. Like other witnesses you condemn the Railway Commission Court as being not suited to the requirements of this country?—The people generally consider it quite inapproachable; and, as a matter of fact, I happened to look over one report for one year, and I found that out of something like 150 cases that appeared before the Court two came from Ireland, and those were between railway companies, and not between traders. They were disputes between railway companies.

17673. Before the Railway Commission Court?—I think so.

17674. I think not?—Do the railway companies not appear?

17674A. I am quite sure there there is no year in which they had 150 cases before them. It may have been complaints to the Board of Trade you are speaking of. (*To Mr. Barrington, Solicitor*).—The Railway Commissioners have not had an average of twenty-five cases?——

Mr. Croker Barrington, Solicitor.—Something like twenty-five or twenty cases. They are all reported. I think he is alluding to complaints to the Board of Trade.

Chairman.—Since the Railway Commission Court has been established, I am quite sure there has never been a year in which they have had 150 cases brought before them.

Witness.—It may be the Board of Trade. It is quite possible I might have been mistaken.

17675. *Chairman.*—The people in your particular district, and the County Council, strongly object to the constitution of the present Railway Commission Court as being unsuited to the requirements of Ireland?—Yes.

17676. You are aware of the powers given to the Department of Agriculture in this country?—Yes.

17677. And we have had evidence from that Department before us?—Yes.

17678. Have you read the evidence?—I have read what appeared in some of the newspapers.

17679. On the whole, that would be in the interests of the country?—It has been decidedly useful.

17680. Are there any light railways in the North Riding of Tipperary?—No; no light railways.

17681. What do you suggest as the remedy for the various complaints you have made?—Well, I may say that nearly everybody I have met seems to think there is only one way out of the difficulty as an escape from the present unsatisfactory state of things, and that the State ought to take over the lines.

17682. Some form of municipalisation or nationalisation?—Something of that sort.

17683. Do you think it would be an effective remedy for all those complaints that you have brought under our notice?—It is the general opinion of the country that it would be an improvement of the state of affairs.

17684. Have you thought out the subject?—Yes.

17685. I believe you have written upon it?—Yes.

17686. Have you formulated any scheme?—My idea was personally that if running powers were given over the different lines it would get over the difficulty. The whole secret is want of competition—nationalisation won't afford us that. If we had competition, as they seem to have in many parts of England, the whole thing would right itself. The crux of the question is how to create competition.

17687. You would not create competition by the nationalisation of the railways?—Certainly not. That would do away with it.

17688. If the railways are the property of the State where is the competition?—I am not in favour of the State working the lines, but in favour of the State acquiring the permanent way.

17689. By purchase?—Yes, the permanent way.

17690. Don't you agree that the State should purchase the railways, and that some central body in Ireland should work them?—No. The traffic ought to be worked by the companies and the lines owned by the State, as the country owns the high roads at present.

17691. The State does not own the high roads?—No, but the local authorities own them.

17692. The various local authorities should work the railways?—No, the companies should work them.

17693. I see you make a suggestion that the railway companies should furnish fuller accounts?—Yes, of their proceedings.

17694. Surely the half-yearly accounts contain everything necessary for the shareholders to know?—perhaps the shareholders are satisfied. I don't think, comparing these accounts published with the Indian railways, they are anything like as full as we could wish.

17695. These are State-managed, most of them?—Some of them, not all.

17696. Some of them are guaranteed?—My idea is that a great number of them are guaranteed by the State. Some are private owners.

17697. Just name one?—I am not sure.

17698. At any rate, the railways were private companies guaranteed by the State, and now the State has acquired most of them—there may be some exceptions?—I bow to your knowledge in the matter.

17699. If the shareholders are satisfied with the present figures in the half-yearly reports—I suppose they are—I am asking now for information?—I have no reason to think they are not.

17700. What have outsiders got to do with it if the shareholders are satisfied?—I most respectfully think the outside public have a great deal more to do with it than that.

17701. They have no interest in the property. Why should they?—They know nothing as to how the railways are being worked in regard to the prosperity of the country.

17702. I am speaking of the accounts—the detailed accounts?—They must show a good deal of how it is worked.

17703. The shareholders are satisfied with the reports?—The public ought to be given more information—why bury it away in a Blue Book? I say it with the greatest respect.

17704. The Blue Book gives all the information that even the public ought to have?—I am not prepared to say that.

17705. I want you to put it on the notes—I want to know what other information not given in the accounts should be given?—The first thing is that the ton mile and passenger mile returns should be furnished.

17706. Ton mile statistics are being discontinued on some railways in America?—I am not aware of it.

17707. They are fallacious from beginning to end?—I am not aware of it. I believe it is the case, is it not, that they are published in India. All the Indian railways publish them, and American railways—I bow to your knowledge of American railways—have laid the greatest stress upon them.

17708. Some people have?—I have read letters in the papers, and many authorities say that it ought to be given.

17709. Letters in the papers. Take it from me many give it, but they are discontinuing the information?—May I mention that I also thought it desirable the Board of Trade should give the gross earnings, and give a return showing how much was earned by each railway per mile of railway per annum.

17710. I can make it out in two minutes?—I think the Board of Trade ought to publish it; I have done it myself.

17711. You want something that would save you the trouble—anybody can work it out?—It takes some time to work it out for the whole of Ireland, and I think it would be reasonable that the Board of Trade should publish it.

17712. It is very simple, the earnings per mile of railway?—I am not objecting to that.

17713. If you take the *Railway News* or the *Railway Times* you will see it almost every week?—I should like that it should be tabulated, a return showing how much each company was earning per mile.

17714. The gross per mile?—I think it is an important piece of information.

17715. It is now shown in the return—you can get it?—You can work it out if you take the trouble to do it. It took me a good many hours before I did it.

Mr. Healy, K.C.—And you enjoyed yourself, I am sure.

17716. Are you prepared to give any evidence with reference to the Portumna railway—is this your statement?—Yes.

Necessity for the publication of fuller railway accounts.

Birr and Portumna derelict railway.

17717. I thought it was a separate matter?—I should not like to do so without having Mr. Taylor, who is my colleague here. I don't know whether he is in the room or not. He and I were deputed to attend on behalf of the committee which was appointed in the matter of the resuscitation of the Portumna line.

17718. Well, then, Mr. Trench, would you wish Mr. Taylor to give it?—I have not my papers here. I should not like to give it without having Mr. Taylor here.

Resuscitation Committee appointed by the people of the district.

Mr. Shanahan (Secretary to the Commission).—He is here.

Witness.—I am quite satisfied.

17719. *Chairman.*—We have heard a lot with reference to this derelict railway. Just explain who called the meeting and asked you to represent the case before us?—I think it was Lord Westmeath.

17720. Was the meeting called by the original shareholders, or was it by an influential meeting of the people interested in the district, which ought to have been served by the railway?—The people of the district.

Apr. 26, 1907.

Mr. W. T. Trench, D.L., representative of the Tipperary (North Riding) County Council and Nenagh Urban District Council.

Birr and Portumna derelict railway: Construction, temporary working, and abandonment.

17721. When was the meeting held—this year or last year?—This year or the end of last year. I have got a lot of papers on the subject.

17722. Within the last twelve months?—Yes.

17723. A meeting of residents of the district took place within the last twelve months, and they deputed you and Mr. Taylor to bring the subject before this Commission. Can you tell us when this Portumna line was first constructed?—Previous to 1868.

17724. And where was the line from and to?—From the town of Birr, which is just on the borders of the King's County and bordering on the County of Tipperary, to Portumna Bridge, which is on the borders of Tipperary and Galway.

17725. What is the length—about twelve miles?—I think twelve and a quarter statute miles.

17726. When was it opened?—In 1868. It was worked by the Great Southern and Western Company under a working agreement.

17727. How was the capital raised for the construction of the line, do you remember?—It was raised by local subscriptions to a certain extent, also by loans from the Board of Works, and also by a loan from the Great Southern and Western.

17728. How much did the people of the district subscribe?—It has been said that they subscribed £60,000 for the line. I mention that sum, but I am not sure.

17729. Have all the books disappeared?—Nobody knows what has become of them.

Mr. Healy, K.C.—The Government have them. The Board of Works or the Public Loan Commissioners.

17730. *Chairman.*—When did the lease of the Great Southern and Western expire?—In 1878. The Great Southern and Western declined to renew the lease.

17731. Do you remember the reason that was alleged?—They said it did not pay them to work it.

17732. Was there a loss, a great deal of loss, on the working of the railway?—According to their accounts, there was a loss under the agreement.

Loss incurred by the Great Southern and Western Company under the working agreement.

Mr. Healy, K.C.—We were working it for 40 per cent. of the gross receipts, and were losing £2,000 a year.

17733. *Chairman.*—It would not be possible to work the line on that. How much did the Loan Commissioners advance, do you remember?—£12,500.

Advance by the Public Works Loans Commissioners and action of that Board after working of line ceased.

17734. On the security of the line itself?—They were there as mortgagees.

17735. When the agreement with the Great Southern and Western expired did the mortgagees take possession?—Yes.

17736. Did they continue to work it?—No.

17737. The rolling stock belonged to the Great Southern?—Yes.

17738. They had agreed to work it and to find the rolling stock?—Yes.

17739. They withdrew the rolling stock, and the mortgagees took possession of the line without rolling stock?

Mr. Healy, K.C.—State ownership.

17740. *Chairman.*—Now, did the Public Loan Commissioners make any attempt to work the railway?—No; no attempt.

17741. How long did they continue practically exercising rights over the line?—About five years from 1878 to 1883.

17742. Had they a staff there to keep it in order?—The milesmen were there, at least, I think they were, and their houses were occupied up to that time.

17743. Now, what was the first move in bringing it into a derelict condition, if I may call it that?—People began to steal the wire as soon as the working stopped, but there was very little damage done for some time until it was abandoned.

17744. Was the property assesed for rates by the county authorities?—Yes.

17745. Was the money paid?—No. The rates were in arrears.

Seizures on the abandoned line for county cess.

17746. Did the county authorities take any action?—The County Cess Collector seized some of the rails and sold them by auction.

17747. For the rates?—Yes.

Inaction of the Public Works Loans Board.

17748. And the Loan Commissioners, what did they do?—Looked on.

17749. Well, that was the beginning of the destruction?—The end, I should say. It was the end. Pilfering had been going on.

17750. Stop a minute. The end of it, you say, when the rate collector seized?—All the rails were stolen. They made a great descent on the line. There was nobody to look after the line, and nobody to look after anything, and all the rails and all the property that was moveable was seized and carried off.

17751. What were the shareholders doing all the time?—Nothing.

17752. No meetings?—No meetings.

17753. Who were the directors?—I don't know. I never heard.

17754. It is most extraordinary; the people in the district saw this line disappear gradually, and they took no action?—Oh, yes; they did.

Mr. Healy, K.C.—They took a bridge.

Witness.—No; it was the police prevented the bridge from being taken. The bridge would have been taken. The bridge spans the River Brosna, near Birr, and after the looting of the rails was going on someone—I don't know who he was—a man came down with cranes and other appliances, intending to carry away the metal girders of the bridge; but there happened to be a police station at the little village of Riverstown close by, and the sergeant of the police took it upon himself to tell the man he would not allow it, and so prevented the man from taking it away.

17755. And he did not?—The bridge is there now, I am glad to say.

17756. Was anybody prosecuted for stealing anything?—The police brought up people who were supposed to be in illegal possession of the rails, but no owner of the property appeared.

17757. And the prosecution fell through?—We understood that the police were told—this is only hearsay—not to take further steps in the matter.

17758. Well, we have reached a stage where gradually the material disappeared?—Not gradually; very rapidly. There had been all these petty thefts going on before, and after that, demolition.

Mr. Healy, K.C.—The word "thefts" should not be used. There was no owner.

17759. *Chairman.*—There were mortgagees?—I will say "abstractions," then.

Mr. Healy, K.C.—They had abandoned the line.

17760. *Chairman.*—We will get it directly.

Mr. Healy, K.C.—When did this take place—about twenty years ago?—It was more like thirty years.

Colonel Hutcheson Poë.—It was thirty years ago.

17761. *Chairman.*—Did the shareholders take any action to bring the subject before the Government, the Public Loan Commissioners, or some public authority or anybody. Were they all asleep?—The idea was that there might be some liability in connection with unpaid shares, and that they would be liable for it, or something of that sort. Lord Clanricarde was said to have bought a number of shares. Not the present Marquis; the old Marquis. Others in the neighbourhood had subscribed for shares.

17762. Let us come down to a later period. I suppose that application has been made to various Chief Secretaries with reference to this question?—Yes; I think to every Chief Secretary who has been in office, nearly, since that date. The first move for the resuscitation of the line was made in 1889. At that time Mr. Balfour—Mr. Arthur Balfour—was in office.

17763. He was Chief Secretary. How was it brought to his knowledge. We held a meeting and memorialised the Government, and a deputation was to have seen him, but it was Sir West Ridgway, who was Under Secretary, that we saw, as Mr. Balfour was not well at the time. A deputation came to Dublin and laid the whole case before him.

17764. And what steps were taken by the Chief Secretary?—The Chief Secretary undertook that the Government would advance a sum of £12,000 on certain conditions towards the resuscitation of the line. We understood at the time that it would cost the Great Southern and Western that. At all events, that they would take up the line and work it if they got £12,000.

17765. And the Chief Secretary did recommend that?—The Chief Secretary recommended giving that grant, and he was very sympathetic in the matter.

Mr. Healy, K.C.—As usual.

Witness.—He gave us the grant, and I may say we renewed the appeal to Mr. Morley, and he said in a letter which I have that the grant would be given.

17766. Now, then, do you know, to your own knowledge, anything as to whether this was communicated

to the Great Southern and Western Company?—It was. My papers in connection with the Portumna Railway are downstairs.

17767. But your memory seems to be perfectly clear?—Do you wish to see the papers?

17768. You seem to have a clear idea of the whole thing. I would rather take it in evidence and put it on the notes. Never mind the papers. Then, you know the Great Southern and Western agreed to resuscitate the line and put it in order on the payment of this £12,000?—There was no actual agreement. I don't like to say very much now, because the correspondence which formed the basis of these negotiations took place between myself and a gentleman who is now no longer alive.

17769. *Mr. Healy,* K.C.—We said it would take £25,000 to put it in order. That was the whole difference between us?—That was not my impression. I don't want to go into the matter.

17770. *Chairman.*—All I want is to get the facts. £12,000 seems a very low sum to put a derelict line into order. Did they not say, "We want £24,000," or double the £12,000?—They did say that.

Mr. Healy, K.C.—To put down rails, sleepers, and such like. We sent an engineer down, and the expert found it would cost that.

17771. *Chairman.*—Did the Board of Works make any claim?—It was not the Board of Works; the Public Works Loans Commissioners.

17772. It is the same thing?—They had not abandoned it at that time. They did convey an understanding that provided a responsible company took up the line they would hand it over.

17773. And abandon their claim?—Yes; that is more than twenty years, however.

17774. This seems to me like the Trinity—incomprehensible—the action of these public bodies?—Ireland was in a very disturbed condition at that time.

17775. At the present time there is the bed of the railway?—Yes.

17776. *Mr. Healy,* K.C.—It has been abandoned since 1878?—No; 1883.

17777. *Chairman.*—The bed of the railway is there, but the equipment—the rails and wires and gates and buildings—are all gone?—All gone.

17778. And the district has no other means of communication?—It never had any means of communication except this railway. And it has been deprived of that for the last thirty years. If you look at the map you will see a very wide district to the west absolutely without railway accommodation. They, in fact, are in a worse position than the many places that lie between Birr and Portumna. These poor people are an immense distance away from the railway. They inhabit a very poor district.

Mr. Healy, K.C.—This is a letter addressed to Mr. Trench in July, 1891. I will just read one or two passages:—(*Reads*)—"The mention of any sum in January, 1889, could only have been informal, as no further examination was in the interval made, and must have been on the assumption that no material change had taken place since the previous examination, and it now appears that a complete waste of the permanent way and stations has taken place, and, in the opinion of this company's engineer, the large sum of £24,168 will be required to be spent before the line can be re-opened. It seems incredible that this wholesale destruction of property could have been permitted by the Government, who had a very large claim upon it, or could have taken place without attracting the observation of some of the local residents interested in the line. My directors cannot alter the decision handed to you in their letter of the 22nd inst."

17778A. *Chairman.*—That was in 1891?—Yes.

17779. That is in favour of the company. So far as I am concerned, there is no reflection on the company.

Mr. Healy, K.C.—Thank you.

17779A. *Chairman.*—It is the public bodies.

Witness.—We were led to believe, when the correspondence took place that this £12,000 would be accepted and the line would be opened.*

17780. *Chairman.*—Looking at the difficulties, it is impossible that the work should be done for £12,000?—The offer of £12,000 was made, and we understood they were prepared to accept it. We thought that they were prepared to accept it. We were led to expect that, and the correspondence will show it. I am merely trying to clear myself from having misled anybody else.

17781. It is deplorable?—Most terrible.

17782. And I think you have told us everything in a very fair manner?—Thank you. I think Mr. Taylor will be able to tell you more on the subject.

Mr. Laurence Taylor.—My evidence would be a mere repetition of what Mr. Trench has told you. I can remember the working of the line very well. It was worked in such a way it could not pay.

Mr. Trench.—Their arrangement as to trains was very inconvenient.

Chairman.—We won't go into that.

Mr. Taylor.—I remember having sent a message to the Secretary of the Great Southern and Western asking him if it was not possible to withdraw some of the trains. That was just before the line ceased running. One line could be kept going with trains, and it might have paid that way, and have been kept going.

The Birr and Portumna line a source of loss on working to the Great Southern and Western Railway Company.

Mr. Healy, K.C.—We offered to lose £2,000 a year on the place, and the Government would not take it over.

Chairman.—I am sure that there is not another case in the country like it.

Mr. Taylor.—It is a laughing-stock to anybody passing through the country—tourists, strangers, and Americans.

17783. *Chairman.*—Were you a shareholder, Mr. Taylor?

Mr. Taylor.—No, but my father was.

Reason for the inaction of the local shareholders as regards the dismantling of the line.

17784. *Chairman.*—Why on earth didn't they take some action?—(*Mr. Trench*).—There were some prosecutions before Mr. Stoney, the local magistrate. Nobody belonging to the Public Loan Commissioners appeared, and the case was allowed to drop.

17785. Was there an uncalled liability on the shares. Were the shares fully paid up?—I think so; all the local people who had shares were all fully paid up.

17786. What became of the secretary?—I don't know. The Marquis of Clanricarde had a great interest in the line, but he is dead.

17787. What became of the books?—The old Marquis had £10,000 or £12,000 in the line. I heard so, and I believe so. He had a great interest in it. He took a great interest in the traffic of the line. I think he died before the time had expired—before the ten years was expired. After the prosecution had failed tinkers came from Limerick and Nenagh and looted the line. If it were restarted the country beyond Portumna would be benefited by it. More than the towns would, right up to Mount Shannon, and the whole side, and on to Lough Derg—twenty miles.

Examined by Mr. SEXTON.

Revenue of the line was insufficient to pay cost of working

17788. *Mr. Sexton.*—As to the inaction of the shareholders, we have heard that the Great Southern and Western were working this line for 40 per cent. of the receipts and were losing £2,000 a year. Then, probably, if they had got the whole of the receipts, they would have made nothing?—I was looking at the papers a short time ago. They are very voluminous. I came across a letter addressed to Dublin Castle some years ago. It stated that the Great Southern and Western had given them the gross amounts received for the last three years during which they worked the line, and those amounts came to a very small sum, under £100 per mile of railway worked, and under the circumstances, I don't think the line could possibly have paid.

17789. Looking at the length of the line—twelve miles—and what we have heard about the way in which it was worked, does it appear probable that, with 40 per cent. of the receipts leaving a deficit of £2,000 a year, the whole receipts would have paid for the working?—I don't think so.

17790. It is easy to understand the inaction of the shareholders. Of course, they knew, all acquainted

* See Appendix No. 21. Letters from Chairman, Great Southern and Western Company, to Mr. Trench in 1889.

Apr. 26, 1907.

Mr. W. T. Trench, D.L., representative of the Tipperary (North Riding) County Council and Nenagh Urban District Council.

with the state of affairs knew, that instead of having a substantial interest, the position was that the shareholders were really incurring a liability, and they were not anxious to attract attention to themselves by any combined proceding?—I think that is quite possible.

17791. Very likely?—They did not wish to take up the line and work it themselves.

17792. That explains it. I understand that you rest your case upon two main features: first, that people in this district, including the late Marquis of Clanricarde, subscribed £60,000 to give the district a line, and lost the money. They invested that large sum in the effort to provide the line?—I am not prepared to say it was £60,000, but whatever the capital was, it was lost.

Chairman.—Mr. Trench said he did not know what it was, but it was rumoured that was the amount.

17793. *Mr. Sexton.*—Do you think that a district the residents of which provided so large a sum for the construction of this line deserve attention at the hands of the Government even if there were not very special circumstances in the case?—(*Witness*)—I think they deserve consideration at the hands of the railway company too.

The action of the Great Southern and Western Railway Company as regards the Birr and Portumna line discussed.

17794. Let us be fair. The railway company at the time the line was still a workable line made an offer to take it over without a grant, and to guarantee, I understand, to give a fair, sufficient, and satisfactory service. If the line had been given to them at a time when they could work it they were willing to accept responsibility for the cost of working?—Yes.

Mr. Healy, K.C.—They could not do more than that.

17795. *Mr. Sexton.*—Unless you want them to give a grant to the Government I do not know what more they could have done?—That was the position of affairs twenty years ago. The position of Irish railways has materially improved since then.

17796. I am speaking now of the attitude of the railway company at that time. Take that time for a moment, please. Consider that at that time they had been working the line for ten years. The whole of the receipts could have yielded no profit. Was it not a tolerable offer to make to say, give us that line on which we can now make no profit, and we will give you the usual service and take our chance of a profit for the future?—I don't think that represents the case exactly.

17797. It does represent what is in your own print?—I don't think the company ought to be exonerated for what they did.

17798. I am going to take into account all the circumstances of the time. You have a statement here that at the time the line was still an asset they were willing to forget that they had worked it for ten years without a profit, and were willing to guarantee a certain service, to take their chance of a profit, which on that basis, under the circumstances, was not a very encouraging prospect?—At that time, when the line was made, we got no credit from the Great Southern and Western for its feeding value to them.

17799. *Chairman.*—You must deal with it *per se* as a railway?—You mean as a separate unit.

17800. Feeding value is a question for the Great Southern themselves. They are the judges of what they would get from it.

Action of the Government (the mortgagees) in allowing the line to be dismantled criticised.

17801. *Mr. Sexton.*—The second ground of your case is that the Government, through their agents, being in legal possession as mortgagees of that line created by the residents of the district at an expense of £60,000 allowed it to be destroyed?—They allowed it to be destroyed. There is no question about that.

17802. Well, have they not incurred, by that act or neglect, an equitable liability to that district?—I think the Government ought certainly to take the matter up with the Great Southern and Western, and make whatever terms may be considered reasonable and fair with the Great Southern and Western, and open the line within six months. That is my opinion about it.

17803. I assume the Government cannot leave the responsibility with this London Department, the Public Works Loan Commissioners. They must be accountable for the acts of their agents. How can they escape from the responsibility they incurred as mortgagees in possession of the property which they ought to have protected and which they allowed to be destroyed?—They allowed £15,000 to £20,000 worth to be looted.

Mr. Healy, K.C.—The land has now gone back to the adjacent landowners under the law. The very formation of the line no longer belongs to us; it belongs to the adjacent owners.

Mr. Sexton.—Surely if that were the case any grant would be useless.

Mr. Healy, K.C.—There might have been a time limit then.

17804. *Mr. Sexton.*—I assume the law would be capable of recovering this land for the purposes of the line. Assuming, whether rightly or wrongly, that the land is still available, the formation of the line is still there?—If that is the position it is the business of the Government, it seems to me, I cannot say it too strongly, to remedy what occurred through their laxity and remissness.

17805. *Mr. Healy,* K.C.—We are all quite agreed on that.

Witness.—It might be done, and I think as representing the deputation it is also the business of the railway company to come forward and see if they cannot put us in a better position, and if they cannot, without injury to their shareholders, remedy that state of things, which at present is nothing short of a lasting disgrace to the civilisation of the centre of Ireland.

17806. *Mr. Sexton.*—It would be a disgrace to the centre of Africa. Did the Government ever suggest that the sum of £24,000 would be more than sufficient to relay and equip that line twelve miles long?—No, they never did that. I think it is very reasonable, so far as I am a judge. £24,000 is reasonable, an extremely reasonable sum. I should wish to be fair to both sides.

17807. If the Great Southern and Western are asked to bear part of the cost of putting the line into working order they would be entitled to refer to the offer they formerly made to work the line when it was in working order, and say to the Government:—"The offer was made, but you allowed the line to be destroyed, and you ought to restore it if you wish it to be worked." What do you say to that?—If I may be allowed to say so, if I was in the position of the Government I would say to the Great Southern: We do not want to put you into a bad bargain. Show us there is no reasonable prospect of the line paying unless you get the £24,000, and we will give you the £24,000.

17808. The company may point to their former experience and say: "We worked this line for ten years when the population was much larger, when it had not been reduced by emigration and the passenger receipts were therefore likely to be larger, and taking 40 per cent. of the receipts we lost £2,000 a year. If we had the whole of the receipts would they yield a profit." Are they not entitled to ask what is the answer to that question?—If it was referred to arbitration whoever was on the other side could refer to the fact that there was not a single railway in Ireland, taking the least paying lines, which was not earning sufficient to pay interest on an expenditure of £24,000 capital. Here are the figures in the *Irish Times.*

17809. *Mr. Healy,* K.C.—In a pamphlet.

Witness.—Not in a pamphlet, but in a letter to the *Irish Times,* which I wrote in answer to what Sir William Goulding said—that I wanted the railway companies to take up this line and work it as a matter of philanthropy. I wrote to the *Irish Times* disclaiming such an idea, and asking him to show where I had even written, thought, or said anything so foolish.

17810. *Mr. Sexton.*—There has been no malfeasance on the part of the railway company. Whilst the lease existed they fulfilled their obligations under it. They made an offer to work the line without any question of a grant when the line was still in working order, and they ask now that the sum necessary for putting it into working order shall be provided by those who allowed it to be destroyed. Is that not a fair division of liability. I would make a suggestion in this strange and unprecedented case. Instead of going on talking about it, suppose we find out whether the parties are willing to refer the questions, on the one side the grant to be made by the Government, and on the other the undertaking to be given by the company, to the arbitrament of Sir Charles Scotter, who is a very excellent judge. The question might be disposed of without much delay. I have not asked him whether he is willing to undertake the responsibility, but if he is I am sure he would find a solution of the question?—The Great Southern are very ably represented here, and ought to be able to answer the question.

Mr. Healy, K.C.—I would like to hear what the Government's answer is.

17811. *Mr. Sexton.*—What do you say, Mr. Trench?—(*Witness*)—I say certainly. I had it from Mr. Thomas Robertson at the time. We had an interview with him, that the Government would be satisfied to leave it to arbitration, and I hope we may have some expression from the Great Southern and Western Company.

Mr. Healy, K.C.—The Board of Works is very ably represented here. Mr. Shanahan will give us the views of the Government.

17812. *Mr. Sexton.*—We have now taken up so much time with this subject that I will not trouble you upon the general question, except to ask you one or two questions about Sir Alexander Rendel's figures. He estimated that the Irish traffic could be carried at a saving to the public of two millions a year and to the railway companies of one million a year. You know the total annual revenue of the Irish railway companies is about £4,000,000 a year. To give a saving to the public of close upon two millions a year, the traffic would have to be carried for two millions, would it not?—I think so.

17813. And assuming the companies themselves should save over a million, as the working expenses of the Irish companies are annually 2½ millions, if that saving was to accrue they would have to work the lines for 1½ millions?—I am not prepared to subscribe to all that. I mentioned Sir Alexander Rendel merely as one of three great authorities on the subject of the fares being too high.

17814. I want you to apply his figures to what we know to be the facts. The working expenses are 2½ millions, and if you want to have a million of saving on the working of the lines, you would have to reduce the working expenses to £1,500,000, would you not? But if the total revenue is reduced from four millions to two millions, even if you take one million off the working expenses, the profit on the lines, instead of being £1,500,000 would be only £500,000?—It appears so.

17815. It is evident that these figures of this eminent civilian won't march. Would it not be the case if they were to get the traffic receipts increased by, say, half a million and the expenses reduced by half a million more, there would be such a surplus as might go far to solve the whole question of the rates?—My mind does not travel so quickly over figures as yours does, Mr. Sexton.

17816. I do not think that at any pace you would have evolved the figures of Sir Alexander Rendel?

Examined by Colonel HUTCHESON POË.

17817. With reference to the Portumna Railway, I think Portumna is on the left bank of the Shannon?—Yes.

17818. In the event of extending the line, say, to Lough Derg, would it not be desirable to go across the river at that point?—It would be most desirable. There is a large tract of country which could be tapped, and it could be greatly improved if we had a line.

17819. That line could run along the right or the west bank of the Shannon, through that tract, up to Ennis?—Yes.

17820. By the Scalp?—Yes, and O'Callaghan's Mills.

17821. Is there a whole country there without any facilities for the disposal of produce or other goods?—It is quite lamentable.

17822. With a view to the success of land purchase, is it not highly important that the peasant proprietors should be placed on a firm basis, and on that acount could we act in a better way than by giving them the greatest possible facilities in the way of railway accommodation and low rates, in order to place their produce, which must necessarily be in small lots, on the market in good condition and at favourable times as regards prices?—That is so in the district of Scariff. The farmers there breed large numbers of cattle. There is no railway, and the cattle have to be driven a long distance to the nearest line. It would be a great improvement upon that if they had a railway—very important for them.

17823. In the event of the farmers, the new proprietors, failing to meet their instalments, the loss will fall, not upon the British taxpayer, but upon the Irish taxpayer. We had an instance of that the other day through the whole of Ireland; in the reduction of probate grants, and agricultural grants as well, which fell upon the whole of the counties, and in the event of any default on the part of the purchasing proprietors, it is not the English people who will have to bear the loss, but ourselves. Therefore, should not every effort be made—is it not a strong point—to put these men in as sound a position as possible to meet their liabilities?—Certainly, they should have every reasonable facility.

17824. Do you think that under the existing system the companies as they are managed find it impossible to give adequate reductions without some sacrifice such as they could not be expected to afford; that the companies find it impossible to afford these facilities to the traffic?—So long as the companies have a monopoly the high rates will continue.

17825. The conditions under which agricultural produce and dairy produce have to be sent are these—are consigned in small lots. They should be in ten ton lots at least to provide full trains. Yet they must be in small quantities, especially in the dairy industry, by force of circumstances. In England I saw a return the other day showing that practically the bulk of the consignments are sent in two to three ton lots, which means running the trains half full. Under these circumstances there must be a large proportion of dead weight, and a very small margin of profit, and the only way to meet that would be by combination and co-operation on the part of the farmers. Don't you think a good deal could be done in that way?—A good deal might be done at present on principles such as these, and it would have a very good effect. The Department of Agriculture is trying to get that in operation.

17826. We have had evidence to that effect. The railway companies are only too anxious in the interests of those whom they serve and the people whose produce they carry—only too anxious to meet them fairly in every way, and to meet combination and co-operation among the producers, by giving them lower rates than they can at present give?—Possibly, in some instances. In others it is quite the reverse.

17827. Do I understand you to say that the nation, the State, should buy the railways and allow them to be administered by the present boards of directors?—I don't think I said that. The suggestion on the part of the North Riding County Council was that the State should acquire the lines, and that it should be worked as a Public Department. Exactly what that body should be is another matter.

17828. Would it be better to continue the present boards of directors or to constitute some new body?—A new body. That, however, is not my own view.

17829. The question as to what particular form the new body should take was not considered by your Council?—We simply discussed that in a general way, and various opinions were expressed. I said that nearly everyone expressed an opinion in favour of the State taking over the whole of the system of railways in Ireland as being the best solution of the difficulty. That is the opinion of everybody I meet.

17830. On this question I should like to know your own opinion—your views on State purchase in Ireland—not the general opinion?——

Chairman.—He says everybody he has met is in favour of it.

Colonel Hutcheson Poë.—I am not going into the exact form of control.

17831. *Chairman.*—He has answered that. He said he had not gone into it himself?—(*Witness*)—My own idea is that the use of the lines should not be confined to one company, so that we might create competition. If we could create competition the difficulty would be got over.

17832. *Colonel Hutcheson Poë.*—Under the State there would be no necessity for competition. Can you propose a practical solution?—I am in favour of competition. I don't say whether you can have it under State control or private control—why not under private control?

17833. If they want to cut rates they cannot do so without involving the shareholders in liability?—I don't think that has been proved to be so. I don't see why that should be so in railways—we don't find competition necessarily produces loss in other business.

17834. Are you prepared to express any opinion as

Apr. 26, 1907.

Mr. W. T. Trench, D.I., representative of the Tipperary (North Riding) County Council and Nenagh Urban District Council.

Necessity for convenient railway facilities and low rates to assist peasant proprietors to market their produce.

Combination and co-operation amongst the farmers to take advantage of low quantity rates suggested.

State purchase and control approved by the County Council.

Competition in railway working either under State or private control advocated.

Apr. 26, 1907.

Mr. W. T. Trench, D.L., representative of the Tipperary (North Riding) County Council and Nenagh Urban District Council.

to the advantage of some central authority being set up to whom might possibly be entrusted the administration of the railways; would you be in favour of such a devolution of railway management to such a body?—Yes, if such a body were set up I think there are plenty of men in Ireland who are quite qualified to administer the railways of Ireland; but I should not be personally in favour of handing the administration over to a body like, for instance, the General Council of County Councils. I should be in favour of handing it over to Irishmen. There are plenty of capable Irishmen who could manage the railways.

17835. *Mr. Healy,* K.C.—I have just one request to make, Mr. Trench. Would you favour me with a copy of your pamphlet?—Certainly.

Chairman.—We are very much obliged to you, Mr. Trench.

Mr. Trench.—I hope if my feelings with regard to the Portumna line were too warmly expressed you will accept by excuses.*

Mr. LAURENCE TAYLOR examined by the CHAIRMAN.

Mr. Laurence Taylor, representative of the Birr and Portumna Derelict Railway Resuscitation Committee.

17836. You have heard the evidence about that particular railway; do you agree with the evidence that has been given?—Yes, sir; Mr. Trench has given his evidence very ludidly, and just what he has said I would wish to say.

17837. Well, under these circumstances there is no use of my repeating to you the same questions I put to him, and your giving the same answers?—No; the only thing I would like to say is as to the way the line was worked. You would have to be up all night if you wanted to avail yourself of the morning train, and the night train was so late that arriving by it you were practically kept up all night. The train left at six o'clock in the morning, and you would have to be up all night, particularly if you lived at any distance, to catch that train. It was sometimes 11.30 at night when you got in there.

17838. I don't think it is necessary to go into the working of the old railway, let us take things as they are. I take it that on the general question you agree with Mr. Trench?—Yes.

Portumna Derelict Railway—Anticipation of the line paying well if re-opened.

17839. *Mr. Sexton.*—Do you think that if the line was re-formed and worked again there is any prospect of its being run at a profit?—I don't see why it should not be a very paying line, because there is a vast country about, fully populated, and there are several towns, including Tynagh, Killimore, Woodford, Portumna, and others.

17840. Improving towns?—Yes.

17841. *Chairman.*—The result of the working, you think, could be very different from what it was thirty years ago?—Yes.

Examined by Colonel HUTCHESON POË.

17842. Are there at present practically no means of communication in the district?—No means whatever, I might say. I am thirteen miles from the nearest railway station.

17843. And the canal, I suppose, does not give you much help in any way?—No; none of communication.

17844. It is not a very efficient service?—Except for heavy goods.

17845. And even for these?—The accommodation is not good at all.

Examined by Mr. SEXTON.

17846. Would it be, in your opinion, a necessary part of any arrangement towards the further working of the line that this Government mortgage should be cancelled?—Yes.

17847. That they should forego it?—Well, they treated us very badly; they treated the shareholders very badly by allowing their property to be looted all over the country.

* See *precis* of further evidence included in Appendix No. 22.

The Commission then adjourned until the 13th May.

THIRTY-FIRST PUBLIC SITTING.—MONDAY, 13TH MAY, 1907.

At the Board of Trade Offices, 8 Richmond Terrace, Whitehall, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel WILLIAM HUTCHESON POË, C.B.; Mr. JOHN AUDLEY FREDERICK ASPINALL; and Mr. W. M. ACWORTH.

Mr. GEORGE E. SHANAHAN (Secretary).

Chairman.—I have a telegram from Mr. Sexton regretting his inability to attend in consequence of a rather important engagement.

Mr. GEORGE E. SHANAHAN, Assistant-Secretary, Board of Works, Ireland, examined by the CHAIRMAN.

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

17848. You are the Assistant Secretary of the Board of Works, Dublin?—Yes.

17848A. And we know you are Secretary to this Commission. You have been requested by the Commissioners of Public Works in Ireland to give evidence before us?—Yes.

17849. In what capacity?—In my capacity as an officer of the Department, and the evidence I have been asked to give is as to the unsatisfactory working of the Letterkenny to Burtonport railway since the opening of the line in March, 1903.

17850. Have complaints as to the working of that railway been made to your Department?—Yes; only a month or two after the opening complaints began to reach the Board as to the unsatisfactory working of the line, including late trains and serious delays to traffic, consequent on frequent engine failures, and from the evidence before them, the Board were satisfied that the real cause of the unsatisfactory working of the Burtonport engines was that they were seriously damaged by incompetent management and severe maltreatment at almost the very commencement of their working.

17851. What do you mean—serious mismanagement of the engines?—Serious mismanagement of the engines, and in connection with that, I may say that for a considerable time after the opening of the line, the company entrusted the engines to a series of drivers and firemen, many of whom were grossly incompetent, and several of whom had been previously dismissed from other railways for inefficiency and misconduct, and some had to be subsequently dismissed by the Lough Swilly Company.

17852. How did you get this information?—This information came to us in various ways. The Board had an engineer on the line at the time and had other officers in the district. In addition, the Board had information from various people resident in the district who were affected by the unsatisfactory working.

17853. Of course what you call the unsatisfactory working of the line involved necessary delay to the trains?—Serious delays.

17854. And, therefore, I suppose, the public were complaining?—The public were complaining, naturally.

17855. Did you ascertain any details as to what particular neglect on the part of the drivers caused these failures?—Yes. The Board had within the first twelve months information as to numerous instances of carelessness, neglect, and incompetency in the working of the engines, including the burning of fusible plugs (through neglect of feeding the boilers), excessive heating of parts, washing the boilers out when hot, gross inattention to cleaning, the use of inferior and unsuitable coal, &c., involving serious delays to trains and unsatisfactory working of the line generally.

17856. Have you got any specific instance that you can refer to with dates as to these irregularities?—Yes. I have a few selected instances here which I shall quote.

17857. Give us the first one you have got?—On the 6th June, 1903.

17858. One minute—when was the line opened?—On the 9th March, 1903. This was less than three months afterwards: "Engine No. 3 stopped between Kilmacrennan and Creeslough to bucket water into tanks, engine-driver having left Letterkenny after one hour's shunting without taking water."

17859. Was that officially brought under your notice?—That was officially brought under our notice.

17860. Have you the complaint there?—The complaint is available, and can be produced.

Instances of irregularities in 1903 from opening of Burtonport line.

17860A. *Mr. Acworth.*—Complaint by whom?—The matter was really brought under our attention by a locomotive engineer that we sent down to the district to investigate, and in his report he mentioned several specific instances of these irregularities that he considered quite proved the statement that the engines were being badly treated.

17861. *Chairman.*—That complaint of the 6th June, 1903, was brought under your notice by your locomotive engineer, who was down on the spot?—Quite so.

17862. Give us the next instance?—8th June, 1903. "Fusible plug burnt out of engine No. 4 at Creeslough. Train seriously delayed."

17863. These engines, I suppose, are the engines the Board supplied?—The engines that the Board supplied as part of the equipment for the Burtonport railway, paid for out of the grant.

17864. Anything else on the same day?—The same day "driver melted out fusible plugs of engine No. 3. Trains delayed."

17865. You do not know how long they were delayed, do you?—Well, the delays became so serious on the Burtonport Railway——

17866. No, no. Stick to the 8th June?—The delay must have been two or three hours.

17867. Have you got another instance?—10th June:—"Gates at level crossing, Trentagh, smashed by 1.50 p.m. down train—careless driving."

17868. Was it a clear day or a foggy day?—I am not sure as to the conditions of weather, but I think there is no doubt as to the carelessness that brought about the damage.

17869. Go on and give us another instance?—18th June:—"Traffic delayed seriously owing to driver failing to get up sufficient steam in engine due to inferior coal."

17870. On the same day you have another case?—"Engine of 12.10 p.m. from Derry had to be stopped several times near Lough Agher to get up steam. Engine was being worked (through inexperience of fireman) at 50 lbs. steam pressure."

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

17871. What is the next case?—19th June:—"Engine working 6.45 a.m. train had to be taken off at Barnes Gap and sent on to Creeslough for water, leaving the train standing on the line. This was due to the neglect of the driver in not filling his tanks."

Instances of irregularities in 1903 from opening of Burtonport line.

17873. What is the next case?—22nd June—the same month:—"Fusible plugs melted out of Engine No 2 owing to neglect of driver in not feeding the boiler. Train delayed 8 hours 40 minutes."

Mr. Acworth.—May I ask how does Mr. Shanahan know?—Who reports them?

Chairman.—It was explained that he had a locomotive man on the spot watching the working of this railway, and these complaints are extracted from his report.

Sources through which the Board of Works obtained information as to unsatisfactory working by Lough Swilly Company.

17874. *Mr. Acworth.*—Is that so in all cases?—Not in all cases. A railway locomotive engineer was sent down to investigate the cause of the serious continued breakdown of the engines, and he was there ascertaining the particulars as to the number of these irregularities, some of which had been previously reported to the Board through other sources. Though he did not remain in the district, he remained sufficiently long to investigate and report.

17875. As I understand, what the Board of Works is giving are reports, some of which rest on the authority of their own officials and some of which do not?—The reports can be produced; the documents are here.

17876. I am only asking, if they do not rest on the report of their own locomotive engineer on the spot, what do they rest on?—Well, as I said before, partly upon reports presented by locomotive experts (there were several whom they sent down); partly from a special agent that they appointed and located in the district and who is there to this day; partly on the reports of their railway engineer who was resident in the district, and partly as the result of complaints made by the public.

Lord Pirrie.—As long as the witness says he has proof that the statements he has made are correct, I think that is sufficient for us, Mr. Acworth.

17877. *Mr. Acworth.*—I am not expressing an opinion; I am merely anxious to understand the position?—I should explain that in every case these matters were reported to the company.

Instances of irregularities in working.

17878. *Chairman.*—I was coming to that. If you will kindly finish your list, then we will raise that question?—25th June:—"Engine No. 3, working 3.20 p.m. train, leaking so bad from tubes had to be sent to Londonderry for repairs. This failure caused by maltreatment of engine, which had been damaged on 8th idem by neglect of driver." 28th June:—"Level crossing gates smashed at Peg 118, Div. II." on the railway.

17880. That is two lots of gates smashed?—Yes. 8th August:—"6.45 train seriously delayed through leaking tubes in engine and use of inferior coal. Engine had to take water four times extra."

17881. I see you have jumped from June to August. Are there no complaints in July?—Only minor complaints. The complaints noted in my proof are all major. We take no notice, for the purpose of this Commission, of unimportant irregularities, many of which occurred of course.

17882. Give us the next case?—24th August:—"7.50 a.m. train was not started from Burtonport until 8.25 a.m. owing to delay in lighting up engine, which was despatched with only a pressure of 80 lbs. of steam (the minimum at which the vacuum brake could work)." Then on the 27th August—the same month—"Trains delayed through driver of 1.10 p.m. up train starting from Churchhill without train staff."

Report in each case sent to the working company.

17883. Each of these cases, I apprehend, was reported to the railway company as it occurred?—Yes, all were reported to them, as they were brought under the notice of the Board.

17884. And correspondence took place between the Board of Works and the railway company?—That is so.

17885. That was the Lough Swilly Company?—Yes; the Lough Swilly Company.

17886. And the communications were with that company?—Yes; they never denied these complaints; in some cases they acknowledged them; in others they offered an explanation, but in the majority of cases they took no notice.

17887. What have you got to say in reference to the engine men in particular?—Well, the Board thought it desirable to offer some evidence of the character of the drivers employed to show it was natural to expect that men of such standing would perpetrate these irregularities, therefore, a list has been prepared of a number of these drivers. I have extracted, and am ready to present, certain particulars, but, advisedly, I shall not mention names. The names, however, are available on a separate list if the Commission should require them. Take No. 1, for example. This man was formerly employed as a fireman on the Great Northern Railway, and was dismissed for drunkenness on 25th June, 1898. He was subsequently engaged by the Lough Swilly Company as driver on the Burtonport Extension, but was dismissed (June, 1903) for hooking off his engine and running to Creeslough for water, leaving a passenger train standing on an incline. He was afterwards re-employed (June, 1904) as fireman on the Carndonagh and Burtonport Railways, and retained despite the protests of the Board. He was reported for drunkenness and bad conduct in November, 1904, and transferred to the main line. He afterwards left the service. 2. This driver was dismissed by the Cavan and Leitrim Railway Company on 28th January, 1903, for carelessness in the management of his engine, and for other offences. Notwithstanding this he was engaged by the Lough Swilly Company for the Burtonport line. He was subsequently dismissed for burning Burtonport Engine No. 3. He was afterwards re-engaged at the time of the strike. On December 14th, 1903, he derailed Burtonport Engine No. 1 at Burtonport. He was supposed to be under the influence of drink on this occasion. He had frequently been cautioned for intemperance and furious driving, but was retained by the company. Subsequently (May,1904) he was dismissed for serious irregularities on the Letterkenny line. That is the record of No. 2.

Evidence as to the character of some of the engine men employed by the Lough Swilly Company on the Burtonport Railway.

17888. I see you have got a very long list?—I think there are nine altogether.

17889. I do not think it is necessary to give the whole nine, but is that a fair sample of what these men were?—In the first twelve months of the working of the line that is a fair sample. Perhaps I may make one or two selections—No. 7, for example.

17890. Just give us one other case?—No. 7. This man was taken on in November, 1903. Various irregularities occurred during his employment. He was dismissed on 27th January, 1904, for drunkenness and the theft of whiskey from the Goods store at Burtonport.

17891. Just give us No. 8?—No. 8. This man was also taken on in November, 1903, but was dismissed for incompetency and neglect on 23rd December, 1903.

17892. That was a man taken on during the strike?—Quite so. No. 6. This man graduated with the Lough Swilly Company. He was dismissed for leaving his train at Letterkenny and going up town for drink. He was subsequently re-engaged to drive on the Burtonport Extension. He afterwards went out on strike.

17893. I think that is sufficient. Did you call in any railway engineer to report on the working of this Burtonport Railway?—Two or three within the first few years of the working of the line—amongst others, the Locomotive Engineer of the Dublin and South-Eastern Railway, Mr. Cronin. He reported on the condition and working of the Burtonport engines in October, 1905, and he stated (and this is *apropos* of what I have just been remarking as to the character and qualifications of the drivers) that "The earlier engine men which the company had employed seemed to be the men who were the refuse of other lines, and these men could not be expected to be reliable and competent."

17894. Was any other railway man called in?—Yes, Mr. Basil Hope, the locomotive engineer of the Midland Great Western Railway.

17895. What date was he called in?—He reported in June, 1903, on the condition and working of these engines.

17896. That was the month when so many failures occurred that you refer to?—Yes. He stated that the serious delays and complete failures which had occurred on the Burtonport line during the previous four months had been caused "By shortness of water, shortness of steam, and heavy leakages of tubes, and melting of the fusible plugs in the fire-boxes." Summarising the case, he reports that "Briefly these

three heads are the causes of failure:—Firstly, the qualifications of the drivers; secondly, the mode of washing out the boilers, and, thirdly, the mode of coaling."

17897. No complaint in either case having been made as to the engines themselves?—No.

17898. As to the construction of the engines?—As to the construction or design of the engines—no.

17899. The whole of the failures being attributable to bad management on the part of the engine men?—Yes, bad management on the part of the engine men.

17900. When you got Mr. Hope's report in 1903 did you send a copy of that to the Lough Swilly Company?—Yes, the Board communicated to the Company on the 7th July following the substance of that report, and the Company were apparently impressed by the statements contained therein, as they subsequently, on 13th idem, informed the Board that they had "taken very serious notice of the failures of the Locomotive Department so far as they had been found to be of an avoidable nature."

17901. Was there any complaint up to that time from the Lough Swilly Company as to the faulty construction of those locomotives?—I do not think any specific complaints; generally, they had complained of the type of engine supplied.

17902. But was not that more with reference to the question of tank and tender?—Yes, tank and tender.

17903. Not as to the construction?—Not that I am aware of, as to the construction of the engines.

17904. In fact, the specification of the engines was approved by your locomotive engineer originally?—Yes, it was approved. I may say, however that, subsequently the company did object to the construction of the locomotives—subsequent to the dates of which I am speaking now.

17905. The Lough Swilly Company, I gather, stated that they had taken serious notice of the failures?—Yes.

17906. Did any improvement take place from that time?—Unfortunately, no, because from later reports it was found the irregularities had only been partially corrected, as further instances were brought under the Board's attention as to the ill-use of the engines, and they were advised that no machinery, however good, could withstand the treatment the locomotives had received.

17907. Did you call in another railway expert, with reference to the working and development of the railway?—Yes, the Board called in the services of Mr. Tatlow, the Manager of the Midland Great Western Railway.

17908. What was the date?—8th October, 1905. He made his report in November on the subject of the working——

17909. One minute; just tell us in your own words what were his instructions when he went down to that railway?—I am coming to that presently; I am quoting this paragraph now, as it bears upon the immediate case of the engines and the drivers. But later on I will refer to Mr. Tatlow's inquiry. At any rate, he stated in his report of November, 1905, that the Lough Swilly Company had informed him, "That since the line was opened in March, 1903, no less than thirteen drivers had been employed, ten having left the service, and of these ten, seven had been dismissed by the company, most of them for drink." I may say that he also reported, on this subject, that "The working of the locomotive department does not appear to have been in a satisfactory condition for some time past." He says, in September, 1904, "The then Locomotive Superintendent was made foreman at Letterkenny, and he afterwards resigned. A new Locomotive Superintendent was appointed in September, 1904, and he resigned in August, 1905. From that date the foreman has been in charge of the locomotive department, but I understand the company have now made a new appointment to the office."

17910. Where was the locomotive headquarters of the Lough Swilly Company?—Londonderry.

17911. How many locomotives do you suppose they had on their system?—I think, including the Burtonport engines, twelve. I am not quite sure, but I think that is the number.

Mr. Balfour Browne, K.C.—I do not know whether we might have access to these reports that Mr. Shanahan is quoting. Many of them, of course, are private documents, but now they are being made public, and I think the railway company might perhaps fairly be allowed to see the reports.

Chairman.—We will consider that.

Mr. Balfour Browne, K.C.—Thank you.

17912. *Chairman.*—In consequence of the complaints made of the working of this railway, did the Board of Works take any specific action in order to look after it?—They did; they appointed an agent to reside in the district, and to report details of irregularities. A complete record of these has been kept in the Department and is available.

Resident Agent appointed by the Board of Works to report on irregular working of the Burtonport line.

17913. I suppose in the judgment of the Board of Works he was a competent man, but was he a man of railway knowledge?—He was a railway man; he was got from the Great Northern of Ireland Railway through the kindness of Colonel Plews, the General Manager.

17914. Recommended from one of the large Irish railways?—Yes; Colonel Plews lent this officer to the Board of Works; he is in the service of the Department for as long as he may be required, and the understanding is that he may return to his position on the Great Northern Railway at any time.

17915. And is he still in the employ of the Board of Works?—He is still in the employ of the Board of Works and has his headquarters at Letterkenny, the terminus of the railway.

17916. Did you make any communication as to these complaints to the builders of the engines? First of all, tell us who were the builders?—The builders were Messrs. Andrew Barclay, Sons and Company, Limited, of Kilmarnock.

17917. Did you communicate with them?—Yes; the Department communicated with Messrs. Barclay in September, 1904, owing to these continued failures of the engines, and it was considered that something should be done to bring to an end the interminable series of mishaps that were bringing discredit on the line, and interfering with the development of the district, and the Board, for their own satisfaction, requested the contractors who built the Burtonport locomotives to send over a representative to examine and report as to any special repairs that might be considered desirable to improve the efficiency of the engines.

Report on the failures obtained by the Board from the builders of the engines in 1904.

17918. And did that representative report to the Board of Works?—He did. As the result of that examination, the contractors, on the report of their representative, submitted proposals for extensive repairs, to facilitate which they considered the provision of a new spare locomotive boiler was absolutely necessary.

Extensive repairs recommended and agreed to by Lough Swilly Company, but not carried out.

17919. Did you communicate that report to the Lough Swilly Company?—Yes. The company's officers were with the representative of the contractors on the spot, and heard his remarks and comments, and were on perfectly friendly terms with him After some time they formally agreed, or intimated, that they were prepared to adopt these proposals, and to have the repairs carried out and the new boiler supplied, and the Board believed this was going to be done.

17920. Was it done?—Notwithstanding this, however, nothing, except ordinary minor repairs, was done for fifteen months.

17921. What was the result of that?—The result was that during the following year, 1905, failures of these engines caused by leaking tubes, overheated parts, insufficient repairs, etc., were frequent, many serious delays to traffic being involved, and in several instances the cancellation of trains, which caused great inconvenience and dissatisfaction in the district served by the Burtonport line.

Consequent recurrence of the engine failures in 1905, and great inconvenience caused to the public.

17922. These irregularities brought, no doubt, several complaints from the public to the Board of Works?—A number of complaints from residents and local authorities.

17923. And those complaints you communicated to the Lough Swilly Company?—Yes, they were communicated to the company on receipt.

17924. And the Lough Swilly Company—what action did they take?—Well, it is very hard to say, because in many cases the Board's Reports were not replied to.

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

17925. Do you mean to say that sometimes the Lough Swilly Company did not even acknowledge the complaints made?—They always acknowledged by post-card—a printed card—there is no doubt that every letter was acknowledged in that way.

17926. By printed card?—A printed card of formal acknowledgment, but in many cases there was no further communication. What surprised the Board was the apparent indifference of the company to the inconvenience caused to the public by their prolonged failure to carry out their obligations to work the line efficiently.

Indifference of the Lough Swilly Company to the inconvenience caused to the public by inefficient working.

17927. But were the communications referred to sent to the secretary of the company?—They were sent to the secretary, of course.

17928. Had they a general manager at that time?—Oh, yes, and a very competent manager, too, in many respects.

17929. Now, we have got as far as the end of 1905. Was anything particular done by the Lough Swilly Company in 1906?—Yes; the company adopted a change of policy, because early in that year, some of the engines were thoroughly overhauled and renovated by British firms, and the reports received by the Board show that, on the whole, these locomotives have since worked satisfactorily. It should be explained, however, that the engines, after undergoing these extensive repairs, retained substantially all the features of their original design. In fact, the Board were advised that if these engines, after repair in the early part of 1906, had been sent to the Burtonport Railway and used for the purposes for which they were provided by the Treasury, the extension could have been worked much more satisfactorily than it has been. In proof of this, it may be stated that for the period of about six weeks in the early part of the present year, during which the tender engines were withdrawn from the extension and the Burtonport engines substituted, the trains, with one exception, were worked punctually, and the traffic arrangements were satisfactory. Then, I may add, that the company——

Engines thoroughly overhauled and renovated in 1906.

17930. Do you mean to say that in six weeks in the early part of this year, these engines worked satisfactorily?—On the Burtonport Line.

Satisfactory working of the tank engines on the Burtonport line for a period in 1906.

17931. Of course, they were supplied for the working of that railway?—Yes; they were supplied for the working of that railway. The railway between Letterkenny and Burtonport is a self-contained line—forty-nine and a half miles long.

17932. Did that satisfactory state of working continue?—I am going back to what happened in 1906.

17933. Yes; go back to 1906—I began the question at that date. Why were those engines withdrawn from the Burtonport Railway?—I was going to explain that the company, in opposition to the wishes of the Board, withdrew all these locomotives, except one, and replaced them by two new tender engines, which, except for two short periods each of a few weeks, ran through between Londonderry and Burtonport. The Burtonport engines were sent to other parts of the Lough Swilly system and were worked with satisfactory results. This arrangement at first worked smoothly, but after a short time, failures of engines, including the new locomotives, and mishaps to trains occurred from time to time on the Burtonport Extension, and the working of the line again gave rise to serious dissatisfaction and complaint.

17934. You are now dealing with the first half of 1906?—Yes.

Tank engines withdrawn by Company from Burtonport Railway and new tender engines substituted, with unsatisfactory results.

17935. Were there breakdowns and failures with these new engines in the early part of 1906?—Yes, and the other engines as well—one of the other engines as well—that had been working on the line. I have extracted a few instances by way of illustration. On the 24th of February——

17936. Stop a moment. On the 24th of February; you have got a case there; was that a breakdown of one of the new engines, or of one of the old ones?—One of the new engines.

17937. *Lord Pirrie.*—Were they engines from the old line, or new engines altogether, perfectly new?—The Lough Swilly Company bought two new tender engines without consultation with the Board of Works, and they placed these engines on the Burtonport Railway, and ran them through from Burtonport to Londonderry. They did not consult the Board, or tell them anything about it until the engines were actually delivered. They took away two Burtonport engines, and worked them on the other parts of the system.

17938. *Chairman.*—They took two tank engines away, and replaced them by two tender engines?—That is so.

17939. Did the tender engines work more satisfactorily than the tank engines for a time?—The tender engines worked more satisfactorily for a time.

17940. What was the result of the working of the first half of 1906?—The failures re-commenced and became rather frequent. I have selected a few instances for the first six months. On 24th February, the 12.30 p.m. down train, hauled by tender engine No. 11, arrived at Creeslough forty-eight minutes late, had to be detained 1 hour 12 minutes, waiting to cross the 3.20 p.m. up train from Burtonport. Arrived at Burtonport 2 hours 19 minutes late. On the 26th of the same month the 6.0 a.m. down train was delayed at Foxhall 1 hour through the breaking of a drawbar in tender engine No. 11. The train arrived at Burtonport 1 hour 25 minutes late, and the 7 a.m. up train from Burtonport in consequence arrived at Letterkenny 1 hour 40 minutes late. On the same day the 12.30 p.m. down train was delayed 41 minutes late waiting on engine "Richmond" to be got ready. It was further delayed 1 hour 15 minutes at Creeslough waiting to cross the 3.20 p.m. up train. It arrived at Burtonport 2 hours 9 minutes late. On the 27th the 5 p.m. down train arrived at Burtonport 5 hours 16 minutes late. The delay was caused by the bursting of a tube in Burtonport engine No. 3.

17941. That was a tank engine?—Yes, a tank engine, No. 3.

17942. There are two or three other cases you had better give?—On the 5th March the 5 p.m. down train was delayed at Letterkenny 1 hour 19 minutes, waiting on Burtonport engine No. 3, which had to have a leaking tube plugged. Wagons had to be detached to allow the train to proceed. On the 8th March, the 12.30 p.m. down train was delayed 2 hours 18 minutes at Letterkenny, to cross 1.15 p.m. up train. It arrived at Burtonport 3 hours 14 minutes late. The company stated that the delay was due to driver O'Malley refusing to work the train. On the 12th March the 6 a.m. down train was 2 hours 30 minutes late at Burtonport, due to the drawbar between the engine and tender of the new tender engine No. 12 giving way when passing Pennyburn. The engine had to be replaced, and great inconvenience was caused to passengers and mails. On the 21st March, the 12.30 p.m. down train was 5 hours late in arrival at Burtonport through the drawbar of new tender engine No. 11 giving way when the train had passed Gweedore station. Driver Scarlett was killed by the train passing over his body. On the 24th March, the 12.30 p.m. down train was delayed 2 hours and 28 minutes late in starting from Letterkenny through the leaking condition of Lough Swilly engine "Abbeyfoyle."

17943. There are several other instances, but it will be sufficient if you just give the date?—30th March.

17944. On the 30th March—just give the delay?—2 hours 24 minutes.

17945. Go on to the next?—12th June, there was a delay of 1 hour and a half to the 12.25 train, and there were very serious delays in this case to passengers, and a quantity of fish traffic was delayed nearly 5 hours, a portion of it missing the cross-Channel connection at Londonderry. On the 15th June there was a breakdown of the 12.25 p.m., through the injectors of the engine "Aberfoyle" refusing to work. These engines with names are Lough Swilly engines.

17946. Are they tender or tank?—Tank. The only tender engines on the system are the two new engines provided for the Burtonport Line.

17947. On the 4th July there is another case?—On the 4th July, the 12.25 p.m. down train arrived 2 hours and 9 minutes late.

17948. And on the 14th July?—The 12.25 p.m. down train, worked by tender engine No. 11, left Letterkenny 20 minutes late, and was delayed 1 hour and 15 minutes at Cresslough to cross the 3.25 p.m. up train. It arrived 2 hours and 22 minutes late at Burtonport.

17949. Those are what you call serious cases of delay?—Yes, I should call these serious cases of delay.

17950. Have you received many complaints of minor delays?—Yes. I was going to say that these instances of unsatisfactory working which I have quoted are given by way of illustration, and are only a few of hundreds of such mishaps, which are included in the Board's record, and I have here further extracts which I am prepared to read, if necessary. I have a list here of alarming dimensions. Perhaps I should say several hundreds instead of many hundreds, as being more correct.

17951. But surely they do not run into hundreds?—*This* is the record (*handing in a document*).

17952. You have not got a return of when the trains did arrive to time?—No; I think the return would be a short one—it would be prepared without much difficulty. I may again explain that full particulars of these items were, from time to time, communicated by the Board to the company. The Board were perfectly frank and open with the company in all these matters.

17953. Under the Railways (Ireland) Act of 1896, what powers have the Board of Works to make inquiry?—Under Section 7 of that Act, the Board are authorised to send down an engineer, or other competent person, to inquire into the condition, management, and development of any State-aided line.

17954. Did the Board of Works appoint anybody under that Section?—Yes. On the 14th September, 1905, they appointed Mr. Tatlow, the Manager of the Midland Great Western Railway, "to inspect and report" (these are the terms of the reference) "on the condition of the railway and the working, maintenance, and development of it, by the Lough Swilly Company." I referred to Mr. Tatlow's Report just a few minutes ago; it was the same inquiry and the same report.

17955. Was that Report communicated to the Lough Swilly Company?—It was not.

17956. It was a private Report?—I believe the Report is available.

17957. What do you mean by "available." Do you mean that you have got it?—No, I have not got it, but the representatives of the Board of Works can produce it, if required. It is here in this room.

17958. Could you tell us the principal points raised by Mr. Tatlow with reference to the working of the railway?—Well, I will quote a few extracts. The following are extracts from his Report of 11th November, 1905, previously referred to:—"A very serious condition exists in regard to the running of the trains. Owing to the frequent failures of the engines most extraordinary delays are constantly occurring. Complaints were made to me that this state of things commenced soon after the opening of the line, and had gradually grown worse. In order to obtain reliable information on the subject, I have had the running of each of the trains for a period of six weeks, ending the 30th September last, taken out from the Guards' journals, and the following is a summary of the late arrivals of each of the trains at their destinations during that period. No delays under thirty minutes are included."

17959. No delays under thirty minutes are included?—No; they are all over thirty minutes. This is the table which he gives:—

Number of Cases in which, during six weeks ending 30th September, 1905, Trains arrived at their Destinations—

Over 30 minutes late and not exceeding 1 hour.	Over 1 hour and not exceeding 2 hours late.	Over 2 hours late and not exceeding 3 hours.	Over 3 hours late and not exceeding 4 hours.	Over 4 hours late and not exceeding 5 hours.	Over 5 hours late and not exceeding 6 hours.	Over 6 hours late and not exceeding 7 hours.	Over 8 hours late and not exceeding 9 hours.	Over 13 hours late and not exceeding 14 hours.
25	11	6	6	4	1	1	1	1

17960. Can you give us the total number of trains?—That can be made up in a few minutes. There are three trains each way per day. Fifty-six trains for the period were over half an hour late.

17961. *Lord Pirrie.*—The number of trains that actually run?—Three per day; thirty-six per week.

17962. But you have far more than the total?—There would be 216 trains for the whole period, if there are three trains each way.

17963. *Chairman.*—We will take it in that way. You have given the figures?—Fifty-six. That is the number of trains I have quoted as being more than half an hour late.

17964. You have not taken into consideration any train less than thirty minutes late?—None less than thirty minutes late.

Percentage of Burtonport Railway trains arriving more than thirty minutes late at destinations for six weeks ending 30: 9: '05.

17965. In England we generally take a return of trains arriving three minutes late—or two minutes late in some cases?—Well, the condition of affairs was so bad on the Burtonport line that the investigator thought it better to regard less than thirty minutes as a negligible quantity. I may say the percentage is 25 roughly—the percentage of the trains actually run that were over half an hour late was 25 per cent., or one in four.

17966-7. You have not got the number of trains arriving to time, have you?—No, but these fifty-six trains I have mentioned as more than half an hour late, represent a percentage of 25 on the number of trains run.

Mr. Tatlow's opinion that the train delays are a source of public inconvenience and a bar to the development of the district.

17968. It goes without saying that this must have been a source of public inconvenience?—"The amount of public inconvenience caused by these delays" (this is Mr. Tatlow's phrase), "and their prejudicial effect on the development of the railway, can scarcely be overstated. It is needless to enlarge upon the subject, as the facts and figures speak for themselves. It is clear from these delays that the line is not efficiently worked," Then, he goes on to say about the locomotives:—"The railway is not efficiently developed, nor can it be, so long as the locomotives fail in their work, and the trains are subject to the excessive delays already mentioned. A train service, so lamentably irregular, must deter the public from travelling, and prevent the natural development not only of the passenger traffic, but also of the goods, fish, and live stock traffic. Fish traffic and live stock traffic, all of which is, of course, particularly susceptible of delay."

Temporary improved working constrains the Board of Works to refrain from taking action on Mr. Tatlow's report.

17969. What action did the Board of Works take on Mr. Tatlow's report?—In view of these statements the next step, according to the provision of the Act of 1896, would have been the presentation by the Board of a report to the Lord Lieutenant, on receipt of which the Lord Lieutenant in Council, after giving the persons an opportunity of being heard, might, if satisfied that the undertaking had not been efficiently worked, maintained, and developed, make an order appointing a manager or receiver of the undertaking for such time, and with such powers, as might be specified in the order. Whilst the report was still under consideration, however—that is Mr. Tatlow's report—a marked improvement took place in the working of the Burtonport Railway, which continued for some months, and the Board, in the hope that the improved working would continue, thought it better not to take the further steps which might have led to the appointment of a receiver, and the exclusion of the Lough Swilly Company from the management of the undertaking.

17970. In other words, there was such a change made in the working of the line that you did not take any action with reference to Mr. Tatlow's report?—No action; there was only one possible course of action which would have had the desired result.

17971. And that was a course of action which you did not take?—Which we did not take.

Memorial to the Board of Trade from the ratepayers in Burtonport district, but that Department refrain from taking action owing to improvement in the working.

17972. Had complaints gone also to the Board of Trade in reference to the working of this railway?—Yes; a memorial had been presented to the Board of Trade from the ratepayers in the district.

17973. Direct to the Board of Trade?—Yes, direct to the Board of Trade; and I was just going to explain that this period of improved working which I have referred to also led to the postponement of action by the Board of Trade on this memorial from certain ratepayers resident within the guaranteeing area, sent to that Department on 15th August, 1905, complaining of the unsatisfactory working of the Burtonport railway, and of the inconvenience caused to the public by the incessant train delays, and asking that the Board would hold an inquiry in reference thereto.

17974. The Board of Trade did not take any action

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

upon that, did they?—The Board of Trade took no action, because I believe, the Board of Works, in reply to an inquiry on the subject, mentioned that a period of improvement had set in, and also stated that they believed this period of improvement might continue, and that it would be only fair to give it a trial.

Improved working in 1906 not maintained, but irregularities less frequent and management now regarded as relatively fairly satisfactory.

17975. How long did that period of improvement to which you have referred continue?—Unfortunately, it did not continue beyond the early months of 1906, but the failures of engines and the mishaps to trains became less frequent and, on the whole, it may be said that the working of the line during last year was not nearly so inefficient as in the previous twelve months. During the present year, although several serious engine failures and train delays have occurred, matters have improved appreciably, and the management may be regarded at present as relatively fairly satisfactory.

Terms under which Lough Swilly Company work Letterkenny Railway.

17976. I think you are prepared to give us some information with reference to the Letterkenny railway which, of course, is worked by the Lough Swilly Company?—Yes.

17977. Tell us, first of all, how are they paid for working that line?—For working the Letterkenny line?

17978. Yes?—By a percentage of receipts.

17979. What is the percentage?—It is a sliding scale, dependent upon the extent of the traffic, and I think it runs from 61 to 67 per cent.

17980. That is near enough—about 60 per cent.?—Sixty-seven is the maximum, and I think it goes down to 61 or 62. The more the revenue, the less the percentage.

17981. It is worked on a percentage basis?—Yes, it is worked on a percentage basis.

17982. Not a fixed sum per mile?—Not a fixed sum per mile, no.

17983. We have had some evidence by Sir Henry Miller, you remember, representing the Londonderry Corporation. What have you to say on that subject?—The Board think it necessary to make one correction, at any rate. I am not deputed to go into the Letterkenny line specially, but I am only asked to correct one or two points. The questions are 17153, 17154, and 17155.

Correction of some points in Sir F. Henry Miller's evidence.

17984. Is not he the town clerk of Londonderry?—Yes, he is the town clerk of Londonderry. He gave evidence at the last sitting with regard to the guarantee and other matters relating to the Letterkenny line, the reason being that Londonderry city is responsible for the payment of a portion of the interest guaranteed on one of the Board's loans. There are two loans—there is a loan of £50,000, the repayment of which is dependent upon the surplus receipts, and there is a second loan of £35,000, the repayment of which is by an annuity—repayment of principal and interest—guaranteed by the city of Londonderry, and a portion of the county of Donegal. This annuity was for a period of forty years, terminating 1st November, 1923, and the city of Londonderry pays £1,150 per annum, and the guaranteeing area in Donegal £617, representing a total payment annually of £1,767.

17985. That is, no doubt, correcting what was a slip on the part of Sir Henry Miller?—No, that was explanatory. The point Sir Henry Miller mentioned was this, he said that a resolution which had been passed by a committee of the Joint Committee of the Londonderry Corporation and Chamber of Commerce, and the Donegal County Council in 1899 in favour of the remission of the tax payable by the guaranteeing area, and the sale of the line to the Lough Swilly Company was fully and absolutely representative of public opinion.

17986. Well, it appears that the statement is not quite correct?—No, we say the statement is quite inconsistent with the action subsequently taken by the local bodies concerned in the district served by the Letterkenny railway. On 13th June, 1900, the Donegal County Council, by resolution, rescinded that portion of their resolution of 19th May, 1899, which expressed approval of the sale of the line to the Lough Swilly Company.

17987. Was not there a memorial protesting against the sale?—There was, in July, 1900, a memorial protesting against the sale signed by the bishop, clergy, merchants, and prominent residents in the rural districts of Letterkenny, Dunfanaghy, and Milford, and adopted by the Letterkenny Rural and Urban District Councils in the previous month, was forwarded to the Board and the Treasury.

17988. You merely wished to correct the statement so as to remove any false impression that might rest on the Board of Works?—Yes, it might if allowed to stand, be calculated to induce the belief that the Treasury in declining to entertain the proposal for a sale of the line to the Lough Swilly Company, were acting in opposition to the wishes of the locality, whereas it would appear that the people of the district not only declined to support the proposal, but took steps to prevent its adoption. It is only necessary to add that in view of the very large expenditure of Government moneys under the Acts of 1889 and 1896, on the construction and equipment of 112 miles of railways in Donegal, amounting in the aggregate to about £660,000, equal to £5,893 per mile, the payments by the guaranteeing area in respect of the Letterkenny line may be regarded as comparatively unimportant. In connection with this expenditure only two small guarantees for the payment of interest on £5,000 each for the Burtonport and Carndonagh lines are a possible charge on the ratepayers, but no payment in respect of either has been, or is ever likely to be made, so that the full amount of £660,000 just mentioned, was, in effect, a free grant to the district.

17989. I think the county of Donegal has a great deal to thank you for?—Yes, so the Board think.

Examined by Mr. Acworth.

17990. I will just ask a question or two as to one point. First of all, I will ask you, from what point of view this comes before us?—This comes before the Commission on the application of the Board of Works, who found it necessary to notice and refute certain statements made against that Department in connection with the construction, equipment, and working of the Burtonport Railway.

17991. In other words, we may take it, so to speak, as a personal explanation that had to be made?—It was necessary because the evidence given on a former occasion by a gentleman representing the Chamber of Commerce in Londonderry, was printed and circulated; and, so far, it reflects on the Department until it comes to be corrected.

17992. I quite understand—we, of course, have not to judge—that is the point I was on. I do not know how far you are able to go into it. The reference to us is, by what methods the economic, efficient, and harmonious working of the Irish railways can best be secured. I think you will agree that this is not a specimen of economic, efficient, or harmonious working?—I am afraid it is necessary to assent to that.

17993. Are you in a position to go on and draw the moral?—I do not think I am asked to do that. I was requisitioned by my Department to make a certain statement; and I have done so, to the best of my ability.

17993A. Then I do not think I want to ask you anything more. If we are not to draw the moral, we clearly are not here to decide the merits of this particular dispute; and, therefore, I do not see that there is anything more for me to ask.

Examined by Mr. Aspinall.

17994. On this question which you have dealt with at length, it seems to have been a case in which the Government have supplied the railway and supplied the rolling stock?—That is so.

17995. And the people who are operating the railway are criticising?—That is so.

17996. It is a reversal of the ordinary conditions, where the company very often makes a railway and supplies the rolling stock, while the Board of Trade criticises?—That is so.

17997. Can you tell me, in connection with these serious complaints made with reference to the working of the trains, whether the railway, as a whole, is properly equipped with rolling stock in the sense that there is sufficient?—I think it is admitted that for the requirements of a three-train service the rolling stock as originally supplied was insufficient; but the rolling stock equipment was based upon the requirements of a two-train service, the advice having been given not only by experts employed especially for the purpose by the Board of Works, but by the Manager of the Lough Swilly Railway, who went into the matter at an early stage at the time when that line was being promoted.

17998. Yes; but I see there are a great many complaints about breakdowns, some of which are serious,

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

and some of which are very trifling indeed. Is it quite certain that there are sufficient locomotives upon the line to carry on the work and to leave a proper percentage under repair from time to time, so that they may be kept in an efficient condition?—Yes, for a two-train service, but not for a three-train service.

17999. I see. Then there are not sufficient?—Not sufficient for a three-train service.

18000. Who ought to supply those?—The working company who, among other things took over the obligation of permanently and efficiently working the line, and, of course, supplying such additional equipment and works as the development of the traffic or the necessities of the case might require from time to time.

18001. Can you tell me how many engines are under steam per day?—I really do not know; but I presume sufficient to work a three-train service.

18002. You see, taking your evidence, in 1905 you had a great many complaints about breakdowns; then, apparently, everything was put into good order, and you had fewer complaints of breakdowns, in consequence?—Yes, fewer complaints.

18003. And in 1906 the breakdowns began to increase in number, showing that the engines had again got into bad condition. It appears to me that the line is suffering from not having sufficient rolling stock, and that there is no time to repair the engines. Unless you can give the figures showing the number of miles run per engine per annum, it is impossible to tell whether they are or whether they are not short of rolling stock; can you give those figures?—No; but I think it is admitted that with the train service they provided they did not get sufficient engines. The same remark does not apply to the other rolling stock. I am speaking about the locomotives. Four locomotives were estimated as the necessary equipment for a two-train service; those were supplied, and after the line had been opened some time it was found that the traffic was very much greater than anybody had anticipated, and that instead of two trains it required three trains a day.

18004. Of course your other complaint about the staff is, that they pay a great deal more attention to whiskey than to work?—I am speaking now of the drivers employed for the first twelve months, at any rate, after the line was opened; since then I cannot say that the same remarks apply.

18005. I want to ask you a question about these smaller railways in Ireland getting their firemen from the larger railways. Is it not likely that those who would make efficient drivers would be the senior firemen? Have you ever heard of that at the Board of Works?—Yes; at least, I personally, have heard of engine-men from the smaller lines getting employment on the larger lines, and *vice versa*.

18006. My point is, why should they select drivers who had been dismissed, instead of taking on senior firemen who would naturally be promoted on the larger lines were additional staff required?—Well, the only explanation I ever heard was, that they get them at a cheaper rate of wages.

18007. So that all we have had this morning means that there is a serious dispute between the Board of Works, on the one hand, and the owning company, on the other?—Well, I am not prepared to admit that there is a serious dispute, because the Board of Works contend—and, of course, I am representing the Board of Works here in this matter—that they have done everything they undertook to do under the agreement between the Treasury, the Board of Works, and the Company; and that everything that has happened has arisen from the failure of the company, as a party to the agreement, to carry out their obligation. As you heard at the last sitting, the Board of Works went so far as to promise, without its being incumbent upon them to do so, that under certain conditions they would provide a certain sum to supply additional rolling stock. But, of course, the conditions have never been complied with and the grant was never made.

Examined by Colonel HUTCHESON POË.

18008. With regard to the question of rolling stock, would you turn to p. 84 of the Board of Trade Railway Returns—I think you will find there that the length of the whole system of the Lough Swilly is ninety-nine miles—100 miles, we may say?—Yes.

18009. And that the length of the Burtonport Extension is 49½ miles, or, roughly speaking, half the total distance?—Yes.

18010. The provision of rolling stock for the whole line is fifteen locomotives and 301 passenger and goods wagons. I do not know what it is worth, but it strikes me that if four locomotives, which, I think, you said the Board of Works provided, were actually provided for that length of line, it would be a small proportion, having regard to the fact that fifteen locomotives are in use for the whole system. In other words, eleven locomotives are provided for the remaining fifty miles?—It all depends upon the traffic and the power of the locomotives.

Rolling stock equipment of the Burtonport Railway supplied by Board of Works.

18011. Yes; but the traffic on the Burtonport line is rather heavier than the traffic on the other part, is it not?—I should say not. You see there are more trains on those other lines than on the Burtonport line.

18012. So much so as to account for that difference?—I should say so; I know there are at least four trains on the Carndonagh, eight or nine on the Lough Swilly Railway, and four on the Letterkenny line. In other words the Burtonport Extension has the smallest train service.

18013. In your opinion, four locomotives on the Burtonport fifty miles is a fair proportion as compared with eleven locomotives on the other fifty miles?—Yes, for the train service for which the rolling stock was originally estimated.

18014. With regard to the passenger and goods wagons, I think the figures work out rather favourably for the Burtonport?—Yes.

18015. There is a total of 301 wagons of different classes for the whole line, of which about fifty are allocated to the Burtonport Extension. And, if you take some of the other railways of proportionate gauge and length, the rolling stock would not work out so high in proportion as in the case of the Lough Swilly?—That is so.

18016. Taking the Clogher and West Clare, I think the number of passenger and goods wagons compare very favourably in the case of the Lough Swilly?—Yes it should be noted also that the Burtonport cariages have a capacity of 50 per cent. more than ordinary carriages; and the same remark applies to the wagons—thus the position is more favourable.

18017. That would be possibly more favourable still?—More favourable still.

18018. I think the provision of rolling stock was included in the free grant in respect of the Burtonport line?—It was.

18019. That free grant was £318,000, roughly speaking, was it not?—I think £313,000. £5,000 of the £318,000 was capital raised on the guarantee of the county.

18020. £313,000, then?—Yes.

18021. Out of that figure, have you any idea what amount was allocated to the provision of rolling stock?—I think, over £20,000.

Provision for rolling stock out of free grant for Burtonport line.

18022. With regard to the Carndonagh Extension, I think there was a specific sum named in the Treasury agreement for providing rolling stock—at least £10,000?—Yes; at least that amount.

18023. And the Carndonagh Extension is twenty miles in length, is it not?—18½ miles.

18024. In other words, you provided double the amount for rolling stock on the Burtonport Extension than was provided for the Carndonagh?—That is so.

Amount provided for rolling stock on Carndonagh line.

18025. And, taking into consideration that there is double the length on the Burtonport line, that is about a fair quantity?—Yes; of course, in the Carndonagh case the money spent on rolling stock was provided by the company and the amount was all that they were under an obligation to provide, but the Board of Works spent all that was required for rolling stock on the Burtonport line.

18026. Under that agreement it was incumbent on the Lough Swilly Company to provide such additional rolling stock as was required from time to time, to cope with the increased traffic on the system?—They had to supply everything additional required. Otherwise, of course, the company might be in a position to come to the Board of Works twenty years hence and say, "We want additional rolling stock for three new trains, because the traffic has grown enormously."

Working company's obligation as regards provision of additional rolling stock, sidings, &c., required by increase of traffic.

18027. I think we have evidence from Dr. Todd and other gentlemen that the great complaints of the inefficiency of the line were due in the first instance

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

to bad construction, scamping of the work, and insufficient rolling stock; the line was not constructed in such a manner as to be enabled to cope with the great traffic; but I am right I think in saying that under Section 12 of the Act the Lough Swilly Company undertook, after the opening of the line, to work it in such a manner as would develop the resources of the district, maintain the line in good order and repair, and supply additional sidings to meet increased traffic?—That is the wording of the section.

Working company's obligations as regards provision of additional rolling stock, sidings, &c., required by increase of traffic.

18028. So that when it was contended on behalf of the ratepayers, or of the public generally, that the sidings and accommodation generally were insufficient, it really was part and parcel of the Lough Swilly Company's undertaking to provide proper facilities to meet the traffic as it developed?—Quite so.

18029. Under the Order in Council, I think, there is provision made for a Baronial Director to be appointed by the contributing Barony, and also for two delegates?—That is so.

18030. Do you know if that provision has been acted upon?—Only to a small extent.

18030A. Has a Baronial Director been appointed?—Yes.

Provisions of Order in Council relating to Baronial Director; delegates and Board meetings, Burtonport Railway.

18031. I think we had evidence from Mr. Sweeney that he was one?—You had evidence from Mr. Sweeney that he had been appointed a Baronial Director; but that during two years he was summoned only to two meetings, that he attended only one meeting; and that he had had only one other summons in the whole period.

18032. I have it here, but I would rather take it from you, that the provisions in the Order in Council are that certain meetings were to be held by the company in respect of the Burtonport Extension?—There was no provision for any specific number of meetings; but there is provision for separate meetings, because the Order reads as follows:—Section 20—"The promoters shall hold separate Board meetings for the transaction of business relating to the railway and undertaking authorised by this Order as distinct from the existing railway and undertaking of the Promoters and the Promoters shall, prior to such separate Board meeting, give three days' notice at least to such director after his appointment has been notified to them, save as hereinbefore mentioned such director shall not be entitled to act upon the Board of the Promoters."

18033. I think, further than that, the Order in Council provides for the remuneration of the director, and it also contemplates that possibly as many as twelve meetings might be held in the course of a year?—That is so.

18034. Does it not seem very strange that when the Order in Council contemplates that a maximum of twelve meetings may be held, according to Mr. Sweeney's evidence there was never any meeting in two years, or, at any rate, he got no notice of any?—It is a stranger fact still that the first Baronial Director, Sir John Olphert, had not an opportunity of attending a single meeting.

18035. We have had it in evidence that he was refused admittance?—Yes; and Sir John Olphert wrote to the Board of Works complaining of it, and asking what was the remedy. I know this, because it is a matter of official knowledge. I think the Board took legal advice in the matter, and communicated the result to Sir John, but the remedy was a rather troublesome one and would have involved an action at law, which Sir John Olphert, I think, did not care to enter into; so that the matter was allowed to go by default at that time.

Baronial Director not summoned to Board meetings by Lough Swilly Company.

18036. *Lord Pirrie.*—You mean it does not make a meeting illegal if it is held, and a director, who is either bound under the Act to attend, or who can attend, is prevented, that does not make the meeting illegal?—But they did not hold a special meeting for the special business of the Burtonport line; they presumably discharged the business at the general meetings which were held for other purposes.

18037. *Colonel Hutcheson Poë.*—It was contemplated that they might hold twelve meetings in a year; and, so far as we know, they only held a meeting once in two years?—Yes.

18038. Do you know if either of the baronial delegates attended any of the meetings of the company which they were entitled to do?—I am not aware that any baronial delegate ever attended.

18039. Was any action taken—I believe Mr. Sweeney gave evidence to the effect that representations were made to the Board of Works and, I understood also, to the Board of Trade, that he had been refused admittance, or that he had got no notice of the meetings, and that beyond writing to the railway company nothing further was done?—Yes; I think the Board of Works felt that they, as a department, could not interfere directly to preserve the rights of an individual who was acting as a representative of the local authority; in other words, it was for the local authority, or the representative of the local authority, to have taken action. The Board of Works got all the advice it was possible to get, and they communicated that advice not only to Sir John Olphert, but to Mr. Sweeney.

18040. I think reference was made by a gentleman who gave evidence before us that on several occasions representations were made to the Board of Works, and also to the Board of Trade, that they should hold an inquiry into these complaints; and I think Dr. Todd stated that those representations had reference to an inquiry being held under section 21 of the Treasury agreement, which, as a matter of fact, I believe does not apply except in the case of disputes arising with the engineer of the company as to the plans and specifications during the time of construction. Is not that so—section 20, or section 21?—Yes; there were two inquiries asked for—it is as well to keep the two matters distinct. The ratepayers presented a memorial to the Board of Trade under the section of the Order in Council, which authorises twenty or more to do so. That document was treated in the usual way by that Board. And the reason why action was not subsequently taken was that the Board of Works reported officially to the Board of Trade that the improvement which had set in might be given a fair trial to see if it would become permanent. The other application was for the appointment of an arbitrator for the settlement of disputes while the line was in course of construction.

18041. That could only have been held under section 21 of the agreement?—Yes, and had nothing to do with the ratepayers.

18042. That could only have been held during the actual construction of the line, and not three or four years afterwards?—Yes.

18043. Dr. Todd in his evidence distinctly stated that the different representations and resolutions contemplated action under that particular section, and not under section 24, which was the ratepayers' section?—I think if that was said it was wrong, because the Board of Trade, I think, through their officers, could show that the memorial presented to them was from a certain number of ratepayers, and it was presented under that section of the Order in Council which authorises the ratepayers to intervene.

18044. Then it was, I suppose, a mistake on the part of the Board of Trade, because Dr. Todd said that the reason why they did not apply for a Board of Trade Inquiry was that, in the event of any default, the liability would fall on the Lough Swilly Company?—Yes, that was certainly the intention, and it was the very strong desire of the ratepayers, as far as I remember the circumstances, that the Lough Swilly Company should be forced to carry out their obligations, and that the Board of Trade might assist.

18045. In reference to these numerous complaints from year to year, did the Board of Works never contemplate inviting the Board of Trade to hold an inquiry, and practically urge upon them the necessity for holding an independent inquiry. The Board of Works were naturally implicated in this dispute, and they could not hold an absolutely independent inquiry; and it is rather strange if they never urged upon the Board of Trade to hold such an inquiry, which you say had been requested by the ratepayers, and which, probably, if it had been held, might have cleared up all these differences?—I may say at once that the Board of Works were animated by the fairest possible ideas after this line was opened. The feeling was this: Here is a new railway; naturally, mistakes will be made in its management; the company which is managing this line is a very small second or third-rate company; they have had no experience of working a big line; let us give them time to develop and to make their management more perfect. And I think it was with that desire that the Board of Works, for a considerable time after the

line was opened, did nothing beyond communicating particulars of these irregularities from time to time to the company, and asking them to prevent their recurrence. Then, as matters got very much worse, it was found that something more drastic was necessary; and about that time the ratepayers became very impatient. They had been pouring in complaints to the Board of Works, and ultimately they took action and sent a memorial to the Board of Trade. But the reason for the abstention of the Board in the beginning was that they were desirous of giving the company every possible opportunity.

18046. I quite understand that; but, after those engines were put into repair, and they did their work for a time, and then went back again, do you not think it would have been advisable that your Board should have asked the Board of Trade to hold an inquiry into the whole of the matters in connection with this dispute between the Board of Works and the Lough Swilly Company—do you not think it would have been desirable to institute an inquiry which would have been satisfactory to the Board of Works and also to the ratepayers?—I am quite sure from the evidence we have had that the Board of Works were very lenient in the matter, and refrained from exercising the powers which they might have exercised; but I should have thought it would have been desirable for their own sake that the Board of Trade, whose assistance had been invoked, and who had been asked to make inquiry, should have gone fully into the whole matter?—I think that at the last sittings of the Commission the engineer of the Board gave explanations on that point. The feeling of the Board was that, although complaints were serious and not infrequent in 1906, they were not nearly so bad or so numerous as they had been in previous years, and that while for a week or two inefficiency would supervene, still there would follow a period of fairly satisfactory working; and it was hoped that in the end things would assume a more satisfactory complexion, and that an inquiry would be unnecessary.

18047. Is the only matter as regards finance or money transactions between the Board of Works and the railway company that question of a couple of thousands of pounds balance due to the company—are there no other outstanding matters?—The only outstanding matters I am aware of are some disputed items with reference to promotion expenses which the railway company have not satisfactorily vouched up to the present moment.

18048. What does that amount to?—Well, some hundreds in each case—I think it is £1,400 in one case.

18049. Altogether, a matter of some £4,000 or £5,000 probably?—Yes, something like £3,000 or £4,000. Then, of course, there was a big claim the company made——

18050. We have had all that—I do not wish to ask about it. But that, to my mind, only enforces the argument I put before you, that, with a view to clearing up the balance outstanding, it might have been desirable for some independent tribunal to adjudicate between you. Now, with reference to the Letterkenny line, I think there is evidence before us that that line, and the receipts of that line, would be very seriously affected by the opening of the Strabane and Letterkenny section, and that the construction of that line was made a strong point for asking that some relief should be given to the contributing area, in respect of the £35,000 mortgage on which they had been paying a high rate of interest for the last twenty-four years. Was that not so—that, in view of the Strabane line, they considered they would be seriously prejudiced thereby, and that gave them good ground for expecting relief?—Yes, that is so.

18051. Is it not a fact that when that Bill was before the House of Commons in 1903 Mr. Wyndham, the then Chief Secretary, appeared in support of it?—I think it was in the following session, 1904, that he did so. I happened to be present, and I heard his evidence.

18052. And he admitted that the Treasury would be in all probability the losers. I think it appears in the Board of Works Returns, and that he admitted that the Letterkenny line would suffer by the opening of the Strabane line?—To some extent.

18053. To some extent; but that the interests of the whole county, in his opinion, counterbalanced any loss that might be sustained?—That was his evidence.

18054. Is it not a fair argument, that if in the opinion of the Chief Secretary, the responsible Minister to the British Government, the Treasury could incur a loss in the interests of the whole county; that it is rather hard to expect the contributing area, which would also be involved in loss by that Extension, should not be afforded some relief?—Yes, it is.

18055. And I think it is a fact—we have it in evidence—that of that principal amount of £35,000, there is a matter of something like £22,000 outstanding?—Yes, I think so.

18056. The old debt was £50,000 in respect of the first mortgage; £6,000 in respect of arrears of interest on that mortgage, and £22,000 in respect of the principal of the second mortgage; in other words, £78,000?—Yes, the arrears of interest up to March last amounted to £5,567.

18057. I think they have already paid in respect of the second loan something like £40,000 in interest and principal?—Yes; I was just going to add as regards a former question, that the Burtonport Line was never contemplated when these loan arrangements for the Letterkenny Line were made; there was no question of this line at that time.

18058. But I think it is also correct to say that the people of Donegal and Derry joined in that guarantee on the understanding that they would get the benefit of any future extensions in the Burtonport direction?—At the same time it must be admitted that any possible loss would be more than compensated for by the benefit of increased means of communication.

18059. But their contention was that their traffic, instead of going by the Lough Swilly main system, would go off at Letterkenny and go by the Great Northern and Midland system?—A portion of it.

18060. And, so far as the receipts for the last four or five years having shown an increase on the Letterkenny Line, the probability would be that there would be a loss and a liability to still further decrease?—Well, I think there is a sufficient margin to admit of diversion of traffic. The receipts have been so satisfactory for some time past that I think if there were a considerable diversion of traffic to the new line, there would be still a surplus. Of course, that is only approximate.

18061. That is a matter of conjecture?—A matter of conjecture.

18062. The interest these people have been paying has been 4 per cent.?—Yes.

18063. I presume the Treasury can borrow money at 3½ or 3 per cent.?—Yes, I think so.

18064. If the interest had been computed at 3½ or 3 per cent., I suppose that at the present time the whole of the principal would have been paid off?—Not the whole of the principal.

18065. The whole of the principal of the second mortgage, which is all they are liable for. The first mortgage is irredeemable?—That is so.

18066. Does not that constitute a further argument for the Board of Works approaching the Treasury—that these people are practically paying interest twice over?—Yes, but, as you are aware, the rate of interest for such loans is settled by the Act of 1 and 2 William, cap. 33, and the Board of Works and the Treasury are helpless without further legislation.

18067. But by a subsequent Act the interest is reduced very considerably on other undertakings which offer no better security than a railway?—Yes.

18068. I only put it in this way—would it not be fair to approach the Treasury, having regard to the fact that possibly the line will not be able to pay interest on the loan after the opening of the Strabane section. With regard to the evidence of Sir Henry Miller and the Joint Committee which waited on the Treasury with a view to their selling the Letterkenny Line, have you any idea as to what price, or whether any price was ever named as the consideration for which that line was to be sold?—I have not the figures before me, but proposals were made.

18069. I have them; but perhaps you will correct me if I am wrong. I understand that a price was to be fixed by railway experts arbitrating, or failing that, the Lough Swilly Company were prepared to give £70,000?—I think those were the figures.

18070. £70,000 in full discharge of all liabilities?—I am not sure that that proposal was ever put forward by the company; but I think it was put forward

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

by Dr. Todd, and probably he was acting for the company.

18071. I think he said that the company was prepared to pay that sum if a price were not fixed by arbitration?—Yes.

18072. Does that not seem to be a fair condition?—Well, the opinion of the district was certainly opposed to it, as I have quoted in my direct evidence.

18073. The Joint Deputation was in the early part of 1899; and this resolution was not till the year afterwards, 13th June, 1900; so it is not contradicted, and I do not think you would wish to contradict it, that in 1899 they joined these other bodies in approaching the Treasury for a sale of the line, and that the year afterwards they rescinded the resolution—why, I do not know?—Of course, I might explain that this matter has been thoroughly considered by their Lordships; and that the promoters of this proposal sent a deputation to the Treasury, and that the Treasury had the fullest possible information on the subject direct from the promoters; and, under all the circumstances, their Lordships did not see their way to approve of the scheme.

Proposal of the Lough Swilly Railway to purchase the Letterkenny line.

18074. Probably if at that time this Strabane Extension had been under consideration it would have affected their decision?—I do not think it had anything to do with their decision, or, at any rate, not very much.

18075. No, because it was not contemplated. But, do you not think, if it had been in contemplation, and that Letterkenny was seriously threatened, the Treasury would have been glad to accept that offer?—I do not think so; the reply of the Treasury was so positive that I do not think there can be anything like a feeling of uncertainty as to what was in the minds of their Lordships.

Examined by Lord PIARIE.

18076. You said, in answer to the Chairman, that the Manager was a most competent man in connection with the Lough Swilly Railway; that he was really working this line; am I right in that?—Perfectly right.

18077. You used the words "very competent"; in that case, who do you blame for all the failures you have read out to us, one after the other, which seem to have occurred almost daily, and which show that one-fourth of the trains of the entire service are over half an hour late?—I am afraid the Directors have to accept the responsibility for that. I should be very sorry to blame the Manager; I know the Manager personally, and I have a very high opinion of him. I believe that if the Manager had proper appliances, and everything else to assist him, and if he were given a free hand, which perhaps he has not had up to the present, things might be very much better.

Question of the responsibility of the Directors of the Lough Swilly Railway for the unsatisfactory working of the Burtonport Railway.

18078. It is the Directors you blame for that?—Certainly.

18079. That being the case, do you consider it the Directors' duty to engage drivers and firemen?—Well, there are Directors and Directors—usually speaking, Directors do not interfere in the minutiæ of railway management, but there are exceptions.

18080. In this particular case you consider it was the duty of the Directors to see that properly competent men were employed, and not that of the Manager?—I do not think it was their duty, so much as their action.

18081. They should not have interfered with the Manager, you think?—Certainly not.

18082. In other words, you say that the Directors put forward certain men, and that the Manager had to employ them?—I do not know who put forward the men; but I mean to say that the Directors were responsible for the employment of the men at small wages.

18083. The Board of Works felt the very great seriousness of these cases, and they sent a man down to represent them, the man whom you call an agent?—Yes.

18084. Now, was that agent an engineer? Was he a thoroughly practical engine-driver himself, or, was he competent to see the causes of the failures that we have been alluding to?—This man is a good all-round railwayman; he was an agent of the Great Northern Railway—agent and stationmaster; and, as such, his experience brought him into contact with all conditions of railway service. Among other things, I daresay he would be expected to have at least as much mechanical knowledge as would enable him to say why an engine broke down. I think any ordinary railwayman could make a happy guess at that.

The qualifications and experience of the Board of Works' Agent on the Burtonport and Letterkenny Railways.

18085. Do you really think that an ordinary stationmaster or agent, who has been collecting, or trying to collect goods, has any idea of the cause of a failure of a locomotive, whether it has failed from want of water or too much water, or from having water with lime in it, and so on?—To a certain extent, yes. You remember, of course, what I said before—that Col. Plews recommended this man as being the best man to assist the Board of Works in this emergency.

18086. In every one of your instances, from 6th June, there is not a single complaint put forward by the Board of Works of want of wagons, bad stowage of goods, breakage of goods, or incompetency, of the stationmaster or their agent. Every complaint you have put before the Commission to-day has been of such faults as shortness of water in the engine, and the fusible plugs being burnt out. Is it not better to burn the fusible plugs out than to have an explosion, and perhaps kill a lot of people?—It is a fortunate thing in such cases that the plug does fuse and burn; otherwise you might have explosions; but, what are we to say about the railwayman who would permit the water in his engine to become so low as to allow of this fusing taking place?

18087. Have you any report from the Board of Works as to the distance from one station to another where the engine gets water—that the engine can go the full distance without taking in a fresh supply?—I am not an engineer, but I am able to answer that question in this form; the arrangements for the tank capacity in the engines, and the number of watering places on the line, were thoroughly gone into before it was opened, and proper provision was made for the requirements of the traffic.

18088. The evidence you have given to-day rather impresses me that the stoppages for taking in a supply of water, or the irregularities of the water, was the cause of nearly every one of the failures?—Because of the omission of the engine-men.

18089. Well, because of the incompetence of the man who is looking after them, and that, you say, is the Director?—I say that whoever employs such men and whoever retains such men after they have given evidence of their incompetency, surely must admit some responsibility for having kept such men in the service.

18090. The idea your evidence has conveyed to my mind is, that you have tried to make a stationmaster, whom you call an agent, report to you, and keep the Board of Works posted up in a duty that he is not competent to perform. I forget the name of the gentleman from the Board of Works who gave evidence some months ago, but he said that you had no railway man in connection with the Board of Works competent to report to you, and that you had to engage outside men to report?—We do; and those instances you refer to are taken from the reports of technical men who were specially employed by the Board. So that, so far as those instances are concerned, the particulars given are correct. As regards the competency of our agent in the district, of course he gets a good deal of his information from the Company's representatives and their officials; and if a train breaks down and if he does not know just what causes it he asks the driver or the guard or the fireman, or somebody else, and gets the information in that way. That goes to the Board of Works, and is communicated to the company. If it is wrong the company have every facility for contradicting it in every case which the Board reports.

18091. From this account of yours, he sees a train just going to start, and he sees that the engine which is going to take the train has a certain number of leaky tubes, which you have referred to over and over again?—Yes.

18092. Does not that show gross negligence on the part of the agent in allowing the train to start with leaky tubes?—The agent has no power to interfere one way or the other in the management of the line, any more than the man in the street. He is the representative of the Board of Works, and he reports to the Board what he sees and hears, and of course what he hears he verifies as far as he can; but he is not competent to speak to an official and say, you must do so and so, or you must not do so

and so. He simply has to report to the Board of Works what he believes to be irregularities in working.

18093. That is not the question I intended to put to you. Does the agent ever report to the Board of Works that an engine on arriving from a journey has such a number of leaky tubes that he thinks it is impossible for the engine to get to the end of its journey without being short of water?—I believe there have been instances where reports of that nature were made; and where the driver had no other resource or alternative except to proceed with his train as far as his engine would permit. And, speaking from memory—I have not them before me—I believe there are instances in the record kept by the Board, of drivers, after such protest, having to stop their train, block the line, and wait for assistance.

18094. All the cases you have given me lead me to believe that the engines were short of water because they started with leaky tubes, and therefore could not get on?—Or an insufficient supply.

18095. I am assuming that a competent manager would not allow an engine to start without sufficient water in it?—I quoted the case of a driver who shunted his engine for an hour on the Letterkenny line and did not renew the water.

18096. I need not dwell longer on that; but I do not know why the Board of Works sent a station master. Now, every single complaint that has been made, from the very first year you began to the end, is entirely a case of engines, and not a case of anything else; and therefore the man whom I think the Board of Works should have sent down should have been the most competent man they could have found, so as to point out what was wrong?—May I explain, because I am afraid your lordship is a little in error. There are hundreds of other irregularities, and those have been withheld from you simply because the Board did not consider it necessary to trouble the Commission with minor complaints that will occur on any undertaking, no matter how well managed. Further, these expert matters that you speak of with regard to engines are really not matters for the manager but for the locomotive superintendent of the line. Of course the Board of Works send down, as you have heard, locomotive engineers as experts to go into these matters and report to them; they do not consider it necessary to keep a locomotive expert on the ground always at enormous expense. They thought it quite sufficient to have reliable information which could be gleaned even by a non-technical person of experience in railway matters and engines, such as we have always found this agent of ours to be—a very capable man.

18097. Have they facilities along the line for watering an engine?—There are watering places, certainly.

18098. At various stations along the line?—Yes, at various stations along the line. The engineer gave particulars on that subject at the last sitting, and it is really a matter for him, and not for me.

18099. I understand that the number of trains was a short time ago approved by the Board of Works?—It was, and by the investigators who investigated the prospects of the undertaking at an early stage before it was promoted.

18100. Then at that stage the three trains a day were arranged, were they?—No, two trains.

18101. Were originally arranged?—Yes, originally arranged.

18102. Then, after that, the Board of Works gave permission for a third train to be started?—Of course it really was not for the Board of Works to interfere; they approved of the proposed time-table arrangements for the third train.

18103. In that case, why did not the Board of Works supply an extra engine or two engines which you say were necessary to work the line without injury to the locomotives?—Because there is a certain contract between the Treasury, the Board of Works, and the company, under which the company are bound to provide all additional works and equipment as might be necessary to meet the requirements of additional traffic induced by the development of the undertaking.

18104. All they were bound to do with the stock you supplied them was two trains a day; and if the company had been working only the two trains a day in all probability there would have been no failures?—Quite so. It is not inconceivable that there might be six trains a day, in which case the company would have to provide such equipment and works as might be necessary.

18105. The county gives a guarantee of interest on capital to the extent of £5,000?—That is so.

18106. Could not the county have refused to pay that interest when their director was not allowed to attend the meetings?—I am afraid not. The method of paying the interest is one appointed by statute. Arbitrators have to sit, and having examined the accounts and satisfied themselves as to the actual receipts and expenditure of the undertaking, they issue what they call an award; and it is on that award, which is sent to the Secretary of the County Council, that the Council have to meet the deficit, whatever it may be, and the payment is made. As a matter of fact the arbitrators were never called together for that purpose.

18107. Once they get that notification, that there is so much money to pay owing to the shortness of money, have the County Council not written to say, we will not pay until our representative is allowed to attend the Board meetings?—They have no alternative I am afraid. They can take other steps.

Method of ascertaining the amount payable by the Baronies under guarantee.

18108. That would mean that there would have to be an action at law taken by the Lough Swilly Company?—Quite so.

18109. Did you advise them to take that method?—There has been no such opportunity, inasmuch as there has never been a deficit; therefore the arbitrators never met.

Re-examined by Mr. Acworth.

The equity of the working company's claim to be supplied with additional rolling stock for the Burtonport Railway.

18110. May I ask one question arising out of this: The effect of the bargain, as I understand it, was that you were to hand over to the company a line fully equipped and ready for traffic?—Yes.

18111. The company, as the traffic grew, were to supply the new rolling stock and so on to deal with it?—Yes.

18112. How soon after the opening was this third train necessary?—Within a few months.

18113. That is what I wanted to put. An undertaking by the company to supply rolling stock for the gradual development of traffic does not seem to me quite the same thing as an undertaking to supply rolling stock which was practically immediately necessary; do you not think they had an equitable claim, when it turned out that your rolling stock was insufficient, that you should make it up to what was required from practically the opening?—I think you have evidence to show that the Board recognised a certain moral responsibility in the matter, because the Treasury, on the representations of the Board, some six months after the line was opened, authorised the expenditure of a certain sum of money for the provision of additional rollings stock contingent upon the settlement of all differences between the Board and the company; that was made a distinct condition by their Lordships. That condition has never been complied with; and therefore the money has never been spent. But if to-morrow—I am not speaking for the Board of Works in this respect—the condition were met in a proper spirit——

18114. I do not know that I want to go into a very complicated question which I have no right to decide as to how far the Treasury's distinct condition is reasonable; if you say the Treasury recognised that they have an equitable if not a legal claim to an amount of rolling stock that you have not hitherto furnished?—Their Lordships never intimated that; but I say again that they were willing to have all matters in dispute with the company settled amicably, and consequent on that to supply some additional rolling stock equipment.

18115. *Lord Pirrie.*—All claims, you mean?—Yes.

18116. *Mr. Acworth.*—As far as I know, the Treasury may have been willing that any reasonable claim should be admitted; but could you not go so far as to admit that they have an equitable claim to have so much rolling stock as was necessary?—I am afraid not.

Mr. Acworth.—Very well. I understand your attitude.

The Board of Works' advisers on the question of equipment of the Burtonport line.

18117. *Chairman.*—Who advised the Board of Works as to the number of engines?—I think the last expert who advised the Board was Colonel Plews, the General Manager of the Great Northern Railway.

18118. Did Colonel Plews advise the Board of Works that only two trains would be necessary?—Colonel Plews reported on the sufficiency of the rolling stock for a two train service.

18119. Who suggested the two train service?—It had been settled in the early stages of the promotion of this line. The investigators were Mr. Tatlow, of

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

the Midland Great Western Railway, and Mr. Roberts, the chief engineer of the Highland Railway. These two gentlemen held the inquiry necessary before the scheme could be promoted before the Grand Jury, and took evidence. Among others they took evidence from the then manager of the Lough Swilly line. He said that two trains each way would be sufficient for the requirements of the traffic, and he made a demand for rolling stock based upon that service. The demand he made was larger, of course——

Estimate for rolling stock based on a service of two trains each way made by Manager of working company at the preliminary inquiry when Burtonport line was being promoted.

18120. Whose?—The demand of the manager of the line. At the inquiry the number of vehicles he thought necessary for two trains was larger than was subsequently given for that service, but the main point is that, he said, two trains would be sufficient for the purposes of the traffic.

18121. Then the Board of Works asked Colonel Plews to advise you as to the quantity of rolling stock necessary for the two trains service?—Yes.

18122. Was any provision made for a spare engine?—Yes.

18123. How many?—It was considered that four engines would work the traffic—I am speaking now of the working of the Burtonport Railway 49½ miles—that two engines could work the two trains— one each way, leaving two in reserve.

18124. How many engines were supplied altogether?—Four—two engines to work the two trains, one engine to work special trains, and one to lie up.

18125. That was Colonel Plews' report, was it?—I am not certain that it was Colonel Plews' segregation of the four, but it was an arrangement made at an early stage that the four could be apportioned in that way.

18126. Immediately afterwards it was found that 50 per cent. more train accommodation had to be given?—Shortly afterwards—yes.

18127. Surely the supply of rolling stock for that service was a capital charge?—There was no capital available.

18128. I mean it was not a revenue charge?—No, of course not, but it was a charge that they, the Lough Swilly Company, were called upon to provide for.

Qualified consent of the Board of Works to supply additional rolling stock explained.

18129. At any rate the Board of Works agreed to supply the additional rolling stock contingent upon certain claims which the company had made for incomplete works being satisfactorily settled?—All claims. I may explain that there were a number of matters in dispute arising out of the accounts. The first set of accounts for the Burtonport line which we examined disclosed that in apportioning charges and in other words regulating the accounts to show what profits had been made, some of the items had been dealt with in a manner which the Board thought was irregular. Consequently the Board took up these matters with the Lough Swilly Company, and asked them to re-adjust the accounts in order that the surplus might be increased, but the company refused. What was in the minds of the Board, to a large extent, was the question of these accounts, and then there was the claim for incomplete works, which was, of course, a very unimportant matter at that stage. The engineer explained all about that at the last sittings.

Counsel's explanations of the working company's position as regards the matters in dispute with the Board of Works.

Mr. Vesey Knox, K.C.—Perhaps you will allow me to say that I have observed what my learned friend, Mr. Healy, says on page 16 of the Minutes of the 22nd April, in Dublin, and my instructions are the same as his. That is to say, our only desire in this matter is to give any little assistance we can in laying the facts before the Commission, and we recognise that it is a matter rather apart and aside from the general question of the management of the railways in Ireland, and one which is rather difficult perhaps for this Commission to adjudicate upon. I am instructed to say that the railway company are and always have been ready to refer all these questions to any impartial tribunal and they are only too anxious that this should be so referred. That has been their position all through. They are quite willing that everything should be referred to one arbitrator or tribunal with a view of settling everything. But there are two points—perhaps you will allow me to mention—that seem to bear on questions we have been discussing to-day. Many of the details would have obviously to be dealt with by the evidence I believe you are going to be good enough to hear on Wednesday. For the assistance of the Commissioners I might mention that of these two points the first is that 21 miles from Letterkenny there is no crossing place on this railway. It is a single line, without a crossing place for 21 miles from Letterkenny; nor was there, when it was opened, a watering station on this 21 miles.

Lord Pirrie.—That we have had evidence of to-day Mr. Shanahan says there are watering places all along the line.

Mr. Vesey Knox, K.C.—One may have been put up since, but when the line was opened, not only were there no crossing places, but there was no watering station for 21 miles from Letterkenny. I thought I might mention that fact so that the Commission might bear it in mind in connection with the complaints that have arisen. Another fact I should like to put in at this stage is a letter which was, I understand, addressed to the Board of Works on the 27th July, 1901, by Mr. Malcolm, who was the locomotive engineer of the Belfast and Northern Counties Railway, and who is still occupying the same position under the Midland Railway in Belfast. And it does seem to show that the type of these engines was objected to from the very beginning. Perhaps I might hand that letter in.

Chairman.—Would it not be better to defer any further remarks until you call witnesses? Either deal with it now, or defer it to Wednesday. I think, having heard the evidence, you ought to have a day's interval to consider the evidence of Mr. Shanahan.

Mr. Vesey Knox, K.C.—I am quite willing to fall in with your suggestion, sir.

Chairman.—Unless you wish immediately to correct something of importance. It is, of course, quite at your discretion, Mr. Knox—do just as you like.

Mr. Vesey Knox, K.C.—I think there are a number of points that we do dispute in the report of the Board of Works, but having regard to what you have said, perhaps the most convenient course would be to defer it to Wednesday, when we shall bring up our evidence.

Lord Pirrie.—I should like to see the letter as far as I am personally concerned.

Mr. Vesey Knox, K.C.—If the Chairman has no objection, I will read that one letter. This is a letter dated 27th July, 1901, which was addressed to the Board of Works:—"Gentlemen,—On the 24th inst. I met Mr. Livesey and Mr. Batchen at the offices of the Londonderry and Lough Swilly Railway at Londonderry, and had a long consultation with them regarding the type of engine best suited to work the Burtonport extension of that system, and I explained my reasons very fully for preferring a tender instead of a tank engine. I am quite prepared to admit that the line could be worked with tank engines similar to those on the Glenties line, but I am convinced that the line can be worked in a much more satisfactory manner, and more economically with tender engines, and I am therefore strongly of opinion that this type of engine should be adopted. The extra cost of a six-wheeled engine and four-wheeled tender as compared with a ten-wheeled tank engine would be trifling, as the expensive parts, *i.e.*, the wheels, axles, axle-boxes, springs, buffers, &c. would be the same in both cases, and practically the only additional material required would be due to the larger carrying capacity of the tender body as compared with the tanks and coal bunkers of the tank engine. Mr. Livesey, while expressing himself strongly in favour of tank engines, did not raise any objection to tender engines, provided the engines are fitted with leading bogies or pony trucks, and I agree with him that a leading pony truck would be an improvement, although on a line with such easy curves as the one in question I do not consider it in any way essential. I may mention that when considering this matter I have not overlooked the fact that for the efficient and economical working of the line it will be necessary to use engines capable of running through from Burtonport to Londonderry—a distance of seventy-four miles—because, to confine engines to a particular section of the line far from headquarters would be both unsatisfactory and expensive, especially on a system like the one in question, on which there is only one locomotive repairing depôt. Arrangements should therefore be made for all engines to run to Londonderry, so that they may be systematically examined, and running repairs carried out under proper supervision, and without the cost of keeping an expensive staff at out stations. I may further mention that the reason why narrow gauge tender engines have not been already adopted in this county is because narrow gauge lines so far are all comparatively short, and therefore suitable for tank engines, but abroad tender engines are largely used; for example, the Cape Government Railways (metre gauge) have adopted them exclusively." It seems to me it is a valuable letter. As regards what was asked by Mr. Aspinall, I have a later

November, 1903, giving the mileage run. He estimates on the service then working there was a train mileage of 99,100 per annum, and that 15,000 was as much as any narrow gauge engine ought to work.

Chairman.—15,000 per annum?

Mr. Vesey Knox, K.C.—15,000 per annum for a narrow gauge engine.

Mr. Acworth.—Might I ask Mr. Shanahan whether that is the fact—twenty-one miles without a passing place?

18130. *Chairman.*—It has been given in evidence by Mr. Shanahan. The evidence of the Board of Works was that the crossing places and water supply tanks were arranged with the engineer of the Lough Swilly Company?—*Mr. Shanahan.*—Yes, and of course it has always to be taken into account that this line was constructed in accordance with plans originally drawn by the promoting company—the working company—and adopted by the Board of Works. But if I may be permitted to, I will read a word or two from the investigators' minutes of evidence—the investigators were Mr. Tatlow and Mr. Roberts, the engineer of the Highland Railway.

18131. *Lord Pirrie.*—Might we not have the answer to Mr. Acworth first. Do you admit that you were wrong in your evidence, and that Mr. Knox is right in saying that there was no watering place for twenty-one miles, and no crossing place?—My evidence is, of course, that the crossing places and the tank capacity were regulated according to the requirements of the traffic.

18132. All along the line?—Yes, according to the plans drawn by the company.

18133. *Mr. Acworth.*—But is the fact admitted that from the point of starting to the next crossing place was twenty-one miles—that is the point I want answered?—Yes.

18134. *Chairman.*—Taking that twenty-one miles, how many stations are there?—Four.

18135. And no crossing places at the stations?—No crossing places at the stations. This is what the manager of the line swore at the inquiry: "So that apart from Letterkenny, which you propose to make a passing station, you only suggest two?—Yes. Two passing stations. It is a large distance—twenty miles?—It is only an hour. How about these excursions—do not you think it would be hampering you?—But this being a congested district, I do not think you should be heaping up expense."

May 13, 1907.

Mr. G. E. Shanahan, Assistant-Secretary, Board of Works.

18136. This is the answer of the investigator?—Yes, there it is in black and white, and the manager put it in his plans—at least the engineer did. I may mention for the information of the Commission that the engineer of the Board of Works in Dublin is here ready to answer any technical questions he may be asked.

Mr. Acworth.—Would you allow me to get a small matter off my mind. It will be just as well to do it now as at any time. At a meeting in April, when I was unfortunately not present, Mr. Field said, in Answer No. 13138, on the authority of a gentleman named Mr. Cunningham, "that Mr. Acworth admits that the British fares are the highest in Europe, and goods double the price of the Continent, while the Irish fares, as far as I can learn, are higher than in Great Britain." I have asked Mr. Cunningham for his authority for crediting me with that statement. So far he has not given it me. I am not aware that I made the statement. If I ever did make it, I am prepared to say it was an absurd statement to make, because figures justifying it or disproving it are not in existence.

Mr. Acworth's contradiction of statement alleged to have been made by him on the subject of British railway fares. (See Mr. Field's evidence, Question 13138.)

Chairman.—I think Mr. Cunningham referred to me also, but I do not think it necessary to contradict him.

Mr. Acworth.—I do not want to have it said that I made such a statement as that without contradicting it.

Adjourned for luncheon.

18137. *Chairman.*—Mr. Shanahan, I think you have a statement you wish to hand in?—Yes This is a list of Irish Railway Companies (including Light Railways) at 30th September, 1906, showing the gauge of the lines, the miles open, and the paid-up capital. This statement includes lines constructed under the Tramways and Light Railways Acts. I hand it in to be printed in the notes of my evidence.

List of Irish railway companies, showing gauge of line, miles open, and capital paid up.

LIST of IRISH RAILWAY COMPANIES (including Light Railways) at 30th September, 1906, showing Gauge of Line, Miles Open, and Paid-up Capital.

Mr. Alfred D. Price, M.Inst. C.E. Engineering Inspector, Local Government Board, examined by The Chairman.

18138. Mr. Price, you are a member of the Institution of Civil Engineers?—I am.

18139. And you are a Master of Engineering of Trinity College, Dublin?—Yes.

18140. And also an Engineering Inspector for the Local Government Board of Ireland?—Yes, I am; but I do not appear here in my official capacity as an official of the Local Government Board.

18141. That I understand. You have been trained as a railway engineer?—I have; from the beginning.

18142. Are you the son of the late James Price, a member of the Institution of Civil Engineers?—Yes.

18143. And have you done any work in connection with the surveying of railway extensions in Ireland?—Yes. From the year 1878 I was employed first in the surveying of railways—Parliamentary work—in County Donegal and County Antrim.

18144. What was the gauge of the Antrim railway?—It was a three-foot gauge. I constructed the first electrical railway in the United Kingdom—to the Giant's Causeway; it was on a raised footpath. I was with Mr. Traill at that time.

18145. That is an American railway, is it not?—It has been called an American railway; the Americans sometimes claim it, but they have no right to it.

18146. *Lord Pirrie.*—Mr. Traill is now Provost of Trinity College, is he not?—Yes; his brother was the engineer; Dr. Traill was the promoter there.

18147. *Chairman.*—Have you surveyed and constructed railways for the Great Southern and Western Railway Company?—Yes. I constructed the extension to Valencia Harbour.

18148. What year was that?—I commenced that in 1882, and it was finished as one of the light railways on to Valencia.

18149. That is in County Kerry?—Yes.

18150. Did you do any work in connection with the railway in 1894?—Yes. In 1894 I was on the Valencia Railway, and then in 1895 I was employed as engineer on different railways, one of them being the Cork and Macroom Railway; I had charge of the maintenance.

18151. Really you have had a vast experience in connection with the construction of railways in Ireland?—Yes.

18152. Have you been employed by the Commissioners of Public Works at any time?—Yes, on some of the inquiries that were referred to in regard to the Donegal railways. There was a Commission of which General Hutcheson was Chairman, and I was acting as an assistant on that Commission as inspecting engineer to go over the routes of particular lines in Donegal.

18153. Have you put your views in writing at any time?—Yes. I contributed a paper on the subject of the location, construction, and equipment of light railways to the Institution of Civil Engineers in Ireland, for which they were good enough to award me a gold medal. I have sent a copy of the paper to the Commission

18154. The first railway in Ireland, I think, was the Dublin and Kingstown Railway?—The Dublin and Kingstown Railway

18155. What was the gauge of that railway?—It was originally constructed in 1832 with a gauge of 4 ft. 8½ ins.—the English gauge. But that has been abandoned and changed into the ordinary Irish 5 ft. 3 in. gauge.

18156. In 1905, coming down to a later period, how many miles of railways were there in Ireland?—I find by the returns available there were 3,312 miles, of which 505 are 3 ft. narrow gauge, and the rest are 5 ft. 3ins.

18157. 5 ft. 3 ins. being the standard gauge?—5 ft. 3 ins. being the standard gauge in Ireland.

18158. Have you made any calculation as to the average cost of working expenses in Ireland?—Yes. According to the last return it works out at 62 per cent. of the receipts. In Ireland we pay no passenger tax. It is slightly less than the cost of the working of English railways, but it is more than the Scotch. The Scotch is 55 per rent. of the gross receipts.

18159. What is the average expense per train mile in Ireland?—Taking the average, it works out at 2*s.* 10*d.* per train mile; it comes down as low as 1*s.* 6*d.* on some of the light railways.

18160. I suppose the chief disparity between the receipts per mile in England and the receipts per mile in Ireland is attributable to the passenger traffic?—Yes. That is due to the difference in the density of population in Ireland as compared with England. Taking 100 acres in Ireland, the average is twenty-one persons, whereas in England it is eighty-one, or about four times the population per acre.

18161. Therefore, passenger traffic in England must be greater?—Yes; I think you would expect that. Then we have to allow for the number of tourists.

18162. Has the 5 ft. 3 in. gauge been in existence since the first railway was built?—No. The Ulster Railway was originally 6 ft. 2 ins., but by an Act of Parliament making all lines in Ireland uniform, 5 ft. 3 ins. was substituted.

18163. The Ulster line was a line running into Belfast, from where?—From Portadown to Omagh.

18164. Does it form a link in the chain between Dublin and Belfast?—No. It is called the Ulster Railway now, but I think the Ulster line as described in the Report of the Commissioners to 1868 was a railway commencing at Portadown and ending at Omagh.

18165. Can you give us for our information the various gauges there have been in Ireland?—The first was 4 ft. 8½ ins.

18166. That was the Dublin and Kingstown?—A short line of seven miles.

18167. That has been abandoned?—It was changed to 5 ft. 3 ins. Then we had a 6 ft. 2 ins. gauge.

18168. That is the old Ulster line?—Yes. That has been abandoned. It is all 5 ft. 3 ins. now. 5 ft. 3 ins. gauge is the regular standard gauge.

18169. How many miles are there of that?—2,807.

18170. And the 3 ft. gauge?—There are 505 miles at present.

18171. Those are what we call light railways, I suppose?—There are light railways with the 3 ft. gauge and with the 5 ft. 3 ins. gauge. The first was a 5 ft. 3 in. gauge in County Kerry to Castle Island.

18172. In Donegal, where we had so much evidence about the railways, what is the ordinary gauge there; is it the 3ft.?—All these branch railways and light railways in Donegal are 3 ft.

18173. In Antrim?—There are four light railways in Antrim, and they are all on the 3 ft. gauge.

18174. In Tyrone?—In Tyrone it is the 3 ft. gauge.

18175. I think we may take it generally that in

Mr. Alfred D. Price, M.Inst. C.E., Engineering Inspector, Local Government Board. Mileage and gauge of railways in Ireland in year 1905.

Average cost of working expenses.

Cause of disparity between receipts per mile in England and Ireland.

Present uniform gauge in Ireland regulated by Act of Parliament (5 feet 3 inches, except for light railways).

Mileage of light railways with 3 ft. gauge in Ireland.

May 13, 1907.

Mr. Alfred D. Price, M.Inst. C.E., Engineering Inspector, Local Government Board.

the other counties, Cavan and Leitrim, Cork and Kerry there are 3 ft. gauge lines?—They have one 3 ft. gauge line in Kerry, but the other lines in Kerry are 5 ft. 3 ins. There is also a short mono railway line from Listowel to Ballybunion.

18176. Now?—Yes. You get in at one side and they must balance you the other side.

18177. What has been the average cost of these narrow gauge lines, including equipment?—£5,500 per mile has been the average of the narrow gauge.

Average cost of narrow gauge lines.

18178. And what has been the ruling gradient of these railways?—They have got one in thirty and one in forty, in some cases one in twenty-seven; but one in thirty and one in forty have been the ruling gradients on some of these lines, with curves of six chains radius. There are sharper curves; for instance, the Tralee and Dingle Railway has curves on a 2½ chains radius, but that is really a tramway, and it is in a very unfortunate condition at present.

Ruling gradients and curves on the light railways in Ireland.

18179. Do you, with your great experience, claim any particular advantage for these light railways?—The advantage that is claimed by those who advocate narrow gauge railways is that the dead load to be carried is less than on the broad gauge railways; that is, the rolling stock is lighter in proportion to the load carried. It is also claimed that they are adaptable to sharper curves, and that special light wagons can be used, and they can be easily handled.

Advantages claimed for narrow gauge railways and the disadvantages of such lines.

18180. Have you made any calculation as to the dead weight compared with the ordinary railways?—The dead weight is about 39 per cent. in the case of the 5 ft. 3 ins. gauge, and 31 per cent. in the case of the narrow gauge.

18181. That is the goods rolling stock?—Goods rolling stock, the ordinary uncovered wagon.

18182. So that in that respect there is a considerable advantage in favour of light railways?—There is.

18183. I mean in that respect only?—The wagons are lighter, and therefore they have not the same life as broad gauge wagons.

18184. You mention the advantages, but I suppose there are disadvantages also?—The disadvantage generally is the break in gauge; you have to transship the freight, and if it is cattle you have to drive them into another wagon. I think the most important disadvantage is the non-interchangeability of the rolling stock; that is, these small lines have to keep a larger quantity of rolling stock, which is idle except on fair days; they have no reserve; whereas a broad gauge railway can bring down wagons from any other portion of the system.

Light railways constructed on the standard gauge; and cost.

18185. I think you said there are some light railways which have been constructed on the standard gauge?—Yes. The first light railway in Ireland was constructed on the standard gauge; it was from a place called Gortatlea to Castleisland in County Kerry, and it is worked by the Great Southern and Western Railway with special light engines.

18186. Are there any others?—Yes, there are the other branches of the Great Southern; the Mitchelstown line in County Cork, and the Newmarket and Kanturk line; also several in connection with the Midland Great Western Railway.

18187. Have you made any calculation as to the cost of these lines; I am speaking of light railways on the standard gauge?—They vary very much, according to the country that is to be gone through. For instance, if it is near the coast line we have steep gradients and pretty heavy cuttings, and the cost has gone up as high as £8,800 a mile. But some have been constructed for £5,000 a mile.

Receipts and expenses of working light railways.

18188. In other words the cost of construction of the 5 ft. 3 in. gauge line has not exceeded very much the cost of construction of the 3 ft. gauge?—Not much, and it is doubtful whether in similar circumstances the 3 ft. gauge line would have saved much.

18189. Have you made any calculation as to the receipts from these railways?—I have taken the return which the Board of Works have issued of the receipts of light railways, and I find that the West Kerry Railway—that is what is called the Valencia line—the receipts per mile per week are £5, and the working expenses £6 8*s*. But the receipts vary from £4 15*s*. to £7 per mile per week, and the working expenses from £4 to £6 per mile per week.

18190. I think we have heard quite sufficient about the abandonment of the Birr to Portumna Railway, and I do not propose to ask you anything about that. But there is another railway in Ireland which has been abandoned, is there not?—There was a railway laid down to Red Bay, in the iron ore district of County Antrim; it was six miles long and was very well constructed, with a shipping pier. The line has been abandoned and the rails taken up and sent out to America, and the pier has been allowed to go to ruin.

18191. Was that constructed by private enterprise?—Yes.

18192. *Mr. Acworth.*— Did it join the existing Ballymena road?—No; it did not. I surveyed a connecting line there, but it was never carried out, and the other line was abandoned; but there is, at present, a very large traffic in iron ore down that road to the sea, which is shipped in sailing vessels.

18193. *Chairman.*—Do you think that the natural resources of the country in some districts require further railway extensions?—I do. I have gone specially into the question of the portions round the seaboard. There are two things that I think we want in Ireland. One is extension of railways, and the other is reduction of freights.

18194. You do not suggest that private enterprise can make those railways, I suppose?—I do not. There is no encouragement to private enterprise to construct these lines. They would be speculative to a certain extent. I believe they would pay more than their working expenses, but I do not think you would get private enterprise to start them.

18195. I think we shall all agree that it would be extremely difficult for capital to be raised to provide for the construction of these railways?—Yes. In some of the cases I have mentioned it would be very difficult.

18196. In other words, if these railways are to be made, it will have to be done either by Imperial grants or by local guarantees?—I see no other way to hope for it.

18197. At any rate, I think you are of opinion that the railways, if constructed, would be of considerable benefit to the districts through which they would run?—Yes. I have seen the benefits in districts where railways have been constructed. New markets are generally started in the vicinity, and farmers generally are benefited by the construction of railways in their neighbourhood.

18198. Have you formed any opinion as to how far on each side of the railway the benefit extends?—You would have to take each railway by itself. It depends upon the topographical condition of the country. In some cases the railway would benefit only one side, and in others it would benefit both sides. The benefit might extend as far as seven or eight miles on each side of the railway.

18199. Have you considered in what particular districts of Ireland not now served by any railway company it would be an advantage to have railways?—To begin with the map, taking the extreme south-east of Ireland, there is the mouth of Waterford Harbour, from Tramore to Dunmore East. It is a Royal harbour and a very important fishing station. There is no railway to Dunmore East.

18200. About how far are they from a railway?—They are only about seven miles from Tramore, but none of the traffic ever goes to Tramore. They carry the traffic into Waterford, about fifteen miles. I have surveyed a railway from Dunmore East to Tramore, and it could be worked in connection with the Waterford and Tramore—I mean with their ordinary rolling stock.

18201. Would you suggest that in that particular district the railway should be on the standard gauge?—Yes. The Tramore railway is on the 5′ 3″ gauge.

18202. So as to avoid the transshipment to which you referred?—Yes; that is very objectionable in the case of fish.

18203. There are industries in that particular district that would be developed by a railway, are there?—It is a good farming and agricultural district.

18204. Is there any fishing industry?—Yes. The deep sea fishermen come in there at certain seasons.

18205. What is the next district?—The next on the coast would be in County Cork. There is a harbour at Ballycotton, but there is no railway connection to Ballycotton. Several lines have been considered. As to that, the simplest one to make would be from Midleton to Ballycotton, joining the Great Southern Railway at Midleton.

18206. What would be about the length of that?—Ten miles.

18207. Where is the next one that you would suggest?—The next place would be Castletown Bere. Castletown Bere is now a naval station, and the line I suggest would be from Kenmare to Castletown Bere. Castletown Bere would be the extreme end of the line. That would be a branch of the Great Southern and Western Railway.

18208. These are in County Cork?—Yes.

18209. Are there any in County Kerry that you would suggest?—I think the railway which I have completed to Valencia Harbour might, with advantage, be extended to Waterville, a fishing district which has no railway accommodation. By extending that line about nine miles you would open up a further district. Waterville is an important place of itself; it is one of the places where the Atlantic cable comes in.

18210. *Mr. Acworth.*—The Great Southern have an hotel there, have they not?—Yes. Another railway in Kerry which I think is required is from Listowel to Tarbert, a harbour at the mouth of the Shannon. The distance is twelve miles, and it should be a 5′ 3″ gauge, joining the Great Southern and Western at Listowel.

18211. *Chairman.*—Now, will you go on?—Then I come to County Mayo. Since I prepared this evidence the preamble of a Bill has been passed which will bring Belmullet into the railway system. It is not commenced yet. It is a line from Killala to Belmullet. I was employed by the Board of Works to hold an Inquiry when a railway was contemplated, but the railway was rather expensive and it was never carried out. It is thirty-eight miles from Killala to Belmullet. There is a good harbour at Blacksod Bay.

18211A. That railway would form a junction with the Midland?—Yes, at Killala. The railway at Killala was extended, under a former Government grant, from Ballina to Killala, and this will be a further extension of that same railway.

18212. All these which you suggest it would be advisable to construct on the standard gauge?—Yes; so that they could be worked by the parent companies each with their rolling stock.

18213. Then we come to County Donegal. I should have thought that Donegal was sufficiently served with railways?—There is a little town in Donegal called Ardara, which is the centre of industries; the woollen and other industries are there, and it is also a fishing station. The railway which at present goes to Glenties is paying more than its working expenses, and to extend that railway to Ardara, about six miles, would be a great advantage; it should be on the 3′ gauge.

18214. Because the railways in that district are on on the 3′ gauge?—Yes.

18215. How far is it from Glenties to the coast?—Six miles.

18216. Your suggestion is that that should be the same gauge as the adjoining railway?—Yes. There is another village in Donegal which is not provided with railway accommodation. It is not very far from Letterkenny. It is twelve miles from Letterkenny, and it is an important point near Lough Swilly, near Milroy Bay.

18217. Is that a good agricultural district?—It is a very good district.

18218. Now, Antrim?—There is another railway in Donegal which I would suggest, from Londonderry to Moville, where the Canadian Mail steamers used to come in. More than twenty-five years ago I surveyed a line there. The Great Northern were at that time going to construct it, but it has never been constructed. I think it is a blot on the system not to have that line.

18219. What is the distance?—About twenty miles.

18220. How did the mails come when they were landed there?—A tender went down and brought the mails from Derry to Moville.

18221. But you said the mails were landed there?—The mails were put into tenders at Moville and brought up to Derry.

18222. But that, you say, has been discontinued for many years?—Just a year ago.

18223. And the tender brought the mails to Derry?—Yes.

18224. What is the distance from Derry to Moville?—Twenty miles.

18225. Now, in Antrim?—In County Antrim I would suggest that the railway which has been abandoned——

18226. The one you referred to just now?—Yes. From Parkmore to Red Bay—the termination of the Ballymoney Red Bay line. That should be constructed. The distance is six miles, and it should be on the 3′ gauge. That is a total of 164 miles.

18227. A total of 164 miles that you have ventured to suggest?—Yes; representing about a million of money.

Reconstruction of Parkmore to Red Bay line recommended.

18228. As an experienced man you suggest that the gradients should be limited to one in fifty?—Except in very exceptional cases.

18229. But exceptional cases rule the whole, do they not?—They do; but there may be an exceptional case where there is a short gradient of one in forty leading to another—a sort of switchback arrangement. That is not so objectionable as a long gradient of one in forty. It is very much against the working of these lines to have such gradients.

Importance of proper gradients and curves on light railways.

18230. Any engineer laying out railways of this sort would consider the question not only of gradients but of curves?—Unfortunately, in some of the light railways that were brought before the Commission in Donegal there was very little consideration of the gradients and curves. We have two gradients running into each other with no horizontal between; any engineer knows that you cannot work a train properly on such a line. If you get the maximum curve and the maximum gradient together, you have a very difficult line to work.

Class of engines required for such lines.

18231. Have you formed any opinion as to whether a special class of locomotive should be constructed to work these railways?—My experience on the Valencia line, where we had gradients of one in fifty and ten chain curves was, that there were special engines made for working those gradients, and the same engines are working them now, and have been since 1894. They have radial axle boxes and two axles coupled, and there are twelve tons on each axle, and they have worked remarkably well on those gradients and curves.

Weight of rails necessary.

18232. Your roadway would have to be strong to carry that?—I do not think there should be any permanent way with less than 60 lb. rails.

18233. But in Ireland they have roads of 40 lbs.?—Yes, but they are regretting it.

18234. Very likely; but I think that with the weight you mention upon the axle the roads would have to be good roads?—Yes. But that was not under the Light Railways Act. Under the Light Railways Act you could only put eight tons on the axle.

Question of the use of road motors to develop backward districts.

18235. Have you considered amongst other things the question whether a district could be served with motors?—I think you have got to get over the difficulty of the local prejudice in that case before you can do anything in the way of developing the traffic by motors on the ordinary roads. They are not popular amongst the farming class, and I need not say that they are not popular amongst the carters on the roads. For instance, the Great Southern Railway purchased some motors and put them on from Tuam to Dunmore. These motors worked very well, but after a short time it was found that they were boycotted; no one would buy from the merchants who brought the material by these motors. The farmers had it in their own hands, and the motors had to be taken off. In Dunmore East, County Waterford, motors have been put on, and they have certainly not developed the traffic. They seem to take the whole road to themselves, and sometimes it is not wide enough and they go over the fences into the field.

18236. You think there is still some prejudice against the use of these motors?—I think there is a very strong prejudice against them. There is another thing which goes against motors which I experienced during last winter, and that was that if there is a snowfall, the roads are simply blocked.

18237. Is not that the case with cars?—Not at all. I was able to get an ordinary Irish car where a motor could not run, because the axle is so near the ground that it touches on the snow.

18238. Have you considered the question of the amalgamation of Irish railways—we will deal with that first?—Yes.

Question of the nationalisation of Irish railways.

18239. But perhaps I ought to ask this question first. Have you considered the question of the nationalisation of Irish railways?—Yes; I considered

May 13, 1907.

Mr. Alfred D. Price, M.Inst. C.E., Engineering Inspector, Local Government Board.

the two questions together, but I cannot see how we should gain much by the nationalisation in proportion to what, I think, we should lose.

18240. Legislation has already provided for the purchase of Irish railways, has it not?—It did in the Act of 1844; section 2 of the Irish Act did provide for the State purchase of Irish railways.

18241. That was subject to certain contingencies, was it not?—To a contingency which I do not think can now arise. In every case railways have adopted reduced tolls and rates, so that there is no compulsory purchase now, I understand. But the Act provided that twenty-five years' purchase of the divisible profits was to be paid subject to arbitration.

18242. You are referring to the Act of 1844?—Yes.

18243. That is sixty-three years ago?—Then, there was a Commission in 1868, which had that question before them as to what should be done about the purchase, and they certainly did not encourage the idea that the State should acquire the lines. Later on we had the Allport Commission, which rather advised amalgamation.

18244. Have you yourself formed any opinion on the question of amalgamation?—I think amalgamation would meet nearly all the defects.

18245. What do you mean by amalgamation—do you mean compulsory amalgamation of certain railways—would you compel one railway to amalgamate with another whether they liked it or not?—Yes.

Compulsory amalgamation of the Irish railways advocated.

18246. You would?—Yes; but you would have to compensate the railways.

18247. Subject to compensation?—Subject to compensation. I think the Government should guarantee that there should be no loss on the undertaking, and the Government should be recouped afterwards when the receipts increased; when the receipts went up the Government should get 50 per cent. of the excess profits.

18248. How many trunk companies do you think there ought to be?—I do not think there is room for more than three.

Three systems considered to be sufficient for Ireland.

18249. Why not two—why do you say three?—I feel that Belfast seems to own a little bit at the top of Ireland by itself almost; it is not worked into Dublin, and I think we have almost to leave the North of Ireland, North of Belfast and Donegal as one system.

18250. As one?—Yes.

Government control recommended.

18251. And the rest as another system?—And the other divided into two.

18252. That would be two?—Three altogether.

18253. Have you thought the question out, really?—Of course I know objections are always raised that the public would not be treated fairly if there was no competition, but I think that could be dealt with by giving control to the Government in return for providing funds; they should have a voice in the matter, and have an expert on each board.

18254. The Government?—Yes.

18255. One of a body of nine, or ten, or twelve?—Yes.

A State guarantee against loss a necessary condition of compulsory amalgamation.

18256. Do you suggest that the State should guarantee the interest on these amalgamated railways?—I think if the State guaranteed that there should be no loss for a certain time, and at the same time there should be a provision made that the State should be recouped.

18257. What is the difference between a Government guarantee that there should be no loss, and a Government purchase altogether?—A Government purchase seems to upset the whole system, and puts it out of commercial hands. The Government could not be expected to work railways on commercial lines as coumercial men do. We could not have better men than are on the boards in Ireland now. We could not find men more interested in the country.

State purchase of the railways disapproved.

18258. What are you going to gain by three railways—that is the point I am on. There would be no competition?—The way the passenger looks at it, or the way the trader looks at it is this. He does not want to have to deal with two or three companies in order to get through. The railways do not run very much in unison; there are awkward gaps in several places.

18259. Would it not be infinitely better if there were only one?—I think one would be too big to be managed in a commercial way, and too small to constitute a good railway department. If it were all one, it would be rather a small department for a Government department.

18260. But Irish railways are not so big as large English railways?—The bulk of Irish railways, no. But still we are linked on very well to England; at present we have three pretty tight links, Belfast, Dublin, and Rosslare.

18261. You do not object to the Government undertaking the monetary responsibilities in the way of guarantee, but you do object to Government purchase?—I do.

Examined by Lord PIRRIE.

18262. In advocating certain railway extensions, you particularly mentioned the re-laying of the line to Red Bay?—The Red Bay and Parkmore Line.

18263. You said you had surveyed that line?—I did.

18264. Are you aware that after Parkmore where that line stopped there is a tremendous valley—how do you propose to join it with the main line?—You would not join it at the very end; you would join it just below Parkmore Station, and get through the valley on the north side, and go down to Red Bay. You would not go to Cushendall.

18265. How would you cross the hill opposite Parkmore to the line—there is a tremendous valley there. You would have to make one of the finest bridges in the world?—It is not necessary to make a bridge there; you go up into the valley and join the railway.

18266. Have you considered the question of running it to Cushendall?—Unless you put a funicular railway I do not think you could go down there.

18267. On account of the gradient?—Yes; the gradient is very steep.

18268. Are there any people at all living on that side of the hill—the iron ore comes out from Parkmore down to Red Bay—how would you get up into clouds on the side of the hill—what is the object of the line?—It is very largely for the iron ore.

18269. But the iron ore has almost ceased to come down there?—Not at all; it is still cutting up the roads as it used; it is carted down.

18270. Then it is for iron ore and not for passenger traffic?—There would be a development of tourist traffic.

18271. On the other side of the valley, from Parkmore down to Cushendall, would it not be very much wiser to put the line from Retreat to Cushendall?—But it would not be one of your home railways; it would be a Swiss line; a funicular.

18272. Would it not be better than a bridge across the valley?—There is no bridge required.

18273. It would cost more from across the valley than all the way from Parkmore?—I do not think so; the other line was actually laid down there.

18274. But the rails are all up?—They are all gone.

18275. Therefore you would have to lay your rails again, and you have not a population to get to; you have no hotel accommodation at Red Bay, and you land the people at no terminal at all?—It is more for the iron ore.

18276. It is not for tourist traffic then?—It would do both. It runs along the outcrop of the iron ore.

18277. Would it not be very much better to run the line from Parkmore to Retreat, to continue the line to Cushendall and Ballycastle, and so making a continuous line round the coast; you would get the most popular line in Ireland?—I have not surveyed it, but I know the gradients are very much against it.

18278. I know the district so well?—You are a thousand feet above the sea at Retreat.

18279. I think you have the finest scenery in Ireland there, and I do not quite agree with your proposal to go the other side, where there is nobody living?—Yes.

18280. You said that one of the objections to motor traffic in Ireland was the snow. Do you know how many days in Ireland there would be snow on the ground at all, or that you could find in any part of Ireland?—No; I do not. I know the motors were blocked on two occasions, once for three days and once for two days this year at Cushendall.

18281. Once for two days and on another occasion for three days?—Yes.

18282. That is five days in the year, and that is once in every five years, shall we say?—I do not know.

18283. Probably once in ten years. I remember a block three times since 1852?—The snow is not the greatest difficulty.

18284. Now, I presume that what you really meant about the motor traffic is that the smaller carters and men who buy eggs and butter from the small farmers, and sell tobacco, flannel, tea, and so on, would be interfered with in their traffic and trade; that is the objection to motor traffic, is it not?—Not altogether. The objection is an objection of the farmers themselves. A farmer going along a road, when he meets a motor coming along, his horse will not stand it, and he has to get down and put a bag over its head.

18285. Are you not aware that horses in the streets of London meet motor buses and do not shy?—The horses in London are well trained.

18286. What about motors in Dublin? You live in Ireland, do you not?—Yes.

18287. Do you never see motors driving about Dublin or Killarney without interfering with the horses?—At Killarney I think they do interfere with the horses.

18288. Do you think the horses in the outlying districts cannot be trained?—I have no doubt they could be trained if the people put themselves to it, but they are prejudiced against it.

Examined by Colonel HUTCHESON POË.

18289. With regard to the prejudice of which you speak as having been experienced by the Great Southern and Western Railway in respect to motors, was that a passenger service or a goods service?—A goods service.

18290. Even though they were prepared to put on motors for the purpose of feeding their line, they met with such opposition that they had to discontinue them?—That is so.

18291. That is not a very encouraging prospect for railway companies to do anything further in that direction?—No.

18292. You speak of the cost of the light railways per mile as being about 18*d.*?—Yes; on the line I referred to it works out at 2*s.* this year, but it was 18*d.*

18293. At first sight that compares favourably with the expense on the standard system, but as a matter of fact is it not the case that the working expenses on these light railways, without exception, are practically from 70 to 90 per cent., and in some cases even more?—Of the receipts.

18294. Of the receipts, yes?—In some cases it is more.

18295. With only three exceptions there is a deficit; the working expenses are more than the receipts in every case with three exceptions; and in those three exceptions I think the working expenses run from 70 to 95 per cent.?—The French have a curious formula with regard to secondary railways; it works out in English figures that the expenses per mile per week equal £2 10*s.*, plus one-third of the receipts; working that out it comes to exactly £3 15*s.* per mile per week, according to the formula, to pay working expenses.

18296. *Mr. Acworth.*—That is a three train service, is it not?—That is from the French Ministerial Inquiry into secondary railways.

18297. But that is three trains a day, is it not?—It can be any number of trains per day, provided they can get £3 15*s.* per mile per week.

18298. *Colonel Hutcheson Poë.*—That is to pay working expenses?—Yes.

18299. Taking the Burtonport line, the Lough Swilly Company get £3 10*s.* per mile per week, which presumably pays their working expenses?—That would not apply on a large railway where the receipts exceed £10 a week; it only applies to secondary railways.

18300. With their experience of light railways and the heavy working expenses in proportion to the receipts, there is really very little prospect of any railway company or any local authority being prepared to come forward and advance money for the purpose of such undertakings?—Very little, I think.

18301. As you are aware the greater portion of the money for light railways has been found in the shape of free grants?—Yes.

18302. There have been 1½ millions provided in the last seventeen years in respect of these light railways, and that has been accompanied, I think you will find, by contributions on the part of the guaranteeing areas which have benefited by the railways, to the extent of something like a quarter million, which represents a very small proportion; the contributing areas have been prepared to guarantee to that extent in order to derive benefits from the system of light railways?—The area under the present system of contribution is the barony.

18303. But a wider area benefits sometimes?—Yes.

Extension of the guaranteeing areas for future light railways advocated.

18304. I gather that you think that in future, instead of the contributing area being limited to a certain barony, it should be enlarged so as to include an area on either side of the railway?—Yes; a certain area on each side of the railway similar to what they have in the case of a drainage scheme where the benefit is assessed over a broad area.

Negotiations with regard to the Glenties and Ardara extension.

18305. With regard to some of these extensions of which you were speaking as being desirable, I think there has been some negotiation with regard to the Glenties and Ardara extension?—It was one of those railways which was proposed at the original Commission in Donegal; but at that time there was not money enough to make all the lines.

18306. Did not the late Chief Secretary, Mr. Bryce, go down there recently?—He was down there.

18307. Has there not been some communication on the part of the Irish Government with the County Council?—I do not know how it stands.

Advantages of the amalgamation of the railways into one instead of three systems urged.

18308. I think there has been some communication to the effect that if the County Council and the railway company put forward any substantial offer as to the cost of the lines, the Irish Government are prepared to submit a scheme to the Treasury. I think that is the position with regard to that line. Then with regard to amalgamation into three systems, you are aware that the recommendation of the Allport Commission was an amalgamation into one system?—I do not think they limited it to one system; I think they said either one or three.

18309. I think if you look at page 54 of the Report, it distinctly says with reference to amalgamation that it recommends centralisation in the hands of a single company, and they proceed to consider how that may be best carried into effect. I think you will find that they distinctly express themselves in favour of amalgamation into one system accompanied by Government control?—By State control, of course.

18310. Do you not think that all the advantages of which you speak as being likely to accrue from amalgamation into three systems would be still more likely to accrue if the railways were under one system?—I think that Ireland is naturally divided into three districts; we have three leading ports of Ireland—Dublin, Rosslare and Cork, and Belfast.

18311. If you lay down three systems, or any number greater than one, would not the danger of each of those systems becoming a monopoly, more or less in itself be increased; you would get three monopolies instead of one?—You want control. I go for State control.

State control —*i.e.*, an official on each Board recommended.

18312. That implies one Government official on each Board?—Yes.

18313. Then, again, that increases the expenses of staff and does away with a good many economies which you would hope to effect by means of amalgamation. I presume that the object of amalgamation is to get rid of superfluous Boards of officials, and so on?—I do not think you can get rid of many of the officials; you can get rid of directors, but officials will still be required; there will have to be assistant secretaries and engineers, and so on.

18314. We have had recently a judgment of the Canal Commissioners with regard to the Dublin and South Eastern and the Great Southern and Western. That Commission reported practically, that without in the least imputing any wish to take advantage of the position which had been given by the Amalgamation Act, yet, owing to the difficulties imposed upon the Great Southern and Western, that amalgamation had not been in the interest of the South of Ireland, but had resulted in the port of Rosslare getting advantages over the port of Dublin. I think that was the effect of the judgment?—Yes.

18315. Undoubtedly that was not in the interests of the public, and my only point is that if you put the whole of the railways of Ireland into three systems, you run the risk of having this disadvantage in each of the three systems and of making a big monopoly in each direction—North, Midland, and

May 13, 1907.

Mr. Alfred D. Price, M.Inst. C.E., Engineering Inspector, Local Government Board.

South—which you would obviate if you put them into one hand under strong Government control?—I think it would be too small to go into one Government control. You would have a very small Government department to select the staff from, and I doubt if the railways would be better than they are at present.

18316. I think the Chairman pointed out that the total mileage of the Irish railways is less than many of these in the Colonies, but we have had figures from Australia that the mileage in New South Wales and Victoria is practically the same as the Irish system, and the whole of the Colonial rails are managed by Commissioners, or in some cases by the municipality?—Yes.

Management of Colonial railways.

18317. The experience of those Colonies was that it had resulted in the greatest possible benefit to the whole of the State and to the development of the resources of the country?—It is just ten years ago since the Melbourne Commission was held, and this paragraph appeared in the *Times* of September, 1895:—"The Board of Inquiry on Victorian Railways reports that the service is disorganised, and that political influence is noticeable throughout. It recommends the complete separation of the railways from the State." That was in 1895 when they had had experience of the State railways, and that is what I would be afraid of in Ireland if you have too much connection with politics; I would be afraid of political influence.

18318. The evidence we had from Mr. Anderson the other day was directly contrary to that?—But this is a Blue Book of 1895.

State ownership of railways in Continental countries.

18319. That is ten years ago, and those difficulties have been overcome. He distinctly stated that where the Railway Commissioners were a strong body of men and doing their work well, if there were any attempts on the part of the legislature to interfere with them and put political pressure upon them, public opinion in the Colonies was so strong that it was able to back them up and prevent that pressure being exercised. Further than that, the different Governments on the Continent, Belgium, Denmark, and Holland, have all considered it better and wiser in the interests of their States to resume the management of the railways. They have given very large reductions in order to develop the industries of the country. Do you not think that amalgamation in one hand would be more likely to follow the same course and to make reductions with a view to possible development?—I do not think it is uniform on the Continent.

18320. The Italian railways have not been successful. But I think that with that exception, and perhaps Spain has not been very successful——

18321. *Chairman.*—But the Italians only got possession last year. You cannot form any opinion on the Italian case.

18322. *Colonel Hutcheson Poë.*—Though the facilities may not be so great as in this country, the experience of most Continental systems is that State ownership has enabled them to give very low rates?—I do not know about the rates.

18323. Can you imagine how under the existing system such reductions can be given?—They can be given if there is a Government guarantee against loss.

Alleged disadvantages of a system of State-subsidised railways under private ownership.

18324. Against the Government guarantee, do you not think there is a great danger that any incentive to stimulus on the part of the railway company would be diminished. At present the complaint is that they are not enterprising enough; surely that enterprise will be diminished if the railway shareholders have reason to believe that whether they get traffic or not, the Government will guarantee a subsidy?—It might have that tendency.

18325. But you do not anticipate that?—I do not anticipate that.

18326. The general experience is that where there is a guarantee, people are less diligent in looking after the undertaking, as they know they will get an income in any case?—I do not think the Irish railway boards are quite of that nature; I think they are more broad-minded than that. I think they are working for the good of the country and for the good of the shareholders at the same time.

18327. Would you be opposed to putting these railways, in the event of their being amalgamated, under this new council which has been suggested in the event of its being established?—I think owing to my position as a Government official, I would rather not touch on that.

Examined by Mr. ASPINALL.

18328. You have apparently surveyed a great many lines in Ireland?—Yes.

18329. With regard to this list of additional railways which you say you think might be made, do you not think some of them might be made very much like the Belgian railways in a very much cheaper form; are you aware that the Belgian Government have got a very large system of subsidiary railways, something over 3,000 miles, which have cost not more than £3,300 a mile. If in Ireland the figures which you have given point to anything between £5,000 and £6,000 a mile, and the figures which Colonel Hutcheson Poë has quoted show that the expenditure comes to 70 or 80 per cent. in the case of these smaller lines in Ireland, is it not the more necessary that the first construction should be done at the cheapest possible rate in order that you may get a good return upon your money in a poor country?—Yes, as cheap as possible consistent with permanency, but I do not see how you can make a railway at £3,500 a mile.

18330. Are you familiar with the Belgian lines?—I have been over them. We have railways or tramways such, for instance, as the Clogher Valley, parts of which were made at £3,000 a mile, but it is along a public road. Then that railway to the Giant's Causeway—a portion of that was constructed at about that figure, but you would have to have special rolling stock.

18331. Is not the rolling stock which is used on the Belgian railways suitable?—Is it a narrow gauge?

18332. It is a metre gauge?—It would suit the Irish 3-foot gauge, but you would be limited to a 3-foot gauge.

18333. What is the objection?—The non-interchangeability of rolling stock; they would be only local lines.

18334. You mean that you could not put the rolling stock of a 3-foot gauge on to the 5 foot 3 inch gauge?—Except you have transferable wagons.

18335. What is the objection to the use of that very efficient arrangement which the Donegal Railway have of transferring the tops of their wagons to the Great Northern wagons at Strabane and elsewhere?—That is a very ingenious and a very useful thing, but that will not meet the case of wanting a number of wagons for fairs or special traffic; you require an excessive number of wagons.

18336. Is there not a great deal too much made of this question of transferring from one gauge to another?—I think there is with regard to the cost of it.

18337. In the North of England every day thousands of flat bottoms are transferred from the lorry which brings the stuff to the station practically to the truck; the railway takes these to the truck; to the end of their journey, when the flat bottom is again transferred to another lorry, and nothing is done except that the crane lifts this flat bottom containing from four to six tons from the truck to the lorry as the case may be, and no handling takes place beyond that. Is not that system applicable as between a narrow gauge line in Ireland and a broad gauge?—I think it is quite applicable.

18338. Has it ever been tried in Ireland?—There are some places where they have these hopper wagons. They have them on the Ballymena and Red Bay Railway, but I do not think they have tried flat bottoms in Ireland to any extent.

18339. I do not think you have studied the Belgian railways very carefully?—I admit I have not.

18340. Or you would have seen how applicable they would be to Irish requirements. In that pamphlet of yours you speak about Board of Trade regulations in connection with Irish railways; you are not satisfied as to the regulations being as easy as they might be?—I think that in regard to the light railways they might be greatly relaxed if the railways were properly constructed and heavy gradients avoided.

18341. *Mr. Acworth.*—You think you might do away with signalling at level crossing gates, telegraphic locking, and all those luxuries which the Board of Trade like to have?——

18342. *Mr. Aspinall.*—You recommended another line to Ballycotton. Is there any depth of water at Ballycotton?—Not for steamers.

18343. What is it for—fishing vessels?—Fishing vessels; there is a pier there.

18344. Was there not a railway commenced at Moville at one time?—No.

Examined by Mr. ACWORTH.

18345. You speak of the percentage of working expenses in Ireland as compared with England and Scotland?—Yes.

18346. Do you attach any importance to that?—What I draw from that is that we cannot say that the management of Irish railways is extravagant.

18347. What I put to you is, can you draw anything from it?—That is all I draw from it.

18348. Are you entitled to draw any conclusion whatever from it—do you know how far the goods are carried on the average in Ireland and in England respectively?—They must be carried much further in England.

18349. Do you know, as a matter of fact—have you any figures?—No, I have not.

18350. Do you know how many tons are carried over the average mile in each country?—No, I have not the particulars.

18351. Do you know the average rate that is charged for carrying a mile?—No.

18352. In ignorance of all these factors, is it any use to attempt to draw any conclusion from percentages of varying ratio?—The only conclusion I draw is what I said. At first sight it would appear that Irish railways are not extravagantly managed.

18353. Would you say, for example, without knowing anything more, that the French railways, which are operated at 50 per cent. are more economically managed—would that be a reasonable conclusion?—No. I do not think it would be the same.

18354. Would you say that the American railways, which are managed at about 68 per cent., are very much more extravagantly managed—would that be a reasonable conclusion?—I think I would draw that conclusion from it.

18355. Would you really, from that sole factor—supposing the Irish railways are charging 1*d.* at present, and they cut that rate to ½*d.* except so far as traffic increases, the receipts would be halved?—Yes.

18356. And their working expenses would be the same?—Yes.

18357. They would then be managed at 124 per cent.—would that prove that they were extravagant?—It would prove that they had reduced their rates.

18358. Is it not clear that without a knowledge of the factors making up the cost the ratio of expenses to receipts percentage is not of any importance?—It is not of much importance.

18359. You have a note on your proof that with thirty trains per mile per week the receipts are £3; where is that?—It follows from the 18*d.*

18360. It is not a receipt; it is an expenditure, is it not?—The two are worked together. Taking the receipts at 18*d.*. you would have thirty trains.

18361. You are taking the case of a 100 per cent. working?—Yes.

18362. You do not draw any conclusion from it?—No.

18363. I thought perhaps it led somewhere. As to the narrow gauge question, I suppose we should all agree that the Donegal railway is a big enough thing; there would be no question of touching the gauge in Donegal now; would that be your view?—I think it can be worked as a narrow gauge system.

18364. You would have it as a little system by itself?—Yes.

18365. Take the Clogher Valley and the Cavan and Leitrim, and the Tralee and Dingle; would you be inclined to make them all broad gauge?—There is a great difficulty about these railways on the side of the road; you are bound to leave 18 feet from the edge of the railway to the opposite fence, and you cannot do that without buying land.

18366. That is only the Statute We are not concerned with the Statute; we are concerned with what you would desire to do; we may recommend that the Statute should be modified; you would be inclined to change the gauge where the lines are extensions of standard lines?—Yes.

18367. Have you any estimate of what it would cost, taking one with another?—I have not made any estimate of it; it cannot be very much.

18368. What do you suppose; £2.000 a mile?—It would not cost £2,000 a mile; probably you could lay the whole line at £1,400 a mile.

18369. It means new sleepers, but it does not mean new rails, clearly?—Not necessarily.

18370. There are not many standing works that would have to be widened?—No.

18371. You made a calculation of how a new railway might be financed; you suggest a certain tax on the land on either side?—Yes.

18372. For a certain proportion of the assumed advantage to an acre of land you suggest taking 3*d.*, or some sum of that kind?—Yes.

18373. I do not want to discuss that, but in the table you put forward an estimated profit on working of £52?—That is taking the profits per mile.

18374. What ground have you for taking that; do you think it is true that the light railways which have been made are, on the whole, the least unprofitable; one would expect that the best would get made first, of course?—The best lines were made first, yes.

18375. You think they were?—Yes.

18376. If the best lines are only just paying working expenses, what is the probability of the next best earning a profit of £1 a week?—Some of them are earning a good deal more than that.

18377. Very, very few. The average working cost is 100 per cent. of receipts as near as may be. There are only three, I believe, that are making a profit. Does it seem to you really that there is much hope of £1 a week?—I think so.

18378. Are you in that assuming that the present lines are not being worked for all they are worth?—Some lines are being worked for all they are worth, and some are not. I think there is a traffic that is greatly neglected; that is what I call the 2*d.* traffic.

18379. What do you mean by that?—Picking up people for short runs. You still see in the country markets, carts coming in to the market with whole families. These people should go by rail, and, in some cases, where they have catered for these people they have got a very substantial traffic. The Cork and Macroom line, for instance, they cater for them; they pick up people and bring them into market at a very reasonable price; but I think some of the larger lines have not done it, in some places you run ten miles without a station.

18380. Do I understand that in putting in that £1 per mile, you think that more might be done in that traffic than is done?—I do.

18381. You think receipts might be increased in that way?—I think passenger receipts might be largely increased by working the motor system.

18382. That is my view, I confess. Are you also thinking that expenditure might be diminished seriously?—I do not think so.

18383. You speak of a permanent way of 60 lbs. Do you really mean to say that you cannot do with less than 60lb. rails for this petty traffic?—I think it is very unsatisfactory to try and work with less; I have tried to maintain a line with lighter rails.

18384. What is the difference between England and America; I have travelled thousands of miles over 50 lb. rails with standard locomotives with 18 or 20 tons on the axle, and twelve-wheeled Pullman cars behind. What is the difference; is it the Irish atmosphere, or what?—I know it is very hard to keep a line in order with 40 or 50 lb. rails. We do not keep these small railways in a great state of efficiency. On the permanent way the line is not touched for the whole winter sometimes.

18385. The difference between 50 and 60 lb. rails is 20 per cent. extra on the capital cost of the rails one of the largest items?—Possibly.

18386. Surely it is worth your while to do a little more maintenance to save that capital?—My feeling

May 13, 1907.

Mr. Alfred D. Price, M.Inst. C.E., Engineering Inspector, Local Government Board.

Cost per mile of substituting standard for narrow gauge.

Possibilities of increasing the receipts of existing railways by improved methods of working.

"Pick up" or roadside passenger traffic not fully catered for.

Question of the necessary weight of rails.

May 13, 1907

Mr. Alfred D. Price, M.Inst. C.E., Engineering Inspector, Local Government Board.

very strongly is that it is a great mistake to put in light rails.

18387. And I believe you are speaking the general opinion of Irish engineers?—I think so.

18388. That is my impression. As to motors and the local prejudice against them, has there not been in some cases exactly the same local prejudices against trains?—Before my time, yes.

18389. But do you not know the story of the coal mine in the last year or two where a free grant was offered to make a railway, but it was rejected for fear of throwing certain carters out of employment?—I have heard of it.

Popular objections to road motor services.

18390. I have not heard it contradicted. Do you think there is more fear—speaking of prejudice and not of the objection to the look of motors on the road—of taking other people's livelihood away; why should there be a stronger prejudice against motors than against trains?—Against trains on the road, do you mean?

18391. No, against any trains. A train will take away a carter's livelihood perhaps more efficiently than a motor?—Carters have found out that wherever trains have come they have not lost, because trains bring a further development to their trade in different directions.

18392. And they do not think that that would happen with motors; motors appear to them more like closer competition?—I think so.

The proposal for State-aided compulsory amalgamation.

18393. Now, I want to take you to the real gist of your evidence; you spoke of State-aided amalgamation?—It was not intended to be the gist of my evidence, but I had to answer questions.

18394. Here is my difficulty. Suppose that we agree that the Tralee and Dingle line ought to pass to the Great Southern, or, without taking names, we will say, the A and B line. The A and B line values itself at £300,000, and the Great Southern values it at £50,000; what is the compulsory process to be—to make the Great Southern take it at a valuation?—To take it at a valuation.

18395. One side must sell at a price they do not want to take, and the other must buy at a price they do not want to give?—That is done in Ireland in other commodities than railways.

18396. Is it?—Yes.

18396A. In what direction?—That is the system of purchase of land in Ireland.

18397. But there is a willing purchaser or a willing vendor in that case, is there not? Either the vendor wants to compel somebody to buy, or a purchaser wants to compel somebody to sell; is not that so?—Yes, that is so.

18398. But in this case you have two people, neither of whom is willing?—I still think a Government arbitration should be able to settle the question.

18399. Of course it can settle it, but it can only settle it to the dissatisfaction of both sides?—It is a proof that the award is fair.

Suggested apportionment of the country under a scheme of amalgamation into three systems.

18400. You speak of three companies. There are two principles on which you might have three companies. As I daresay you know, in Italy before the State purchase there were two companies, and they were arranged to meet at all the big points, to meet at Milan, and again at Florence, and again at Rome, so as to get all the competition possible. On the other hand, the French have distributed their railways on the principle of only meeting at unimportant places so as to minimise competition, and they pool the traffic at the little places; which system have you in your mind?—Competition in Ireland is controlled by the English companies, and I think that would very much divide the railways in my idea. English companies are controlling the North by the Midland Railway; the London North-Western at Dublin; and the Great Western in the South, so that they divide, I think, Ireland into three parts.

18401. How do you fit that into Irish geography; one system centreing in Belfast?—Yes; but the Great Northern Railway really centres in Dublin rather than Belfast; it is the Midland Company at Belfast.

18402. How would you apportion the country to the three companies?—I have not gone into the details.

18403. That is the difficulty; when you come to details the difficulty arises? There are certain small companies which I have in my mind which ought to be amalgamated. The Sligo and Leitrim would go to the Great Northern.

18404. Your stumbling blocks are what will go to the Northern Counties?—The Northern Counties has been taken by the Midland Railway of England.

18405. You can leave that?—Yes.

18406. What about the Dublin and Wicklow? Is that sufficiently acquired by the London and North-Western of England?—I do not know how that stands.

18407. Do you propose to amalgamate that?—Yes, I think so.

18408. Is the Great Southern to have it?—I think so.

18409. Would you leave the Midland in existence?—Sweep it out; it has been cut so much to pieces already that it is hardly able to exist.

18410. What about the line to Galway?—I could not exactly say; it seems to me to be the Great Southern.

18411. It is to be the Great Southern?—Yes.

18412. Then we come to two, with the third in the hands of the Midland Company of England?—Yes, of course, I have not gone into the details.

18413. But one has to face the question in detail when it is proposed to deal with them?—Yes.

18414. What about the English companies; are they to be left?—I think the English companies are a great blessing to Ireland; some people do not think so, but that is my view.

18415. You would not interfere with the English alliances as at present?—No, I think they are an advantage to us. I do not think we should have sufficient competition if it were not for the English companies.

18416. What about your expert on the Board of the new and enlarged Great Southern; what is to be his position; he is to represent the Government?—Yes.

18417. And what power is he to have?—I should say a consultative power; he would be able to keep the Government exactly informed how things were going on, and to express the Government opinion on different matters in regard to the working of the line.

18418. And be outvoted by nine to one?—Yes, he would be outvoted if the matter went to the vote, but I do not think a railway company is so unanimous as that.

18419. You may take it that they would be quite unanimous in desiring to get as much money as possible in return for as little done as possible; you cannot blame them for that?—They like to get the money, but they do their best with the money they get.

18420. Is your expert to be the same on both Boards, or a different one?—That is a matter of detail. I think it would be necessary to have more than one expert in Ireland; it would be better to have three, because they could consult and act in unison.

18421. Do I understand that your idea is really a Government Board?—Yes.

18422. One member of which would be entitled to sit on the Board of each company?—Yes.

18423. I do not quite understand that. Then about Moville. Moville is on the west side of Lough Foyle?—Yes.

18424. Surely there was a railway proposed to Moville within the last four or five years?—It has been twice proposed, to my knowledge, recently; I think the last was an electrical tramway proposal to run along the road.

18425. I have a distinct recollection of a railway being proposed, and being abandoned on the ground of local opposition?—There is a place called Magilligan on the east side; there was a proposal for a branch railway to Magilligan.

18426. It was abandoned on the ground that it would deprive other people of their livelihood in carrying traffic, was it not?—I do not know why it

was abandoned; there was some understanding come to—I rather think it was between the two companies.

18427. That would have given the traffic to the Northern Counties?—It would.

18428. Has your attention been called to the Rénard system?—No, only what I have seen in the papers about it. I was wondering whether our roads in Ireland would stand that.

18429. One of the difficulties with regard to motors is the weakness of the roads?—It is so.

18430. Clearly anything which gives you a maximum of two tons on an axle instead of five would give the roads a much better chance?—It would; but we have not been able so far to get the County Councils to do anything to strengthen the roads. I do not know of any instance in which they have; several proposals were made to them under Lord Pirrie's scheme.

18431. Do you think a motor service of some kind that only implies a very small capital outlay to start with is a good way of testing whether there is a serious traffic available for a railway if built?—I do not think it would be. I do not think you could judge from the traffic you would develop on a road in that way, whether a railway would pay or not. In the old time, when we had cars on the roads in Ireland, no one thought a railway would pay to Limerick, judging from what the cars carried.

18432. But that is a far cry. Do you think you must spend these £5,000 or £6,000 a mile in order to see whether there is any traffic?—That is my view.

18433. Some of the English railways think you can test the traffic with a motor vehicle first?—I do not know of any place where it could be so tested in Ireland.

May 13, 1907.

Mr. Alfred D. Price, M.Inst. C.E., Engineering Inspector, Local Government Board.

Establishment of motor services as a test of the traffic available disapproved.

The Commission adjourned till the following morning at 11 *o'clock.*

THIRTY-SECOND PUBLIC SITTING—TUESDAY, MAY 14TH, 1907.

At the Board of Trade Offices, 8, Richmond Terrace, Whitehall, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel W. HUTCHESON POË, C.B.; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. EDWARD GREER, B.L., J.P., examined by the CHAIRMAN.

May 14, 1907.

Mr. Edward Greer, B.L., J.P., ex-Assistant Legal Land Commissioner.

18434. You are a member, I believe, of the Irish Bar?—I am.

18435. And a Justice of the Peace?—Yes.

18436. Now, were you an Assistant Legal Land Commissioner in Ireland?—I was, for sixteen years.

18437. And in that capacity, of course, you became thoroughly acquainted with nearly the whole of Ireland?—I did.

18438. Had you any previous connection with any railway in Ireland?—Yes; I was a solicitor practising in Newry previous to that, and I promoted the Bill for the line from Newry to Armagh—that is, for the direct line of railway from Newry to Armagh—also the Newry and Greenore line, and several other schemes in connection with Newry.

18439. You are, of course, acquainted with all the railway facilities for the port of Newry?—Quite so.

Carlingford Lough improvement loans.

18440. Have you had any business relations with the improvement of the harbour?—Yes; I was concerned in the Harbour Orders for the improvement of Carlingford Lough some years ago—in 1867 and 1875. We obtained under that Order a loan from the Treasury of £80,000, which was expended in improving the sea entrance to the Lough by removing obstructions and making a deep channel 600 feet wide into the harbour. That work enables the steamers of the London and North Western Railway Company to arrive at Greenore from Holyhead at fixed hours, and at present that route is used for the transmission of a portion of the North of Ireland Mails from England.

Importance of the Port of Newry.

18441. Is Newry an old port?—One hundred years ago it was superior to Belfast. The Customs returns show that it was then a very much larger place than Belfast. I should say that that improvement of Carlingford Lough was a matter of national importance, inasmuch as it assisted in making the harbour of Carlingford Lough a Harbour of Refuge.

18442. You were saying something about the expense of the improvements of Carlingford Harbour?—That expenditure was raised by a loan from the Treasury of £80,000, and the interest and principal on that loan have been since charged upon the port of Newry. It was not a shareholders' undertaking; it was done under a Port and Harbour Order.

Principal traffic dealt with at that port.

18443. What is the principal traffic dealt with at Newry now?—The principal import traffic is coals, timber, hardware, slates, and general merchandise from England and Wales and Scotland.

Service of steamers.

18444. Is there a regular service of steamers from Newry?—There is a very fine service of steamers indeed—Holyhead from and to Greenore—and there is a direct service from the Canal at Newry to Liverpool.

Newry Canal.

18445. Is Newry at the canal?—The canal passes through the town of Newry.

18446. *Mr. Acworth.*—It is within the port?—Yes.

18447. Within the Customs port?—Yes.

Extent of the jurisdiction of Carlingford Lough Commissioners.

18448. *Mr. Aspinall.*—Is Carlingford Lough in the port of Newry?—It is. The jurisdiction of the Commissioners in the port of Newry extends to within about five miles of Greenore; then the jurisdiction of the Carlingford Lough Commissioners comes in, and they have charge of Greenore and five miles up the Lough.

18449. *Chairman.*—Do you know anything about the cross-Channel rates between England and Greenore?—No; I am not conversant with those.

18450. You do not know whether they are looked upon as favourable or unfavourable?—No; I cannot say.

18451. But I suppose the traffic to the North of Ireland which originally, according to your statement, must have passed through Newry has been diverted to other ports?—Entirely diverted from Newry; it is coming back a little now. The cross-Channel traffic of Newry and the traffic of Ulster, I may say, was formerly almost all done through the Port of Newry; it was done by means of the Ulster Canal.

18452. You are going back a great number of years?—About seventy years.

18453. Now, will you come to a later period, since the Ulster Railway was made?—Since the railways were made the traffic on the canals has, to a great extent, disappeared, and the traffic is now carried by rail from inland towns to Belfast, Newry, and to Dundalk.

18454. What I wish to bring out from you is that the traffic that used to pass through Newry, and was sent by canal into the country, subsequently came into Newry, and was sent by rail, but has since been diverted from Newry to the Port of Belfast?—Yes.

18455. So that Newry practically has lost nearly all its direct traffic by it being diverted to Belfast?—Quite so. All I wish to bring out is this, that Newry at one time was the natural port for the export of most of the agricultural produce and the manufactures of Ulster, and that has all been drawn from Newry in consequence of the development of railways, and the railway interest being very largely in the interest of the City of Belfast, the traffic has been drawn to Belfast.

18456. But when you say that the interest of the railway company was to carry the traffic to Belfast, I suppose you know that traffic—nearly the whole of the traffic carried between England and Ireland— is consigned by the senders by a particular route?—Yes, certainly.

18457. That it is not the railway companies that divert the traffic—it is the consignor who has ordered his traffic to go by a certain route?—Yes, but that is generally the result of greater facilities being given upon one route than upon another; so that to come back again, really it is the railway companies that are at the root of it all.

18458. They are at the root of all evil?—No; not the root of all evil; I should certainly not say that. But the two hang together so very closely. The consignor inquires from two railway companies which route he can send by the cheaper. One quotes it cheaper than the other, and of course he sends it that way.

18459. Do you not think that the development of Belfast as a port with greater facilities than Newry has attracted the steamers to Belfast?—Of course the steamers followed the increased advantages of the

dock. What I mean to put is this, that the Great Northern Railway Company is giving greater facilities to Belfast than to Newry, and consequently the consignors use the Port of Belfast in preference to the Port of Newry.

18460. Is there deep water at Newry?—Yes; deep water up to the canal in Newry, and twelve or fifteen feet of water in the canal, so that vessels of considerable tonnage come up to Newry.

18461. Can they lie afloat all the time?—They can lie afloat all the time, and discharge over the ship's side.

18462. But I am speaking of Newry?—They can lie there.

18463. Then they lie aground?—No, they do not lie aground.

18464. But still a vessel alongside the quay does take the ground sometimes?—Not in the canal; the canal is not tidal.

18465. At any rate, the Port of Belfast in itself offers greater facilities for steamers than the Port of Newry?—Not to Greenore.

18466. *Mr. Acworth.*—Do I understand that cross-Channel steamers come up from Liverpool to unload?—Yes.

18467. In order to get into the town they have to be locked into the mouth of the canal?—Yes.

18468. *Chairman.*—Have you any instances of what you would consider an undue preference given by the railway company to Belfast over Newry?—Yes.

18469. Could you give us one or two cases?—The line from the town of Newry to Armagh is twenty-one miles in length. That line was made by the merchants of Newry, Armagh, Clones, Monaghan, and Enniskillen and was made at a cost of £250,000. It was made mainly by its promoters for the purpose of using the port of Newry and getting up to Enniskillen and the West of Ireland. They formerly got up there by means of the Ulster Canal, and at very cheap rates, but when the Great Northern Railway Company got hold of the whole railway system those canals became gradually disused. The railway company managed to carry goods so much quicker that the canals came to be practically unused.

18470. And cheaper, I suppose?—And cheaper. Then those merchants and those interested in the district, found that they could no longer use the Port of Newry, which was the natural and most convenient port—the shortest distance and the cheapest freight across to Wales and Liverpool as compared with Belfast, and they promoted this railway, but the Committee, after hearing evidence on the Bill, which was strongly opposed by Belfast interests and by the railway company, inserted a clause in the Bill which was ruinous to the whole project. The clause was a clause binding the Newry and Armagh Direct Line, which was to join the line at Armagh and go to Enniskillen and other places, to use the station of the Great Northern Railway Company (which was then the Ulster Railway Company) at Armagh. They no sooner got us into their station than they treated the traffic in such a way by delaying it—keeping our wagons lying there—that it became impossible to work the traffic. Again, if any traffic was going beyond Armagh they insisted upon its being re-booked after coming over our twenty-one miles; if it was going to Clones, Monaghan, Enniskillen or any of those places it had to be re-booked.

18471. Before you go any further, how long was that ago?—About the year 1875 or 1876. The distance from Belfast to Armagh is thirty-six miles; the distance from Newry to Armagh is twenty-one miles. The rates charged are the following. They refused, as I have said, to enter into through booking arrangements at equal mileage rates, in respect of any traffic coming from Newry over the direct line, and which was destined for Monaghan, Clones, Enniskillen, and other stations beyond Armagh. They required all such traffic to be re-booked at Armagh and upon it they charged a ruinous preferential rate; for instance, if the rate for a ton of coals from Newry to Armagh was 2*s.* 6*d.* for the twenty-one miles of carriage, the rate for a similar ton of coals from Belfast to Armagh would be the like sum of 2*s.* 6*d.* for the carriage over thirty-six miles, whereas if a ton of coals was consigned from Belfast to Monaghan (fifty-one miles), the rate would be 4*s.*, but for a ton of coals that had come over the direct line from Newry to Armagh, and which was consigned to Monaghan, the charge from Armagh to Monaghan (sixteen miles), would be 3*s.*, thus raising the freight of Newry coals to Monaghan (thirty-seven miles) to 5*s.* 6*d.*, as against 4*s.* 6*d.* from Belfast to Monaghan (sixty-one miles). That very soon told its own tale. The Newry Company were practically ruined, and became insolvent, because they could send nothing beyond Armagh, and we applied to the Court of Queen's Bench in Ireland to compel them to give us through booking arrangements with equal mileage rates, and the Court decided that they had no power to make such an order in respect of an Irish railway.

Newry traffic to the interior destroyed by preferential treatment to Belfast in consequence.

18472. *Mr. Acworth.*—You said this was after 1875, I understand?—I was wrong.

18473. You must have gone to the Railway Commission after 1873?—It must have been before 1870—I beg your pardon.

18474. *Chairman.*—What became of this Newry line?—The Newry and Armagh—we were obliged to sell it.

Absorption of the Newry and Armagh line by the Great Northern (Ireland) Company in 1885.

18475. Who bought it?—The Great Northern Company got possession of it.

18476. It is a very old story?—Then we went to the Railway Commission and we got relief there to a certain extent.

18477. That was before you sold it?—Oh, no; since we sold it—that was in 1885.

18478. How did you go to the Railway Commissioners after you had sold the railway—as traders?—As traders—yes. I should mention that after we failed in the Queen's Bench we brought an action at law against the Great Northern Railway Company for damage to our traffic at Armagh by delays and by their not supplying a proper stock of wagons. We brought an action for £10,000, and after that had been tried for a week in Armagh before a Special Jury, the jury gave a verdict for £3,500 to the company I represented, and it was after that, that the Great Northern Railway Company bought up the line.

18479. Is the line from Newry to the main line of the Great Northern a single line or a double line?—Newry is at a very great disadvantage in that respect, but not such a disadvantage as I assume could be dealt with by the Railway Commissioners. It is a single line of railway to a junction with the main line.

Inconvenience and loss to Newry owing to the railway from Newry to Goraghwood Junction being a single line.

18480. How many miles?—Three miles; and over that single line of railway the whole traffic of Newry has to be worked. Now, it is a double line of railway, as I am sure you know, from Belfast to Dublin. Every station, except Newry, has a double line of railway to it, but upon that particular portion of the railway there is only a single line.

18481. Have the local authorities ever made any representations to the Great Northern Railway Company as to the inconvenience of that single line?—I am not aware that they have; I do not know that they have. I saw it was stated at a meeting of the Chamber of Commerce in Newry that they were considering the matter with a view to bringing it before the Great Northern Railway Company; it was such a disadvantage that at that meeting it was stated that goods were going to and from Newry to Dundalk—which is the next station upon the system of the Great Northern Railway—and that it took four days for them to reach their destination, a distance of fifteen miles, whereas by going through from Belfast on the double line they got there in six hours.

Representations from the local authorities on the subject.

18482. I suppose that the case you referred to was quite exceptional; I mean that could not be a regular state of things—it would be impossible for traffic in the ordinary course to take that time to go that distance?—The strength of the chain there is limited by those three miles. It is all blocked on that three miles. Even the morning and evening mails from Greenore have to pass over that three miles

18483. Yes, but that is only twice a day?—Yes; but there is all the through traffic going from Newry, north and south and west besides.

18484. But what I want to get at is, what action have the local authorities taken to bring this under the notice of the Great Northern Railway Company?—As I have stated, I am not aware of any, except what I

May 14, 1907.

Mr. Edward Greer, B.L., J.P., ex-Assistant Legal Land Commissioner.

have mentioned with regard to the meeting of the Chamber of Commerce of Newry.

18485. Do you know anything about the rates charged by the Great Northern Railway, or the other Irish railway companies, for agricultural produce?—Well, I do not know specifically, but I have always understood they are very high. When I was sitting on the Land Commission I heard repeated complaints as to the difficulty of getting produce to markets, and, of course, it was a case made very much by the tenants that they could not market their produce; they could not get it any distance except at very high rates.

18486. But you have no specific information?—No, I have not.

Advantages of low rates for agricultural produce urged.

18487. Of course there are no two opinions about the great advantage it would be to have the low rates for agricultural produce; but you know nothing as to whether the rates are fair and reasonable, or otherwise?—I could not go into that question. I was present when a very important judgment was given by the Railway Commission a few weeks ago, if you wish to hear the opinion of Mr. Justice Madden.

18488. We have got the judgment. But, putting it generally, Newry is at present at a considerable disadvantage, firstly, in consequence of its rates, and secondly, in consequence of the single rail junction with the Great Northern?—Certainly.

Prevalence of secret rebates alleged.

18489. Questions have been mentioned several times here about rebates; do you know anything about those within your own knowledge?—Before I joined the Bar, I was a practising solicitor, and was a good deal engaged in railway practice; and I did know that rebates were given, and very largely given, and I believe are very largely given still; but it is a system that is very difficult of detection.

18490. Of course you are thoroughly acquainted with the procedure in the Railway Commission Court?—Yes.

18491. Do you think that is a Court that is likely to find favour with the traders of Ireland for redressing any grievances?—I do not think it is; I think it is a very fair Court as it is conducted, but it is a very expensive Court; and I think that the evils it is intended to redress could be much more simply dealt with than by the machinery of the present Court.

Suggestion that the County Courts should take the place of the Railway and Canal Commission to hear traders' complaints.

18492. As a Barrister, perhaps you could give us some idea as to what would be a model court for hearing grievances between traders and the companies?—I think, in the first instance, the court should be a local court, as near the *locus in quo* of the complaint as possible; and I would give jurisdiction to the County Court judge to deal with these cases. At present the County Court judge can deal with appeals on income tax and appeals on rating; and I do not see why he should not deal with appeals on a business matter like this. It is, after all, only a business matter, and probably it would be advisable to give a further appeal to a judge of assize.

18493. From the decision of the County Court Judge?—Yes, from the decision of the County Court judge; it would cost but a very few pounds more

18494. Have you heard what it cost the Dublin Port and Harbour Board in their last case before the Railway Commissioners Court?—I have not heard it directly, except as legal gossip. From the number of eminent men engaged in the case, it must have cost a great deal of money.

18495. Then, your idea is that disputes between traders and railway companies could be cheaply adjusted by the County Court judges?—Certainly.

18496. And that that would be a satisfactory tribunal to the traders?—It would be very satisfactory to the traders, because they would have their witnesses almost on the spot. Instead of taking them to Dublin and disrupting their business, they would have all their witnesses at hand; and I should say that an inquiry before a County Court judge would not last as many hours as it would last days in Dublin.

18497. Would not the same kind of thing occur before the County Court judge as before the Railway Commissioners. The railway companies would be represented by Counsel; how would the traders be represented?—I should say the traders would be represented by Counsel too.

18498. Then, where would be the saving of expense? The proceedings in a County Court are almost always very much less expensive; there is no doubt about that. A case can be tried in a County Court for probably a tenth the cost it could be tried in Dublin. I do not see why it should not apply to an inquiry about a business matter of this kind.

18499. The County Court judge's procedure is, I suppose, practically the same as in England?—Yes, very much the same; they hold their courts four times a year, probably in four places in the county.

18500. Have you anything to say about the light railways that are guaranteed by the Treasury?—Some of them are in a very bad way; for instance the Clogher Valley Line, and the Cavan and Leitrim Line. The Cavan and Leitrim Railway absorbs 94 per cent. of its working expenses; and within a period of nineteen years it has involved the ratepayers in a total liability of £77,000. The Clogher Valley Line is worked at a cost of 105 per cent.

18501. I have reason to believe there are some negotiations going on between the Great Northern and the Clogher Valley.

Mr. Croker Barrington, Solr.—We are not aware of that here.

Colonel Hutcheson Poë.—It was in the newspaper the other day in connection with the Newry, Keady, and Tynan Railway.

Mr. Croker Barrington, Solr.—There is no one representing the Great Northern Company here, and we do not know of it.

18502. *Chairman.*—Of course you know that all those railways, though worked at 90 per cent., are a great advantage to the public in the neighbourhood, that is, the light railways that are costing so much?—Yes.

18503. And they tend to develop industries that never would have been developed, except for that mode of communication?—No doubt.

18504. Then, in that respect they are of great advantage to the district?—They are a great advantage to the district; but the loss on the working of them falls on a great many people who do not derive any benefit.

18505. I suppose that is so; but that was the bargain made at the time, was it not?—It was. I do not think there will be any more of them made on Guarantees.

18506. Under the same arrangement?—We could not get a county in Ireland to guarantee a light railway now. If you were promoting a Bill to-morrow, you could not get a guarantee.

18507. You began by stating that you were generally acquainted with the various districts in Ireland. I suppose you are aware that there are many districts which would be benefited to a great extent if railway communication existed?—Certainly.

18508. And it would tend to the prosperity of those particular districts if railway communication could be given?—There is no question about it.

18509. I suppose you will agree that private enterprise could not supply the capital for giving those railways?—Not in Ireland.

18510. I am speaking of those districts in Ireland that now have no railway communication?—It is impossible.

18511. We had evidence yesterday as to several such districts; would you be in favour of the State finding the money for those railways?—I would.

18512. Are you in favour of the State purchasing the Irish railways?—I am.

18513. You have considered this subject?—I have, fully.

18514. It is not a new subject to you?—Not at all.

18515. Do you think that the interests of Ireland would be promoted by the railways becoming the property of the State?—I have not the slightest doubt about it.

18516. Do you agree that if the State had the railways considerable employment would be given in Ireland in the manufacture of rolling stock?—Yes, there would—for instance, take Dundalk. Dundalk is a repairing depot for the Great Northern Railway Company; there are very extensive works there, and the population of Dundalk has increased very considerably since the establishment of these works. I am told, and I have no reason to doubt, that the Great Northern Railway Company

disburse as much as £2,000 a week in wages in that town, which is a town of, I think, 11,000 inhabitants at present; they disburse upwards of £100,000 a year among their employees; they manufacture carriages and wagons, and I am not sure that they do not manufacture some of their engines. All that has developed the neighbourhood; and Dundalk at the present time, from having been a very stagnant town indeed, is now one of the most advancing towns in prosperity of the small towns in Ireland.

18517. Of course the small railways have to import their engines, wagons, and so on?—The small railways cannot do anything else, of course.

18518. As a Barrister, you know that there is a power under some old Act for the Government to take over the Railways. Do you know anything about the Act of 1844?—Yes.

18519. Do you remember it?—No, I do not, only as a matter of history; I have never read it.

18520. But you are clearly of opinion, after consideration, that the interests of Ireland would be promoted by the railways becoming the property of the State?—I am in favour of the State acquisition of the railways in Ireland, and of the placing of the entire system under a representative Council of control, associated with elected representative members representing the various Chambers of Commerce and the Port and Harbour Boards, together with members to be nominated by the Board of Trade, the Board of Works and other Departments connected with the advance of Imperial funds to Ireland.

Examined by Colonel HUTCHESON POË.

18521. You spoke, I think as to the action of the Great Northern having been detrimental to the interests of the Port of Newry; and you said that at the time that the Newry and Armagh Railway was constructed, that railway in conjunction with the canal, would have the effect of drawing, and was designed to draw, traffic from Clones, Monaghan, Enniskillen, and even so far as Sligo, to the Port of Newry; is that so?—Quite so.

18522. At the same time, you complain now that the result of the action of the Great Northern has been to divert to Belfast traffic which should have gone to Newry?—Yes.

18523. But surely is it not rather inconsistent of you to complain of that when your action was designed, in the first instance, to draw traffic from Sligo? Would not that have been the natural outlet for a good deal of traffic you were attempting to draw to your port?—I do not think I mentioned Sligo—Sligo is rather out of the range. I do not think I went beyond Enniskillen. I think Sligo is going too far.

18524. It occurred to me that a great deal of the traffic which you were wishing to draw to Newry would have found its natural outlet at Sligo, and that, just on the same basis as you say certain traffic, whose natural outlet would have been Newry, has been diverted to Belfast, so in the same way the natural outlet of much of this traffic that has come to Newry would have been the port of Sligo?—Clearly. What was in my mind was Enniskillen.

18525. But even as regards Enniskillen, would not Sligo be practically nearer to Enniskillen than Newry?—Yes, it is; undoubtedly; but not for cross-Channel traffic to and from England and Wales.

18526. We have had evidence from gentlemen interested in the port of Sligo complaining of the natural traffic of the port of Sligo being diverted to the port of Derry, and so on; and Enniskillen, amongst other places, was mentioned as one where the traffic was being diverted from the port of Sligo. My only point was, that if you complain of Belfast and the Great Northern injuring your traffic, I think the Sligo people are equally justified in complaining of your injuring their traffic?—I did not mean to go as far as Sligo. Enniskillen was more in my mind. When I was a boy the whole coach traffic from Enniskillen to Dublin was all done through Newry—the mail coaches ran from Enniskillen through Newry to Dublin.

18527. May I take it, then, that while you disclaim any intention of diverting traffic from its natural channel, you consider that under a system such as at present exists, under which the railway systems are divided into the Great Northern, we will say in the interests of Belfast, the Great Southern and Western, in the interests of the port of Dublin, and the Midland, the tendency naturally must be to divert traffic to two or three large centres at the expense of a number of smaller ones?—That is my point.

May 14, 1907.

Mr. Edward Greer, B.L., J.P., ex-Assistant Legal Land Commissioner.

18528. And, generally, you would favour every port in Ireland, if capable of developing traffic, getting the full benefit of its geographical position?—That is all I meant to insist upon. I think, with regard to the traffic of the whole country, if the lines were in the hands of a general Council and the traffic were allowed to flow in its natural channels, it would be very much better for the country. I only advocate equal mileage rates for all ports.

Equal mileage rates for all ports advocated.

18529. Assuming the result of this Commission is to recommend that, at any rate, the smaller railways should be concentrated and amalgamated and drawn into the bigger ones, would not that still further tend to keep all traffic in the direction of the large centres if you do away with the small companies which at present exist and confine yourself to two or three large main traffic routes?—Well, taking the larger ports of Ireland on the east coast—Londonderry, Belfast, Dundalk, Drogheda, Greenore, and Newry, I do not know of any other ports, and those are all the natural ports for that traffic.

18530. What I meant to convey was, that until you could put the management of the railways into one hand—no matter whether into the hands of a Board of Directors, with some kind of Government supervision, or into those of the State or some national authority—until you put them into one hand there will be naturally a tendency to draw traffic over the length of line which gives the greatest return?—That is exactly what I complain of as regards Newry—that the Great Northern Railway will take goods from Enniskillen down to the port of Belfast, and give greater facilities to the port of Belfast than to the port of Newry, although their own line runs into the port of Newry, because they get a longer haulage. They are bound in the interests of their shareholders to do so.

18531. And under existing circumstances, and so long as the present system of private ownership is continued, such a policy must be pursued. The only remedy then is, as you consider, to put the whole of the railways into the hands of some central authority?—And let the traffic go through its natural centres.

Constitution of the controlling authority of the railways if State-owned.

18532. Would you be in favour of that authority being a direct State authority—by which I mean under the direct supervision and control of the Imperial Parliament—or would you advocate its being in the hands of some responsible Irish authority?—An Irish authority, certainly.

18533 In the event of the Bill now before Parliament becoming law, and an authority such as you have foreshadowed being established, would you consider that when the handing over a number of very important Departments to this Council probably no more important function could be assigned to it than the control of the railways and other communications of the country?—I think the management of the railways of Ireland would be essentially a work for them to do.

The excessive cost of procedure in the Railway and Canal Commission Court a serious tax on litigants.

18534. You spoke of the judgment which was recently delivered by the Railway and Canal Commission, and of the great expense which was probably involved by that Commission. I think you said you could not give any forecast of what that expense would be, but I happened to look over the list of counsel, and I saw that one of the law officers of the Crown—the Solicitor-General, I think—and an array of twelve King's counsel, and I think eight lesser lights of the legal profession, were engaged in the litigation, and I think one can form some idea of what the cost of that must have been, lasting, as it did, over three or four weeks.

Chairman.—I have a letter from Mr. Field giving the cost to the Dublin authorities.

Recent case by Port and Docks Board instanced. (See Appendix No. 25)

Mr. Shanahan.—There is a letter from Mr. Field. I think he said £3,000. The letter is not here.

18535. *Colonel Hutcheson Poë.*—I should have thought it would have been more. At all events, with such an array of legal gentlemen the expense must have been enormous?—Certainly.

May 14, 1907.

Mr. Edward Greer, B.L., J.P., ex-Assistant Legal Land Commissioner.

18536. And I take it to be your view that with the present legal system, expense of that kind must be incurred whenever traders or the public wish to get any redress of grievances under which they suffer?—Under the present system.

18537. Under a unified system, such as we are contemplating, where the control would be in the hands of a central body, that expense would disappear?—Yes; and my idea would be that the proceedings before the County Court judge would be initiated by a short petition, stating the grievance, and the solicitor, or counsel instructed by the solicitor, would deal with the whole thing. Of course, the procedure would be greatly simplified if the railways of Ireland were in the hands of one authority, and if there were rules and regulations laid down it would simplify the proceedings.

The advantages expected from a unified State system of railways

18538. There would be hardly any recourse to litigation, I suppose?—Very little.

18539 I suppose you also consider that for the future prosperity of Ireland, in order that some encouragement and some stimulus may be given to the agricultural industry, and also to such manufacturing industries as may be established, and which we hope to establish, it is absolutely essential that the administration of the railways should be of an enterprising nature, and should be directed to develop those industries by the only means by which they can be developed, and that is, by a material reduction in the rates and charges which are at present in force?—I have a very strong opinion upon that subject; and I believe if something is not done, and done very soon, in that direction, the country will be face to face with a very serious financial crisis. It is becoming a question already of whether the rent instalments will be ultimately paid. The counties are beginning to cry out, and it is a matter of notoriety that a great deal of the supplemental grants they have hitherto had will have to be applied in making good the defalcations in rent instalments.

18540. I quite agree. The main point of a unified State system would be to bring about such reductions as would improve the position of those agricultural tenants, of whom you are now speaking?—Certainly.

18541. Such development cannot be given by the existing system of private ownership?—I think it is hopeless to look for that.

18542. They are restricted from making experimental reductions by legislation introduced in the interest of the public?—The railway companies are making money for their shareholders; the Railway Council would make money for the people of the country.

Excessive cost of the construction of existing light railways.

18543. To go to another point. You spoke of light railways and the great cost involved in their construction. Seeing that something like £1,500,000 has been given in the last seventeen years in the way of free grants, and that the baronies are responsible for another million and a quarter, towards which the Treasury give a certain contribution, does it not occur to you that either the cost of construction of those light railways must have been very largely in excess of what it should have been or that the traffic to be served by those light railways was of such a small and unimportant character, so to speak, that a much less expensive system of railway communication would have been not only justified, but would have been absolutely essential if economic conditions are to be considered at all?—I think the lines were constructed quite too expensively. Those lines should not have cost more than £4,000 a mile, instead of which they cost up to £8,000 and £10,000 a mile. That line you have spoken of—the Newry and Armagh line—cost something like £15,000 a mile.

18544. You are of opinion that the lines have cost a great deal more than they should have done. Might I ask you, having regard to the fact that the districts through which they pass could not possibly develop for many years, is it not manifest that they did not require so expensive a line, and that a simpler line would have answered all the purposes?—A line of about £2,000 a mile would have been all that was necessary or justifiable. Certainly, circumstances have shown that the higher-priced line was not justified.

Examined by Mr. ASPINALL.

18545. Supposing that you had the arrangement in force which you seem to desire of having a certain area allocated to the Port of Newry, Belfast would, of course, have to have an area allocated to that port?—I would not allocate any area. I would like to let the merchant in Enniskillen or the merchant in Monaghan use either the Port of Belfast or the Port of Newry, whichever suited him best.

18546. But let us take, say, twenty miles from Belfast, twenty miles from Newry, twenty miles from Dundalk, twenty miles from Drogheda—suppose the rates to those ports were all equal?—That is for the twenty miles.

18547. For the twenty miles, yes. Would you not even then have the difficulty that some of these ports have not the same natural advantages that you have at Belfast, where you have deep water at any state of the tide, and where, therefore, you have a continuous flow of steamers coming and going any time of the day, giving facilities which cannot be given at your Port of Newry, because it is tidal, or at Dundalk, because it is tidal, or at Drogheda, because it is tidal, and that, therefore, you will attract the merchants by the facilities that exist for transit quite irrespective of the question of the railway rate?—I should be very well satisfied, if I were a merchant, if you gave me twenty miles from Newry, and twenty miles from Belfast. I would be perfectly satisfied. I would then put the Port of Newry in competition with the Port of Belfast, and for cross-Channel traffic Newry would get it.

18548. Take a port like Belfast. You have steamers going from Belfast direct to Liverpool?—Yes.

18549. Where there is no question of tide. You have them going direct to Fleetwood, and direct to Scotland, and that creates a facility which is very, very attractive to the merchant?—I will answer that. I think you are assuming that the facilities for some years going in and out of Newry, are not equal to Belfast.

18550. Quite so; because it is tidal?—They are equal. A steamer can come in and can come right up to the town of Newry, just as into Belfast, at any time of the tide.

18551. Drawing what depth of water?—About fifteen feet.

18552. Can she get right up into the port?—Right up into the canal.

18553. She cannot get into the canal at any state of the tide?—She can, when drawing fifteen feet, get into the locks.

18554. Are you quite sure?—Quite sure, because they come in and out at stated hours.

18555. Take the case of the Dundalk and Newry Steamship Company. They have got one steamer—the Dundalk, and they have some smaller steamers. Where are those smaller steamers run to? Are not the smaller steamers run to Newry, and the larger steamer to Dundalk?—Because larger steamers cannot go up to the quay at Newry, but the larger steamers go to the canal and go in and out at all times of the tide. Take the Belfast steamer going to Liverpool. Belfast is not by any means so direct a port for Liverpool as Newry is.

18556. But surely you must generally agree that the great facilities of these deep water conditions will attract traffic irrespective, to a certain extent, of railways?—Newry is not labouring under that disadvantage as a port at all, because Newry has got Greenore, where the London and North Western steamers go in and out at all tides. They start every night at eight o'clock.

18557. The London and North Western start from Greenore, where they have deep water at any state of the tide. Then you look upon the London and North Western steamers as a great advantage to that part of Ireland?—They have been a great advantage.

18558. So you are not complaining of the Greenore boats?—Not at all; they are carrying the mails to Belfast now by Greenore.

18559. Greenore is an illustration of my point that you have deep water at any state of the tide, and the coming and going of those steamers is absolutely regular, and, no doubt, has taken away from the Port of Newry some of the traffic which used to go in the smaller steamers from that port?—Well, it has not taken much from Newry, but it has taken from another place between Greenore and Newry,

namely, Warrenpoint, where there used to be a large fleet of tidal steamers, but these have all disappeared, and smaller steamers have taken their place and go up to Newry.

18560. It all comes back to deep water being an advantage?—Yes.

18561. Speaking of the difficulty you experienced on the Newry and Goraghwood section of line because it is a single line, can you tell me what tonnage passed over that?—I cannot say; but a good deal of the trade must be done over it, because it is the only way into Newry.

18562. How could the local courts you spoke of decide matters of rates with regard to this particular district around Newry without inflicting injustice upon somebody out in Donegal, where the circumstances were somewhat similar in character? How could you permit local courts spread over the country to deal with questions affecting the general policy of the railways?—Of course, if the question was one that affected two or three counties, and the traders of two or three counties, there would be something in that.

18563. Does not that point to having some skilled authority to whom you can go?—Well, if you had this great central railway authority, this Railway Council, they could send representatives down to investigate, and take evidence.

18564. If there were a Railway Council, you would be satisfied that that body would be efficient for the purpose?—I would; I think they would take the place of the County Court judge.

18565. And that would have the effect of giving uniformity of decision?—It would have that great advantage.

18566. You have expressed the hope that if these railways were taken over by the Government, and were worked for the benefit of the State, Irish industries would improve materially. Of course, that would not happen until the lapse of a certain period of time. How soon do you suppose that Ireland would begin to respond to the advantages which you suppose would then exist by reason of greater railway facilities and lower railway rates?—I should say ten years.

18567. And during that period of ten years there will be great difficulty in carrying on the railways for the State at a profit?—Well, of course, some financial arrangement would have to be made to bridge over that period.

18568 That difficulty would have to be recognised?—Certainly.

18569. But you do hope that after a period of ten years a considerable change would take place?—I do.

Examined by Mr. Acworth.

18570. You spoke of this single line. Do you really think that a single line three miles long is a handicap to a place of 15,000 people?—I do, where it is a port, and where vessels are going in and out, and discharging cargoes and coal and wishing to get away again.

18571. You know Plymouth, I suppose—at any rate, by name?—I do.

18572. You would admit, I take it, that Newry is not likely to be as important as Plymouth for some time to come?—I wish it was.

18573. Do you know that last year the Great Western had about three miles of single line to get to Plymouth?—I was not aware.

18574. Do you know that until a few years ago on the Great Western there were twenty or thirty miles of single line to get to Plymouth?—No, I did not know that.

18575. Does that change your view?—Not very much.

18576. If a rich company can get to a place like Plymouth with thirty miles of single line, do you really think three miles of single line is necessarily a great handicap to Newry?—Might I ask you whether there are any other towns near Plymouth circumstanced as Belfast is with regard to Newry.

18577. We are talking not about competition, but about the inconvenience of a single line, that is all?—Well, I think the inconvenience of a single line of three miles, if it is connected with a system of seventy or eighty miles from Greenore to Belfast, is almost too evident to admit of argument. Why, a man can send goods from Belfast to Dundalk and get his goods into Dundalk in six hours, while another man sending goods from Newry to Dundalk cannot get them there in less than four days.

18578. I do not want to argue that at all. I want to ask you to consider whether you are prepared to maintain that three miles of single line is such a great obstacle as you have suggested?—I think it is a very great obstacle.

18579. The London and North Western, by-the-bye, is behind Newry?—Yes.

18580 The North Western has got to get through these three miles?—Yes.

18581. The North Western is not very poor?—I should say not.

The disadvantage of the single line from Newry to Goraghwood and its effect on London and North-Western Railway traffic.

18582. If the North Western thought it a serious obstacle, do you not think they would find means of getting it doubled?—I do not know what their relations with the Great Northern are.

18583. They have an interest in getting to and from Greenore?—They have.

18584. If they thought this was a block of so much importance, would they not have done something?—I dare say they would.

18585. That is what it seems to me. As I gather, what you really want is State management?—Yes.

18586. Of course, the State would not allow itself to be taken into the County Court, would it? The State would lay down its rules?—When you say State management, might I ask you to define what you mean?

The control of the railways in Ireland by a public representative authority advocated.

18587. I understood it was to be managed by a public body?—Yes, that is what I meant. A Public Representative Council.

18588. Which would have statutory authority to levy certain rates?—Certainly.

18589. And would levy them if it thought proper?—Quite so.

Litigation between traders and the railway authority under public control improbable.

18590. You could not take them into the County Court on that, could you? You could not take the Chancellor of the Exchequer into the County Court on the Income Tax or the Tea Tax, which would be the same thing, would it not? If your view prevails, we need not talk about the County Court—that is what I am trying to get at?—If the public Council is established, then I do not think there is any necessity for going to the County Court at all.

18591. That is just what I understood you to mean. You were suggesting that the County Court should be resorted to if private management continued?—Yes.

18592. Then I will not ask you about that, if you do not want to have it?—I very much prefer to have a public authority.

18593. In that case resort to the County Court would not be necessary?—Certainly not.

18594. Now, on that, I want you to tell me this. I think I understood you to tell Mr. Aspinall that supposing the reductions you desire were made, there would be a difficulty about money for the first few years until the traffic grew?—Quite so.

18595. Where is the money to come from?—It must come from the State.

The loss involved by rate reductions in the event of State purchase to be borne by the Treasury.

18596. What do you mean by the State now?—From the Treasury of England.

18597. From the Treasury of England?—Yes.

18598. That is your view. I gather that you could not expect Ireland to pay part out of the rates?—Ireland could not possibly pay; it could no more pay for that than it could have found the money for land purchase, which the Treasury has done.

18599. I only want to get your view. The position is that you think the railways ought to be handed over to Irish management, and that the necessary money to fill up the deficit, at the start at any rate, ought to be found by England?—Yes.

Constitution of the Council of Management.

18600. Would the Treasury have any control?—I suggested that—that the Board of Trade, the Board of Works, or whatever Boards were necessary, should appoint their representatives upon this Council.

18601. A certain number?—A certain number.

18602. Perhaps it would be 25 per cent. as suggested in Mr. Birrell's Bill?—Quite so—they would be fully represented.

18603. Then they would not be able to stop a reduction of rates. A 25 per cent. representation could not control?—It could not control in an assembly of 100.

18604. The interest of the other seventy-five would clearly be reduction of rates, would it not?—Certainly—not a ruinous reduction of rates, but a fair reduction.

May 14, 1907.

Mr. Edward Greer, B.L., J.P., ex-Assistant Legal Land Commissioner.

18605. A fair reduction at the expense of the Treasury as represented by the minority?—Well, I would not say at the expense, because that would be a dishonest thing to do.

Constitution of the Council of Management.

18606. I do not think it is in the least dishonest, but that is the proposal, is it not?—The proposal is, that of the 100, twenty-five should represent the interest of the bodies that were advancing and have control of the funds, and the other seventy-five should represent the traders and persons interested in the general development of the trade of the country and the prosperity of the country.

18607. By means of lower rates?—Whatever it may be.

18608. We may assume that the 75 per cent. would outvote the twenty-five?—That might or might not be.

18609. Would you propose to give the 75 per cent. power to vote reductions to any extent they thought desirable in the interest of the development of Irish trade?—That is rather a difficult question. If you gave them power to do it, and they had absolute power to do it, they might ruin the whole thing.

18610. No, the lower the rates were to be, the better for Ireland. It would be much better for Ireland if they had no railway rates to pay at all, clearly?—It would be better, of course, but how are you to bring that about?

Treasury control in the case of rate reductions.

18611. The Irish representatives on the Council would naturally vote for it?—They would, I suppose.

18612. Are you proposing to put a stop anywhere?—Of course, there must be a check upon it at some point or other.

18613. I want you to tell me what you suggest?—That I have not considered.

18614. It is a serious point for those of us who do not live in Ireland, is it not?—I can scarcely follow you in that, because if the rates were reduced, if the Board were so foolish——

18615. But surely they would be very wise, would they not? If the Board is appointed——?—Pardon me, I do not quite see it, because they first get the money to purchase the railways, and they get that from the Treasury of England; they then proceed to reduce the rates so low that it would not pay the interest and I think that would be a very dishonest thing.

18616. I follow your point, though I cannot myself see that it is dishonest. Of course if there is a bargain that you would not reduce below a certain point, then it might be dishonest to break your bargain?—I think it is assuming rather much.

Suggested arrangement for preventing excessive reductions with consequent loss of revenue required for payment of interest.

18617. Let me turn it round then. Is your point that the Council ought not to be allowed—ought not to have power, we will put it—to reduce the rates below the point at which they paid interest on the purchase money?—Some such arrangement would provide a safeguard.

18618. You think there ought to be a limit of that kind?—That would be reasonable.

18619. Supposing that were put into a Bill, do you think there would be any money available to reduce rates—any serious money?—You mean that the Treasury, under those circumstances, would not advance the money?

18620. No, I mean this. Assume that the Irish railways were bought by the State for £40,000,000, or any other sum you like to take, would you be able to get out of them more than enough net revenue to pay the interest on the £40,000,000?—That is a question of calculation altogether. I cannot say what has been estimated it would take per annum to pay, say, 4 per cent. upon £40,000,000.

18621. We can easily do that—it is £1,600,000, is it not?—Yes.

18622. Have you gone into it financially?—No, I have not.

The question of the manufacture of railway rolling stock in Ireland.

18623. Then I will not ask you any more about that. Just one other thing. The manufacture of rolling stock you laid stress on; I think you said the Great Northern manufacture it practically all at Dundalk?—Yes.

18624. So that is in Ireland already?—Yes.

18625. The Great Southern manufacture, also, at Inchicore?—Yes.

18626. Do not the Midland Company manufacture most of theirs?—I am not aware of it.

Mr. Vesey Knox, K.C.—Not all, but largely.

18627. *Mr. Acworth.*—The Great Northern and the Great Southern are a very large part of the Irish railways?—Yes.

18628. You have that already?—Yes.

18629. So that really all the additional manufacture wanted is for the little railways—the bulk of it is already in Ireland?—So it appears.

18630. Do you know what the Northern Counties do? They have works at Belfast—you do not know whether they manufacture?—I am not sure.

18631. Anyway, the Great Northern and Great Southern form the bulk of the railways of Ireland?—Yes.

18632. *Mr. Aspinall.*—I should just like to ask a question upon that. With regard to the manufacture of rolling stock, say, at Dundalk, is there not an impression that any additional rolling stock which is required would bring in a very large amount of money to the artisans of Ireland. Take wagons, for instance?—That is the way I put the case of Dundalk. There is a sum of £2,000 a week spent amongst the working population of Dundalk, and it has had the effect of increasing the population of the town very considerably during the last twenty years.

18633. I only want to ask you how far that is true. According to the Board of Trade Returns, there are about 19,633 wagons owned by all the companies. Now, I think it is generally accepted that from the rolling stock in Ireland the number that you would require to renew in a year—to make new wagons instead of those that are worn out—would be about 785 a year. Now, the whole of the wages that you can spend in Ireland upon a wagon does not amount on the average, to more than £5 a wagon, so that the total amount that you could possibly retain in the country, having regard to the fact that the materials must be purchased out of the country, would be something under £4,000 a year?—Yes.

18634. So that it is rather a smaller matter than it sometimes talked about.

18635. *Chairman.*—You are only dealing with renewals, Mr. Aspinall. What about repairs?

18636. *Mr. Aspinall.*—I was just coming to that. When you come to the question of repairs, which are practically all done in Ireland, you have to spend something like £4 per wagon per annum on a total of 19,633 wagons. Therefore, the question of repairs is of immense importance, while the question of renewals, or new stock, is not of such great importance?—So it would appear from those figures, but whatever it is, the country would have the benefit of it. I could get no other figures that I thought afforded an example of what I wished to convey better than Dundalk. There £100,000 a year is spent in the way I have said, and that, in a town like Dundalk, is a very large thing, and within the last twenty years the prosperity of Dundalk has improved immensely, and I think it is due greatly to this cause that I have mentioned.

18637. Practically all the repairs are done, you know, in Ireland—at Inchicore (the Great Southern and Western), at Dundalk (the Great Northern), at Belfast for the Northern Counties, and at Grand Canal-street for the Dublin and Wicklow. Therefore, as repairs are already dealt with in Ireland, the question of renewals of wagons is of less importance than it is sometimes considered to be.

Cross-examined by Mr. VESEY KNOX, K.C.

18638. You know Mr. Thomas Irwin, of Newry?—Yes.

18639. You know he is Chairman of the Newry Port and Harbour Trust?—Yes.

18640. I do not know whether your attention was called to the evidence he gave before this Commission at page 295 of the Minutes. He said that the Harbour Trust had sent out circulars asking the traders whether they had any grievances, and that they could find no grievances in Newry. Did you know that?—No.

18641. You are not yourself in trade, I think?—No.

18642. The actual people who are in trade in Newry have no grievances?—The evidence I have given upon that subject is based upon reports that I took out of the newspapers of meetings of the Chamber of Commerce and other bodies in Newry.

18643. What bodies? Mr. Irwin is also a member of the Chamber of Commerce?—This is a meeting of

the Chamber of Commerce of the 2nd of May, 1907. If you wish it, I will read it for you, it is very short.

18644. Does it go beyond what you said just now?—It states what their grievances are.

18645. Are there any grievances in it except the two—the occasional shortage of rolling stock and this point about the single line?—The point about the single line is one point, and the point about the Dundalk people getting an advantage over Newry in consequence of the single line is another point.

18646. In consequence of the single line?—Yes. The Chairman says here that "he did not know how far other people had suffered, but so far as the firm which he was connected with was concerned, they had a great deal of trouble ever since Christmas, owing to the small number of wagons at the railway stations. They had sent stuff over to the railway, and it had to lie at the station three or four days before sufficient wagons were obtained to take it away. A number of logs for Belfast were lying at the station for three days before they could get a wagon to put them in, and the same applied to their box trade. All their customers were complaining that they could not get stuff delivered as quickly as they could from Belfast, and he would like to hear what the other members present had to say on the subject." It was the Chairman who said that.

18647. This has no reference at all to grievances—there was the question of wagons and the single line?—And the single line.

18648. Now, on the single line question, do you know the Great Northern have promised to double that line?—No; I am very glad to hear it.

18649. Evidence of that was given by Mr. Irwin when he gave evidence before the Commission?—That does not appear by this report.

18650. That is a newspaper report, I suppose?—I am sure it is an accurate report.

18651. How can you be certain it is accurate?—A newspaper has no object in publishing an inaccurate report upon a subject of that kind. It is very easily checked.

18652. Here was the gentleman who is Chairman of this Port and Harbour Board coming here and stating that the only real grievance they had was this difficulty of the single line, and he said that this railway company had promised to remove that for them. You yourself have no actual experience of the trade of the place at all?—No; I am a practising barrister.

18653. I think the grievance of rates that Newry used to suffer from, and about which some controversy arose, was after the amalgamation with the Great Northern, which took place about 1874, I think, speaking from recollection?—I think so.

18654. After that amalgamation there was some little difficulty in adjusting rates, as there very often is after an amalgamation, and there was a case before the Railway Commission about it?—Yes.

18655. That was thirty years ago. Now things have settled down, and there is no difficulty about rates at all?—I would not follow you in that; I believe they have a very great grievance.

18656. There was none they could find to bring before this Commission. Mr. Irwin said there were some complaints, but upon investigation it was found that they had no basis. That is Question 9763?—Well, in this report, one gentleman says——

18657. I do not want that—I mean if it is not anything you know yourself.

Chairman.—I do not think Mr. Greer has given any evidence about this at all.

May 14, 1907.

Mr. Edward Greer, B.L., J.P., ex-Assistant Legal Land Commissioner.

18658. *Mr. Vesey Knox*, K.C.—Very well. Now, on the question of shops, do you know that the Great Southern, in addition to their shops at Inchicore, have shops at Limerick?—No, I do not.

18659. Wagon and repairing shops at Limerick?—I am not here giving evidence objecting to the Great Northern Railway Company having works at Dundalk, or to the Great Southern and Western having works at Inchicore. I would rather see those works increased ten times. I have no objection to them.

Extent of rolling stock repairs and renewals in Ireland.

18660. I quite appreciate that; but I do not know whether you know the extent to which Irish railways have gone in this direction to support local industry. Do you know that even a small railway like the Belfast and County Down has got repairing shops?—It has got repairing shops, but I do not think they make any wagons.

18661. They do not make engines, but they make all their wagons and carriages. Do you know that even the Cork and Bandon make their carriages and wagons, too?—I do not.

18662. Do you know that even the West Clare has just turned out a very fine train?—Well, I was only once on the West Clare, and certainly there was room for great improvement.

18663. That is some time ago, I suppose?—Yes.

18664. On the question of uniformity, I know you are very familiar with the legal practice in Ireland, and I do not know whether I might get this from you. It is the law in Ireland that there is an appeal on questions of fact as well as of law from the County Court judge—it differs from England in that respect?—Yes.

18665. And there are sometimes as many as ninety civil bill appeals, as they are called, to be heard at one assize town?—I am sorry to say that is not my experience.

Suitability of the County Courts to deal with disputed railway matters.

18666. Perhaps you do not go to Tyrone—but there are some cases?—But you know Tyrone is a very exceptional county.

18667. There are a large number of civil bill appeals to be heard at each assize?—Not very large, about two days in each assize town is sufficient to dispose of them, except in the city of Belfast.

18668. The judges would get through them very expeditiously?—In from one to two days.

18669. Do you think all those questions of railway management involving the examination of experts could be sandwiched in among all these civil bill appeals?—I do not think it is such a complicated question at all. I think any of our Irish judges would deal with these cases very expeditiously. The assizes in most of our towns—take the North-East Circuit—only last two days, and they only last three days in Armagh. There would be very little difficulty in adding one day more on to those.

18670. Can you tell me this: is there any appeal from a judge of assize?—No appeal

18671. You would not give an appeal to the Court of Appeal?—No.

18672. You have an appeal, of course, to the Court of Appeal in the case of a running-down action, where, perhaps, there are damages of £50. That case can be taken to the House of Lords?—Yes.

Mr. Robert M. D. Sanders, J.P., examined by the Chairman.

18673. You are a J.P., and you live at Charleville, County Cork?—Yes. I was a member of the Grand Jury of County Cork for many years, and I had in that county, which is the largest county in Ireland, a great deal of railway business to consider in connection with the light railways, and we had specially brought before us railway schemes which it was our duty to consider under the Railways Acts.

18674. That was before County Councils were established?—Yes.

18675. Do you farm any land yourself?—Yes, I farm a considerable amount of land. I have a good deal of property round Charleville.

18676. Have you been agent for other properties?—Yes, I have been an extensive land agent in Ireland. I have had the management of estates in various other countries, and I have had to do with about 3,000 tenants. I have a good knowledge of the wants of the people, and the manner in which they carry on their farming business.

Mr. Robert M. D. Sanders, J.P., Landowner and agent, and Chairman of the Tourist Development Company, Ireland.

18677. Of course, you are conversant with the railways of your county?—Yes, and for the last ten years I have been chairman of the Tourist Development Company, the object of which company is to increase the tourist traffic in Ireland. We have arrangements with all the railway companies, English and Irish; we

May 14, 1907.

Mr. Robert M. D. Sanders, J.P. Landowner and agent, and Chairman of the Tourist Development Company, Ireland.

have contracts with them, and arrangements for through bookings. And that brings one very much in contact with railway work so far as passenger traffic is concerned.

18678. That is principally passenger traffic; it is like Cook's Agency in England?—Well, it is rather more than Cook's.

18679. In what way?—Because we work the routes. We have our own horses and coaches, which run in connection with the railways, and we own hotels.

Objects and work of the Tourist Development Company.

18680. *Lord Pirrie.*—And Cook's actually sell some of your tickets, I believe?—They are our agents.

18681. *Chairman.*—This is something peculiar to Ireland?—I daresay that abroad it has been worked.

18682. How long has your company been established?—We commenced about ten years ago.

18683. Have you any figures to show the result?—Roughly; I can state how it came about.

18684. Never mind that. Has it developed a traffic which did not exist prior to the formation of your company?—Certainly it has.

Improved railway facilities for tourists.

18685. In that respect it has improved the railway and other travelling facilities of the country?—We have assisted the railways and the railways have assisted us; and by our co-operation with the railway companies we have made it possible for tourists to come over, especially to the West side of Ireland, and enjoy themselves better, and at a cheaper rate, than they could formerly.

18686. How many passengers do you deal with per annum?—Mr. Crossley, our managing director, informs me that their number is about 14,000 on the southern section.

Extent of the traffic dealt with by the company.

18687. In one year?—Yes. The movement was taken up about ten years ago in Ireland. Lady Aberdeen first gave a help to it, and then afterwards Lord Crewe, when he was Lord Lieutenant, presided at a very important meeting, held at the Royal Dublin Society, when the Irish Association was formed. That meeting was representative of the whole of Ireland, and it was attended by important men from all parts of the country. I think Lord Pirrie was present at that meeting. At all events, subsequently an important meeting was held at Belfast, at which Lord Pirrie, who was then Lord Mayor of Belfast presided. The meeting was a very great success. Then, again, a meeting was held in Cork, and was attended by men of all classes of political opinions. And afterwards, the campaign was carried into London, and a great meeting was held at the Imperial Institute, which had the effect of drawing attention in Great Britain to the desirability of travelling in Ireland.

The Fishguard and Rosslare scheme and the Great Southern and Western Railway amalgamation in the South.

18688. Do you know anything about the Fishguard and Rosslare scheme?—Yes; I have been interested in that scheme for a good many years. It is nearly twenty years since it was first discussed in the County Cork. At that time the Great Southern and Western had only a limited area from which to draw traffic; their line ran from Dublin to Cork, with a limited number of branches; and then there were numerous small railways, in the hands of weak companies, which ran across the country from Waterford; there was the Waterford and Dungarvan Railway, for instance.

History of the amalgamation, and the satisfactory results consequent thereon

18689. I do not think you need name them; it is sufficient to say that there were several small railways?—Well, the position was this: that we had what was a very inefficient form of competition in South Ireland; we had a strong company, the Great Southern and Western, and we had these other companies; and it was a competition of the very poorest description, because, instead of giving facilities there used to be a good many differences between the big company and the small companies; the small companies imagined that the big company was getting the traffic from them; and they used to raise a good many difficulties at the junctions; and there was a strong division of opinion in Cork. People at that time thought competition was a good thing; some people thought there might be effective competition with the Great Southern and Western into Cork by means of these railways; and certain promoters started a company to run a cross line from Cork, buying up these small railways into Rosslare in connection with England. But they had no strong company behind them in England; and many of us thought—and I was one of those—that that would be a useless scheme, because it would not give effective competition, that it would only perpetuate the then state of affairs, especially as they were asking the County Cork to contribute a very large sum of money to this scheme to finance it. I did not see why we should have to pay a tax in the shape of these guarantees. Subsequently, the Great Western Railway Company made arrangements with the Great Southern and Western Railway Company, with the result that a big amalgamation was carried out, practically amalgamating all the railways in the South of Ireland with the exception of these small railways down in County Cork, which I can deal with afterwards. That has been done at very great expense, not to the ratepayers, as was originally proposed, but by the companies themselves. They have spent a very large amount of capital upon them; and the service is now complete. It is a very fine service, the steamers are very good; and I think it is likely to result in very great benefit to the South of Ireland. It carries out the principles which were laid down in the Allport Commission Report. The only difference is that in that Report it was suggested that these amalgamations should be carried out at the expense of the State; whereas, in this instance, it has been carried out at the expense of the railway companies.

18690. Do you think that on the whole this amalgamation has been an advantage to the South of Ireland?—Most distinctly; I do not say that we have reaped a benefit as yet, but we have facilities now which will put us in a position to reap the benefit in future.

18691. Can you remember the year when the grand juries ceased to exist?—1899.

18692. *Lord Pirrie.*—1900 was the first year of the County Councils?—That is so.

18693. *Chairman.*—I think we will go on, if you please, to the general question, without going into all the detail which you have in your proof. Have you formed any opinion as to whether it would be to the advantage of Ireland if the railways were amalgamated either into two, or three, or even one; have you considered that subject?—Yes, I have given some consideration to it.

18694. I should like to have your views upon it, shortly. First of all, we have had evidence before us on several occasions; some advocated the railways in Ireland being amalgamated into three systems, and some into one system; and a great number went so far as to suggest State purchase. Now, what is your view about it, because you seem to have taken a great interest in the development of the tourist traffic, and of the interest of English people in Ireland?—I think that with proper conditions and safeguards it would be almost better to go for the whole thing, and to have one system.

18695. That would mean some arrangement for the State to purchase the railways?—No, I am not in favour of State purchase; I would not go as far as State purchase.

18696. Who would make the arrangement?—I think it might be brought about by voluntary arrangement with the railway companies.

18697. A voluntary arrangement?—If you buy out the railways altogether and eliminate the shareholders, you must give them a very good price; it would be a very expensive operation, and it is questionable whether it would be a provident arrangement. I think there would be a loss on it, which would have to be made good somewhere; and the question is, who is going to pay for that loss?—It would certainly have to be either paid for by the British Treasury or paid for out of the local taxation; and I do not think Ireland could afford it.

18698. You said just now that you were in favour of the whole of the railways being amalgamated into one system; how do you say that is to be brought about?—I should rather follow the views expressed by Sir George Findlay many years ago. I am aware that he suggested the division of Ireland into three separate railway systems, but I think that probably at that time he did not see the feasibility of going further than that; and he suggested that the State, if it

came in and assisted the railway companies financially by raising a loan of money at a low rate of interest, might then impose certain control over the railways; and that there should be independent Commissioners appointed who would have a voice in the management of the railways. I think that is the soundest policy to go on, if there is to be a change. What I would suggest is, that there should be created a 3 per cent. railway consolidated stock of a certain amount, and that the debenture and preference and ordinary shares should be exchanged for that stock. The details would have to be gone very carefully into to adjust the rights of the various shareholders.

18699. Who would advance the money?—It would be the State authority.

18700. The State is to find the money, to begin with?—I would suggest the establishment of an independent Railway Commission, composed of men who were the best men you could get, and they should be appointed permanently.

18701. Appointed by the State?—Appointed by the State.

18702. Paid Commissioners?—Paid Commissioners.

18703. Well, that is the first step; what is the second step?—I would consolidate the debenture, preference and ordinary railway stock into one railway consolidated stock; I think that would be done at 3 per cent.; and I would exchange the scrip for that.

18704. Whether the railway shareholders liked it or not?—Well, I do not say that. If the railway shareholders did not like such a system, and would prefer State purchase, then I think you would have to give them State purchase.

18705. To begin with, the State is to find the money; but why do you not swallow at once the proposal of State purchase? Why beat about the bush? You say the State is to find the money?—Yes, because the State will have to find a great deal more money if you have State purchase out and out.

18706. How do you mean, "more"?—What I suggest is, that you retain a certain proportion in the railway companies for the shareholders; you do not pay the shareholders the full amount that they would otherwise require if you have State purchase out and out; you retain the shareholders' interest in the railways.

18707. Excuse me, but I really do not follow you at all. Are the shareholders to be bound by any Act of Parliament to come into this suggested scheme, whether they like it or not? That is what I want to know?—Well, of course, when it was ultimately decided upon, the shareholders would have to be bound by it; but the arrangement would be sufficiently favourable to the shareholders, I think, to induce them to approve of it.

18708. Do you know anything about the railways in Australia and New Zealand?—No, except what I have read.

18709. Or those in Belgium?—I have seen something about Belgian railways.

18710. Your scheme differs from anything I have ever heard about?—It is more on the lines of Sir Geo. Findlay's scheme.

18711. No, I am afraid it is not on his lines?—Well, perhaps it goes farther. The way in which it would work out financially would be this: that you give the railway shareholders the value of their stocks at, say, their present market value.

18712. Stop a minute. Do you think that would be a fair thing to the shareholders?—Not if you stopped there, certainly not; but, in addition to that, you would give them an interest in the railways to make up for the further compensation which they would be entitled to.

18713. Who is to fix the interest?—That would be fixed automatically; they would have a share in the success of the railways; and I would give them half of the net profits of the railways after providing for the dividend on the consolidated stock.

Examined by Mr. Acworth.

18714. Are you going to give that to the debenture holders?—It would have to be a matter of adjustment; I do not want to deal with the different classes now; but if you pay the debenture holders off in cash you must give rather more than the market value, because you cannot cut down their interest to 3 per cent. without some further compensation. It would have to be a matter of adjustment between the shareholders. But the result would be that the railway interests would receive the present market value of their stocks and, in addition to that, they would receive their share of the profits of the railways. And then there would be a saving, and a considerable saving, through the low rate of interest, the effect of the consolidation with the assistance of the Government. That would give a further sum, which might be available for improvements and for facilities; it would not, I think, deal with the question of a reduction of rates, because it would not be sufficient for that; and I am very doubtful whether that can be dealt with.

18715. I want to follow your scheme. As I understand, you want to leave the ultimate control of the railways in the hands of the shareholders?—I want to maintain the shareholders.

Position of the shareholders in reference to the proposed unification scheme.

18716. You want "to maintain" the shareholders?—Yes.

18717. And then you propose, what you call, the establishment of an independent Railway Commission?—Perhaps I had better use the word "Commissioners," because it is better.

18718. When you say "Commissioners," you do not mean people like the present Railway Commissioners, who are a mere legal tribunal?—Certainly not.

18719. You mean a body with some control, at any rate, over the operation of the lines?—Yes.

18720. They are not to work the lines themselves?—No; the lines must be worked by proper railway managers.

Functions of the proposed Railway Commissioners.

18721. But they are to act as a Court of Appeal between the public and the representatives of the shareholders on the question of rates and on the question of operation, and so on; that is what I understand you to suggest?—I would not call them a Court of Appeal, because I think you would then get into the functions of the Railway Commissioners; but I would call them Railway Commissioners, who would have the control; they would have, for instance, some voice in the appointment of the chief managers; and they would, to a large extent, do what the Government Railway Directors in India do; they have a voice in the management of the railways.

Debenture and preference shareholders to be guaranteed a fixed dividend.

18722. That is just the point: in India, on the Government Guaranteed Railways, of which you are now speaking, the shareholders get a fixed dividend?—Yes; that is very much what I suggest—that you guarantee them—that is practically what it comes to—3 per cent.

18723. No. As I understand you, the 3 per cent. is to be a consolidation of the upper securities which are at present held at a fixed rate of interest?—Yes.

18724. Those we may put out of the way; they are safe at present; they may be worth a little more with the Government guarantee, but they are pretty safe now. But as I understand you, you propose to have also, what we may call, deferred shareholders?—Yes.

18725. Is the Government going to guarantee them?—No.

Financial aspect of the proposed unification scheme generally.

18726. You are now proposing that on the one hand you shall have a Government Commission dictating to the Boards of Directors, and on the other hand that the Boards of Directors, with the shareholders, should depend on the dictation of the Government?—I do not think it goes so far as that, because you see that you at once put them into a better position, owing to the benefit of the upper consolidation; you begin with a fund there which brings them into a better position; and you guarantee them in that way a better chance of dividend.

18727. As I understand, it comes to this: You think that by consolidating with, ultimately, a Government guarantee behind them, you can, either by refunding at a low rate of interest, or by paying off, or in some other way, reduce the prior charges, to give you a fund for the benefit of the ordinary shareholders?—It would give you a fund for the benefit of the ordinary shareholders, and also give you a fund for the betterment of the railways, because I do not think the present system is at all satisfactory. I think railway companies do not keep a sufficient amount for betterment.

May 14, 1907.

Mr. Robert M. D. Sanders, J.P., Landowner and agent, and Chairman of the Tourist Development Company, Ireland.

18728. That is how you would create an additional fund, by relieving the pressure of the higher class of securities? that is what it comes to?—Yes.

18729. Now, then, this fund that is available is to be guaranteed by the shareholders of the united company, subject to Government control?—Yes.

18730. The point that I want to ask you is, who is to have the last word in the last resort? Is it that the Directors are to say, "We will not" or that the Government are to say, "You shall"?—That is a difficulty.

18731. That is the difficulty I want you to face?—I am only trying to find some way in which it can be done satisfactorily to all parties.

18732. I only want to see how far you can face that difficulty?—I think I get over that difficulty by giving both an equal interest in the ultimate result; because I suggest that one-half of the balance that would be left over after paying the interest on the Consolidated Stock of 3 per cent.——

Suggested apportioning of the net revenue under the proposed scheme as regards dividends and reserve for improvements.

18733. That is, the net revenue?—Yes; that one-half should go to the shareholders and the other half be carried forward to an Improvement Account to be utilised for the improvement of the railways. That, of course, would to a certain extent assist the shareholders, too, because it would give them a better security.

18734. But I do not at present follow your half. The ordinary shareholders get all that is over after paying the fixed people?—No, they do not get all, because a railway company ought to keep a certain amount back for rest, for improvement.

18735. But you do not suggest that any railway company in the United Kingdom having, after paying its Debentures and Preference, we will say, £100,000 of net revenue for the half-year—you do not suggest that any one of them at present puts £50,000 to extension and improvements, and pays only £50,000 in dividend—you would hardly expect such superhuman virtue as that, would you?—No.

18736. Therefore, if you are only proposing to give them half, and to keep the other half for extension and improvement, you are diverting something which they are getting at the present time?—Well, they are not getting it at present.

18737. Subject to this: we will agree that you are going to make the divisible sum a little larger by reducing the previous burden?—That is so.

18738. But, subject to that, supposing that made the £100,000 up to £120,000, you would divide the £120,000 into £60,000 and £60,000?—Yes.

18739. But at present the shareholders take £99,000 out of the £100,000?—Precisely.

18740. So that you are taking something from them?—I do not think they are getting £99,000 of the £100,000 now.

18741. Well, say, £90,000?—Because you must recollect they have obligations to carry out, and they must find money if we are to have these works in the south, for instance.

18742. That is capital. But when you are proposing to divert some of their income, I suggest that you are not conferring a boon upon the Ordinary shareholders?—I think it is a mistake to say that I am diverting half of the income; I am not doing that at all. I am merely suggesting a condition that there shall be a certain amount paid in for the improvement of the railways and for giving improved facilities which will eventually bring in further revenue.

18743. Paid in, by whom?—Paid in by the managers of the united railways.

Suggested continuance of State grants for railway extensions in Ireland.

18744. But then it is coming out of the railways. Are you suggesting further moneys from outside?—In addition to that, I think the State should give further grants, that it should supplement the fund with further grants, which they have done nearly constantly; we have had grants for railway purposes constantly, and I think it is perfectly right that we should have them.

18745. Are you suggesting grants in the shape of annual grants towards the annual expense of the working?—No, I am not dealing with that question; but for extensions; there are certain extensions in Ireland which ought to be made, but which cannot be made out of private capital, and which, therefore, ought to be made by the State. They will not be made at all if they are not made either by the State or by local guarantee.

18746. Now we have got your scheme: the Government shall reduce the prior charges by lending its guarantee?—Yes.

18747. The Government shall also contribute in the shape of free gratis extensions?—Yes.

18748. And in both those ways the present shareholders will benefit?—Yes.

18749. In return, you think it would be fair to say that the net profit is to be cut in half—half to go in dividends and half in improvements?—I do not tie myself to half; it might be three-quarters, or it might be less or more.

18750. You do not tie yourself to half; but you have to admit that if the yield was less than it is now, you could not do that?—Quite so.

18751. Now, going to another point; your Railway Commissioners would be skilled railway men?—The best you could get.

18752. You quoted Sir Geo. Findlay; we have been very often told of Sir Geo. Findlay's saying. I do not really know whether he said it, that "he could manage all the railways in the country and fish two days a week"?—Yes.

18753. You are proposing to keep a Railway Board and its officers, and to put three Sir Geo. Findlays—the best men you can get—to manage them; so that they would be able to fish six days a week?—Perhaps one might do; but it would be difficult to get the country to leave the matter in the hands of one man.

18754. You want your general manager to be a good man?—Yes.

18755. And you want your Commissioner to be a good man?—Yes.

18756. Would they not clash; how are you going to have two men managing the same concern?—I do not see why they should clash, because the Commissioners would not go into details of the railway management?—I think the relations would be very much like the relations which exist between the chairman of one of our big railway companies and the general manager.

18757. I think you will find that one has to go under?—I agree the general manager must be under the directorate.

18758. I think you will find there is a difficulty?—I think there is an advantage in having three, for this reason; that I think you want one man to be a railway expert, and you require probably an engineer or a man with engineering experience, and possibly a man who has a good knowledge of finance and soforth.

18759. Let me ask you something upon another question with which you must have been brought very much into contact in connection with your Irish tourist experience. You spoke of abolishing competition in the South of Ireland?—Yes.

18760. Well, I put to you that what is to happen in the future is, that you will have introduced a keener competition—more powerful competitors?—I was going to mention that what we have now is an effective competition, which has taken the place of what was merely an ineffective local competition before.

18761. The Waterford and Central Railway could only scratch, and now you are getting a good fight?—That is the position.

18762. And you like that?—From a public standpoint, I think it is satisfactory; but at the same time I think there are disadvantages in squabbles even between big railway companies.

18763. But they have become more dignified than squabbles. You want to keep the competition of the L. and N. W. Railway in the South-West?—I think it is most desirable.

18764. I suppose you would say the same where, for instance, the Midland has gone into the North?—Yes, I think the element of competition is useful.

18765. Do you think it would be useful for a bit of single railway authority in Ireland to deal with that state of affairs?—I think that would be a difficulty.

18767. You appreciate that?—Absolutely.

18767. Although the Central Railway Authority in Dublin might be impartial, the Great Southern and Western, the Northern, the Midland, and so on, would not think he was?—Yes, you would have to have safeguards; and it would be most important that all the ports taking traffic should be properly protected; that is to say, it would not do to have the

whole of the traffic driven into one port, say, Dublin or Rosslare, and driven away from other ports.

18768. What safeguard would you rely on?—Well, of course, the Railway Commissioners, if they were impartial, fair men.

18769. On what principle are they to act?—I should be very happy to be impartial if you will tell me the principle; but if I do not know the principle it is difficult for me to apply it?—I think the principle should be the providing of a free flow of traffic everywhere, and not forcing traffic round by a circuitous route; but to give to every place the benefit of its geographical position.

18770. That means, equal mileage rates?—Oh, no, I do not go so far as that; you cannot have equal mileage rates; that would not do.

18771. Do you know what the benefit of geographical position, when translated into rates means?—I am merely referring to the position of the ports. For instance, no doubt South Wales is entitled to get its traffic by the shortest route from Cork. I do not think it would be a desirable thing to send the traffic up to Dublin, and down to Wales again; nor would it be a desirable thing to send traffic from the County Dublin to Rosslare and up to the North again.

18772. Taking Charleville and Birmingham, you would probably agree that Rosslare and Dublin ought to have a look in for that?—They ought both to be entitled to have a share in it.

18773. Would you suggest that Rosslare ought to have a look in for Manchester?—Yes, I think so, if people like to send their traffic that way. But I think the natural course is to send traffic by Dublin to Manchester.

18774. What I mean is, can you suggest any rule or any principle?—No, I cannot; and I think that is one of the great disadvantages of State purchase, because I do not think you can.

18775. You would rather leave that to a commercial manager than to a State owner?—I would.

18776. Was your attention called to the system mentioned by Mr. Field in his evidence—what had happened in Mexico in the last year or two?—I read a summary.

18777. The system was this: that the State bought the bulk of the deferred shares and had a small financial interest, but had a large voting interest. It then says to the Directors, go and manage as you think proper; only remember that in the last resort we call the tune, and if you do not satisfy us, we will turn you out. That is practically the system of the Mexican Government; how would that strike you?—I would not like to express an opinion about that.

18778. You have not thought about it?—No.

18779. I was asked to ask you?—There is one matter I am anxious to put before the Commission. I do not know whether I might be permitted to do it, and that is in connection with the collection of produce for storage and facilities for the collection of farmers' produce

Chairman.—We will have that after lunch.

Cross-examined by Mr. Balfour Browne, K.C.

18780. Perhaps I might be allowed to put a couple of questions before the adjournment. (*To the witness.*)—You propose, as I understand, to consolidate the debentures and preference stocks, and to reduce the interest?—What I suggested was, that if the State desired to have control over the Irish railways, then the only way I think that could be brought about is by giving the holders—the railway interests I will say——

18781. You have calculated, I understand, that there would be a saving in the first charges which would be a benefit to the deferred?—I think I rather guarded myself against going into the question of the relative rights of the interests.

18782. I follow that; but if there would be no saving upon the primary charges there would be no profit to the deferred?—There would be a saving certainly.

18783. Do not you think that the debenture holders would insist, as they have a right to insist, upon the same income as they are getting to-day?—That is one of the great difficulties I see, that if you are to pay them off in Government stock you have to give the debenture holders the same income.

18784. Then there is no benefit?—You give them a stock which is worth a great deal more than the stock was worth before.

18785. I daresay you know that the debenture holders of the London Water Companies get the same income now as formerly, although they have the security of the London rates?—That is a great benefit to them, no doubt, but I am not sure that it has been a beneficial operation to the public.

18786. As a financial operation, I do not see any great gain. For instance, I have here a list of investments, and I find the Great Northern of Ireland 4 per cent. Debenture yields £3 10*s.* 3*d.*; then I turn to the Guaranteed Irish Land, and the return is £3 5*s.* 6*d.* So that after all there is no great gain?—We ought to treat Irish Land Stock as an example, because I think there is something radically wrong about the finance of it.

Mr. Balfour Browne, K.C.—I agree; and that is all I ask you.

Adjourned for a short time.

Examined by Colonel Hutcheson Poë.

Approval of the recommendations of the Allport Commission as regards compulsory amalgamation,

18787. I think you said in referring to the Allport Commission that it recommended amalgamtion at the expense of the State?—Yes.

18788. I think that is a misunderstanding, is it not?—What it recommended was that amalgamation should be carried out by arbitration, if possible; but, failing arbitration, that the Railway Commissioners, which it was proposed should be set up, should decide as to the terms?—That was so. I think I am right in saying that they did also suggest that the State should assist in amalgamation.

18789. Perhaps what you are referring to is this paragraph: "Should Parliament think fit in fixing such new scale of rates and tolls to reduce generally the proper statutory charges, we think it is only just that the shareholders should be protected from loss by some guarantee to them on the part of the State." Perhaps that is what you were thinking of?—Yes.

Mr. Childers' views as set out in the Financial Relations Report.

18790. That if this Railway Board, which they proposed to set up, should, in the interests of the public, make any reduction, then the Government should guarantee the railways on a basis of their present gross receipts?—Yes; and that was the view of Mr. Childers, who suggested it in the Financial Relations Report.

18791. Would you have any objection to the State taking over the railways on terms such as were proposed by the Allport Commission, leaving the decision as to future economies to be effected in the hands of such a Railway Board?—I am altogether with the Allport Commission Report. I think what they recommended was very excellent indeed, but I do not think they recommended actually the taking over of the railways by the State.

18792. No, they did not. They recommended that they should be amalgamated in the hands of one central company, and be subject to the control of this Railway Commission?—Yes, and that is the effect of my evidence.

Suggested Government guarantee against loss by reason of compulsory reductions in rates.

18793. Would you go so far as to say that in the event of this Commission recommending certain reductions, that to whatever extent was determined upon the Government should recoup the railways for any loss which might be incurred in consequence of those reductions?—Yes, I agree.

18794. You are opposed to State purchase on the ground of the large sum of money which would be required for such a transaction?—Yes. That is not, perhaps, the wording I used, but the great difficulties of carrying it out owing to the financial operations.

Estimated value of the present interest of all classes of shareholders in the Irish railways.

18795. If you look at that table (*handing document to witness*) you will see that the total capital invested in Irish railways at the present time, exclusive of ordinary stock, is, roughly speaking, 27½ millions debentures, guaranteed and preference, and thirteen millions ordinary, making a total of 40½ millions, of which 27½ milions represent what I call a first charge?—Yes.

18796. And the dividends which were paid in 1905 in respect of that 27½ millions amounts to a little over £1,034,000?—Yes.

18797. The ordinary dividend-paying stock—I am excluding stock on which no dividend is paid—is, roughly speaking, thirteen millions?—Yes.

18798. And that received dividends in 1905 to the extent of £596,000. I think?—Yes.

May 14, 1907.

Mr. Robert M. D. Sanders, J.P., Landowner and agent, and Chairman of the Tourist Development Company, Ireland.

18799. Roughly speaking, £600,000. If you capitalised the interest which is earned and received in respect of the debentures, guaranteed, and preference stock at 3 per cent., it would mean thirty-four millions in round numbers. If you capitalise £1,034,000 it comes to thirty-four millions. If you capitalise £600,000, it comes to 19½ millions, giving a total on those two transactions of, roughly speaking, 53½ millions?—Yes.

Estimated value of the present interest of all classes of shareholders in the Irish railways.

18800. In respect of non-paying stock, which amounts to over £3,000,000, which is earning no dividends at all—I am talking of preference and ordinary stock—if you give the shareholders of that non-paying stock 50 per cent. of the face value of their holdings, I think that would be dealing liberally with them, would it not?—I think they would be delighted

18801. Even if you do that it only represents another one and a half millions?—Yes.

18802. If you add that to the 53½ millions, which we have given as the capitalised value of the other classes of stock, the whole thing comes to fifty-five millions?—Yes.

18803. Surely, if one could get rid of the whole of the interest of all classes of shareholders in Irish railways at such a price as that, as far as they are concerned they would be quite satisfied, would they not?—I think it would be a splendid bargain for the shareholders.

Purposes to which the probable savings to be effected under a system of central control might be devoted.

18804. Yet, on the assumption that such a transaction could be carried out, and that the State was willing to lend the money or was willing to allow some central authority that might be set up to borrow the money on certain securities of the railways themselves and of the buildings in Ireland and so on—assuming that that were done, and that the whole of the railway systems could be put into one hand, either under a State authority or an Irish authority, do you not think that very considerable economies could be effected on the present net earning capacities of the independent systems?—That is a point I am not quite convinced upon. I am afraid that State ownership of railways might not lead to economies.

18805. I take it that the first object of ever putting the railways under the State or under a central authority would be this—that it should be part of the arrangement that they should institute, not extravagant reductions, but reasonable reductions, in the hope that after a few years they would be recouped by the extra traffic which would follow?—I thought you meant reductions in expenditure.

18806. Well, to a certain extent, there would be such reductions; but I think that economies effected in one direction would very probably be swallowed up to a great extent in another by the increased cost of the Railway Board, which you contemplate being established?—Yes.

18807. But, putting aside any economies which might be effected by amalgamation, would not such a body probably be in a position to experiment in the way of certain concessions, both in regard to passenger fares and goods rates, with a view to stimulating industries and manufactures, and even for the time being to incur some loss by so doing?—I am afraid the loss would be a very large one.

18808. What reason have you for thinking so? You have studied to a certain extent, doubtless, the experience of foreign countries, where their rates compare favourably with ours, and though in some instances their rates do involve loss, still they believe it is good business to incur that loss?—That loss would have to be thrown on somebody.

18809. But it would not be thrown on the shareholders?—No; the shareholders would be secured. But it would have to be found by somebody, and the question is, would the Irish taxpayer be willing to make up that loss for the sake of the traders, because, looking into this question, I see that there are instances where rates have been reduced considerably, and it is not the consumer or the producer who has benefited by the abatement, but very often it has been the trader who has got the benefit. There is a notable case on the Great Western Railway, where, in connection with the milk traffic, they brought the rates down considerably to assist the farmers in the West of England, and the result was that the wholesale milk people reduced the price they paid to their farmers. So that in that way I think it does not quite follow that the producer gets the full benefit of the lower rate.

18810. I could understand your objection if you thought these concessions would involve some increase of taxation on the Irish ratepayer; but, assuming that such a body was empowered to allocate a certain annual sum in respect of such reductions, would you have the same objection then?—No; I think it would be very desirable if we could get it done, but I think the Irish taxpayers are too poor to bear the loss themselves. I agree with Mr. Childers' Report on the Financial Relations—that if there is a sum of money capable of being applied from the Treasury to Ireland one of the very best ways in which it could be applied is in this question of reducing rates. But we have, first of all, to convince the people on this side of the water that we are entitled to some concession of that kind.

18811. Without looking to any redress as regards financial relations, you are aware that under the constitution of the Department of Agriculture that Department is empowered to spend money in promoting transit facilities throughout the country?—Yes.

18812. That is an indirect power which they are given?—Yes.

18813. And Sir Horace Plunkett has more than once said that if the funds at their disposal permitted of it, he could see no direction in which the money could be so profitably expended as in subsidising—as that is what it comes to—the carrying companies of the country?—Yes.

18814. If that principle has been admitted and embodied in the Act which constituted that body, is it not reasonable to suppose that if certain powers were given, perhaps to this proposed new authority, where the Board of Works are, for instance, given £300,000 in addition to anything they are getting now, there would probably be no difficulty in giving the Council such a sum of money as would compensate them for the time being at any rate, and see what result would follow from an effectual reduction of the railway carrying charges?—I would be very glad to see it done.

18815. You would be willing, under those circumstances, which would not involve any direct charge on the taxpayer, to favour some method of State or National authority purchase?—Yes. On those lines I would see a benefit in it.

Examined by Mr. Aspinall.

18816. With regard to new railways in Ireland, do you think any additional lines of railway are required?—Yes; there are; but I do not think they will be made by private enterprise.

18817. If the Irish railways are to remain in the hands of some commercial company, and are yet to be controlled by the State, and these new railways, which perhaps are not likely to be remunerative, are to be made, how is the new authority to pay for the building of those railways?—You would have to follow out the principle adopted already, and recommended by the Allport Commission; that the State might be expected to build the line, and the parent company might be expected to work it.

18818. But the State must first of all provide the money for the additional railways which they may know are not going to be remunerative?—Yes.

18819. Is it to be laid down that these railways are to produce a certain rate of interest, or is the State to be satisfied that they shall be absolutely unremunerative?—I am afraid that these railways hardly ever pay more than their working expenses. But railways which were wanted very badly have been made, and it is not such a big question as it used to be. And then there are the possibilities of motor transit. There are many places that would not pay for a railway which might well pay for a motor service. I think that is one way of getting out of the difficulty of providing facilities in remote districts.

18820. Does that mean that you will not require new railways?—There are certain places where railways are required, and where it would probably be desirable, in the interests of the State, that railways should be built.

18821. Your view really is that if these railways are required, the State must pay for them?—Yes; I think

must take each case on its merits. There are some railways which one might well look upon as important railways for the State to build, and you must take each case on its merits.

Examined by Lord PIRRIE.

18822. I take your evidence, broadly speaking, to be that you favour the amalgamation of the railways, but you are not quite prepared to say by what scheme, or how you will bring that amalgamation about, and you are opposed to State purchase because you are afraid of the working of State railways in Ireland, and you suggest a sort of partnership between the State and the shareholders of the present railway companies?—Yes, that is so.

18823. I only want to get it clear?—One of the great difficulties is the financial difficulty.

18824. But that is your broad view—that you want to get one large amalgamation in which the State will be partly interested and the shareholders will be partly interested?—Yes.

18825. Is that because in your experience as an agent of large properties in Ireland you have found that landlord and tenant work so harmoniously together, that everything goes on so satisfactorily that you want to bring a similar state of matters into the railway system?—I do not think you can compare the two things.

18826. But you want to bring, as I gathered from your answers to the Chairman and to Mr. Acworth, the State into exactly the same position with regard to the railways as the landlords have held in Ireland with regard to the land for the last hundred years?—I do not think it is the same case at all. You have the State already controlling the railways, though I admit in a very clumsy way.

18827. Does the State control the Great Northern Railway, or the Midland or Southern?—They have a certain amount of influence and control over the railways at the present time by the Act of Parliament.

18828. But it is not because everything works so satisfactorily between landlord and tenant that you would like to set up a similar system in regard to the railways?—I do not think the two cases are on parallel lines at all.

18829. Then you do not mean that line of argument?—I do not think you can compare the two things at all.

18830. But the partnership you were suggesting was that the State should become partly interested owing to the 3 per cent. preference that they guarantee; you actually go so far as to propose to do away with the debentures, the preference, and the ordinary stock, and to give a 3 per cent. preference—I do not know why you call it a 3 per cent. preference when there is no stock before it?—It is a 3 per cent. Consolidated Government Stock.

18831. But your own evidence is that you should turn the Debentures and Preference and Ordinary Stock into a 3 per cent. Preference Stock, guaranteed first of all out of the revenue of the railways?—Yes.

18832. Secondly, if they fail, you take the local rates next?—Yes.

18833. If they fail over a certain amount, you would come on to the consolidated fund for the balance?—Yes.

18834. That is what you have put down in evidence?—Yes.

18835. Then, if there is a profit of £50,000, I understood you to say that you would give half of that to the State and half to the shareholders?—I do not give it back to the State.

18836. Not at all?—No, May I correct that? I do not think I was very clear in answering Mr. Acworth. Perhaps my best way is to give an example. I have taken out the present value of the Irish railway stocks from the Stock Exchange. I do not want to be taken as saying that this is the price at which you ought to buy them, because stocks are depressed now. But I will assume that you create a perfectly good security, a 3 per cent. railway stock. The value of the stocks at present is forty millions. Three per cent. on that is £1,200,000. The present net receipts of the railways are £1,600,000. That leaves a difference of £400,000.

18837. *Colonel Hutcheson Poë.*—Do you say that the Stock Exchange value is only forty millions?—Yes.

18838. It must be more than that?—It is a very depressed market at present.

18839. Have you included the Preference Stock which was handed over to the Northern Counties by the Midland Company of England?—Yes.

18840. That is about five millions?—Yes.

18841. That return which I gave you gives the face value as forty-three millions?—There are a great many stocks below par. But this is merely an illustration.

18842. *Chairman.*—It is merely an illustration; we will assume the figure?—You have a difference of £400,000 a year. You have given to the Irish railway interests—this will include everybody—a very solid security, and you have this £400,000 a year over after paying that interest. As I say, the £1,200,000 is very well secured on the receipts of Irish railways, amounting to £1,600,000, and, therefore, there will be nothing falling on the rates at all to make up that 3 per cent. You have £400,000 over, and I would say that there would be a possible saving in amalgamation—I am not quite certain on this point, but I know it has been stated on good authority that there should be a saving of £100,000 a year. That would make £500,000. If that money were divided so that one portion of it could be carried to an improvement account——

The anticipated savings from the conversion of the existing stocks into a 3 per cent. railway stock.

18843. *Lord Pirrie.*—Or for making extensions of railways?—If you take over the Irish railways you will have to spend a lot of money on them—capital expenditure—because I think the system of railway finance both in England and in Ireland is not very satisfactory at present.

18844. But we have nothing to do with England?—It is not very satisfactory, because it tends rather to over-capitalisation, and there ought to be funds out of the profits made available for improvements and betterment. Then I would give the shareholders a very fair proportion—I suggest one half, because I think that would give them as much as they are receiving at present.

Expenditure on improvements and betterments necessary.

18845. *Mr. Acworth.*—Is that £250,000 to be divided among all the holders of the 3 per cent. stock?—That is a matter I do not want to go into; I do not want to go into relative rights of shareholders—that is a matter of arrangement.

18846. If that were one level 3 per cent. Preference Stock, they would get a bonus of as much as £250,000?—You may call them bonus shares if you like.

18847. *Lord Pirrie.*—I think Mr. Sanders must have meant to leave some of the original stock, so that they will get a portion, because all along he has said that so much would go to the original shareholders and so much would be put aside altogether? (*Witness*).—That was rather suggested in certain questions, but I did not wish myself to go into the differences between them. I want to treat the railways' interests as one. Then it is a matter of apportionment afterwards how they are to be dealt with as between themselves. The point I want to make is this. It has been suggested that I am taking something away from the shareholders. I am not really doing that.

18848. Who suggested that? I did not suggest it in my question?—Oh, no, you did not; but I think it was suggested that this was taking from the shareholders some of the income which they receive at present. It does not do that; it merely provides a fund for improvement which will give them an increased security, and at the same time it will strengthen the Irish railway system, so that it will be able to do better service to the public.

18849. I did not quite understand your answer there. Why do you want to give the shareholders of the Irish railways more than the market value of their security in a country which even in the most commercially successful parts in the North we believe is being depopulated every year—why are you going to give them that benefit?—Because I do not think it would be just to take the railway shareholders' property away without giving them a fair equivalent.

18850. But in Ulster alone last year the population decreased by over 12,000?—That is not the fault of the railway shareholders.

18851. Never mind that. If you reduce the popula-

May 14, 1907.

Mr. Robert M. D. Sanders, J.P., Landowner and agent, and Chairman of the Tourist Development Company, Ireland.

tion of a district, how do you expect it to increase in earning power?—I hope that we shall have the population increasing some day.

18852. Why do you propose to give them greater value than the value of their shares in the market?—Because I do not think it would be a fair thing to take the present Stock Exchange quotations as the proper price to pay the shareholders.

18853. Why?—I do not think it would be just to do it.

18854. Why? If I give you a sovereign, will you give me 21s. for it on the chance of gold going higher?—I will put it in this way: let us forget altogether about the State. Assume you have a big railway company buying up the Irish rails. Would it be considered fair to compel the shareholders in one railway to sell to the shareholders in the other railway unless they got, at all events, not only the present market value but a little bit more?

The financial arrangements in connection with the suggested amalgamation scheme.

18855. Why? I know of many railway companies in Ireland who have sold willingly, and the shareholders have sold willingly, feeling that they were getting the stock of a large railway company, which they could always sell immediately. Why should we Irish shareholders try to get out of the English taxpayer more than the value of our property?—I am not taking anything out of the English taxpayer.

18856. Excuse me, what is the Consolidated Fund; where does that come from? In your own evidence you have already said that the third security for this 3 per cent. stock is the Consolidated Fund?—Yes.

18857. Is not that the British taxpayer?—Yes; but I am not taking anything from him; I am giving him a very good security.

18858. You cannot give a security to a man without making him liable for what he undertakes to do. How can you have the Consolidated Fund as a security without placing some responsibility upon it? Your evidence to-day is that we want to get something more for our railways than their present value. I do not think that is what you intended?—I do, certainly. I do not think the Irish railway shareholders would be satisfied to sell their property at the present quotations—it is the very bottom of the market. Great Southern and Western Stock, for example, which stood at 140 some years ago, is now something below 90. I do not think they would be satisfied with that price. Then there was a question of Colonel Hutcheson Poë in regard to increasing the traffic on the railways. I do not think you will get an increase of traffic unless you can get the people, at all events, to make use of the facilities which are already offered by the railway companies. There are some very excellent facilities offered by the railway companies which are not made much use of at present. It is very hard to get people to co-operate in that direction; and I am a very strong supporter of the idea of agricultural co-operation in regard to the transit of produce.

The prospects of increasing traffic.

18859. *Chairman.*—In adopting in Ireland what you know has been adopted in Holland and Belgium to the advantage of the producer?—Yes; and not only in Holland and Belgium, but in England.

18860. To a limited extent?—Yes. On some of the railways in England they have done a great deal in that direction, and a great deal might be done to improve the condition of Irish agriculture in that way.

18861. That is by co-operation?—Yes.

Necessity for co-operation amongst the farmers.

18862. The consignments, instead of dribbling in in small quantities, should be sent in one large quantity?—Yes. The railways offer excellent facilities for the transit of perishable goods, but the farmers do not make use of these facilities to the extent which might be expected. The reason for this is that there is no organisation to bring home to them the extent of these facilities. Everybody acts for himself, and there is no combination. Capital is required for collecting and grading stations, cold storage, and so on. This is not forthcoming; and the question which I think it worth considering is where the capital ought to come from. I am afraid we cannot expect the railway companies to build these cold stores. They have done a good deal, and it is a question whether that might not be taken up by some co-operative arrangement on the part of the farmers, or whether the Treasury or Board of Works might not give loans for the erection of these buildings, as they do for agricultural buildings. I think they are just as much agricultural as any others.

18863. *Lord Pirrie.*—I think some of the railway companies have offered to do it?—I dare say they have. I think in connection with these depôts and cold storage stations we might have a traffic development by means of collecting cars. Motor cars or steam lorries might be utilised for collecting the produce of outlying districts and bringing it into a central depôt at the railway station. This has been done abroad, and that is one of the reasons why foreign produce competes against Irish produce.

18864. *Chairman.*—Do you suggest that it should be done by the existing railway companies?—I think it would be better to get voluntary effort. I am rather in favour of private enterprise. I think the railway companies might give facilities, and in some cases they might build depôts, charging a small interest on the expenditure, or else the Board of Works might be authorised to make loans for the erection of these buildings. It is not a big question. You can put up a big cold storage establishment for about £1,500 at a wayside station. If you had these collecting steam lorries, it would be a great advantage. I know a case in point where it would be of great benefit. The place to which I refer is in the centre of a great dairying district in County Limerick, and in an area of some fifteen miles round there is probably 100,000 lbs. of butter produced in a year. There are a number of creameries, but they are in outlying districts. I know one creamery where they are not able to turn out absolutely fresh butter because it takes them some time to get to market. That is due to the fact that they are fourteen miles from the railway station. If you had a means of getting their stuff in they would be able to catch the night train, and the stuff would be in the English market anywhere you liked the next morning or before mid-day.

18865. *Mr. Acworth.*—Did you hear the evidence from Tuam yesterday about the motor that was put on, but because it interfered with local carriers it had to be taken off again?—That is one of the difficulties you have to contend with. The railway companies have to be very careful what they do, and there may be a great deal of opposition to movements of this kind. In time people will understand that it is the right thing to do, and traders will see that it has got to come.

18866. Do you think it is in the public interest, taking it as a broad question, that the railway company should encourage petty consignments? We have heard a good deal about the 7 lbs. and 14 lbs. of butter being sent to little local stations in England and getting low rates. Do you think it is in the public interests that they should be encouraged, or would it be better if the railways should throw their weight on the side of co-operation?—I think that suggestion is the best, but I do not think the small man ought to be cut out.

18867. But do you think the railway companies ought to do their best to squeeze the small man into co-operation, or to go on with what you agree is an inferior method?—I should prefer that they should co-operate of themselves.

18868 You would not say that they should squeeze him by refusing to give low rates?—I do not think they ought to do that.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

Mr. Andrew Spence examined by the Chairman.

18869. You are the Secretary of the Londonderry and Lough Swilly Railway?—I am.

18870. How long have you been Secretary?—Since 1901—six years.

18871. Were you in the service before that?—I was for seventeen years in the head office.

18872. You were connected with the company when the arrangement was made between the Lough Swilly Company and the Board of Works with reference to the working of the Burtonport Railway?—I was; as assistant to the General Manager I had a knowledge of the whole of the negotiations.

18873. I have a very extensive proof here, but I think we can curtail it considerably. First of all, it has been stated before us that the specification for locomotives for the working of that railway was submitted to the Board of Works by some one connected with the Lough Swilly Railway; do you agree to that statement?—No; it was stated that the specification was submitted to us by the Board of Works in order that we might refer it to our expert adviser; that is not correct. What happened was this, our former manager had a conversation with the Chairman of the Board of Works about the stock.

18874. One minute. Just confine your answer now to the question of engines; we will deal with the carriages and wagons separately. With regard to the engines, who prepared the specification for those engines?—It was prepared by a traffic manager of a competitive line who was consulted by the Board of Works as their expert on this occasion.

18875. Who was he?—Mr. Livesey, of the Donegal line.

18876. He was a very experienced man, was he not?—A very experienced gentleman in traffic matters, but one without mechanical training, having no more knowledge than the rest of us about locomotive engines.

18877. How did he prepare the specification if he had no knowledge?—He did it, but I cannot say how he prepared it. I know he did not provide any plans, for when we asked for one none could be supplied.

18878. What do you mean by a plan?—Any drawings of the engine showing the particulars which were meagre on the specification.

18879. I see the specification was printed?—It was.

18880. And sent to you by the Board of Works?—Not until after tenders had been invited; we had previously consulted Mr. Malcolm and sent recommendations to the Board. Notwithstanding this the specification was prepared and tenders were invited without any reference to us. We wrote protesting, and in reply a specification was sent.

18881. What objection did you take to the specification; please confine your remarks to the engines first?—Our objection is summed up in this: we were advised that tender engines were required to work this line efficiently and that the specification was for tank engines.

18882. A letter was read to us yesterday by Mr. Vesey Knox from Mr. Malcolm; I gather from that letter that he did not object to tank engines as being unsuitable for the traffic?—He did very strongly.

18883. Have you got the letter?—Yes; shall I read it?

18884. Yes?—The letter is dated July 27th, 1901—"On 24th inst. I met Mr. Livesey and Mr. Batchen at the offices of the Londonderry and Lough Swilly Railway at Londonderry, and had a long consultation with them regarding the type of engine best suited to work the Burtonport Extension of that system, and I explained my reason very fully for preferring a tender instead of a tank engine. I am quite prepared to admit that the line could be worked with tank engines similar to those on the Glenties line, but I am convinced that the line can be worked in a much more satisfactory manner and more economically with tender engines, and I am, therefore, strongly of opinion that this type of engine should be adopted. The extra cost of a six-wheeled engine and four-wheeled tender as compared with a ten-wheeled tank engine would be trifling, as the expensive parts, *i.e.*, the wheels, axles, axle-boxes, springs, buffers, etc., would be the same in both cases, and practically the only additional material required would be due to the larger carrying capacity of the tender body as compared with the tank and coal bunkers of the tank engine."

18885. Apparently I put a wrong construction on that letter; you are quite right. Mr. Malcolm did recommend the tender engine?—Yes.

18886. *Mr. Acworth.*—I think the witness had better read the next three lines?—"Mr. Livesey, while expressing himself strongly in favour of tank engines, did not raise any objection to tender engines, provided the engines are fitted with leading bogies or pony trucks, and I agree with him that a leading pony truck would be an improvement, although on a line with such easy curves as the one in question, I do not consider it in any way essential." I was going to explain that we were yielded this interview after the order for the engines had been placed.

May 14, 1907.

Mr. Andrew Spence, Secretary of the London derry and Lough Swilly Railway Company.

18887. *Lord Pirrie.*—At the time that letter was written?—Yes; in response to sixteen or seventeen letters of protest, they at length yielded this interview, but after the order for the engines had been placed.

18888. That is the usual practice, I have no doubt?—I cannot say.

18889. *Chairman.*—Mr. Malcolm's letter is dated the 27th of July, is it not?—Yes.

Allegation that the Board of Works' Order for "tank" engines was placed in face of Lough Swilly Company's objection to them.

18890. When was the contract for the engines placed?—I cannot say; but the 28th June, a month previous, we were informed that they had placed an order with Messrs. Barclay & Sons, Kilmarnock. This was a firm who had never before built a passenger locomotive, and if that were possible, our efforts to prevail upon them to reconsider their advice were redoubled. Mr. Livesey himself protested, he told me, against the order being given to an inexperienced firm.

18891. *Lord Pirrie.*—Who gave the order?—The Board of Works.

18892. *Chairman.*—Do you happen to know when tenders were invited?—I have a copy of the advertisement, which was issued before we were consulted at all.

18893. Have you got it there?—I will hand it in.

18894. You have got it?—Yes; I have it in the room.

18895. Where was it advertised, do you remember?—I have it cut from the "Contract Journal."

18896. Do you know the date of it?—I can give you an approximate date, because on the 17th April——

Specification said to have been issued and tenders invited without any consultation with company.

18897. If you have the advertisement, that will settle it at once?—On the 17th April, 1901, we wrote to the Board of Works when we saw the advertisement, expressing disappointment that a specification had been issued and tenders invited on the 29th March; that is the date.

18898. When was it first brought to your notice in any shape or form that tank engines were going to be provided for this railway?—After we had consulted Mr. Malcolm, and sent his recommendations to the Board of Works, they replied early in 1901 to say that they would adopt the Glenties type.

18899. The Glenties type of engine?—Yes.

18900. That is the type used on the Glenties line?—Yes, on the Glenties line; they are tank engines.

18901. When was that?—On the 1st February, 1901.

18902. Did any communication between your company and the Board of Works take place before that?—We had previously submitted Mr. Malcolm's recommendations; we employed Mr. Malcolm as an expert, gave him the necessary data, and got a report from him. By data, I mean we gave him the length of the line, the gradients, the limit of weight, the loads required, the curves, the ambit of the turntables, and other data. With that information he made a report which we sent to the Board of Works.

Type of engine in use on Glenties line ("tank") selected by the Board of Works.

18903. When was that sent?—On the 28th January, 1901.

18904. Before that, who was the General Manager?—Mr. Dawson, who is now General Manager for a railway in South Africa—the new Cape Central Railway.

18905. You were with him?—I was his chief assistant.

18906. Had Mr. Dawson any interview with the Chairman of the Board of Works?—He had.

Interview between the former General Manager and the Board of Works.

18907. Before that?—He had a conversation some time before.

18908. That would be some time in 1900?—Towards the end of 1900 Mr. Robertson, the Chairman, asked our Manager to write to him on the subject.

18909. On the subject of what?—Of the rolling stock which we thought necessary. Mr. Dawson immediately took the necessary advice from Mr. Malcolm and our own locomotive superintendent, and submitted a recommendation.

18910. When did he submit that?—On the 28th January, 1901.

18911. That was sent in writing to the Board of Works?—The letter was as follows—"Referring to the conversation I had with your Chairman some time ago with reference to the question of rolling stock for the Burtonport Extensions, I beg to inform you that since then I have gone very fully into the matter, both with our Locomotive Superintendent and the Locomotive

May 14, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

Superintendent of another railway, who has great experience in such matters, and the conclusion we have arrived at is that the following would be the most suitable engine for the Burtonport Railway, having regard to the long mileage and the delay that would arise in watering the engine so frequently, and also in coaling. Outside cylinders: fourteen inches diameter; twenty inches stroke. Wheels: leading, driving, trailing, 3 feet 9 inches diameter. Weight: leading, driving, trailing, each eight tons; wheel base not to exceed eleven feet six inches Boiler pressure: 160 lb. per square inch. Tender: four or six wheels, two feet two inches diameter; capacity coal, three tons; water 1,200 gallons. Engines of this type will be able to work a train of eight fully loaded wagons, three bogie carriages, and one combined brake van and carriage up the inclines with ease and good speed; they will be easy on the road, as the maximum weight on any pair of wheels will not exceed eight tons, and the large fuel and water carrying capacity of the tender (impossible in the case of a tank engine), would prove of great advantage on such long runs. I beg to suggest that a number of locomotive builders should be asked to submit designs, based on the leading dimensions given above."

Former General Manager's recommendation to the Board of Works as to design of tender, engines for Burtonport Railway in 1901.

18912. *Mr. Acworth.*—From whom is that letter?—It is from the General Manager of the railway company, Mr. Dawson, to the Board of Works.

18913. In the early part of 1901?—On the 28th January, 1901.

18914. *Chairman.*—The tenders were invited after that?—They were.

18915. Have you found the advertisement?—No; I will send my clerk to the hotel for it.

18916. I thought you said it was in the room?—He cannot find it in the bag. I have given the date on which it was issued.

18917. Now, let us go by steps. Did you receive any communication from the Board of Works after that letter suggesting that tank engines would be preferable to tender engines?—In reply to our recommendation we got a very short letter quoting us clauses of the Agreement. "Having laid your letter of the 28th ultimo, S. 21/469, before the Commissioners of Public Works, I am directed to request that you will be so good as to draw the attention of the Directors of the Londonderry and Lough Swilly Railway Company to the terms of Clause 11 of the Treasury Agreement scheduled to the Order in Council of the 18th May, 1899. It is as follows:—"The engines and rolling stock to be of suitable type for the efficient working of the line. The engines and rolling stock shall be legibly inscribed with the words 'Letterkenny and Burtonport Extension Railway' or some other appropriate designation or mark to distinguish them as belonging to the undertaking for the benefit of which they shall be exclusively used." The Letterkenny and Burtonport Railway, now under construction, will be similar to that from Stranorlar to Glenties; and the stock supplied to the latter has been found to be efficient in the working of the line. Consequently, the Board will supply for the Letterkenny and Burtonport Railway, engines and rolling stock of a similar type, but with any alterations which may have been found necessary from experience in their use on the Stranorlar and Glenties Line."

Decision of Board of Works under Clause 11 of the Treasury agreement as to selection of type of engines and rolling stock.

18918. What is the date of that?—February 1st, 1901.

18919. Who worked the Glenties railway?—Mr. Livesey, the gentleman who advised the Board.

18920. That was part of the Donegal railway?—Yes.

18921. And Mr. Livesey was General Manager?—Yes.

18922. These engines were worked on that line; is it the same gauge?—Yes.

Difference in the gradients on the Glenties and Burtonport lines.

18923. What was the length of the Glenties railway?—Twenty-four miles as against fifty on this. The vital difference is in the gradients. The longest gradient on the Glenties line is ¼ mile of 1 in 50. There are in all ten miles of 1 in 50 on the Burtonport line.

18924. What is the most severe gradient?—You are climbing 1 in 50 for four miles.

18925. What is the most severe?—1 in 50.

18926. Nothing below that?—Nothing worse than that.

18927. It is a long run, is it?—Four miles.

18928. *Mr. Acworth.*—With no break?—Yes.

Examined by Lord Pirrie.

18929. The Glenties engines were tank engines?—They were.

18930. And they were working without difficulty, as far as you know?—They were not working satisfactorily.

18931. Do you know anything about that?—I do, because the former locomotive engineer of the Glenties line was our locomotive superintendent at this time, and he warned us to have nothing to do with the Glenties type of engine because of the trouble they had given him.

18932. Were they built by the same people?—No; Mr. Livesey said that if they had been built by the people who built his engines they would have been better, but they would not follow his advice.

18933. Who was the builder of the Glenties engines?—Messrs. Neilson Reid, of Glasgow.

18934. Now, we have got to the point where the Board of Works point out that the engines working the Glenties railway were to be the engines to work this Burtonport railway; what was your answer to that?—We replied as follows.

18935. Will you give us the date first?—12th February, 1901.

18936. Just read the point bearing on the question of engines?—"The similarity between the Glenties and the Burtonport railways is confined to the rails and the sleepers being of the same section and size, but otherwise the whole line differs both in mileage and in length of grades of 1 in 50. For the expert working of these gradients I have taken some trouble to offer my advice, which I now regret, seeing the tone in which you reply." That was the manager's reply.

18937. Will you let me look at that letter?—Certainly (*letter handed to the Chairman*).

18938. What do you mean by that last paragraph?—I think the General Manager was a little piqued at not being consulted.

18939. What is the date of that?—The 12th February.

18940. After that letter the Board of Works advertises for the new engines?—There were several other letters passed to the same purport in which we begged the Board to consider our expert advice and in which they adhered to the Glenties type.

18941. Would you give us what you consider the strongest letter on that point; we do not want all the letters, but just one; make your selection?—There is one on the 17th April, 1901.

18942. That was after the advertisement?—After the advertisement.

18943. Have you got something before the advertisement appeared?—When we wrote that letter we did not know that the specification had been issued. We did not know until the 17th April. We at once wrote as follows:—"I took an early opportunity of submitting your letter to my directors, and they desire me to say in reply that they regret there should be any difference of opinion between them and your Commissioners with reference to the rolling stock for the Burtonport railway, inasmuch as they believe it is for the advantage of both that before the stock is contracted for the description most advantageous for the efficient working of the line should be mutually settled. My directors are much disappointed to find that a specification has been issued and tenders invited without reference to them or to the officers of the company responsible for the maintenance and working of the railway, whose opinion would be of some practical value as to the requirements. It is most desirable that we should be agreed at the present time and thereby avoid any difficulties on the subject when the line is about to be opened for traffic. I therefore suggest that you send me a copy of the specification for the information of my directors and responsible officers, and that in the meantime no steps be taken to close the contract for stock. If necessary, a circular can be sent to the firms supplied with specifications postponing the date for receiving tenders. By referring to page 13 of the Treasury agreement, Clause 11, you will see that the engines and rolling stock were to be of a suitable type for the efficient working of the line, and at page 15 of the Blue Book the quantity was estimated as follows:—6 locomotives; 6 composite carriages; 14 thirds; 4 brakevans; 80 wagons; 2 combined carriages and timber trucks; 1 horse box. It is in no hostile spirit

that your attention is drawn to the present position, but with a view to co-operating with your Board in procuring rolling stock on the most favourable terms, and of a class that will enable the company to work the line efficiently and satisfactorily."

18944. That is perfectly clear; what is the reply to that?—"I am directed by the Commissioners to state that they have pleasure in forwarding copies of the specification for the locomotives and rolling stock. The Board recognise the spirit expressed in the concluding portion of your letter and they have caused the question under correspondence to be carefully inquired into by experts of great experience, and have given it full consideration, and they believe that the engines and rolling stock proposed to be supplied will be found suitable. Minor alterations in detail can of course be arranged for if necessity arises. The Board, as conveyed in their last letter, will be glad if your company's officers will confer with the railway engineer in connection with such points as suggest themselves, if your directors desire it. I am to add that this estimate of rolling stock was only the estimate of the Secretary of the company, and was not accepted by the investigators, or by this Board.

18945. Did that conference take place between the representatives of the Board of Works on the spot and your officers?—It did.

18946. And what was the outcome of that?—The outcome was that they agreed to meet Mr. Malcolm, our superintendent, and manager, while the Board was represented by their engineer and by Mr. Livesey. The letter which was read yesterday was Mr. Malcolm's report of what took place.

18947. That is bringing it up to that point?—Yes.

18948. Were any minor points mentioned?—None were mentioned in Mr. Malcolm's Report, and I am not sure whether any were discussed.

18949. Have you mentioned any to the Board of Works in the correspondence?—No; we confined ourselves to the question of principle—tank or tender.

18950. *Mr. Acworth.*—That letter spoke of the Board having been very carefully advised by its experts, I think?—Yes, in the plural.

18951. You have told us they were advised by Mr. Livesey?—Yes.

18952. Do you know who the other expert was?—There was no one else, unless it was their civil engineer.

(*Mr. Acworth to the Chairman*).—But the letter says that the Board was advised by its experts—experts in the plural—and I got from the Secretary that as far as he knows nobody but Mr. Livesay was consulted.

18953. *Chairman.*—And the resident man, I suppose?—The civil engineer and the manager; there was no mechanical engineer consulted on the question.

18954. As far as you know?—As far as I know.

18955. *Lord Pirrie.*—Was not the stationmaster or their agent consulted?—No.

Lord Pirrie.—I thought his opinion was taken on all subjects.

18956. *Chairman.*—Were the engines supplied in accordance with the specification that has been printed?—They were supplied fairly well, but not quite in accordance. There were numerous improvements suggested by ourselves and some by the builders; but there were some points on which the engines, when they arrived did not conform to the specification; but they were not very large.

18957. The crux seemed to be that your advisers strongly recommended tender engines, and the Board of Works supplied tank engines?—Yes.

18958. Is not that the real point?—That is the real point. I wanted to say that before this interview with Mr. Batchen took place, we asked for a plan of the engines and a profile of the gradients of the line, and neither could be supplied. The order had been placed by the Board without any plan of the engine being before them or the builders, and without any profile of the gradients to be worked, being prepared. Mr. Malcolm would not give us any recommendation until we gave him all those data.

18959. All the plans and specifications for the line were prepared by your own engineer?—No doubt; but my point is——

18960. But that is so, is it not? Therefore, you had it within your power to give all the particulars from your own engineer—you have got all that information?—At this time he had been taken over, and his plans with him, into the service of the Board of Works.

18961. He had left you?—We have an engineer, and had one then, and if we had given him the working of the plans he could have prepared the profile, but we thought they had a profile before them.

18962. You mean a section of the gradients?—A section of the gradients showing the ups and downs; but we found that they did not use one in ordering the engines.

Allegation as to neglect to supply a section of the gradients on the Burtonport line to the builders of the engines.

18963. It is not usual to get these sections of gradient out until the line is about to be completed, is it?—It is necessary in designing an engine to know any figures or a profile of the gradients to be worked.

18964. If you know there is a gradient of 1 in 50 for a certain distance, and that that is the worst gradient, is not that quite sufficient?—I do not think so. A good deal depends on the continuity of the gradient. If you are climbing all the way for ten miles, even though the worst gradient is not a bad one, it is a strain on the engine to get to the summit.

18965 But you knew all about that?—We did; and that is why we wanted tender engines, but the builders did not know it.

18966. But you need not make a grievance of the Board of Works not supplying a section of the gradients when you knew all about it?

Mr. Acworth.—But the point is that they did not supply the information to the builder, so that the builder did not know what the engines had to do.

Chairman.—But everything is specified.

Mr. Acworth.—They had not the material to specify.

Witness.—The builders, when they came over, after a year and a half, and saw the line that had to be worked. told me and the chairman of the company that if they had known the gradients that had to be worked they would not have recommended the engines they were building, but they had to build them according to orders.

Chairman.—That is what I say—they had to build them according to order.

18967. *Mr. Acworth.*—Did they build to a detailed specification or were they invited, to some extent, to make their own specification?—It was a very general specification. All the expert work of translating what was in the specification into actual machinery was done in their own drawing office by their own staff at the works.

Allegation as to insufficient details in the specification of the engines furnished to the builders.

18968. Was it only a specification on certain leading points—the weight on the wheels, and that kind of thing?—It was a more detailed specification than that.

18969. *Chairman.*—It must have been?—A good deal more detailed than that.

18970. You have the specification, have you not?—I have. (*The specification handed to Chairman.*)

18971. *Lord Pirrie.*—It gives the size of the tubes, and so on, I suppose?—Yes, and the diameter of the wheels.

18972. *Chairman.*—At any rate, the engines were supplied. I think, according to the evidence given when this line was applied for, the estimate was for six engines?—Yes.

18973. How many were supplied?—Four.

18974. And did you consider that would be sufficient for the traffic?—We did not.

18975. I suppose it would have been barely sufficient for two trains a day?—The manager's estimate of six was for two trains a day and occasional specials. The Board accepted the estimate of the traffic, but rejected the estimate of the quantity of stock.

Complaint as to insufficiency of the engines and rolling stock supplied.

Mr. Acworth.—I should have imagined this to be a detailed specification (*indicating the specification*).

Lord Pirrie.—No, it is not a detailed specification; it is a broad specification; it does not give the actual particulars. There are various points, which I take it, were worked out by the builders' experts in the drawing office. I would not call it a detailed specification.

Chairman.—You know a good deal about shipbuilding, but I think I would prefer Mr. Aspinall's opinion on that. (*Handing the specification to Mr. Aspinall.*)

Mr. Aspinall.—It is only a very general specification; you might build anything on that.

Lord Pirrie.—Then you support the shipbuilder.

18976. *Chairman.*—Then about the rolling stock; there has been no complaint that I have heard about the rolling stock?—Except as to the quantity; we complained very strongly about the quantity.

May 14, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

Protest as to the inadequacy of the proposed supply made by working company before opening of the line.

18977. I think it has been admitted, even by the Board of Works, that contingent upon certain things and conditions, all the rolling stock would have been supplied?—Yes; but I wanted to correct two things in their evidence about that. At first they said that the application for additional stock was not made by us until after the line was opened and traffic had increased. The facts are that we began to protest about the inadequate supply on the 16th May, 1901, and have kept at it steadily ever since.

18978. When was the line opened?—On the 9th March, 1903.

18979. I understood it was within two or three months?—We began to apply two years before the line was opened—in ample time.

18980. What did you complain of two years before the line was opened—as to the quantity?—Yes. You will recollect that the engineer of the Board of Works said that by agreement with us the number of carriages was reduced from fourteen to twelve on condition that we got another compartment, and the letter in which we confirmed that arrangement is as follows:—"Whilst my Directors confirm the several matters put forward by Mr. Fisher and myself with reference to the type of rolling stock, they desire me to say clearly and explicitly that they consider the quantity of rolling stock proposed is altogether insufficient for the proper working of the existing traffic, and that unless a very much larger quantity of rolling stock is supplied, it would be impossible to work the line efficiently or to develop the district. The number of engines proposed is four. The minimum mileage will probably be 80,000 miles, or 20,000 per engine. This is an excessive mileage for a narrow gauge engine, and clearly illustrates my Directors' contention that the quantity proposed is altogether too small, and the same thing applies as regards the carriages and wagons."

18981. What is the date of that?—The 16th May, 1901, two years before the opening of the line.

The Commission adjourned till the following morning at 11 *o'clock.*

THIRTY-THIRD PUBLIC SITTING—WEDNESDAY, 15TH MAY, 1907,

At the Board of Trade Offices, 8 Richmond Terrace, Whitehall, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel W. HUTCHESON POË, C.B.; Mr. W. M. ACWORTH, and Mr. JOHN AUDLEY FREDERICK ASPINALL.

Mr. GEORGE E. SHANAHAN (Secretary).

Chairman.—I think I had better announce, for the information of the parties concerned, that the next sittings of the Commission will be in London; we shall sit on Thursday and Friday, 6th and 7th June, and on Monday, Tuesday, and Wednesday, 10th 11th, and 12th June. The meetings will not be held in this room, but due notice will be given as to where they will take place.

Mr. ANDREW SPENCE further examined by the CHAIRMAN.

May 15, 1907

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

18982. I forget where we left off yesterday?—You asked me about the quantity of stock, and I said there were two errors of the Board of Works on this subject that I wished to correct.

18983. I asked you about the carriages and wagons?—The number of carriages and wagons supplied.

18984. Yes?—The first error I wish to refer to is, where the Board of Works stated, in the answers to questions 15237 and 15244, that the increase in traffic necessitating additional rolling stock did not occur until five or six months after the opening of the line, and it was not till then that the company applied for some.

18985. *Lord Pirrie.*—What page is that?—It is on page 16 of my proof.

18986. *Chairman.*—But I suppose you have quoted from the official notes?—I have given the number of the questions in the official notes.

18987. That will be sufficient?—It is down on the notes.

18988. What have you got to remark on that?—That that statement is wholly wrong. The letters urging on the Board of Works the advice my directors had received as to the quantity of stock required were addressed to the Board on the 17th April, 16th May, and 8th June, 1901, two years before the opening of the line—about the time the order for the stock was given—and on the 27th January, 3rd February, 22nd April, 19th May, 26th May, 30th May, 8th August, 14th July, and 7th September, 1903, being the year in which the line was opened.

18989. You may read one letter from you to the Board of Works with reference to the rolling stock—the first letter you wrote after the line was opened?—Yesterday I read at your request one letter written on the subject before the order was placed.

18990. I know, but I am now speaking of another matter. The rolling stock was supplied in accordance with the expert advice given to the Board of Works. Now, what communications passed between you and the Board of Works after you received the rolling stock and commenced to work the line—what was the first letter?—The first letter was on the 26th January, 1903, after the stock had come, but before the line was opened.

18991. That will do?—"Sir, My Directors have just obtained from your engineer, Mr. Batchen, an inventory of the rolling stock provided for the Burtonport Railway. As you are aware, the equipment which has been provided consists of four engines, twelve carriages, and sixty-two wagons. My Directors desire me to say that they consider this equipment altogether insufficient for the working of the line, and that more must be supplied for the proper working of it. They have taken out particulars of the rolling stock owned by narrow gauge railways in Ireland, and find that if the Burtonport Railway had been equipped on the basis of this average, no less than nine engines, twenty-four carriages, seven vans, and 169 wagons would have been provided. It will be seen that this is more than twice the equipment supplied. For the Killybegs and Glenties lines" (I should explain that these lines were also equipped by the Board of Works out of the public funds a couple of years previously; therefore, they afforded a good precedent), "with a mileage of 43½ miles, six engines, seventeen carriages, and four other vehicles, and seventy-eight wagons were provided. My Directors would ask you to look into the list of rolling stock supplied and compare it, as they have done, with the supply of other lines under similar conditions with a view to the reasonable equipment of the railway for the traffic anticipated, as it is most undesirable that they should be crippled at the opening stages, and the advantages of the new railway curtailed from the fact of the rolling stock being so inadequate. Seeing that the line will be ready for opening at an early date, a reply stating what you purpose doing will oblige."

Company's letter of 26th January, 1903, to Board of Works as to supply of rolling stock.

18992. What is the answer to that?—The answer is dated the 28th January:—"I am directed by the Commissioners of Public Works to refer to your letter of 26th inst., as to the rolling stock provided for the equipment of the Burtonport railway, and to state that the comparison of the rolling stock with that supplied to the Glenties Railway is not a fair one. Apart from the consideration that the requirements of the Burtonport line were carefully considered, having regard to the character and population of the district and its traffic-producing properties, I am to remind you that the Killybegs and Glenties lines were constructed at different periods, and separately equipped with rolling stock, and that even if the circumstances were analogous any comparison between the Burtonport and these railways should be with the rolling stock of each individual line. The Board also desire me to point out that as a matter of fact the Killybegs and Glenties Railways were provided with more than the usual supplies of rolling stock under the special circumstances of each case. As regards the rolling stock owned by narrow gauge railways in Ireland referred to by you, I am to request that you will communicate particulars as a matter of information. The Board desire me to remind your company that they were fully aware of all the circumstances connected with the provision of the rolling stock, and to state that this is not the proper time to put forward a claim for an additional equipment, as any application of this nature should have been made long since. I am to add that before deciding as to the extent of the engines and rolling stock required for the Burtonport Railway, the Board obtained the best advice on the subject available, which was only given after a full investigation of all the circumstances."

Board of Works' reply of 28th January, 1903.

May 15, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

18993. Who signed that?—It is signed "George E. Shanahan, Assistant Secretary." You will recollect, sir, that they alleged that the Glenties and Killybegs lines were similar as regards the type of engine, but they deny that they were similar as regards the traffic-producing properties of the district or the quantity.

18994. I think that clears up that part of the question. Now, what about the men that you employed?—Well, sir, I said there was a second error in the Board of Works evidence that I wished to correct.

18995. What is the reference to the question?—Question No. 15244.

Question of the adequacy of the supply of rolling stock for the Burtonport line.

18996. Where is that in your abstract?—In question 15249, page sixteen of my proof.

18997. What is the statement?—The Board's Engineer was asked by Colonel Poë if the offer of additional stock was made practically as soon as the line was opened, and he replied, "Yes. The Board saw very soon after the line was opened that a third train service would be necessary."

18998. What do you want to say upon that?—The Board's witness, who was examined the day before yesterday, said the offer was made six months after the line was opened. The fact is that the offer was not made until eighteen months after the line was opened, when the engines had completely failed, when the traffic was being carried on with our own engines, and when things were at their worst.

18999. I do not remember the statement that it was six months after the line was opened that the Board of Works offered to supply rolling stock; I think you are wrong there?—Well, the notes will show that when they are printed; I took it down at the moment.

19000. At any rate, I do not think anything turns upon that that is material. We have now got from you, at any rate, proof that two years before the line was opened you wrote for considerably more rolling stock than the Board of Works intended to provide?—Yes.

19001. And that just before the line was opened you have read the letter in which you detailed what you thought was necessary?—Yes.

19002. Now we will leave it there. What have you to say about the men? You have heard the evidence given to us with reference to the incompetency of the men?—Yes.

The alleged incompetency of the engine drivers on the Burtonport line.

19003. What have you to say upon that? First of all, is it within your knowledge as to the capacity of these men?—Yes, I am familiar with them—everyone of them.

19004. Did you hear the evidence of Mr. Shanahan?—I did.

19005. And did you notice the dates that were given of the complaints made as to breakdowns?—I did.

19006. And as to certain men being dismissed?—I did.

19007. Would you just tell us generally what you have got to say upon that?—A great number of the changes that took place in the engine men occurred in consequence of the strike which broke out on the line in the month of November, 1903.

19008. How long was that after the line was opened?—Eight or nine months; and from the strike on for a year very numerous changes took place; but the injury to the engines—the failure of the engines—was all prior to this, while they were being driven by our own trained and trusted men. The suggestion that it was the fault of the men is a very obvious one. It did not require any ingenuity to suggest that. We thought of it ourselves at first, but when the breakdowns occurred with one man after another, always with these engines, we began to look elsewhere for the cause. We brought in Mr. Malcolm, and he reported.

19009. I want you to deal with the period before the strike—before your difficulty. As to what occurred after the strike, I do not think you need say a word, because we know that certain men had to be taken on, and under circumstances such as those irregularities necessarily would occur. We will not deal with that period at all. That is exceptional. But now, before the strike, or a month or two after the railway was opened, instances were given?—I do not know whether you have got them?—I know them all.

19010. Very well. Can you deal with the man who was dismissed for drunkenness on the Great Northern, and engaged by you as driver, and dismissed by you in June, 1903—that was just after the line was opened?—What was his name?,

19011. I do not think it is right to mention his name. You said you had got all the particulars?—I cannot identify him from those particulars.

19012. I thought you said you knew all the particulars?—I do.

19013. I will let you read that in the proof—just those remarks there (*handing document to witness*).

Mr. Shanahan.—I refrained advisedly from mentioning names. I will give them privately to Mr. Spence.

Chairman.—Put them down on a slip of paper.

Mr. Shanahan.—That is No. 1 (*showing a paper to witness*).

Witness.—That man was recommended to us by Mr. Batchen; he drove on the line before the line was opened, and was highly recommended by Mr. Batchen. He was taken on at the time as fireman, and was afterwards promoted to be driver, and he remained with us until he resigned.

Mr. Shanahan.—That man came from the Donegal Railway, and was dismissed for drink.

Mr. Batchen.—May I deny Mr. Spence's statement sir?

Witness.—I will prove it.

19014. *Chairman.*—At any rate, it does not matter who recommended him really. The man was in your service at the opening of this railway as a fireman, was he?—Yes.

19015. Then he was promoted to be driver?—Yes.

19016. And he was several times cautioned, I think, for being drunk and for leaving passenger trains standing on an incline, and subsequently he was dismissed?—Yes. I am not sure as to his being cautioned several times; I have no record of that, but I know he was dismissed for drink.

19017. And he was afterwards re-employed by you?—I do not think so.

19018. I am not going into all these cases, but this seems to me a typical case of an incompetent man upon an engine, and it explains some of the causes why this line was improperly worked?—I do not think that it was a typical case, because there are cases of men in the employment still who drove these engines after the line was opened, and they are still giving satisfaction.

19019. He was dismissed in 1903?—He was.

19020. June, 1903?—Or thereabouts.

19021. We have got the dates. Then in June, 1904 you re-employed him. If you do not know anything about it, say so, and we can go on?—Well, I know generally, but I am not aware that he was re-employed. I am not able to say whether he was re-employed or not. I have asked to have the papers found to see if it was so. (*After examining papers.*) Yes, sir; I have traced the man's career. He joined the Company's service in February, 1903, as fireman; he was promoted to be driver on the 2nd June. Of course he came as a passed fireman from the Donegal line. He was reduced to fireman on the 23rd June, 1903, instead of being dismissed for the incident alluded to. He resigned because of his reduction on the 26th June. He rejoined the Company's service on the 5th June, 1904, as fireman on the main line, but was not employed on the Burtonport line.

19022. He was re-employed in June, 1904?—He was. sir, as far as the main line was concerned.

19023. In November, 1904, was he reported for drunkenness again?—He was, and dismissed.

19024. About No. 2—that is another case. I am speaking of cases now immediately after the line was opened. (*The witness examined certain papers*). I think we will dispense with this. You heard the evidence given of a series of men who were incompetent and dismissed the service. Have you any reason to believe that the statements given to us were incorrect? I will put it broadly in that way?—I think that the facts were correct, but that the sweeping inferences drawn were unwarranted, and the damage alleged to be done by the men wholly exaggerated.

19025. But a drunken man on an engine might easily go short of water, and do other damage to his engine—you will admit that, of course?—Certainly.

19026. But you say, I suppose, that the real cause was the engines themselves?—I do, because we at first thought it was the men; we were very strict with them,

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

and we changed them, and selected the best, but the engines failed with one man after another. Then we asked Mr. Malcolm's advice on the 8th November, 1903—before the strike, but after the failure of the engines. He reported as follows:—"I am of opinion that tank engines, such as those in question, are not suitable for the work, and that tender engines of the type described in various reports dated 9th and 19th January, 26th April, 13th May, and 28th June, addressed to you, and 27th July, 1901, addressed to the Board of Works, would have proved more suitable in every way. The engines have neither fuel nor water-carrying capacity for such long runs as those on the Burtonport Extension, and frequent and serious delays and constant inconvenience is the result. I fear I can add nothing to what I have said in those reports, except that I am convinced that a serious mistake was made in forcing tank engines on you for this work." I also want to say that when our new tender engines came we were anxious that they should be given every chance, and we selected two drivers who were in our employment when the Burtonport line opened, and who had driven the Burtonport engines and failed with them. These were the men that we chose to take charge of our new tender engines, which cost us £2,750 each. One of the drivers—an excellent fellow—was unfortunately killed a short time afterwards owing to the breaking of the draw-bar to which the witness of the Board of Works referred. Another driver named Butler, who was in at least a dozen breakdowns with the Burtonport engines, was given charge of one of these tank engines after we had re-designed it, put in a new fire box, reduced the number and diameter of the tubes, thereby increasing the centre-to-centre of the tubes, and strengthened it in other ways. He got the engine handed over as it came from the maker; he drove it for 30,000 miles; he handed it over——

19027. 30,000 miles in what period?—In about fourteen months; every day except washing-out days, from the day he got it until he brought it back to the works, and it was handed over in perfect condition, ordinary wear and tear excepted, and we have since promoted him to one of the tender engines. These are the men that broke down with the tank engines.

19028. Some of the men?—That is one of the men who were blamed for ruining them.

19029. I think we have had enough about the men; we will not go into further details about the men?—He had not a single breakdown during the whole 30,000 miles.

19030. Are those engines running now?—They are.

19031. We heard from Mr. Shanahan that, on the whole, the working of the extension was giving satisfaction now?—It is.

19032. To the satisfaction of the district?—It is fairly up to the average narrow-gauge single-line work.

19033. What is the service—how many trains per day?—Three trains per day.

19034. I suppose you admit that the line was constructed in accordance with your own engineer's plans?—I would rather not go into that; the witness who is to follow me will go into the construction question.

19035. I am not speaking of the construction so much as that the line was laid out, and the specifications for the contractors drawn up by your own engineers and surveyors; is not that so?—They were approved by the Board of Works.

19036. Then we understood yesterday that this engineer had left your service and had joined the Board of Works?—That is true.

19037. And the same man carried out the works?—He became the resident engineer under the Board's engineer.

19038. Under another engineer?—Under the engineer to the Board, who has been before this Commission.

19039. What about coal—something was said about inferior coal?—I say that we buy the best coal in Ireland.

19040. Irish coal?—It is Welsh—Monmouthshire steam coal, bought by us from the Ebbw Vale Company. We have had contracts running with the Ebbw Vale Company since before the opening of the Burtonport line.

19041. Was Welsh steam coal supplied to the Burtonport line?—It was.

19042. And used on these engines?—Used on these engines.

19043. Of course, Welsh coal varies; sometimes you may get it better than at other times?—We get always the same brand from the same colliery, and at that time it was being got double-screened, but we were advised that to have it double-screened was something of a luxury, more suitable for a gentleman's yacht than a railway, and now we are only screening it once

19044. You used only the Welsh steam coal?—We did then, and we do now.

Examined by Colonel Hutcheson Poë.

Effect of the Treasury agreement in respect of Carndonagh and Burtonport lines.

19045. I should just like to ask you a few questions as to the effect of the Treasury Agreement in respect of the Carndonagh Line and the Burtonport Line. Am I right in stating that the Treasury Agreement, in respect of the Burtonport Line was supplemental to that in respect of the Carndonagh Line?—You are.

19046. And that a clause was inserted in the Carndonagh Agreement that if a line should at any future time be constructed in the direction of Burtonport, the Lough Swilly Company would undertake to work and maintain that line?—That is right; they were, in that sense, joint undertakings.

19047. Is not the whole of the Treasury Agreement with reference to the Burtonport line starting with the preamble to that Agreement, to this effect—it says here:—"And whereas the Treasury are satisfied that the Londonderry and Lough Swilly Railway Company being an existing railway company, will, if an advance is made by the Treasury under Section 1 of the Act of 1896, construct, work, and maintain the railway,"—that is, the Burtonport Railway; is not that the preamble to the Agreement?—Yes.

19048. And the whole of the Treasury Agreement is based upon the understanding that the Lough Swilly Company were, as a matter of fact, not only going to work and maintain the line but they were to construct it?—Quite so.

Bearing of Clause 11 of Treasury agreement on the question of promoting company's obligation to start the construction of the line within a specified period.

19049. There is a clause also in that Agreement, rather an unusual one, I think, giving the Board of Works power, in the event of the promoting company not taking up the contract at the end of six months, to take up the contract themselves; it is Clause 11?—Yes.

19050. That is rather an unusual thing, I take it?—Most unusual.

19051. Might I ask you if you can give any reason why your company did not undertake the construction as it had practically covenanted to do under that Agreement?—It was wrested from us by an unfair use of that Clause.

19052. In what way do you mean "wrested" from you?—That Clause provides that if no contract is entered into within six months of the Order becoming binding they can take it out of our hands. I say that the Board of Works, after they got the approved plans delayed over six months before issuing advertisements for tenders——

19053. Just wait one moment. The confirmation of the Treasury agreement was 25th July, 1898, and six months from then would bring you to 25th January, 1899?—Yes.

19054. What was the date when the contract was taken out of your hands in consequence of your not being ready to take up the construction?—It was taken out of our hands in May, 1899.

19055. Practically a year after?—Practically a year after.

Alleged cause of delay on the part of promoting company in proceeding to take up a contract for the construction of the Burtonport line.

19056. That surely gave you plenty of time to take up the contract under the terms of the Agreement?—Yes; but my answer was that the Board of Works themselves delayed the issue of advertisements for tenders until the time had elapsed, thereby, in our opinion, waiving that Clause. But they revived it afterwards quite suddenly and unexpectedly in connection with a dispute as regards promotion expenses. We issued a Writ and took proceedings, by Petition of Right, to compel them to allow us to go on. But after the date of the trial had been fixed, we took counsel's opinion, and he advised us that on the construction of the Agreement we could not succeed, and the proceedings dropped.

May 15, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

19057. Might I ask you when the inquiry by the railway officials—the Railway Traffic Manager and the Railway Engineer—as to the suitability of the line was instituted; was it after the Treasury Order was confirmed by the Order in Council? When did the Inquiry as to the suitability of the line and the satisfaction of the district which it passed through take place?—You mean the Inquiry by the Investigators?

19058. Yes?—The Investigators under the Act went down before the Order in Council; that is a procedure precedent to obtaining an Order; you require to have that in order to obtain an Order.

Dates of the inquiry by the investigators, the Treasury agreement, and the Order in Council.

19059. Having obtained an order on the strength of the Investigators' Report, when were tenders invited?—Tenders were invited on 6th February, 1899.

19060. 6th February, 1899?—Yes, a year after the Report.

19061. No; the Order in Council was 25th July, 1898; that is, seven months after the Order?—After the Agreement.

19062. The Agreement was in January, 1898?—Yes; a year after.

19063. Clause 11 was only to take effect within six months of the Order becoming binding; and of course the Treasury Agreement did not become binding until after the Order in Council confirming it. The Order in Council was dated 25th July; and therefore Clause 11 did not become binding until 25th January. You cannot dispute that, surely?—The Order in Council is dated May, I think.

19064. 25th July, 1898?—That is the Act of Parliament confirming the Order. The Order was given at the Council Chamber, Dublin, on the 18th May, 1898.

19065. But it did not become binding until the Act of Parliament confirmed it, surely?

Mr. Acworth.—The six months may have run from another date.

Absence of the representatives of promoting company at the opening of the tenders by the Board of Works explained.

19066. *Colonel Hutcheson Poë.*—At any rate tenders were invited early in February, 1899; and it was part of the Treasury Agreement that those tenders should be opened in the presence of the officials of the company; and we were told the other day that for some reason or other your company did not choose to send representatives?—That is so.

19067. Why not? I should have thought that you were almost bound to under the Agreemnt. The tenders were based on the plans which your own engineer had provided?—We were quite willing to accept whatever they reported by post the amounts of the tenders were; our presence was not absolutely necessary.

19068. At any rate, you had the opportunity?—We objected to go, on the ground I have explained, because the promotion expenses which we had already incurred had not been paid.

19069. What reason have you for saying that?

19070. *Chairman.*—There must have been a little temper in this?—There was.

19071. *Colonel Hutcheson Poë.*—At any rate, you admit that you had the opportunity of attending there, for what it was worth?—Certainly.

19072. And that the tenders were based upon your own plans and specifications?—Certainly.

Manner in which the free grant was determined.

19073. The free grant was determined by the lowest tender?—The lowest tender did not include the price of the rolling stock, the land, the permanent way material, the cost of engines, and rolling stock, and the engineering and promotion expenses.

19074. Pardon me a moment. Sec. 3 says that the free grant shall be determined in such and such a way; and then it says: That from the free grant there shall be deducted the sum of money produced by the issue of the guaranteed capital of the company and the remainder, including the amount required for the engines and rolling stock shall be the amount of the free grant" ?—Yes.

Alleged variation of Clause 3 of the Treasury agreement by the Board of Works.

19075. So that the free grant included the provision of rolling stock?—It ought to have included it; but that Clause was varied by the Board of Works; and that variation of the Clause brought on us all this trouble, or a great deal of it.

19076. Will you give the Commission your reason for saying that that Clause was varied by the Board of Works?—Because they accepted from the contractor a tender which, so far from fixing the total amount of the free grant, did not include the items I have named, the cost of land, the cost of the permanent way material, the cost of engines and rolling stock, and the cost of the engineering and promotion expenses. They entered into separate agreements for the land, for the permanent way material, and for the engines and rolling stock, and when we asked them to enter into a separate supplemental Agreement with regard to the engineering and promotion expenses which we had incurred, they declined to do so; for that reason we did not attend, and it was then that the negotiations broke down.

19077. You did not attend the opening of the tenders; is that what you mean?—Yes.

19078. The amount of that grant was something like £315,000?—Yes; but the amount of the tenders which you say should fix it, was only £224,000, that was afterwards reduced to £219,500.

19079. Under that Agreement, the Treasury were to be the sole Arbiters as to the solvency of the contractor, and so on?—Oh, yes.

19080. So that it was in their province to determine whether the tender was a sufficient one. At any rate we have had evidence that out of the £315,000 a sum of £20,000 was expended on rolling stock for the Burtonport Line. Have you any reason to contradict that?—No; but, as I have stated, it was wholly inadequate.

19081. In the Carndonagh Agreement, under which the amount of money allocated for the provision of rolling stock was in a separate Clause, there is a Clause providing that a sum of £15,000 shall be raised, and not less than £10,000 expended on rolling stock?—Yes.

19082. As a matter of fact, I think we have it, that about £12,000 was expended?—The true facts are, that we expended over £17,000 on the rolling stock for the Carndonagh Extension.

19083. £17,000. It was given in evidence before us that the amount was £12,000; the Cardonagh Line is some eighteen miles long, I think?—It is.

19084. And the cost of that line was given in evidence before us as £6,200, including rolling stock; or, £5,600, exclusive of it?—Yes.

19085. That line, I believe, was constructed on the most expensive principle, the work was of the most elaborate description, and stations were provided which would have been suitable for the L. and S. W., or any of the English lines?—It was constructed in accordance with plans approved by the Board of Works.

19086. At any rate, it was constructed in a very substantial manner?—Yes; we say it was constructed on plans approved by the Board of Works, and that it really corresponded to those plans. We say that the Burtonport Railway was constructed on plans approved by the Board of Works, but that the works did not at all correspond to the plans.

19087. As regards the relative cost, I think the cost of construction of the Burtonport Line came to £6,000, exclusive of rolling stock, and £6,400, inclusive?—Yes.

19088. In other words, some £400 in excess of the Carndonagh line. And we know—at least I believe—that the gradients and curves on the Burtonport line involved considerably heavier and more expensive works?—We do not allege that too little money was spent on the Burtonport line. On the contrary, we allege that true value was not got for the money spent, because the contractors were allowed to depart from the plans and specifications to a very large extent: and that therefore value was not obtained for the contract sum.

19089. We had it in evidence the other day that with regard to the deviations from the original specification they had to submit them to your company, and that, as a matter of fact, your company refused to give their consent until they were handed over a certain sum of money by the contractors. That has never been disproved or contradicted. At any rate, whether you received the money or not, the deviations were approved of by your company, and *ipso facto* you were a consenting party to those deviations?—Allow me to explain. We do not complain of the deviations of which we approved, and which were afterwards authorised by a separate Order in Council. A bargain is a bargain, and if they had been twice as bad we would not have said a word. What we do allege is, that the detailed works, both on the original line and on the deviated line, are wholly inferior to the works as set out in the working plans, specifications, contracts, and other documents.

19090. Will you answer the suggestion I make to you? It was suggested in evidence before us the other day that a sum of money was received by your company in order to obtain their consent to promoting an Order in Council sanctioning these deviations, which were considered essential in the interests of the line?—I will. The first we heard of these deviations——

19091. *Chairman.*—Is it true?—Absolutely true, quite true.

19092. *Colonel Hutcheson Poë.*—You received a sum of money before you gave your consent?—Certainly. I will explain it, if you will allow me. The first we heard of these deviations was when the Board of Works, who were in charge of the line, informed us that proposals to deviate had been made, and they sent us the plans to get our consent. The engineer to the Board of Works followed us with considerable pressure to persuade us to agree to these deviations. I will read you a letter from him dated 29th July, 1899, in which he said:—"I received your letter of this day's date, and am now sending you herewith the plans of the deviation proposed by the contractor, and referred to in the Board's letter of the 25th inst. As I mentioned to you, I have been asked by my Board to exhibit these plans to you and answer any question I can in regard to them, and I would respectfully urge upon you that your directors do send for me this afternoon previous to discussing among themselves the merits of the deviations. I would point out that the Arbitrator begins his hearing in connection with the purchase of land on Monday, the 1st"—(that was the extent of the notice we got)—"and to prevent a double purchase of land it is desirable to get the opinion of the directors as early as possible. I shall remain in my rooms all this afternoon, and if you send a messenger for me at any time I will be glad to attend on your directors." We placed that in the hands of the resident engineer for his report. He replied on the 1st August saying that the details were not sufficient to enable him to give an official report. On the 16th August he reported fully on the proposal. There were eight deviations, four of which were not recommended, two were described as unobjectionable, and two were recommended.

19093. *Colonel Hutcheson Poë.*—That was your engineer's report?—Yes. It was the engineer who was at the time in a transition stage between our employment and that of the Board. While the Petition of Right to which I have referred was pending, we sent them to him to help us with his report. We were not aware at that time that he had gone into the employment of the Board, but in making his report he mentioned that among other things.

19094. That was on the 16th August—what next?—In that report he stated that the deviations would give a worse line, steeper gradients, sharper curves, and greater length. I will read you what he said.

19095. I do not think we want that, but the point I wish to get at is this—assuming that the deviations in his opinion were not suitable and were not in the interests of the line—we will assume that?—He believed it would enormously reduce the cost of the line.

19096. I do not think that is the point; what we want to get at is, what justified your company in accepting deviations which they considered were not desirable, and what justified them, when they held such an opinion, in accepting money to waive those opinions?—We agreed to those deviations with the greatest reluctance.

19097. Granted. But you apparently took a sum of money and then accepted them—that is the point I think we should like to be satisfied about?—We wrote to the Board of Works on the 2nd of August saying:—"Taking into consideration the fact that the contract plans have been approved and tenders taken thereon, my directors consider the alterations proposed would open the door to an infinite amount of trouble."

19098. That is all going on the same line, showing that you objected to these details—will you come to the point, please?—We objected, because it gave us a line longer and more difficult to work.

19099. We are agreed upon that point—that you objected to these deviations *in toto*. What we want to know is, how it came to pass that, having these opinions, you waived them in consideration of a sum of money?—Quite so. The contractor's partner came to our solicitors and opened negotiations. The legality of receiving any portion of the money he offered was raised by my directors, and he advised us that we were perfectly justified in accepting it, and the sum of £5,900 was received, and was distributed as follows:—£4,000 to the company as against the additional cost of working and maintaining a worse line than the original line; £1,500 to the solicitor for the legal expenses (because, of course, he had to get the presentment from the Grand Jury, the Order from the Privy Council, and to take up the new line just the same as a new railway, and for all that preliminary legal expense, he got £1,500); and £400 for engineering—we did the engineering and prepared the Parliamentary plans of this line—the Parliamentary plans of this line were prepared by Mr. Cooke and Mr. Hall and lodged by them.

May 15, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

Explanation regarding the money received by the promoting company from the contractors for agreeing to the variations from the original plans.

19100. I do not think we need follow that point out. When you agreed to these modifications and deviations—as I suppose you did officially through the Board of Works—did you inform them that you had done so with great reluctance, but that seeing you received a sum of £5,900 (part of which was to go to, we will say, legal expenses which you were justified in taking), you agreed to them, because you received a sum of money—£4,000—which, in your opinion, would recoup you for the extra expense involved by this additional cost of working—did you inform them of anything to that effect?—We informed them there was an agreement, but we did not communicate the terms of it to them. At that time the relations between us were somewhat strained. These are the Parliamentary plans to which I refer, signed by Mr. G. Hall and Mr. G. Y. F. Cook, our engineer (*producing same*).

19101. One point that struck us as curious was this. We have heard a great deal about rebates. Apparently the negotiations between this company and the Board of Works and the contractors were something very much of the same kind?—We never heard such a suggestion until the Board of Works witness gave his evidence in Dublin. The transaction was a perfectly open one. We were informed by the contractor that the Board of Works knew all about it, and it was openly referred to by the company in a letter addressed to the Board of Works—a letter of 31st December, 1901.

19102. *Chairman.*—Did that letter state the amount?—It did not; it referred to the fact of the agreement.

19103. *Colonel Hutcheson Poë.*—It said nothing about money passing?—No.

19104. At any rate, the fact was that certain money passed, of which you got £4,000 to recoup you for working the line, and so on. Now, having accepted that money, I do not see what right you had to complain afterwards that you were put to expense?—I will repeat that there is not a single item in our claim of £78,000 based on the authorised deviations to which we agreed under that agreement. What we allege is that the principal agreement and this subsidiary agreement were violated by the contractors with the permission of the Board of Works, so that we got a line to work and maintain in perpetuity very much inferior to the line we had bargained to get. Our engineer only visited the works twice during the three years while the construction was going on, and you can yourselves form an opinion as to a check that would be on the way in which the work was being done. On the two occasions that he visited it he observed serious departures from the specifications, which he reported to the Board of Works, and this they very much resented. They wrote to the Press complaining that our engineer had had the audacity to go on the line without asking their permission.

Allegation of promoting company that the plans with the deviations agreed to by them were departed from without their consent and to their loss.

19105. *Mr. Acworth.*—The Board of Works wrote to the Press?—Indeed they did. They wrote a letter which I will read. They went to the Press with this grievance. The letter is dated 23rd October, 1903, and was sent to my directors, being at the same moment sent to the Press of the whole of Ireland.

Board of Works letter to company of 23rd October, 1903. (See Appendix No. 9, III.)

19106. It was not addressed to the Press, but it was communicated to the Press?—It was communicated to the Press.

19107. *Colonel Hutcheson Poë.*—There is just one thing I want to ask you with regard to that £5,900. You said, I think, that £1,500 was given to the solicitor of the company for the expenses involved in legal work in connection with these deviations. Who was the solicitor of the company at that time?—Dr. Todd.

19108. And he received the £1,500?—He did; for services rendered. He alleged it was not enough, of course.

19109. That is the usual practice of members of the legal profession, I fancy. At any rate, all these difficulties in which, from the very first, you were involved would have been avoided if your company had fulfilled the obligations which they were really under when they entered into the Carndonagh agreement, if they

Money paid to Dr. Todd for acting as solicitor to company.

May 15, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

had taken up the contract, as they were virtually bound to do, under that agreement?—Will you kindly repeat the question?—(*The question was repeated*). I cordially agree. We say that the fatal mistake made by the Board of Works was in ousting us from this line by an unfair application of Clause 11 of the agreement which they had waived by the Bill.

Complaint as to the action of the Board of Works under Clause 11 of the Treasury agreement.

19110. You have admitted yourself that they were entitled to take up the contract in January, 1899, and, as a matter of fact, they did not take it up till May, 1899, so that surely they cannot be said to have exceeded their powers in that respect?—I go back to my point—that they departed from the provisions of the Order in Council as to the fixing of the free grant. They made supplemental agreements for the rolling stock, for the lands, and for the permanent way material. They declined to make a supplemental agreement to protect us as regards the promotion and engineering expenses which we had incurred, and that was where the negotiations broke down.

19111. But do you wish this Commission to infer—we will assume the amount of the tender in February, 1899, was £220,000—that, subsequently, finding your company would not take up the contract, and that they had to take it up themselves, in self-defence, they then introduced fresh agreements, by which they were enabled to obtain the sum of £300,000. Is that what you wish us to infer? It seems rather a strong order, but I do not know what else your contention can be?—I will explain it again. I am afraid you misunderstand the facts. As originally intended, and provided in the Order in Council, the free grant was fixed by an inclusive tender, which was to include everything.

19112. Yes, that is right?—Owing, as the Board of Works' witness stated in Dublin, to the difficulty in getting the contractor to inquire into the price of land, and other matters, they varied the Order in Council, and accepted from him, not an inclusive contract for everything, but an inclusive contract for the line. They made supplemental agreements for all these other things, but refused to make a supplemental agreement for us as regards the expenses we had incurred.

19113. But, with the exception of this provision about rolling stock, which differed in the two agreements, the acquisition of land, and all the other expenses involved in the construction of the line, were exactly the same in the case of the Cardonagh agreement and the Burtonport agreement?—Yes.

19114. So that, with the exception of your expenses, whatever the amount involved, which is very immaterial, the tenders invited for the whole of the rest of the work were based upon the same Orders in Council and Treasury agreements in both lines?—Yes; but on the Carndonagh line they did enter into a supplemental agreement.

19115. A supplemental agreement for rolling stock; but beyond that there was nothing else?—Exactly.

19116 *Chairman.*—The real reason was that they would not pay your expenses—isn't that the whole of it?—It is. Will you let me contrast it with that which was done on the Carndonagh line?

19117. Never mind that. The whole dispute has been because the Board of Works objected to pay your preliminary expenses?—The Board of Works refused to fix them by agreement.

19118. Well, but they refused to pay them. It was no use fixing them without paying them?—No. We met in Dublin, and fixed a supplemental agreement for the Carndonagh. We also came to a conclusion as regards the Burtonport, but the meeting broke up in order to enable our solicitor and the Board's solicitor to drive over to Dublin Castle and ask the Privy Council for an extension of time. Knowing that everything was settled, our solicitor applied for an extension of time, and got it, and the next morning, when we came in to have the negotiations concluded, we were shown the door, because of the letter of complaint we had written to the Treasury asking them to hurry up the Board of Works about this matter. They said we had gone past them, and they would have nothing more to do with us, and showed us the door. Then all these pains and penalties were resorted to. Would you permit me to read a clause in the letter published in the Press? "It may be pointed out, however, that even if your company had not the plans they had full opportunity of finding out everything connected with the line before it was opened for traffic, for your engineer, Mr. Hall, visited it when he thought fit, without even going through the formality of asking the permission of the Board." That is surely inconsistent with the statement that we supervised its construction.

Allegation that the company's negotiations with Board of Works broke down because of complaint made to Treasury.

19120. *Colonel Hutcheson Poë.*—Did you make any representation as to the difficulties which the Board of Works put in the way of your engineer supervising?—We did.

19121. Did they remove them?—No.

19122. Did they take any notice of your representations?—Very little indeed. Indeed none; because, when we went back to work the line, we found all the defects of which Mr. Hall had complained, or almost all the defects, still there, and others worse.

19123. And yet the engineer, who was the resident engineer under the Board of Works, was a man who had been practically in your employment, and who would probably have carried out the works if your company had taken the contract?—Yes.

19124. Was it likely that a man who was more or less in your interests——?—He was not at all in our interests. He owed no allegiance to us. He refused to make even a most simple report without a fee of five guineas a day.

19125. I suppose he did not want to serve two masters: he was serving the Board of Works, and he thought it was not incumbent upon him to serve you too. Still, the Board of Works having stepped into the position which you should have occupied as being the contractors to the railway company, was it any part of their province, in the strict sense of the law, to submit all these different matters for the opinion of your Board or your engineer? I mean if they had chosen to act according to the strict letter of the law, I suppose they need not have put them before you in any shape or form?—They did not put anything before us; but they permitted all these departures from the plans and specifications, not only without our knowledge, but contrary to our remonstrances, after they came to our notice.

19126. We can hardly accept that, because it is admitted that in every instance, although there was a certain amount of friction, no doubt, they submitted these deviations, and submitted all these various matters, to your Board and your engineer; and, as a matter of fact, they only did that, I imagine, to avoid friction. You were to work the line afterwards, and they wished to act in harmony with you; but, I suppose, it was not at all incumbent upon them to do so?—It is a great mistake to suggest that they consulted us about every single deviation from the contract plans and specifications. They consulted us as regards all deviations in the route—any deviation in the route for which we required a special Order in Council—and with which, without our consent, they could not go on, because they had to get our agreement to work what was practically a new railway. We do not complain about any of the deviations of route to which we agreed; but we complain that there were deviations from the plans and specifications for which we gave no consent, and which were to the advantage of the contractor, and to the corresponding disadvantage of the company, which had to work the line in perpetuity.

19127. I will not follow that matter any further, but I will ask you whether you were influenced in any way by the fact that at the time of the construction of the Burtonport line it was anticipated that it would not be a paying line. Was not that the case: and was there not a clause inserted in the Carndonagh agreement that in the event of the Burtonport line not paying its expenses the promoting company, the Lough Swilly Company, were to make good any deficit out of the receipts of their existing line?—Yes, as regards the working of the line.

19128. As regards the working and the maintenance of the line?—As regards the working. The expert's estimate of the receipts was mistaken. From the very first the receipts were very much higher.

19129. I am coming to that presently, if you will allow me; but let us stick to one point at a time. Under the 21st section of the Carndonagh agreement it was provided that if there was any deficit your company was to make good the deficit, and there was also a provision for the maintenance of the Burtonport line?—Out of the surplus on the Carndonagh?

19130. Yes. In other words, the one line was contemplated to be a good paying line and the other was, to be——?—To be the foster child of the other.

19131. Yes. In addition to that, you had the Letterkenny line, which was, of course, in difficulties, a badly laid out line, and so on, and in the possession of the Board of Works. Is it reasonable to suggest that your company were influenced to a certain extent by this line being in the possession of the Board of Works as mortgagees, and by the anticipated loss which would accrue on the working of the Burtonport line, and that having got a good line—the Carndonagh line—you did not very much care to fulfil the obligations which you had undertaken in the first instance, and you got out of it and threw the onus on the Board of Works which had to take your place?—On the contrary, we were anxious to get the Burtonport line, and it is entirely due to our persistent efforts that that line is there to-day. And that is shown by the fact that we took proceedings, by Petition of Right, to be allowed to go on.

19132. I take that as your answer. Now, with regard to the rolling stock. Do you dispute that in basing their estimates as to the amount of rolling stock which was to be provided, the Board of Works were not going on the recommendations of the investigators, who, I think, practically recommended—to go no further than the locomotives—that four locomotives were to be provided?—I have not seen the Investigators' report, and I read that statement with some surprise in the evidence of the Board of Works' witnesses, because, throughout the whole controversy they had never used that argument before. But it may be so.

19133. You are not in a position, at any rate, to contradict it, and I do not for one moment suppose that you would suggest that the Board of Works would put forward a statement which they could not substantiate?—No; but after reading the evidence, I do say they are not at all accurate as to some of their facts.

19134. That is a very polite way of putting it. But I suppose the Board of Works could produce the Report of the Investigators, if necessary.

Chairman.—The statement was made in the presence of Mr. Tatlow and Colonel Plews, and neither of them contradicted it.

The Witness.—Perhaps you would kindly let me see the Investigators' Report.

Colonel Hutcheson Poë.—I have not got the Investigators' Report.

19135. *Chairman.*—You must, I think, admit that Colonel Plews——?—He was not the Investigator; it was Mr. Tatlow. I have the Blue Book of the Investigation of Mr. Tatlow and Mr. Roberts with our own Manager's estimate also; and there is nothing in the Blue Book saying what the Investigators recommended.

19136. "Notes on Evidence"?—"Notes on Evidence."

19137. But no report?—No; they made a general report afterwards; and in the copy I have there is no reference to rolling stock.

19138. *Colonel Hutcheson Poë.*—With regard to this difference of opinion as to the relative merits of the tank engines and the tender engines, I think there is no turn-table between Kilmacrennan and Creeslough and Burtonport?—There is not.

19139. And in the event, which I believe is not unusual, of large numbers of people going to Kilmacrennan, to the fairs, or to Creeslough, and so on, a tank engine would be able to stop at those places and go back again, while a tender engine would be obliged to go on to Burtonport and back, a distance of twenty or thirty miles in order to avail itself of the turn-table?—Not at all; a tank engine requires a turn-table just as much as a tender engine does. We always turn our tank engines; we always run our tank engines funnel first, and so do all the Irish narrow gauge lines.

19140. *Mr. Aspinall.*—Why?—Because the driver has his work before him instead of behind him, and he is able to keep a proper look-out and mind his engine duties; and also because we find by experience that they run much better in forward gear than in backward gear, and the danger of heating is not so great. All the narrow gauge railways in Ireland are worked by tank engines except this long one of ours, and they are all equipped with turntables. It is quite different from running suburban trains on a level track to and fro all day.

19141. Why have you gone to the extravagance of a turntable?—Well, it was adopted before my time, and it has not yet been changed.

19142. *Colonel Hutcheson Poë.*—In the event of these tank engines running to Kilmacrennan, for instance, would they go on to Burtonport?—No; in the event of a local train of that kind we run the tank engine backwards and the tender engine backwards.

19143. That is the point. We are saying that you do avail yourself of the tank engine, but you would not run a tender engine backwards, surely?—Yes; we have done so, but we avoid doing so as much as possible with either.

19144. As a matter of fact, do you ever run tender engines in that way?—I have frequently seen tender engines running tender first; but we avoid doing it all we can, just as we avoid running a tank engine with the bunker first.

19145. Would not the absence of a turntable be a reasonable consideration influencing the Board of Works as to the type of the engines?—No; and that was never suggested throughout the correspondence, it would not weigh for a moment.

Examined by Mr. ASPINALL.

Tank engines run to and fro in England without being turned.

19146. With regard to the matter of turning your engines, are you not aware that quite 50 per cent. of the passenger mileage of all the great railways in England run with tank engines?—I am.

19147. And that practically they are not turned; there is no necessity for turning them?—I am aware of that.

19148. Then why, if it is only necessary in England to run them backwards and forwards without turning, is it necessary to turn them on the Burtonport railway?—The conditions are altogether different. In running in a wild country, up and down hill, where trespass is frequent, where a good look-out is necessary and where the drivers are exposed to the weather, it is quite different from running local suburban trains (which make up the 50 per cent. of mileage you speak of) to and fro all day. I really cannot justify, with an expert like yourself, this practice; but it is the case, not only with us, but with all the narrow gauge lines in Ireland. Mr. Malcolm, who stands at the head of his profession, does it on the Ballymena and Larne; Mr. Livesey, who was the Board's expert in this matter, does it on the Donegal; it is done on the Cavan and Leitrim; on the Clogher Valley and all the lines in the South of Ireland. But even if it were not, I submit that it is a very indifferent matter, because, since we opened the line in 1903, we have not had six local trains to Kilmacrennan that ran backwards without going on the whole way.

Working company's real objection to the "tank" engines, the want of sufficient coal and water storage.

19149. I do not propose to press it any further, but it seems to me an extraordinary thing that turntable should be necessary for tank engines in Ireland when they are not required in England. However, the real question between tank engines and tender engines which you have been speaking of is not that you disagree with the use of the tank engines on such a railway, but that you want to get an engine which will carry a large quantity of water, and, therefore, you want to have a tender engine in order to carry the necessary quantity of water behind, because the weight that you can put upon the wheels of the tank engine would be excessive if you put the water in the tank of the engine, instead of behind it in the tender?—That is our case in a nutshell.

19150. So it all depends on the question of water-carrying capacity, which is put very shortly and concisely by Mr. Malcolm in his letter?—Precisely.

19151. Then if it does turn on the question of water-carrying capacity, and you have a length of railway with one section twenty-one miles without any passing place, could you not have got over the whole difficulty by putting a passing place, and putting a water station half-way between the two points?—We did so, but it had not the desired result. We put up an additional water station, but then we found that we wanted more coal capacity. The Board of Works suggested that we should keep bags of coal at intermediate stations. We have had in some cases to run wagons of coal behind an engine; in other cases we have stolen coal off our customers' wagons, to bring in our trains.

19152. *Mr. Balfour Browne,* K.C.—I am afraid you are now incriminating yourself?—I have several instances where we commandeered other people's wagons and replaced them the next day.

19153. *Mr. Aspinall.*—But you say that if the tank

May 15, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

engines had had sufficient coal-carrying capacity, and sufficient water-carrying capacity, you would have been satisfied?—And sufficient power.

19154. Quite so; but you do not quarrel with tank engines as tank engines?—No, because all our other lines are worked with tank engines; it is only this long one that is not.

19155. It is merely a question with you as to water-carrying capacity, as to coal-carrying capacity, and as to the general efficiency of the engine which is to do the work?—It is.

Suggested difficulty of designing a suitable tank engine for Burtonport line.

19156. And what you say is that if Mr. Malcolm's advice had been taken you would have been supplied with efficient engines?—I do.

19157. That is all I want; but I do want to have it recorded perfectly clearly that for the purpose of working such a railway proper tank engines would be perfectly sufficient if of a proper design; is not that so?—Well, that is a question for a Mechanical Engineer; but I do say that the problem of designing a tank engine with the necessary coal and water capacity for these long runs, and with the necessary power to climb these long gradients, would be a very difficult one indeed, when you remember that you are limited by your weight of rail, as to the axle weight and rigid wheel base of the engines, owing to the sharp curves on the line.

19158. Is it a very difficult question to decide?—Yes.

Examined by Mr. ACWORTH.

19159. I want to get, if I can, a few general questions. Our reference asks us to consider by what method the economical, efficient, and harmonious working of the Irish railways can be best secured. Now, I expect we should begin by thinking that the results here have not been harmonious?—They have been very far from harmonious.

19160. We shall agree so far. We shall agree, I suppose, also that the public have suffered very seriously?—Very.

19161. Now, it is also true that the public taxpayer has paid nineteen-twentieths, or something of that kind, of the total cost of this railway?—He has.

19162. It is further true that it was to your interest to get this railway, was it not?—It was.

19163. In order to get it, you entered into various agreements?—Yes.

19164. You submitted to clause 11 of the contract that has been referred to?—We did.

19165. Under that, you made it legal—I will not say whether it was equitable or not—for the Board of Works to do what they did, and take it out of your hands?—Yes.

19166. Under that same contract, you consented that practically the Treasury were to be the sole judges of the construction of this agreement, and of all matters and things therein referred to, save as regards working plans, specifications, designs, and works?—The works to be executed under the agreement. We submitted to that, but not without a great deal of protest.

19167. You did submit?—We did.

The Treasury agreement with the Lough Swilly Company, and the powers of the Board of Works and the obligations of the company as regards the Burtonport Railway.

19168. In your view, the game was worth the candle, because you got the railway made—that is what it came to?—We yielded to the persuasion of the public, chiefly to that of Mr. Vesey Knox, who was then member of Parliament for the City of Londonderry, and sealed the agreement rather than let this money go to another part of Ireland, which the Board of Works continually threatened they would do if we did not submit to their terms.

19169. In consequence of the persuasion of my learned friend, Mr. Vesey Knox, you wisely or unwisely came to the conclusion that it was worth your while to enter into the agreement?—We did.

19170. Then you did enter into the agreement?—We did.

19171. Now you are kicking very much against the way you find yourselves bound?—No; we say that if the agreement were carried out to the letter——

19172. Yes, in your view?—We would have no cause for complaint.

19173. But the position is that you kicked against their taking the contract out of your hands?—We did.

19174. You found you had no legal remedy?—Yes.

19175. You found that in consequence of the persuasions I have referred to, you had bound yourselves?—We had.

19176. Is not that broadly the position?—Yes, but we were not dismayed at the time by what happened, because we did not anticipate——

19177. I do not want to discuss that. It may be possible, if you had to go into it again, knowing what you had to do, you would not be persuaded, even by Mr. Vesey Knox, but you did enter into it. Now, I want you to tell me this. It is clearly your interest to get everything you can out of the Treasury, is it not?—the better the line they build the better for you?—That was our interest when we were negotiating the agreement, but our interest now is to get them to keep up to it, and we say they do not do it.

19178. Never mind; leave out agreements altogether. It was your interest to get out of the Treasury all you can to make as perfect a line as possible?—That was our aim.

19179. It is your interest now—any time, and all the time?—It is our interest to get a line as easy to work and as inexpensive to maintain as possible, because we have to work it in perpetuity under onerous obligations.

19180. It also was your interest, and still is, to make the Treasury give you all the rolling stock you can?—It is.

19181. So as to have a full supply, and not to have to supply any at your own cost?—Yes.

19182. On the other hand, it is the interest of the Treasury, as representing the taxpayer, to make you do as much as they possibly can?—Yes, consistent with the agreements into which they have entered.

19183. Never mind; I am not talking about agreements. It is their interest to put all the responsibility on you they can?—No; it is their interest having spent a quarter of a million of public money in County Donegal, not to destroy the object for which it was spent, and so to retard the development of the district, and to frustrate the intentions of the Government by refusing the necessary stock to work the line which has been built.

19184. Yes, but supposing they can get the stock out of your pockets instead of out of the taxpayers' pockets; it is their interest to get it that way, is it not?—Yes

19185. What I want to ask you is, after your experience, do you think it is likely that a system of that kind ever would work? I want to get the benefit of your general evidence. I will assume that you were both as much in the wrong, or as much in the right as you like—I want to know what you think. Do you think it is a system that is likely to work?—Well, our experience of it has been very unfortunate. I would say that under existing conditions in Ireland I do not think the experiment would work.

19186. Do you think it ever could work when the two interests are absolutely antagonistic?—Well, I do not see why a Government Department cannot enter into, and loyally adhere to, an agreement like any other public body.

19187. I quite agree, but will not there always be friction at some stage? The railway company will try—and naturally and rightly try—to get all they can out of the Government?—They will.

19188. Will not the Government, on the other hand, try to give—naturally and rightly also—as little as they can?—They will.

19188A. Will not there always be great friction, or probability of friction?—There will always be probability of friction.

19189. Have you thought about this as a general question, or has your whole mind been directed to the question as it affects the Lough Swilly?—I have been afraid to think about it as a general question—I have had to think of it so much in reference to the Lough Swilly that I fear my view may have become distorted.

19190. You think it is dangerous, and is likely to lead to friction again. But bringing your mind to bear upon the general question, you would agree that no private company would ever have made that line as a commercial speculation?—I agree that that is so.

19191. If the Government has to find the money what is to be the relation between the Government and the private company, if there is to be one?—How would you suggest you could avoid these conditions?

May 15, 1907.

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

Mr. Balfour Browne, K.C.—May I say this, sir, without, of course, wishing to prevent your asking any question you like. You will remember this gentleman is not put forward as a railway witness representing the railway views?

Mr. Acworth.—I entirely agree, of course, with that, and if he likes, upon that ground, to decline to answer the question, he can of course do so.

Mr. Balfour Browne, K.C.—Not at all. I do not mean that. You are, of course, quite entitled to ask him anything you like, but I wanted to make the position clear.

Mr. Acworth.—I was only asking him, because it occurred to me that very few railwaymen have had more reason to think about the subject than Mr. Spence.

Mr. Balfour Browne, K.C.—Quite so.

Witness.—I had an answer ready, but it has disappeared; perhaps you would repeat the question.

19192. *Mr. Acworth.*—The point I want to get at is this: You have had a great deal to do with the relations between the Government that finds the money and the company that has to work the line. Now, supposing for other lines money had to be found, and supplied to a company (leave the Lough Swilly Company out of your consideration for the moment) what sort of relations between the Government and the company would you suggest?—Well, I think the mistake the Treasury made in these matters, when Parliament voted the money for railways, was in looking upon the Vote as an investment upon which they might expect a capital return in the shape of sharing in the surplus receipts, and that if they did——

19193. This 55*s.* a week, or whatever the figure was?—Over that—If they had handed over the money to the district without any provision of that kind, but with a provision that a portion of the profits of the line should be devoted to improving the facilities and to developing the struggling industries of the district instead of going back to the English Treasury or the British Treasury, that would have altered the point of view of the Secretary, and the engineer, and the agent that Lord Pirrie referred to, who are watching us all the time; they would not care whether or not there was a little difference in the surplus receipts, but would only be interested in the efficient working of the line.

19194. Now, tell me another thing. Your speaking of the Board of Works officials reminds me of it. You spoke of their representative, and said that he had no right to be there; but you did not object?—That is true; there was no provision in the Agreement, but we gave them the fullest information. Mr. Shanahan said that we did not reply to their letters.

19195. Never mind; I will not go into grievances. The position is this: the Government in the public interest found almost the whole of the capital of that railway?—They did.

19196. And if they send a person to see how it is working, you are entitled to say—I do not suggest that you have said—"Get out; you are a trespasser." Does that seem reasonable?—No, and it was because we thought it unreasonable that we did not do it.

19197. Do you not think that if the Government does find the capital, it ought to reserve an official right to "call the tune" to some extent?—I do.

19198. Have you ever thought how that could be done? Do not answer if you have not any views?—I think I ought not to answer that. As regards the reports of the agent, these are a few (*producing a pile of papers*). Those are the replies that the witnesses said had not been given.

Mr. Shanahan.—As that is a decided contradiction of an alleged statement of mine, may I say that I think that my remark as to non-replies to letters from the Board of Works related to the first twelve months after the opening of the line, and I still think that I was right in saying that for the first twelve months only an occasional letter from the Board was replied to. The letters were certainly acknowledged by post-card, but in most cases they were not otherwise noticed. I admit that at subsequent periods our letters did get attention, and explanations were offered.

Witness.—I wanted to say that there was a great deal of delay in replying to the Board of Works letters during the strike, because the officials were down acting as pilot men on the engines, and when we asked the Board of Works to allow their permanent way inspector to go down and give local instruction to the new men, they declined to do so or to give any assistance in the crisis.

The information given by the Lough Swilly company to the Board of Works.

19199. *Mr. Acworth.*—And any reply you did make to the Board of Works was pure courtesy, as far as I understand—they were not entitled to ask a question?—We gave full information, very much in the same way as a stationmaster would give to a general manager—explaining everything.

19200. The legal position being that you were not bound to account to them as to the way in which the line was being worked?—We were advised that, while we had certain obligations, they did not go to that extent.

19201. You were entitled to work the line as you liked subject to this—that when you got a certain amount of receipts there was to be a proportionate division?—We were bound to work the line efficiently so as to develop the resources of the district.

19202. But the test of the efficiency was with you up to the point when they had reason to think it worth while to have a public inquiry—up to that point you were the sole judges?—Except as regards the audit of accounts.

Audit of the accounts by the Board.

19203. They were entitled to audit the accounts to see that they got their share of this figure of 55*s.*, or whatever it was, but they were not entitled to interfere with the working of the line which they paid for, and that, I think you agree with me—although you do not care to go further—does not seem a system likely to promote the public interest or harmonious development?—No, not in the present hands.

19204. Do you think it would in any hands?—That is too large a question for me.

19205. You do not suggest the hands in which you would be likely to find it work harmoniously?—You asked very particularly the Board of Works witness when the sudden increase in traffic took place that showed the necessity for increased stock.

The necessity for a better supply of rolling stock alleged to have been demonstrated from the opening of the line.

19206. Did I ask that?

Chairman.—Nobody asked that question.

Colonel Hutcheson Poë.—It was at a former sitting, I think.

Witness.—You asked Mr. Shanahan, when he was giving evidence, when the increase of traffic took place.

19207. *Chairman.*—You said "sudden." There is no question of a sudden increase?—He said shortly after the opening, and the other Board of Works witness said about a year after. Now, I wired when that question was asked for a monthly return of the traffic, and what I wanted to tell the Commission was——

19208. *Mr. Acworth.*—That is on page 18 of your proof; I noticed that?—That there was no abnormal increase of traffic. The first month the line was opened (although it was opened on the 9th, so that there were only twenty-one days) the traffic was £608. The year after, for a month of thirty-one days, the traffic was £618.

19209. *Chairman.*—That proves nothing. There was a fillip given to the district by the opening of the line which increased the receipts at the beginning. What were the receipts for the second and third months?—They began with £608 for March; for April they were £683, and for May, £883.

19210. That is a gradual increase—there is no doubt about that. Now, the next?—£967.

The traffic receipts on the Burtonport line in the first year.

19211. Well, that is 50 per cent. increase?—Permit me to say that the same thing happened the next year and the next year—that is to say, April was a little higher than March, May was a little higher than April, and June was a little higher than May—but there was no substantial increase in the total traffic that could be called abnormal. It has been steady and normal. For instance, March, 1903, was £608 14*s.*, while March of 1906 was £608 11*s.*—a difference of 3*s.* My point is that the necessity for the increased rolling stock was apparent from the very day that the line was opened.

19212. *Mr. Acworth.*—If you give the four figures that you have got on page 18, they seem to me to deal with your point very fully—if you think it necessary to put those in as showing the receipts from the opening?—The receipts for the first nine and three-quarter months—that is, nine months and twenty-one days—were £8,023; for the next twelve months, £9,215; for 1905, £10,616; for 1906, £10,132; and I say that that traffic necessitated a three-train time-table from the very first, and I also say that the Board of Works urged us, before the line was opened, to put on a

May 15, 1907

Mr. Andrew Spence, Secretary of the Londonderry and Lough Swilly Railway Company.

three-train time-table, although there was only stock for a two-train time-table, and they even submitted us a draft time-table with three trains on it.

19213. *Colonel Hutcheson Poë.*—I should like to ask one question, which I forgot when I was questioning you before, about the meetings of the Board. I think under the Order in Council it was contemplated that there should be separate Board meetings for the purpose of the business of the Burtonport Line?—Yes.

19214. Were any separate Board meetings, as a matter of fact, ever held?—There were very few.

19215. How many?—Two, I believe.

Two Board meetings for Burtonport line business held since 1903.

19216. In the course of how many years?—Since 1903..

19217. In four years two meetings have been held?—Yes.

19218. Were notices of those meetings sent to the Baronial Director?—They were.

19219. When was notice sent to Mr. Sweeney? What dates were those two meetings?—They are not on my proof.

19220. 1905?—I do not dispute Mr. Sweeney's evidence on that point.

19221. Was it the first two years of the working of the line?—No. The ratepayers whom the Baronial Director represents were never called upon to pay any dividend upon their county guarantee, and there were no important capital questions appropriate for bringing before one of those Directors, or one of these Special Meetings. The two meetings that were called were to consider a demand for a new station, and that being a capital question, we asked them to the meetings, and said that we would pay half the cost of building the station; but the Board of Works refused, and the station is not built yet.

19222. Would it not have been very desirable, in view of the contentions between the Board of Works and yourselves, to have given the ratepayers' representative an opportunity of attending the meeting between yourselves and the Board of Works? Do you not think that would have been desirable?—We always thought the Board of Works would yield in time to the logic of events.

19223. At the same time it would have strengthened your position to have had an expression of opinion by the Baronial Director, would it not?—The Baronial Director moved several resolutions, which were sent to the Board of Works, calling for an inquiry, but they would not agree.

19224. He complained very strongly of the want of notice, and of the fact that no meetings were held, and went so far as to say that his predecessor, Sir John Olphert, was refused admittance?—We never did refuse him admittance. He was refused an annual pass, and he complained to the Board of Works of that, and they called upon us to provide him with a pass, and we replied that there was no provision for doing so.

19225. At the time that these agreements were entered into with the Government, it was contemplated that as many as twelve meetings might be held in the year?—We would have done so if the ratepayers had been subscribing anything.

19226. I think there was such a provision in the case of the Carndonagh Agreement, but not in that of the Burtonport, so that that does not affect the question.

19227. *Mr. Acworth.*—Do the other directors get passes?—They do. We said we would issue a pass to the Baronial Director on any occasion on which he desired to attend one of these meetings.

19228. Is there any limitation of that kind in the case of the other Directors—that they are only to have a pass to attend meetings?—Oh, no. The fact is, the reason he was refused—I am not justifying it, but it was very human—was that he did not ask us for it, he asked the Board of Works, and they wrote down ordering us to send it.

Mr. JOHN M'FARLAND, J.P., examined by the CHAIRMAN.

Mr. John M'Farland, J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

19229. Mr. M'Farland, you are chairman of the Londonderry and Lough Swilly Railway Company?—I am.

19230. And you were the chairman when the arrangement was made with the Board of Works with reference to this particular Burtonport railway?—I was.

19231. Have you been in the room all the morning?—I have.

19232. And were you in the room yesterday?—I was.

19233. Did you hear the evidence of Mr. Spence?—I did.

Alleged serious alterations in the contract plans of Burtonport Railway.

19234. Do you agree with what he has said?—Generally, yes. But I would wish to draw the attention of the Commission to the large amount of time that has been taken up in referring to the improper equipment of the railway. That is simply one of our charges—that it has not been sufficiently and properly equipped for working; but it is trivial as compared with the serious alterations that have been made in the contract plans. Works have been agreed to, and the contract that was entered into has been varied, and we have got inferior works, to the serious loss of the railway companies and to the serious loss of the Treasury, and to the corresponding advantage of the contractors. We say that these works have been seriously altered to our loss and to the advantage of the contractors alone.

19235. That is a somewhat serious charge against the contractors, who are not represented here?—Irrespective of whom the charge may affect, the works are there to speak for themselves. The contract is there to speak for itself, and I hold that it is reasonable to expect the Board of Works, who are responsible for the construction of this line, to come forward and say on what grounds they altered the contract plans in favour of somebody.

19236. I do not propose to go into any question which has been referred to by Mr. Spence, or to ask you to repeat any evidence which has been given by Mr. Spence?—No, but I would like——

19237. You had better follow my questions, I think?—Certainly.

19238. First of all, as regards that running shed?—Would you kindly allow me to refer first to the form of tender and the form of contract, and to show that the conditions therein set out, that were equally binding on the Board of Works and on the contractors and upon ourselves, have been varied—namely, as to the supply of the permanent way materials. The supply of permanent way materials was specially reserved in the hands of the Board of Works. They varied these conditions, and it was handed over to the contractors to supply these materials. The result was that they put rails and sleepers three years in the hands of the contractors before they were absolutely necessary. That was clearly to the advantage of the contractor, who was able to use these rails and sleepers for temporary works; the contractors would have had to buy temporary rails and sleepers for the construction of the line if these rails had not been supplied. I need hardly tell the gentlemen forming this Commission that sleepers for permanent way if exposed for three or four years lose a certain portion of their life, and that loss falls on us—the working company.

19239. All these matters, I suppose, were dealt with at the time?—Objection was raised to the use of them by the company immediately on our first becoming aware of it. The Board of Works at first denied it, then they excused it, and said that if any of these rails were damaged they would take care that they were not used in the permanent works. But I need hardly tell you that after the lines have been finished cracks may take place owing to the rough and tumble of the use the sleepers and rails would get in the hands of the contractor, and the result possibly would be very serious to the working; they might be passed over and put in a permanent way and an accident arise.

19240. We will leave that question. Then, with regard to the running shed. The Board of Works agreed to erect a running shed?—Yes.

19241. And they did not do it?—They have not done so.

19242. Why have they not done it?—I cannot answer that question, but I can give you the whole of the correspondence and the facts leading up to it.

May 15, 1907.

Mr. John M'Farland, J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

19243. I want to be very brief, because we have had all the story very pithily told by Mr. Spence. You want the running shed on another railway and not on the Burtonport railway?—Yes. Here is a Minute that was agreed to between the Board of Works and my company on the 5th August, 1898. After settling the other details with regard to the running shed this was agreed to. It was agreed "to provide a running shed with repairing tools at a cost not exceeding £2,000, and to consider whether the amount set apart could be applied at any place outside the limits of the Burtonport railway but for the purpose of the working and maintenance of same. In that case the working company will agree to be responsible for the buildings so erected, or to give a lien on same, or to make any other arrangements necessary to protect the Treasury."

19244. Very well. As a matter of fact, the Board of Works did not agree to that proposal?—They did, because it is here signed by Mr. Robertson on behalf of the Board of Works, by myself on behalf of the company, and by Mr. Stevenson as second Commissioner of the Board of Works.

19245. Ultimately the Board of Works agreed to provide the running shed on the territory of the Burtonport railway?—That was discussed, and that was the reason that this Minute was agreed to, because we contended that it would be absolutely no use or pecuniary advantage to us if it was put on the Burtonport railway while our headquarters were in Londonderry. If any engine required repairs or any carriage required necessary works, it involved a man going to the Burtonport railway, which entailed four hours going and four hours coming, which was, comparatively speaking, an entire day. The man had to do that at serious expense to the company. I should also like to say a word on the question of the ownership of the Burtonport railway. It is eternally referred to as a State railway, or as the railway of the Board of Works. I submit that it is no more the property of the Board of Works than it is the property of any other Board in Ireland. And why? We have entered into a very onerous agreement to work this line in perpetuity. The conveyances are taken in the name of my company and on conditions that we work it in accordance with the agreement. Therefore, I contend that that railway is ours subject to those conditions.

19246. Will you tell the Commission why you refused to attend the opening of the tenders in connection with this railway?—Yes.

19247. Tell us shortly. We have had it from Mr. Spence, and if you have anything to add to what he said on the subject we will listen to it. But it seems to me a most extraordinary proceeding on your part to allege that you could not attend the opening of the tenders in consequence of the expense incurred?—At that time they had accounts before them for over £6,000, and a considerable amount of that was remaining unpaid, although vouchers had been already in their hands for it. I have here, if you will allow me to read it, the correspondence which passed between us and the Board of Works' solicitor, wherein he agreed to pass these vouchers on a certificate from the secretary of the company that the money had been expended. Faith was broken——

19248. Do not let us get into that. Just answer the question. Why did you refuse on the grounds of expense to attend the opening of the tenders for this railway?—That has been already explained. Our accounts were not paid, and we would not go on incurring expense when they had ceased to pay.

19249. We will leave it there. Then with regard to these deviations which you say were made practically in the interests of the contractors?—They were conceived by the contractors, and they were pressed on us by the Board of Works. But in answering questions I do not propose to say a word which I cannot prove by correspondence. I need not tell you that anything which occurred in the mind of an individual six or eight years ago is apt to be twisted in a particular direction to suit himself, but the correspondence which took place at the time will prove the facts, and I hold it is reasonable that this correspondence should be read verbatim to the Commission.

19250. I think we have had sufficient correspondence read already?—But you have not had this correspondence to show why the Board of Works, contrary to our strenuous advice, insisted on not obeying the contract; they did not obey the contract, which, I say, has been varied so seriously to our loss and to the disadvantage of the Treasury. We also say that these are alterations which my company strongly protested against at the time.

19251. The whole of the deviations suggested were submitted to your company?—They were.

19252. And the plans were submitted with them?—Yes. Will you allow me to explain. The plans were submitted to our engineer, but they were incomplete when they were sent to our engineer for him to report upon. He got further details, and a fortnight subsequently he reported that the savings to be effected on these deviations were enormously in favour of the contractors, and he further stated that there were four of them of which he disapproved, and that he recommended two.

Alleged protest by Lough Swilly Company against the deviations from the contract plans for Burtonport Railway.

19253. We have had all that this morning from Mr. Spence. He also read the correspondence. I want to go a little further with you. Whatever the alterations were, did you—and when I say "you" I am speaking of the Lough Swilly Railway Company—did the Lough Swilly Railway Company ultimately agree to those deviations?—I want——

Subsequent approval of the deviations by the company.

19254. Will you answer yes or no?—Yes. But I want to explain so far as this. Our engineer, Mr. Hall, was lying on a sick bed with typhoid fever. These plans were sent to him the following day, and they were recalled, as they were required in connection with the arbitration for the land that was going on.

Deviation from original plan for construction of Owencarrow Viaduct suggested.

19255. We heard that this morning?—They were never returned to us, and we never had an opportunity of knowing whether those works were carried out in accordance with the plans or not until after the line had been placed in our hands for working. I told you that serious alterations had taken place. The Parliamentary plans submitted to us showed that the Owencarrow Viaduct was 110 yards long. The contractors varied that viaduct and constructed it 371 yards long, or almost three and a half times as long.

19256. Stop a moment. Why do you say that the alterations were to the advantage of the contractors?—I will tell you why. This deck girder bridge that they erected was much cheaper than the steel lattice girder bridge with huge earthwork banks. A saving of 81,000 cubic yards was made in the banks joining the viaduct, and they erected this because it was cheaper. Speaking further on that, the engineer for the Board of Works stated to you that the original estimate for the viaduct was six thousand odd pounds, and that it was erected at a cost of £30,000 by the contractors. So far from that being the case, the original estimate of the contractors is here, and instead of it being £6,000 their estimate for it was £19,306. That is the original estimate, and, of course, when they increased the length of this bridge from 303 to 371 yards it consequently would cost more.

19257. *Mr. Acworth.*—103 yards, you mean?—The estimate that I put before the chairman was for a bridge 303 yards long, and they increased it to 371 yards, but the contract with the railway company was only to construct 110 yards.

19258. This was one of the serious alterations?—This was one of the alterations and deviations from the conditions under which we agreed to do it, and on which we took £4,000 for the serious loss that we have sustained in perpetuity in working the line. This was one of them which was entirely set aside.

Allegations that the savings due to the deviations were divided between the Board of Works and the contractors

19259. What I want to get at is this. Whatever the reasons were, and whatever objections were made by you, you on behalf of your company agreed to these deviations?—We did not agree to them as they were carried out. If they had been carried out as laid down on the plans before us, there would not have been a word said about them on our part. But we say that they were altered to the advantage of the contractor and to the advantage of the Board of Works, who divided the spoil equally between them.

19260. What do you mean by dividing the spoil?—You have read from the report of the engineer that there were enormous savings to be made by these deviations.

19261. No; we have not heard that—not "enormous" savings. Do not indulge in superlatives and adjectives?—I am taking the report of the engineer.

19262. Say "savings" were effected?—The words are "enormous savings."

19263. Where do you get that?—From the report of the engineer, if you will allow me to read it.

19264. If it is a short one you may read it. (*Mr. Spence.*)—I read a portion of it this morning, and the original document must be on the table.

May 15, 1907.

Mr. John M'Farland, J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

Mr. M'Farland.—This is from the evidence. This report speaks for itself. This is the report from the engineer.

19265. What engineer?—From the resident engineer working under the Board of Works.

19266. That was your engineer?—He was our engineer; he was originally our engineer, but he passed over to the Board of Works and we had no more control over him. This report speaks for itself and shows the enormous savings he estimated the adoption of the deviations would effect.

19267. That is the engineer's remark?—It was sent to him to report.

19268. Who asked him to report?—We did. The plans were sent to us for our approval, and we sent them on to this gentleman who we thought would be entitled to report to us. He reported that four of them he objected to, that two would do no harm, and two were recommended.

Alleged enormous savings effected by the deviations from the original plans for Burtonport Railway.

19269. We heard that this morning?—He similarly reported that the savings were enormous.

19270. We have not had it in evidence; that is what I mean?—I will find the letter and produce it.

19271. *Mr. Acworth.*—Who is the "he" who estimated the savings?—Mr. Radcliff, who was the engineer of the Board of Works.

19272. That letter is from whom?—From Mr. Radcliff to the company.

19272A. The letter there is written by somebody who says that somebody else estimated?—No.

19273. Will you let me see it?—Certainly; that is in my evidence (*letter handed to Mr. Acworth*).

19274. *Chairman.*—What I understand from you now is this: that you agreed—and when I say you I mean the company—that the company agreed to the deviations, but you now raise the question and say that you objected to the manner in which those deviations were carried out?—Quite so. We agreed to the deviations for which we got £4,000, but the deviations were not carried out in accordance with the plans.

19275. That is what I mean?—Yes; to our serious loss.

19276. What did you get the £4,000 for?—The gradients throughout the line, according to the engineer's report, were seriously increased, and involved, as you know, more difficult working, and more steam and coal had to be used for it. That goes on for ever. Similarly the curves were reduced, and instead of being a large size they were made a smaller size. All this involves additional wear and tear in working.

19277. What was the additional chainage—I suppose it was not mileage—of the increase?—It is set out here; the engineer set it out in his report.

19278. I am alluding to the difference between the amended plans and the deposited plans. We have been told that it was a gradient for a certain distance of one in fifty?—Yes.

19279. Was that gradient increased?—It was.

19280. That is what I want to get at; by how many yards was it increased?—It was increased from Owencarrow Bridge for about two miles; the bridge was lowered, and the lift to the summit level was greater for a distance of two miles in one place. The curves at sundry places were made smaller as the engineer's report will show.

19281. The only increased cost of working was in connection with the extra one in fifty gradient?—And the curves; the curves and the gradients.

19282. But the curves would not make any difference?—With sharper curves there would be greater wear and tear on the railway rolling stock.

19283. What was the worst curve?—Nine chains was the sharpest curve. I need not tell you how short that curve is as compared with fifteen or twenty chains, which is the ruling gradient on this line.

19284. Do not confuse curves and gradient?—You understand what I mean.

19285. You mean curves?—Yes.

Explanation of why the contractors paid the Lough Swilly Company £4,000 for consent of latter to the deviations.

19286. You made that arrangement, whatever it was, with the contractors?—Yes. We were to get £4,000 from them. I should tell you that the negotiations were carried on personally in the Gresham Hotel, Dublin, between my solicitor, or rather the solicitor for the company and the contractors. We wanted to get as much as we could. Dr. Todd was there representing us, and the contractors explained to us that anything the company got had to come out of their half of the savings. The Board of Works got one half and the contractors got one half, and that these £4,000 which the contractor paid to us, the validity of which we discussed at the time, were to come out of the contractors' share of the savings.

Examined by Lord Pirrie.

19287. Out of their half?—Yes. This (*producing document*) is the original report of Mr. Radcliff, in which the words "enormous savings" are introduced. He says: "Deviation E—this is a proposed deviation through Barnes Gap, from peg 765 to peg 958"—over three miles. I have inserted those words "over three miles"; they are not in this report. I will read it precisely as it stands. "This is a proposed deviation through Barnes Gap, from peg 765 to peg 958, and it goes outside the limits of deviation at each end, but is inside for the greater part of the way. It enormously reduces the cost of the line." There are the words.

19288. I do not dispute that he said it, but you said that it had been given in evidence before us, but we had not had it?—It was read this morning by Mr. Spence.

19289. He did not read it this morning?—I apologise.

19290. I do not think he did?—The engineer in the employ of the Board of Works warned us of the enormous savings to be effected by these deviations.

19291. You say that those deviations have tangibly increased the permanent cost of working?—Yes; and it was on that ground we took £4,000. What I object to so seriously is these gentlemen coming in who know all about it and leading the Commission to believe that we accepted that £4,000 as a bribe and misapplied it, whereas it was absolutely applied to the proper purposes of the railway. That is the impression left on my mind by reading the evidence—that the directors had really "gone on the make with it."

Lord Pirrie.—You have not told us what you did with it.

19292. *Colonel Hutcheson Poë.*—Was it entered in the accounts of the company?—It passed through the accounts of the company. We could not balance the accounts without showing what was brought in and what was paid out.

19293. It is not entered as so much received from so-and-so?—Certainly.

19294. Not in the accounts you submitted to your shareholders?—At all events, we have applied the funds we received to the purposes of the company.

19295. I think we understood that the amount was never entered in any way in the accounts?—It passed through the books of the company.

19296. *Chairman.*—It would be a difficult thing to put in the public accounts of the company, but the books of the company would show it?—Certainly.

Lord Pirrie.—We were led to believe that there was no trace of the £4,000.

19297. *Chairman.*—Not ostensibly in the half-yearly accounts. But we are quite prepared to accept the statement that the books of the company would show it?—Yes. These gentlemen came down and enquired into it and saw all about it. I beg your pardon, the secretary tells me that is not right. A shareholder hearing all this bruited abroad from Dublin to Londonderry considered it his duty to come down and see about it. No objection was raised, and he enquired into the application of this £4,000 and was quite satisfied.

19298. You may take it from me, as one knowing a little about these railway accounts, that I am perfectly satisfied with your explanation that the £4,000, although not shown in the half-yearly accounts, properly appears in your books as a credit, and is dealt with in the accounts?—Thank you.

19299. And your books will show it?—Yes; the books will show it.

19300. Then we will leave that?—Would it be agreeable to the Commission to have all these facts proved by the letters that passed at the time, showing the pressure that the other side put upon us to agree to these deviations? I think the secretary entered into it to-day, but not so fully as I would like.

19301. But quite fully enough for us. We know the particulars were sent to you, and that Mr. Batchen went down and offered to appear before your Board to explain?—Yes.

19302. We had all that this morning?—But I am at a loss to know why Mr. Batchen should come down

to impress upon people who knew their duty quite as well as he did his. The directors of the company were advised by their professional staff—their professional advisers. I may say that I have been a contractor all my life, and having made railways, know all about the matter. There was no necessity for this gentleman pressing himself on the directors to advise us; we knew our own business.

19303. We will assume that you did, and that it was not necessary for Mr. Batchen to see you. I do not think it is really worth while going into that?—Very well.

19304. We will leave it there. What we did elicit this morning was that whatever the circumstances were, ultimately you did agree and sign the plans for the deviations?—Yes.

19305. And alterations. Now, your complaint is that—or rather you contend that these deviations were not carried out in accordance with those plans?—That is it in a nutshell.

19306. That is your statement; we will leave it there?—That applies not only to the deviations, but to the entire line.

19307. I quite understand; wherever the curves were altered, and so on?—Not that alone.

19308. I know; right throughout?—The works were varied in such a way that you would not know them from the specification.

19309. *Lord Pirrie.*—Without your permission?—Without ever consulting us.

19310. *Chairman.*—And that is how you build up your £70,000?—Quite right. I want to read to you how that claim for £70,000 was sent forward.

19311. I do not think you need?—It is only a word. I want to read to the Commission what that claim consisted of; it shows works not carried out in accordance with the plans, specifications, and contract. There is the sum of that account, amounting to £78,000. That has been carried away by the contractors, but it ought to have been left on the ground in substantial works; some of them are failing to-day.

19312. We have had all that?—We do not want to claim one penny of money in respect of this. We want no money; but we want the work left in accordance with the contract, in accordance with the plans.

19313. Can you tell me in a few words how it is that that particular claim mounted month by month from a certain small figure to £70,000; how did it grow?—It is entirely misleading to say that it grew. I should tell you——

19314. Stop a minute. We had it in evidence that the whole of the work not completed in accordance with the specification would occupy a month in being dealt with?—That is the estimate put on it by the other side. No such estimate was ever made by us, or ever acquiesced in by the company. If you will allow me to give you a few words, it will probably explain the matter. You are aware that we were warned off the line, and that we were treated as trespassers if found there.

19315. I do not think we have had evidence as to that. You carry it considerably further than that letter which was read this morning?—I know we were warned off, and the engineer was warned off the line. I was on it only once during the entire period of construction.

19316. You were about the whole time, I suppose?—I was on it once during the four years.

19317. Why not oftener?—Because it was considered a breach of etiquette to go there, although the conveyances were in our name.

19318. As a matter of fact, you did not go?—I was only on it once during the whole period of construction.

19319. Was anybody there for your company?—The engineer was there twice in addition—that is three times altogether. You want to know why this account began at nothing and gradually swelled up like a balloon. We had no permission to be there until the working of the lines passed over to us on the 9th March, 1903. From that time forward our engineer, who had his other duties to attend to from day to day, was constantly devoting his spare time to going over the works with the plans and the specifications in his hands, finding out on the fifty miles of railway wherein the works differed from the plans and specifications. He would take his field notes, and when he returned to the office he had to make his measurements and so on, and that accounts for the assumption of the Board of Works that a sheet of foolscap would hold them. All the original notes of the engineer are here, and there are 250 items that he has noted on his visits, and the delay in furnishing the accounts was in going through the works, carefully measuring them up, coming back into the office, and preparing the account.

19320. When was the first claim made by you upon the Board of Works, for what I would call additional works?—There was no claim ever made but this one, when the account was furnished for the amount which you speak of, the £78,000.

19321. *Lord Pirrie.*—Is that it in your hand?—Yes.

May 15, 1907.

Mr. John M'Farland J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

How the claim of £78,000 for additional works on Burtonport Railway was compiled.

Re-examined by the CHAIRMAN.

19322. Surely there was some other?—There may have been some conversation. This is the list (*showing document*).

19323. I saw the lists—the first list and the last list?—This is the list of 250 items which were prepared by the engineer on the 17th March, 1903.

19324. That is just after the line was open?—The same month.

19325. Is there any estimate here as to what these alterations would cost?—No. All the works would require to be measured out and priced, which would take a very long time indeed.

19326. I think I looked through this one before, or a copy of it; there are an enormous number of little trumpery items?—I am sorry to hear you call them trumpery, because the items in the contract, whether they be large or small, ought to be carried out. The decorations of this room may be trumpery, but if they are in the contract they should be done; there is no reason why they should be omitted to the disadvantage of the owner. There may be some trumpery items, but there are items——

The first claim made by company shortly after opening of line very much smaller.

19327. I think there are a good many trumpery items?—On the other hand, there are items amounting to thousands of pounds.

19328. There may be a few thousands in this list. When was the next list got out?

19329. *Lord Pirrie.*—I thought that was the £70,000 list. Whilst there are trumpery items in that, there are also items to the value of thousands of pounds.

19330. *Mr. Acworth.*—Is this an index, as it were, to the full claim?—No, not to the full claim; that is not the full claim.

19331. *Lord Pirrie.*—How much is it?—That was made immediately after the opening of the line, and we had to go through the entire works.

19332. How much is this—£5 or £500?—That has never been priced.

19333. *Chairman.*—Are these the items that it was stated would take a month to carry out?—I presume they are.

19334. A bigger claim was subsequently made?—But we deny that that statement was ever made by us.

19335. It was made by the other side?—Yes.

19336. But it was brought before us?—Yes.

19337. But I understood that there was some communication in which it was stated that it would take a month to carry out?—It was represented to us that a large portion of these works would be carried out during the period of maintenance. Some were and some were not.

19338. What is the date of the big claim of £70,000; when was it sent to the Board of Works? This is in March, after the line was open?—Yes. In May, 1905, this claim was finally completed for £78,000.

Explanation of the delay in furnishing final claim.

19339. May, 1905?—Yes.

19340. Two years after?—Yes. I will explain one of them.

19341. That is what I want to get at, because first of all these items were all discussed with Mr. Batchen?—Yes.

19342. By your company?—I believe so. But two years elapsed. I want to explain one of them to you.

19343. I want to get at that?—During the first year of working the line was in the hands of the contractors.

19344. That we know?—It was their business and

May 15, 1907.

Mr. John M'Farland, J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

their duty to fill in and complete any of the works that they engaged to complete during the period of maintenance.

19345. That I understand?—We could not begin to prepare our final account until they had left, because we had no staff on the ground. It was the contractors business to maintain the line during the first twelve months; we had no staff there, and we had nothing but the Traffic Department; there was no permanent way staff.

The preparation of the company's first claim.

19346. That I understand?—Hence the engineer did not begin, and could not properly begin the account until the year of maintenance had expired and he could go over it and see all the works the contractors had left unfinished.

19347. But he did prepare this list?—That was prepared immediately before the opening of the line by the Board of Works.

19348. It is after the opening of the line?—It is about that period.

19349. There is a note, "Discussed with Mr. Batchen on 15th and 16th April"?—I think it is in March that the note was made.

19350. The 17th of March?—That was nine days after the opening of the line; we had taken the line over. It would not be much of an inspection.

19351. I think it must have been a very complete inspection judging by these items?—I am glad to hear you say so.

19352. I see an immense amount of detail here which must have been most carefully inspected. Now we get to the big scheme of £70,000?—Yes.

Final claim (£78,000) only sent in two years afterwards (May, 1905).

19353. How is it that that was not presented until two years after? That, you say, was sent to the Board of Works. When?—In May, 1905—fourteen months after the opening of the line for traffic.

19354 Two years and two months after the opening, and fourteen months after the line was taken over to be worked by you?—Yes.

19355. How was it that it took fourteen months on your part to find out these defects?—I have already explained that our engineer had his daily duties to perform. It was only in his spare time that he could take over this work, and he would note in his field book the difference between the works as completed and the works as specified on the plans. When he returned to the office it had all to be put down, and measured and priced. You must thoroughly know the time necessary, and any gentleman engaged on railways, or, indeed, on any contracts, must know the time necessary to take out quantities when you take into consideration that the individual whose duty it is has his daily duties to attend to also. That is the only explanation I can offer. I should tell you that the secretary reminds me that there was an abortive attempt to settle this claim with the Board of Works at a conference between us which delayed the account for a considerable time—for six months.

Reason for the delay.

19356. That may be the explanation?—Will you permit me to read a letter from the office of the Board of Works, Dublin, dated the 10th of January, 1902?

19357. What about? It is with regard to my company going over the line to inspect it. "I have to say that the Board regard the action of the company's engineer in going on an inspection of the works without due notice to the engineer in charge as very unusual and quite unjustifiable."

19358. We had that before?—Very well. It shows the way we were warned off the line that was actually conveyed to ourselves.

19359. At any rate, you say you went over it once and your engineer twice?—Yes, until immediately before the opening.

19360. This claim of £70,000—has it been paid by the Board of Works?—No; they repudiated it altogether. They kept peppering at us for the account until it was furnished, and they originally agreed to arbitration, but have run away from it, and when they got the account they repudiated it. We never asked for £78,000. I wish the Commission to understand that we never asked for a shilling of money, or wanted a shilling of money. We are prepared to carry out our contract with the Board of Works and the Treasury to the extreme limit, but we say that the other side have not done their part; and we want the works either completed in accordance with the contract or some amount allocated and set aside for the purposes of the necessary maintenance of this line when the serious maintenance will fall upon us owing to the improper construction of it. We want the contract works left in accordance with the contract plans and specification, or we want, in the alternative, a sum of money or some variation in the agreement that will put us in as good a position to restore these works when the time of restoration comes much earlier than it otherwise would have done.

Repudiation of claim by Board of Works.

19361. And all these questions you, on behalf of the working company, are prepared to submit to arbitration?—I should like——

19362. Please answer the question?—Yes, I have said that from the first. I am only anxious——

19363. Never mind your anxiety. The whole question in dispute, so far as the short supply of rolling stock and the non-completion, as you say, of the works according to the specification, you are quite prepared to submit to arbitration?—Most willingly.

Examined by Mr. ACWORTH.

19364. I should like to make quite sure that I understand the position. Take the first question—about the running shed. The Board of Works did not undertake to put it off the Burtonport Railway; they only agreed to consider moving it?—Yes.

19365. Whether they considered it or not, I do not know, but in the result they have refused to move it?—Those are the correct facts.

19366. They are within their legal rights in so refusing?—I would be very slow to contradict a gentleman of your position at the bar.

19367. I am only asking the question—is it not obvious?—No, I think not; it is a matter of opinion. I hold that this line was conveyed to us under certain conditions, and for the sake of economy, with our partners, the Treasury, we want this running shed to be at headquarters, where it would be of advantage to them and to us.

19368. I am not discussing that. What I want you to tell me is this: is there anything in the contract binding them to supply the Burtonport Railway with a running shed situated off the Burtonport Railway?—No.

19369. I think clearly not?—No.

19370. Therefore, they are within their legal rights in refusing to furnish it?—I do not think they are, in the face of this minute.

19371. In that minute they agree to consider the question?—What is the use of agreeing to consider the question if they do not carry it out?

19372. It is clear that they could not have made up their mind when they agreed to consider it. They did not say they would do it?—They led us to expect it, at all events. I may tell you that plans were prepared for this, and sent on to them.

19373. For the sake of my question, you may admit that they all ought to be in Bedlam. I am not concerned with that—I am trying to get the facts. The position is this: take the question of the ballast. You say—I do not want to go into the facts—but you say that the ballast is insufficient, and is of inferior quality?—I say that our claim is for the inferior description of the ballast; they have said it was for the insufficiency of it.

19374. Never mind that. You make a claim that the ballast is inferior?—It is not as specified.

19375. That it is below specification?—Yes.

19376. And a great many other claims of the same kind?—Quite so.

19377. The position at present, as I understand it, is that in the contract there is a provision that the Treasury decision is final in most cases?—Yes.

19378. The Treasury refused to appoint an impartial person between you?—They have not done so, and the Board of Trade is the——

19379. Wait a minute. There are two departments concerned. The Treasury decision is final, except in certain cases?—Yes.

19380. The Treasury have finally decided against you, is that so?—Yes, up to the present.

19381. On other points, in reference to the construction, and so on, there is a provision that the Board of Trade is to act?—Yes.

19382. Have you applied to the Board of Trade?—We have.

19383. With what result?—We have applied to the Board of Trade to appoint this arbitrator, and at the same time advised the Board of Works that we were about to do so. The Board of Trade remitted the

May 15, 1907.

Mr. John M'Farland, J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

Dispute with the Board of Works as to the proper vouching of the company's promotion expenses.

letter of the Board of Works to us objecting to arbitration, and on that objection I believe the Board of Trade took legal advice, and how it stands I cannot tell; but through the influence of the Board of Works we never got the appointment of an arbitrator.

19384. You cannot know that. What did the Board of Trade answer? You say that you applied to them to decide the question, as I understand?—Yes. The reply was that they had no power to decide the matter.

19385. So you are shut up there?—Yes, we are shut up there.

19386. The position is that you are asking for arbitration and cannot get it?—Yes.

19387. You have no remedy at present?—Up to the present, no.

19388 And all this difficulty has arisen under a contract which was drawn with the understanding that you would carry out the works?—Yes.

19389. That contract which provided for carrying out the works under your supervision, has, under circumstances that we need not discuss, been turned aside into a contract for the works being carried out under somebody else's supervision?—Yes.

19390. That is the position that comes before us?—Yes.

Examined by Colonel Hutcheson Poë.

19391. As promoters of the line, preliminary plans and specifications which were to be submitted to the Grand Jury were prepared on your instructions, were they not?—By our engineer.

19392. By your engineer?—Yes.

19393. And, subsequently, when you came to render your account for the preparation of those plans, you naturally went to the Board of Works?—The company?

19394. Your company?—Yes.

19395. Did they meet your claim in full or was there any difference of opinion as to the amount of the claim?—There is a balance still outstanding.

19396. You were not able to produce vouchers for the extent of your claim?—On the contrary, the vouchers were all sent forward. If you will allow me to read the correspondence——

19397. I do not think we want to go into all that?—I hold that these questions cannot be answered accurately without the documents I have here, and I do not wish to state anything that I cannot support by the written evidence of the transaction at the time.

19398. We were given to understand by the Board of Works or by the gentlemen who gave evidence on their behalf that you claimed for a certain amount in the way of promotion expenses, including the preparation of these preliminary plans. You produced vouchers for a certain amount, and on those vouchers the Board of Works paid you. You claimed more, and they said: "We will give you the balance when you produce the vouchers"; and those vouchers, I understand, you have never been in a position to produce?—That is merely a statement. I do not know whether it is supported by letters or evidence or not; but I am here to support my evidence by written proofs.

19399. What was the amount actually paid?—The Secretary can tell you that.

19400. *Mr. Acworth.*—There is the question (*handing copy of evidence to the witness*). There were £1,500 that you never vouched for apparently?—The Secretary will speak as to this; you can understand that I am not in daily attendance on these matters.

19401. *Chairman.*—If the Secretary can give a short explanation it would be much better. (*To Mr. Spence*). Will you read the question in the proof, Mr. Spence?—*Mr. Spence* (*reading*).—"Question 14982. And they never furnished vouchers?—They never did. There are about £1,500 standing at this moment that they have not vouched for."

19402. Mr. M'Farland says you will give a short explanation of why the vouchers have not been sent?—*Mr. Spence.*—The vouchers were sent.

19403. They were sent?—*Mr. Spence.*—Yes.

19404. For the £1,500?—*Mr. Spence.*—For the full claim made, and the solicitor to the Board of Works advised us not to send in one of the vouchers

19405. To withdraw it?—*Mr. Spence.*—To withdraw it and substitute for it two sub-vouchers and a certificate; that was done at his suggestion. The next day he wrote to this effect: Yours with vouchers and certificates received; hope you will hear from me to-morrow; I cannot do it to-day. The actual words are: "Yours and further vouchers to hand; I hope you will hear by to-morrow's post; impossible to-day."

19406. What is the date?—*Mr. Spence.*—20th December, 1898. Notwithstanding this, no further moneys were paid, and at the present time a balance of £2,228 is outstanding to us for moneys spent on promotion and engineering on this line.

19407. *Colonel Hutcheson Poë.*—On receipt of that letter saying that they intended to attend to the matter, when they failed to do so, surely you took some further steps?—*Mr. Spence.*—Certainly, a great many further steps, but we never got the money; the accounts have never been paid.

19408. There is no letter from the Board of Works saying that they are ready to pay you when you give proper vouchers, or that the vouchers submitted on the advice of their solicitor were not adequate?—*Mr. Spence.*—A long time afterwards they said that there was a lack of detail on the part of some of the vouchers.

19409. Did they lead you to believe that the vouchers received complied with their requirements?—*Mr. Spence.*—They did not; first they said they would, then they said they would not.

Mr. Batchen.—May I hand this in (*exhibiting document*). It explains the matter very shortly.

Mr. M'Farland.—Why can the correspondence to be handed in by the witness not be read instead of something we have never seen.

19410. *Chairman.*—This is a letter addressed to you?—What is the date?

19411. 14th April, 1902?—That is four years after this. Whatever it may be about I cannot tell. The solicitor writes, as you have heard; the sub-vouchers and certificates suggested by the solicitor were forwarded on the 19th December, and acknowledged.

19412. In 1898?—On 20th December, 1898. It is impossible to explain the matter fully unless you have the full correspondence before you.

19413. You have that letter?—*Mr Spence.*—I think I have all the letters.

19414. I mean there is no doubt about it?—There seems to have been a difference of opinion as to whether they should pay certain amounts?—*Mr. Spence* —Yes.

19415. I think we had better leave it there?—(*Mr. M'Farland*).—I think it would hardly be fair to the Commission to leave it without sifting it to the bottom. All the evidence in my proof will explain it fully to the Commission.

19416. The Commission are quite satisfied on that point I do not see the object in labouring it. There is a dispute between the Board of Works and you as to whether certain demands should be paid by them, and they give reasons for their action in that letter?—Four years elapsed from the time when they told us to send up certain documents and they would pay; four years elapsed when they sent that letter.

19417. That is a fair comment; we will leave it there.

19418. *Colonel Hutcheson Poë.*—My only object was to have a clear understanding that from the very first preliminary work which was necessary to place before the Grand Jury to bring the Order forward there were differences of opinion and disputes between you and the Board of Works, and you, to a certain extent, were averse to going on with the contract for the line afterwards?—No; we were never averse to carrying out our contract. The dispute arose entirely through not fixing the amount to be paid to my company for promotion.

19419. They took up the position in the letter that they were not justified in paying you?—That was four years afterwards.

19419A. However, I do not wish to pursue that matter, and the Chairman does not think it worth going into.

19420. Subsequently, when the time came for preparing working plans and specifications for the construction of the line, you employed an engineer to carry out that work?—We did, and under an agreement, which was submitted to the Board of Works for their approval, whereby he was to be paid precisely the sum of money that the Board of Works were to pay the company for engineering.

19421. There was a written agreement between Mr. Radcliffe and your company?—And the company—of which the Board of Works got a copy.

19422. Could you give the Commission the terms of that Agreement?—The Agreement will speak for itself; he was to get whatever amount of money——

May 15, 1907

Mr. John M'Farland, J.P. Chairman of the Londonderry and Lough Swilly Railway Company.

19423. But might we ask for that Agreement as to the terms of his remuneration for drawing up these plans?—He agreed to accept whatever remuneration the Board of Works would allow.

19424. Mr. Radcliffe was the engineer of the Donegal Railway?—The resident engineer.

19425. He was really employed by you to prepare these plans?—He was, and he was a very competent gentleman indeed, and he agreed to accept whatever remuneration the Board of Works would allow.

Mr. Batchen (exhibiting two documents).—These are the Agreements; the one will explain the other.

Agreement between the Lough Swilly Company and Mr. Radcliffe, Engineer, regarding the preparation of necessary drawings, specifications, etc., for construction of Burtonport line.

Mr. Shanahan.—In connection with the evidence proceeding, the Board of Works wish to hand in two agreements. One is:—"Agreement entered into this 10th day of March, 1898, between the Londonderry and Lough Swilly Railway Company, hereinafter called the promoters, of the one part, and Edward Radcliffe, M.I.C.E., of Coxtown, Bridgtown, Strabane, in the County of Donegal, civil engineer, hereinafter called the engineer, of the other part," viz.:—

AN AGREEMENT entered into this 10th day of March, 1898, between the LONDONDERRY and LOUGH SWILLY RAILWAY COMPANY (hereinafter called the Promoters) of the one part, and EDWARD RADCLIFFE (A.M.I.C.E.) of Coxtown, Bridgetown, Strabane, in the County of Donegal, Civil Engineer (hereinafter called the "Engineer"), of the other part. Whereas the Promoters, pursuant to an Agreement between Her Majesty's Treasury, the Commissioners of Public Works in Ireland, and the Promoters, being about to execute certain works for the construction of a line of Railway from Letterkenny to Burtonport, *via* Churchill, Creeslough, Fiddlers' Bridge, and Gweedore, have requested the Engineer to prepare the necessary drawings, specifications, schedules of prices, bill of quantities and estimates, and all measurements, particulars, and documents necessary for the letting of the Contract for the said intended works, and to superintend the same during their execution and during the period of maintenance by the Contractor, and the said Engineer has consented to undertake and carry out the same. NOW THESE PRESENTS WITNESS that in consideration of the payments to be made to him by the Promoters as hereinafter provided the Engineer agrees with the Promoters as follows:—

1. That he, the Engineer, will take all levels, make all surveys, and prepare all drawings, specifications, and estimates, and Bills of Quantities, and all other Engineering matters, and things called for by the Promoters in connection with the said construction and maintenance of the said intended works to such scales and with such particulars as may be necessary to enable the Promoters to obtain the sanction of the Board of Works to the same, and also to permit of the Promoters or the Board of Works (as the case may be) entering into a Contract or Contracts for the due execution and maintenance of the said intended works, and to alter and amend the said drawings, specifications, and estimates, quantities, particulars prices, and other engineering matters and things as may be required by the Promoters or by the said Board of Works (as the case may be). The said drawings, specifications, and estimates, bills of quantities, and all documents prepared by the subject to the approval of the Promoters, and the Engineer shall conform to, obey, and carry out all orders of the Promoters relating to the said works.

2. That all such drawings, specifications, and estimates, bills of quantities, schedules of prices, and all other documents relating to and required for the letting of the Contract or Contracts, and for the proper carrying out of the Works, shall be prepared, printed, lithographed, or copied at the expense of the Engineer, who shall also at his expense supply the Promoters and the said Board of Works, and the Contractors and such other person or persons as the Promoters may specify, with prints and copies of said drawings, specifications, estimates, quantities, schedules of prices and documents at such times and in such quantities as the Promoters may require.

3. For the purpose of supervision the line shall be divided into two sections, viz.:—(1) From Letterkenny to Creeslough, and section (2) from Creeslough to Burtonport, or other such sections as may be directed by the Promoters. Two fully qualified and competent Resident Engineers and a Junior or apprentice Engineer shall be employed and appointed by the Engineer for each section during the progress of the Works and until completion thereof. The Engineer shall also employ two competent Inspectors of Masonry, who shall exercise constant supervision during the execution of the Works of all buildings and mason work. The said Resident and Assistant Engineers and said Masonry Inspectors and the Engineer's entire staff of Assistants shall be in the Employment of and be paid by the Engineer, who shall be responsible to the Promoters for the competency of all persons employed by him in connection with the works and for the proper discharge of their respective duties.

4. The Engineer shall superintend and direct all works during the construction and maintenance of same, and he undertakes that the Resident Engineers and Junior or apprentice Engineers and Masonry Inspectors so to be employed by him as aforesaid shall give their entire time and attention to the Works, and the Engineer shall be fully responsible to the Promoters for the proper organisation of the Engineering staff and all matters connected with the Engineering for or in relation to said Works.

5. The Engineer shall reside at Londonderry or on the Works between Letterkenny and Burtonport during the entire time from the commencement of the Contract to the end of the Contractors term of maintenance, but after the completion of the working drawings and the letting of the Contract or Contracts may be absent occasionally with the consent and approval of the Promoters. Each of the Resident Engineers for the time being shall reside at some place on the section in his charge during the progress and until the completion of the works. All information reaching the Engineer in his capacity of Engineer shall be considered confidential and shall not be divulged by him to outside parties or any person other than the Promoters, without their written assent.

6. The Engineer shall attend the meetings of the Promoters from time to time to which he may be summoned in writing by the Secretary and shall assist and advise the Promoters in all matters relating to the design and execution of the said intended works, and also shall attend and assist at all Inquiries with respect to the said intended works which may be held under said order in Council or by order of the Board of Works, and at all Courts where his attendance may be required in the interests of the Promoter or the Board of Works, and shall attend and give evidence at any arbitration held to determine the amount of compensation to be paid or accommodation works to be given to all persons whose lands or premises may be taken or alleged to be injuriously affected by the execution of the said intended works.

7. The Engineer shall aid and advise the Promoters in entering into a Contract or Contracts for the execution of the said intended works and shall superintend the same during their execution and shall fully and adequately inspect and examine the works during their progress and maintenance and report on the progress of the Works to the Promoters from time to time as may be required and shall issue periodical certificates to enable the Promoters to make payments from time to time to the Contractor or Contractors who may be entrusted with the execution of the said intended works, and shall assist in winding up all accounts between such Contractor or Contractors and the Promoters or the Board of Works, and all accounts between the Promoters and the Board of Works.

8. The Engineer further agrees to exercise reasonable skill and diligence in the discharge of the foregoing duties so undertaken by him and to act fairly as between the said Contractor or Contractors and the Promoters and the Board of Works (as the case may be).

9. The Engineer shall complete and hand over to the Promoters the working drawings and all other documents necessary for the letting of the the Contract or Contracts within four months

from the first day of April, 1898, or within such further time as the Promoters for some special reason or reasons may fix by notice to the Engineer in writing, and as part of or on account of the sum to be paid the Engineer, the Promoters shall pay him the sum of One Hundred Pounds weekly during the preparation and until the completion and handing over of the working drawings and documents necessary for the letting of the Contract or Contracts. Provided always that the Engineering work shall be carried on with reasonable despatch having regard to the provisions of these Presents and that no more than £2,100 shall be paid until the completion and handing over of the said working drawings and documents. The first instalment of £100 to be paid on the 18th day of March inst.

10. In consideration of the due discharge by the Engineer of the duties so undertaken and of the payments and expenses to be borne by the Engineer under these Presents, the Promoters agree to pay the Engineer all moneys which shall be allowed by the Board of Works and received by the Promoters in respect of the Engineering of said works from time to time and as the said moneys shall be received by the Promoters. Provided always that the sum paid or to be paid for the Engineering work in connection with the Parliamentary plans shall not be included in such moneys or paid to the Engineers. Such payments are to be fixed by the Board of Works, the Engineer and the Promoters, before the letting of the Contract or Contracts.

11. In case any alteration consequent on said works may become necessary on the Letterkenny line of railway (elsewhere than at Letterkenny Station Yard) or on the Promoters line of railway, the Engineer shall, if called upon to do so by the Promoters before the year of maintenance after the opening of the Burtonport line expires, prepare at his own expense all plans, drawings, specifications, estimates, bills of quantities, and other documents necessary for the execution of the works, of and incidental to such alterations, and shall bear and pay the costs of the printing, lithographing, and copying in connection therewith, and shall superintend and carry out such alterations subject to the approval of the Promoters, and shall conform to, obey and execute all orders of the Promoters in respect of such alterations. This clause shall not include any architectural work or alteration to any station buildings other than at the Letterkenny Station.

12. In consideration of the due discharge by the Engineer of the duties undertaken by him set forth in the preceding paragraph, and of the payments and expenses to be borne by him in connection therewith, the Promoters shall pay to the Engineer a sum equal to 10% (ten per cent.) of the cost of labour (exclusive of cost of materials in connection with such alterations) or if the work is let by contract then 5% on the contract amount. The Promoters shall find and supply all materials necessary for such alteration at their own expense.

13. All plans, drawings, specifications, estimates and documents prepared by the Engineer in pursuance of these Presents shall on the approval thereof by the Promoters be and become the property of the Promoters and shall be returned to their Secretary on application after the completion of the works.

14. In the event of the Engineering work in connection with the preparation of the working drawings and other documents necessary for the letting of the Contract or Contracts not proceeding with such despatch as in the opinion of the Board of Works will enable such Engineering work to be completed within the time fixed by these Presents, the Engineer on getting ten days notice in writing from the Promoters shall hand over the plans, working drawings, specifications, and other documents in his possession or control so far as same are prepared or done, to the Promoters, and the Promoters may, if they think fit, appoint another Engineer to complete such plans, drawings, and other documents as may be necessary for the letting of the contract or contracts, and the Engineer on handing over the said plans, drawings and other documents, shall be paid such sum as may be fixed by a competent Engineer mutually chosen by the Engineer and the Board of Works, or in the event of disagreement by an Engineer nominated by the President for the time being of the Institute of Civil Engineers, London, as the balance properly payable to the Engineer for such plans, drawings, documents and other work done by him, having regard to the provision of these Presents and the conduct of the Engineer.

15. In case from any cause during the construction of the works, the Engineer shall cease to act for the Promoters he shall be paid for the work done by him up to the time of his ceasing to act such proportion of the whole sum allocated for the Engineering as the work done by him shall bear to the whole of the Engineering work (exclusive of the Engineering work in connection with the Parliamentary plans), and in case of any dispute arising as to such sum same shall be fixed by an Engineer to be mutually appointed by the Promoters and the Engineer, or in the event of disagreement by an Engineer to be appointed by the President for the time being of the Institute of Civil Engineers, London.

In Witness whereof the Promoters have hereunto affixed their Corporate Seal and the said Edward Radcliff hath hereunto affixed his hand and seal the day and the year first herein written.

Fred Dawson, *Secretary.*

Witness present—Andrew Spence.

Witness present when signed by
Edward Radcliffe,

Alexander Hutchman,
29 Argyle-street,
Londonderry.

Londonderry and Lough Swilly Company [Seal].

Edward Radcliffe.

Agreement between Mr. Radcliffe and Messrs. M'Crea and M'Farland, contractors, relative to certain Parliamentary plans, drawings, etc., of Burtonport Railway.

The second Agreement is "Memorandum of Agreement made the 8th day of March, 1898, between Edward Radcliffe, of Coxtown, Bridgtown, Strabane, in the County of Donegal, civil engineer of the one part and Basil M'Crea and John M'Farland, both of the City of Belfast, contractors, trading as M'Crea and M'Farland, of the other part." viz:—

Memorandum of Agreement made the eight day of March, 1898, between Edward Radcliff, of Coxtown, Bridgetown, Strabane, in the County of Donegal Civil Engineer, of the one part, and Basil M'Crea and John M'Farland, both of the City of Belfast, Contractors, trading as M'Crea and M'Farland, of the other part. Whereas the said Basil M'Crea and John M'Farland heretofore purchased from Francis A. Doyle, Civil Engineer, deceased, the Parliamentary Plans, Drawings, and Documents prepared by him, and all his interest therein, in relation to portion of an intended line of railway from Letterkenny in the direction of Burtonport, in the County of Donegal. And whereas the said Edward Radcliff is about to be appointed by the Promoters of the said line of railway as their engineer, and the said Basil M'Crea and John M'Farland have agreed to hand him over said Parliamentary Plans, Books of Reference, Drawings, and Documents, and the said Edward Radcliff has, in consideration thereof, agreed to make them the payments hereinafter appearing. Now These Presents Witness and it is hereby agreed between the parties hereto as follows:—

(1.) The said Basil M'Crea and John M'Farland shall immediately, on the signing hereof hand over to the said Edward Radcliff all the Parliamentary Plans, Books of Reference, Drawings, and Documents in their hands relating to the said line of railway as approved of and passed by the Grand Jury of the County of Donegal at the Summer Assizes, 1897, and further approved of by the Commissioners appointed to hold an inquiry thereon by the Board of Public Works (Ireland), and so purchased by them as aforesaid from the said Francis A. Doyle, deceased.

(2.) In consideration thereof the said Edward Radcliff shall pay to the said Basil M'Crea and John M'Farland a sum equivalent to ten per cent. on the aggregate of the instalments to be paid to him by the Promoters or the Board of Works for or in respect of his fees as engineer during the

May 15, 1907.

Mr. John M'Farland, J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

construction of the said railway until such instalments reach £10,000 and twenty-five per cent. on each instalment to be paid to him by the Promoters or the Board of Works in excess of £10,000, and in part payment thereof, the said Edward Radcliff will pay to the said Basil M'Crea and John M'Farland the sum of £300 on the signing hereof and gives them his promisory notes or acceptances for £250, £250, and £200, respectively, each of even date, herewith payable twelve months and two years and three years after date.

(3.) The said Basil M'Crea and John M'Farland shall, after the appointment of the said Edward Radcliff as such engineer, use their influence with the Promoters to have the name of the said Edward Radcliff returned to M'Corquodale and Co.'s Official Railway Directory as Engineer to the Promoters either separately or together with the name of any other engineer acting in a similar capacity.

(4.) The said Basil M'Crea and John M'Farland shall use their influence with the Promoters to obtain for said Edward Radcliff and his engineers and inspectors free passes over Promoter's line of railway.

(5.) Should the projected line of railway from Letterkenny to Burtonport be stopped, abandoned, or discontinued from any cause whatsoever, should the Promoters fail to appoint the said Edward Radcliff their engineer, then this Agreement is to be void and of no effect, and should any moneys have been paid to said Basil M'Crea and John M'Farland in respect thereof the same are to be refunded to the said Edward Radcliff.

As witness the hands of the said parties the day and year first herein written.

EDWARD RADCLIFF.

Signed by the said Edward Radcliff in presence of James Elliott.

Signed by Messrs. M'Crea and M'Farland in presence of James Elliott, Foyle-st., Derry.

There are two separate Agreements.

Mr. Acworth.—But that has nothing to do with the company; it is a contract between two private individuals.

19426. *Chairman.*—It is not the Lough Swilly Railway Company?—I and my late partner—I am sorry to call him my "late" partner—have been contractors all our lifetime, and we have nothing to be ashamed of in any of these agreements whatever.

Mr. M'Farland's position with regard to his firm's agreement with Mr. Radcliffe.

19427. *Colonel Hutcheson Poë.*—The agreement between Mr. Radcliffe and you was between him as an engineer and you as chairman of the company promoting the line?—Not at all; it was between the company and Radcliffe, whereby he was to take whatever remuneration the Board of Works would allocate to the engineer for his services.

19428. It was your duty as promoters to prepare the working plans and specifications?—Yes; it fell on the engineer to do so.

19429. You were the promoters?—Yes. the company!

19430. Naturally it had to be constructed by somebody?—Yes.

19431. And he acted on your instructions?—I would not say on our instructions at all. The Board of Works were going in any case to promote this line.

19432. Was there any understanding or agreement or covenant between you and him that you, whether in your capacity as a private individual or in your capacity as Chairman of the company, were to receive a certain percentage of whatever amount was paid him by the Board of Works?—There was.

19433. Will you state to the Commission what the terms were?—If the agreement is here it will speak for itself, but such an agreement existed. I and my late partner had already purchased these plans, and we employed engineers, Mr. Swiney, and other engineers, to prepare Parliamentary plans. The actual money paid for the preparation of these Parliamentary plans was between £1,900 and £2,000. M'Crea and M'Farland, the contractors, were entitled to be paid for the same work—for these Parliamentary plans when they were handed over to the promoters—as the Board of Works paid other engineers.

19434. These are the plans referred to in your abstract of evidence?—Yes.

19435. These plans were already prepared in 1890?—In 1889 and 1890, by the late Mr. Doyle, who, being an old man, my firm had purchased his interest in them so that no contention would arise with their representatives.

19436. Would I be right in saying that there was an agreement of some kind between you and Mr. Radcliffe?—I have already stated so.

19437. That he should pay you 10 per cent. on the amount of money he received?—I have already stated that such an agreement was in existence.

19438. Does it not strike you as rather a questionable proceeding that you, acting either in your private capacity—at any rate you were chairman of the promoting company—that you should enter into a covenant with the man you were employing in the interests of the company? Does it not seem rather a questionable proceeding to bind this servant, so to speak, to pay over to you a certain percentage of the remuneration which he received?—As chairman of the company, yes, but as a contractor—M'Crea and M'Farland—it was a different transaction. It was not as chairman of the company I entered into such an agreement or that I employed this gentleman to prepare Parliamentary plans.

19439. You act in a dual capacity, something like Dr. Jekyll and Mr. Hyde?—There are a great many commercial——

19440. I do not wish to press the matter further?—I submit, with all respect to the Commission, that whatever money the Board of Works have been in the habit of paying from time to time for these Parliamentary plans should have been paid to M'Crea and M'Farland, the same as they would have been paid to any other engineer from day to day.

19441. That is perfectly legitimate, but I think it is rather a questionable way of going to work to recover the value of these plans from the men you are employing in the nature of a percentage?—No.

19442. That is a matter of opinion, and I do not wish to press the matter further. At any rate, the fact that there was this agreement to pay up this 10 per cent. would, I suppose, to a certain extent account for the hostility by which you seem to think he was actuated towards you?—Not at all. I have said here that he was an engineer of high standing and character.

19443. I mean when he became superintendent for the construction of the line?—There is nothing but the greatest friendship between us.

Mr. Acworth.—I understood that that was another gentleman altogether.

Colonel Hutcheson Poë.—Mr. Radcliffe was the resident engineer.

19444. *Mr. Acworth.*—He did not pass into the service of the Board of Works, did he?—He did.

19445. *Colonel Hutcheson Poë.*—I was going to suggest that probably that might account for his not being animated by any great desire to do more than his duty?—That agreement lapsed on his passing into other employment.

19446. You say your relations were very friendly. Is there any truth in the suggestion that subsequent to his engagement and taking up the construction of this line, you endeavoured under the terms of that contract or agreement which you entered into about the 10 per cent. to recover that percentage from the amount of the salary he was earning?—I have no recollection of such a proceeding.

19447. Was not a law suit actually threatened?—I have no recollection of such a thing.

19448. If you have no recollection of it we must let the matter drop?—The secretary tells me there was no such thing; the agreement lapsed when he passed into the hands of the Board of Works.

19449. We will let the matter drop. On page 8 you speak of the valuable property which the Board of Works had in the Burtonport line. It is very valuable now; but at the time of its construction it was never anticipated that it would be a valuable line?—I cannot enter into the speculations of the investigators who inquired into it at all.

19450. I put it to you that the Treasury agreement actually makes provision for a deficit and provided that in the event of the deficit which they anticipated your company should have to bear the brunt and pay

the loss?—If they put it in the Treasury agreement, it speaks for itself.

19451. Subsequently it developed into a fine line?—There is no fineness about it in the world.

19452. It is a valuable line?—The traffic has shown no abnormal increase since the date of opening to-day; the monthly returns are here for the information of the Commission.

19453. If you anticipated that it was going to be so profitable, why did you not take it up?—I did not anticipate any profit at all. If my advice had been followed we would never have promoted the line; it was just the greed of my co-directors and the pressure of the public to have this money that we were being threatened every day that if we would not enter into this unreasonable and onerous agreement with the Board of Works the money would go to the South of Ireland. I would have let it go to the devil if I had not been out-voted by my directors, knowing that no railway could be maintained for £3 10*s.* per mile per week in perpetuity.

19454. And not earn the handsome dividend that you earn?—That has nothing to do with the Burtonport railway; that dividend was earned for my shareholders before the Burtonport line was conceived.

19455. That is very much to your credit?—That is by good management; the line has paid 7 per cent.

19456. You spoke about your co-directors; what does your Board consist of? I suppose you have meetings?—Yes.

19457. You do not appear to have had many meetings with regard to this special extension?—We have had as many meetings as the circumstances of the case demanded.

19458. One every other year?—We have had as many as the circumstances of the case demanded, whether it was one every other year or one every other month. Meetings would be called according to the requirements of the business.

19459. I ask you as chairman of the company whether you do not think it would have been advisable in view of all these complaints and dissatisfaction to have called your directors or delegates who were entitled to attend to a special Board meeting, so that they could have given their views and see if they could not bring a little pressure to bear on the Board of Works?—The delegates always attend. It depends on the official staff when the meetings of a Board, which is only summoned occasionally, take place. They know what business is to be transacted, and it rests with them. When complaints come before me as chairman of the company I would naturally consider the wisdom of what should be done and advise, but beyond that my duty is at an end.

19460. But in your own interest I should have thought that to have given this baronial director and the two delegates who are empowered to act by the Treasury agreement, an opportunity of thrashing the matter out and of bringing their influence to bear on the Board of Works, that might have saved us all this inquiry and yourself a lot of trouble?—The delegates and the baronial directors used their utmost endeavours to have this matter inquired into through the County Council and through the representatives in Parliament; all that has been done.

19461. I should have thought that it would have had more effect if it had come through a Board meeting?—They also sent a memorial to the Board of Trade to hold an inquiry in connection with this, and that also was abortive.

19462. You and Dr. Todd and other gentlemen keep referring to this 21st Clause in the Treasury agreement, which empowers the Board of Trade to send down and inquire into any disputes or differences which may arise between the engineer and the Board of Works during the construction of the line. That does not apply to anything else, but you tried to invoke the Board of Trade under this particular clause a couple of years, or even longer after the line was actually at work. It was impossible for them to act under that clause; you know that?—I am not going to set up my opinion against yours.

19463. It is not my opinion?—I hold that a great wrong has been done and that there should be some means of righting it.

19464. The only clause under which the Board of Trade could act was the 24th section of the Order in Council?—Apart from your opinion or mine, we have been advised by the most eminent counsel in Great Britain and Ireland that we have a right to an inquiry under the other clause.

19465. At any rate, the counsel for the Board of Works or the Board of Trade gave it as their opinion that you were not entitled, and I think that any one reading it would be of the same opinion. I am not a barrister; I wish I were?—You have done very well as a Judicial Commissioner.

19466. *Lord Pirrie.*—Do I understand you to say that the claim of £78,000, roughly speaking, was not a claim to be paid to you in the shape of money, but a claim under their agreement that the Board of Works should compel the contractors for the line to make sound, inaccuracies in workmanship, or bad workmanship, or as regards bridges or material?—Yes; not one penny of money has been claimed, it is merely for defects in the construction works—defects and short works.

Suggestion that the working company's claim against the Board of Works is not a monetary one.

19467. You only ask the Board of Works to compel the contractors to make this good?—To restore them.

19468. Under the agreement as I suppose it exists between the Board of Works and the contractors; was the contract with the Board of Works or with the Lough Swilly Railway Company?—It was a contract binding the three of us—the Lough Swilly Railway Company, the contractors, and the Board of Works, and the Board of Works should see that these works were carried out in accordance with the contract.

19469. Was there no clause in that contract compelling the contractors to make good bad workmanship?—There was.

Allegation as to the failure of the contractors to carry out the works in accordance with the deviation plans

19470. You have not put in any letter or, so far as I have understood, evidence; you have not stated to the Commission yet that you called on the Board of Works to compel the contractors to make good the bad workmanship and the deviations from the plans, which I take it the Board of Works admit were not in accordance with the plans. If the Board of Works admit that the workmanship was not right, why did you make a claim for money, and not merely to make good?—When setting out the works we could also set out the value of them, and I may tell the Commission that the contractors were bound in security for the right completion of the work to the extent of £10,000. That money was to be held during the construction of the works and for the one year of maintenance. During the period of maintenance, owing to these works not being completed, we advised the Board of Works not to pay over these £10,000 pending the completion of the works in a proper manner. We warned them not to do it pending the completion of the works.

19471. I do not understand yet. You say there was a clause in the agreement to compel them to make good. Why did you not call upon the Board of Works to see that the contractors did that. I understood from your evidence that Mr. Radcliffe was the Board of Works' engineer-in-charge?—Yes; the resident engineer.

19472. Did he personally allow the contractors to make this bad workmanship?—Evidently this (*indicating Mr. Batchen, who was present*), is the chief officer, not a subordinate.

Apportionment of the savings on the deviations.

19473. On any of the savings made you were to get one half?—The Board of Works.

19474. I mean the Lough Swilly Railway Company?—No, no. It was the Board of Works and the Treasury got one half and the contractors got the other.

19475. The contractors got one half and the Board of Works the other?—That only applies to the deviations; it had nothing to do with the principal works.

19476. *Chairman.*—Are you sure that the Board of Works got half?—The Board of Works gentlemen are here present, and Mr. Batchen gave evidence on that.

19477. But you do not know within your own knowledge?—Not at all.

19478. Then you had better not say it?—We heard it here.

The payment of £4,000 to the promoting company by the contractors in respect of the deviations.

19479. *Lord Pirrie.*—But we heard that the contractors got it, I think?—Will you let me explain to Lord Pirrie the £4,000 that we got came out of the enormous savings that Mr. Radcliffe reported to us would be effected. Those enormous savings were divided into two, and the Board of Works got one half and the contractors the other, and out of the contractors' half we got £4,000.

19480. *Chairman.*—How do you know that?—It was the evidence here of Mr. Batchen. That has nothing to do with the departures from the plans. If the specifications had been carried out we would have had no claim; it was because the specification was departed from.

May 15, 1907.

Mr. John M'Farland, J.P., Chairman of the Londonderry and Lough Swilly Railway Company.

19481. *Lord Pirrie.*—I do not understand yet why a public board or an individual who enters into a contract in which he is bound to make good what was wrong during the first twelve months of the working of the line—is not compelled to make good?—That is for them.

19482. You say that that was the duty of the Board of Works?—I do.

19483. I suppose you will agree that it is because the Board of Works have no officials in a position to know good work; they employ outside men for that purpose?—I do not know. These are professional gentlemen, Mr. Batchen and Mr. Radcliffe, and it is for them to say why these departures were made from the contract.

19484. You made a claim for money independently of the £78,000, and you got a portion of that paid; what is the balance owing to you to-day of your money claim—not the £78,000?—I have no claim for a penny against the Board of Works.

19485. You have not?—No; the company has a claim.

19486. It is the Lough Swilly Railway Company, I mean?—There are some vouchers.

19487. What is the amount which the Lough Swilly Railway say they have not received in cash—not bringing in this £78,000?—*Mr. Spence.*—The only money demand is in respect of promotion expenses.

Balance of £2,600 on promotion expenses claimed by Lough Swilly Company as still due.

19488. What is the amount?—*Mr. Spence.*—£2,600.

19489. The total amount that is owing to the Lough Swilly Railway Company is £2,600?—*Mr. Spence.*—Yes.

19490. As I understand the letter that has been handed in by the Board of Works to-day it is thought they cannot pay that because it would not be handed over to the partners in the Lough Swilly Railway Company, that is the letter which has been handed in to the Chairman?—*Mr. Spence.*—We desired to read it and fully explain the transaction referred to, but the Chairman advised that the matter should drop. I am quite prepared, subject to the Chairman's decision, to explain the matter fully.

19491. I would have thought, in the interests of Messrs. M'Crea and M'Farland, that it was very desirable, because that accusation of the Board of Works is a very serious one.

19492. *Chairman.*—There is no accusation in that letter. You have seen the letter, Mr. Todd?—(*Mr. Todd*).—There is no accusation; it is a mere question of opinion.

The question of the use of the permanent way materials by the contractors during construction.

19493. *Lord Pirrie.*—On whose authority were the contractors allowed to use the rails and sleepers?—(*Mr. M'Farland*).—On Mr. Batchen's authority.

19494. It was on his authority?—Yes.

19495. The Board of Works took it into their own hands to lend material for making the line?—Yes, contrary to the specification.

19496. *Chairman.*—No, no; the Board of Works lent nothing. The contractors supplied the rails, and those rails were used in the construction—that is what you mean?—They were not entitled to use them for construction.

19497. The contractors used those rails on the railway, but they were allowed to use new ones?—Yes; but why should they be allowed to use them?

19498. Never mind why?—The contracts prohibited the use of them, and they were allowed to use them to their profit of £3,000 or £5,000.

19499. *Lord Pirrie.*—That is what I understand—the Board of Works took that into their own hands?—They did.

Mr. Aspinall.—Did the contractor reduce his claim?

19500. *Lord Pirrie.*—Has the Lough Swilly Railway Company made a claim on the Board of Works for deterioration on that ground?—(*Witness*).—They have in this account.

19501. Is that the £78,000 account?—Yes, it is.

19502. But you tell me there was no claim except for bad workmanship and for making good what was wrong?—This is making good the rails.

19503. For making good the rails and sleepers that were worn out during the construction of the line?—Yes.

19504. *Mr. Aspinall.*—Would you ask the witness whether the contractor reduced his price because he was allowed to use new material?—I do not know about that at all. The contract with my company is with the Board of Works, and this should not have been done without our consent. Here is a letter of Mr. Batchen's, when we complained of these rails being used in 1900, three years before the line was opened: "I might point out to you that if I find these rails are injured in any way I shall not allow them to form part of the permanent way."

19505. *Chairman.*—That has been read before?—The contract provided for these rails being delivered at different places on the railway by the Board of Works, after which they were to be stored until required by the contractors, who were not to use them on the railway until the banks had consolidated. Instead of using them in that way, and storing them and leaving them until the banks had consolidated, they rushed them into the cuttings and ran their own material over them for years. I should explain or state to you that it is within my knowledge that in England, with companies like your own, when they are extending or constructing a railway there is nothing unusual in taking spring ballast wagons and good engines and using permanent rails and sleepers for laying down the pitching, and subsequently ballasting on the hard road or hard bank adjoining; but it is quite different with contractors, and engineers make it one of the most stringent rules of the specifications that these rails are not to be used except under the most special circumstances, when the banks have got consolidated, when the pitching is laid, and that spring ballast wagons must be used, otherwise the use is prohibited.

Chairman.—I might announce that the Right Hon. Sir Joseph Ward, the Premier of New Zealand, will give evidence before this Commission on Friday with reference to the working of the State railways in New Zealand. We have not yet fixed the time or place, but probably it will be at the Board of Trade office.

Mr. M'Farland.—The Board of Works were allowed to give evidence in detail as to the ballast and as to the masonry, viaducts, and the fencing, and I would like very much if you would give me a few minutes. I will not exceed ten minutes.

19506. *Chairman.*—We have finished now for to-day. We are all exhausted. I am very sorry. I think we have heard quite sufficient about this railway, and I daresay we have all formed an opinion, but what that opinion is I am not going to mention?—Very good.

You had better leave it where it is. You have told your story. It has been very well and clearly told.

Dr. Todd.—There are just three points——

Chairman.—We will not have any more points.

Dr. Todd.—There are three inaccuracies I would like to put right.

Chairman.—You can write them.*

Dr. Todd.—It would be very much better to give them in evidence.

* See Appendix No. 10.

The Commission adjourned till Friday, 17th May.

THIRTY-FOURTH PUBLIC SITTING—FRIDAY, MAY 17TH, 1907,

At the Hotel Cecil, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Sir HERBERT JEKYLL, K.C.M.G.; and Lieut-Colonel W. HUTCHESON POË, C.B.;

Mr. GEORGE E. SHANAHAN (Secretary).

The Secretary.—It ought to appear upon the Notes that Lord Pirrie, Mr. Aspinall, and Mr. Acworth have written and wired regrets at not being able to be present, as they have been called away by important engagements; and Mr. Sexton is detained in Ireland.

The Right Hon. Sir JOSEPH G. WARD, K.C.M.G., Premier of New Zealand, examined by the CHAIRMAN.

May 17, 1907.

The Rt. Hon. Sir Joseph G. Ward, K.C.M.G., Premier of New Zealand.

19507. We all know, Sir Joseph, that you are the Premier of New Zealand, and we all know also that you are generally acquainted with the State Railways in our Colonies?—Quite so.

19508. More especially, I suppose, with the State Railways in New Zealand?—Yes.

19509. To get it upon the Notes, what is about the population of New Zealand?—It is just under 1,000,000.

19510. And how many miles of railway have you belonging to the State?—About 2,500 opened, speaking from memory.

19511. That is near enough. I will not ask you with reference to any figures, because I have got some figures here which show the revenue of the railways and so on, but I should like to ask you with reference to the policy adopted in New Zealand in connection with these railways. First of all, were the railways originally constructed by private enterprise or by the State?—Originally, by the State.

19512. There have been private railways in New Zealand, have there not?—Yes, two or three.

19513. Has the State purchased any of them?—The State has purchased all of them except one.

19514. Therefore, practically, the whole of the railways with one exception in New Zealand are now controlled by the State?—All but eighty-four miles.

19515. What has been the policy of the State with reference to the development of the country in connection with its railways; have they gone in for making large profits out of the railways *per se*?—No. I think I can explain briefly to you; I was Minister for Railways for eight years; and the policy of the Government for the last fourteen years, that is to say the Government of which I am Premier (which is a continuation of the same Government under which I was formerly Minister for Railways) was to help the development of the natural resources of the country itself upon the basis of charging moderate rates, with no differentiation of rates to any one class of people, the smallest man in the country being allowed to carry either himself or his products at the same rate as the largest user of the railways in any part of the country. We went upon the basis of fixing our rates so as to return about 3 per cent. For some years prior to that policy being in operation under a system of higher tariffs, the railways did not yield 3 per cent.; but, by the lowering of the rates and the assimilating of them and holding out distinct inducements to settlers in the country to go into the interior, and to people generally to more largely use the railways, we have, by introducing these low rates, brought about a great change for the better all over the country; and for years past our earnings have been over 3½ per cent. We have been in the habit of making concessions by way of reduction of rates upon the carriage of butter, cheese, fresh fruit, eggs, vegetables and other farm produce, manures, wool, grain, fish, meat (fresh and frozen); timber, live stock for market and for stocking the land, and passengers in order to carry out the policy of utilising the railways for the purpose of developing the country. I think I have the information here—I have not looked at it for a long time—up to the point of time when I wrote an article to a little journal which I have just had put into my hands. Perhaps you have seen it?

19516. Yes, we have seen it?—I have not got the railway statements here, but we have returned, by way of reduction, several hundreds of thousands of pounds (£750,000) during the last few years.

Allocation of surplus earnings.

19517. I see that in 1905 you had a substantial surplus, which was used in another way, I think, in connection with the staff?—Yes; we have increased the salaries and wages of the staff two or three times during my administration as Minister for Railways, giving them concessions in pay amounting to £365,000 per annum over and above the rates ruling when the railways were managed by a Board of Commissioners for the State, and we have established a Superannuation Fund for all classes of railway servants.

19518. Are we to understand that the rates under the same circumstances are the same to everybody?—Absolutely without exception.

19519. Are there no rebates?—There are no rebates. According to the system prevailing in our country when a rate is decided upon it is gazetted for public information. It then applies to every person who complies with the conditions. Rebates cannot be given by the Railway Administration. If they were given, they would have to be given upon the authority of the Legislative Parliament, which would be a great restrictive institution in the way of preventing rebates to anyone.

Rates for agricultural produce in New Zealand and in Great Britain.

19520. May I take it, generally speaking, that the rates for agricultural produce in New Zealand are less than the rates current in this country?—I do not know that they are; I have not looked into the question of rates as between the two countries; and I would just like to refresh my memory. What I would like to say generally is, that we have no complaints in the ordinary sense about the cost of the railway carriage of products in New Zealand; and if I have mentioned it here it would be absolutely correct; because I took this information at the time from the ordinary records of the service.

Comparison of the passenger fares in New Zealand and in Great Britain.

19521. Now, with regard to the rates for passengers, I find, from a list which I have seen and which is published in that very able article by you, that all the rates for passengers are much less in your country than in this?—Oh, yes; that is so. First of all, we have uniform rates; our passenger mileage rates are uniform. That is, the same rate applies on all sections of the railways; we do not have fluctuating rates. For holiday excursions it is a question of a single rate for a return fare over all our railways. I mean to say the return journey for the single fare. Here is a case in point with ordinary fares, which I worked out at the time I wrote this article, from London to Glasgow, a distance of

May 17, 1907.

The Rt. Hon. Sir Joseph G. Ward, K.C.M.G., Premier of New Zealand.

402 miles, the first-class single fare was 58*s*., and the second-class fare was 33*s*.

Comparison of passenger fares and goods rates in New Zealand and Great Britain.

19522. You may take those as first-class and third-class—you have only two classes in New Zealand, I believe?—Yes. In New Zealand for the same distance, the first-class fare at that time was 37*s*. 5*d*., which, as you see, is 20*s*. 7*d*. less for one journey. Our third-class single journey fare was 20*s*. 4*d*., that is 12*s*. 8*d*. less than the fare in this country. Our first-class return fare is 74*s*. 10*d*. as against 110*s*. 3*d*., or 35*s*. 5*d*. less than your's. In our country the second-class return fare is 40*s*. 8*d*., as against your 62*s*. 11*d*. or 22*s*. 3*d*. less.

19523. In that article there are a great number of instances given of rates, and I have had them checked, at least I have checked them myself, and I find that in every case your rates are considerably less than the rates in this country for passengers?—Yes, considerably less for passengers.

19524. And also for goods?—Yes, generally so.

Concessions given in rates for the purpose of developing agricultural districts.

19525. Have you any system for giving special facilities for developing agricultural districts?—Well, there is lime, for instance; we carry lime free entirely, up to a distance of 100 miles—we do not, of course, allow the districts to overlap into one another. We say to the people in a 100-mile zone, "We will carry it free, but if you want it to go outside that, you must pay."

19526. That is done to assist the agriculturalist?—Exactly.

19527. And, of course, the lime is necessary for the soil?—Absolutely; and the result is to give us increased traffic upon our railways.

19528. Have you not also some special facilities for passengers, say, school children?—Yes.

System of free conveyance of school children.

19529. What is your system with regard to that?—We carry school children to the nearest school free all over the country. That answers a double purpose with us. Our schools come under the Education Department; they are an institution of the State; and if we adopted the policy of saying to these children, "you must pay," the odds are that we would have to build schools very much closer together than they are now, although we have a great number of schools throughout the country. So, we have for many years carried them free to the nearest school; and in cases of certain denominations that have got schools within sixty miles distance the children are carried free, so that they can go to the particular denomination to which they belong. There are private schools as well as State schools, of course. That system we have had in operation many years, and it has worked admirably.

Advantages derived from the concessions in rates.

19530. With reference to carrying lime free, and with reference to these low rates for agricultural produce, you are of opinion, I suppose, that without those facilities, the land would not have been developed?—I feel pretty certain it would not have been developed to the same extent; because a man on the seaboard in our country, or close to it, who was raising sheep or wool, or wheat, or grain, or timber (we are a producing country), would be placed at a tremendous advantage as compared with his neighbour 100 miles away from the seaboard, unless we gave a fairly low rate right over that 100 miles. And we find upon the whole that a man 100 miles or 200 miles from our seaboard is doing quite as well in the abstract as the man close to the sea shore. We do not come down in the case of short distances to the same extent as in longer distances, of course.

Advantages of the system of State ownership over private ownership of railways.

19531. Do you think the development of the country could have been carried out to the same extent if the railways had been owned by private parties?—I should very much doubt it, for the reason that I think that the first concern of private parties owning railways would be to take all they could out of the users of the railways. While they might in their own interests, and rightly from that standpoint, desire to have an increased traffic from the products of the soil, a railway company would not look upon it as its business to reduce its dividend from, say, 7 per cent. to 6 per cent. down to 3¼ per cent. or even 3 per cent., as we have done in our country through giving collateral advantages to a number of people to improve their condition upon the land. That is the view we take of it.

19532. And, in the extension of the railways, your first consideration, I apprehend, is to develop any industry in the country, whatever it may be, regardless altogether of whether the line *per se* will give a return immediately?—Well, to some extent, yes. We go upon this principle, in the case of a railway line returning what one would call poor results—say, 2 per cent.—we look upon the return on the capital invested in that line as part of the whole results of the State system; and if our average earnings are 4 per cent., we know that some other line of railway running at the same rates on different articles are helping the poorer line to make up its quota of our results. But at one time, before my time as Minister of Railways, and before the policy of the Government, of which I have been a member for some years, was carried out, on one section of railway in the North Island, higher rates were imposed than upon the bulk of the railways; and, as a matter of fact, we saw the absolute effect of it, because it had a withering effect upon the settlement in and around that particular part; and it did comparatively no good until we reduced those rates right down to the same as those obtaining over the more productive railways. That at once gave a stimulus to that part, and had the effect of improving the general condition of that part of the country.

19533. And removing the population of the towns to the country?—That is distinctly so in New Zealand; I am glad to say it is one of the features of our country. And the more I see of the world at large the more I realise what a good thing it is from our point of view that we have a radiating of settlers, young people and others, from the towns into the country. We find there is a percentage of the people who like the city and town life and who are prepared to take that as against the country; but, generally speaking, for a small population we are wonderfully well spread over the country districts.

19534. You think that the railways being in the hands of the State must have played a very important part in that development?—I am quite sure that has been the result of our railway policy as carried out under State Government. If the same policy were carried out by a private company, I should say the effect would be similar.

19535. That is to say, if the railways were remunerative to private parties?—Yes; I am speaking, of course, of our country—I do not know about here, and one tries to keep one's oar out of the concerns of the other land in everything one does—but we believe that in our country the State can afford to take as little out of the railways as we find it necessary to take; and as a matter of fact we prefer to allow our consolidated earnings in the revenue of the country to make up for any deficit in the interest earned upon our railways, and to keep rates low for the benefit of our producers and the travelling public, rather than to keep up high railway rates and destroy that which is so essential to a new country like ours—a good and complete system of transport.

19536. I think you have demonstrated quite clearly that the State control of the railways in New Zealand at any rate does play a most important part in the development of the country and its industries in all directions?—There is nothing in our country which has done more to make it prosperous, in my opinion (and I am not alone in that opinion—very far from it) than an efficient system of railways, and, on the whole, a comparatively cheap one as far as rates are concerned.

19537. Now, only one other question with reference to the management of the railways. Have you Railway Commissioners?—No; we tried Railway Commissioners for a few years, but we went back to Ministerial control, a Minister being responsible to Parliament, and to the people through Parliament, for the administration of the railways, and one of the chief reasons that promoted the change was the very thing we have been speaking of in another form. The Railway Commissioners looked upon it as essential to produce the best results possible, and, on the

whole, they were not disposed to reduce the rates to the same extent by any means as the Government itself, with its collateral policy of opening up industries, was prepared to do; and, from one cause or another, that system of management became unpopular and was superseded by Ministerial control.

19538. Are all the officers appointed by the Minister for Railways?—Yes; by the Minister for Railways.

19539. And are they appointed for a period or are the appointments permanent?—Absolutely permanent, except in the case of casual labour.

19540. I was thinking of the manager—the manager is not engaged for, say, five years?—Not at all; he is appointed, and if he carries out his work properly he remains. Our present general manager has been with us for—I cannot say how many years—fourteen years, I believe it is.

19541. I gather from the views you have been kind enough to express that you think the State control of railways in New Zealand, at any rate, has been of immense advantage to the Colony?—I feel quite certain of it. If a vote were taken in our country on the question of putting our railways under company management of any sort or kind, I think I am pretty right in saying that nine-tenths of the people would vote against it straight. In addition to that, we spend a very large sum of money annually—we allow nothing to go down on the railways in New Zealand—and we keep everything in as absolutely perfect condition as possible, we have our own railway workshops, six or seven of them, and nothing is allowed to go down. Everything is put into proper condition; and our railway tracks are constructed and laid according to plans of engineers. I am speaking as a layman, of course, but necessarily with some amount of knowledge. Our railway tracks from end to end of the country are kept in most excellent state and condition, and also as regards rolling stock and everything else. We do all that maintenance work out of revenue; of course new rolling stock and further additions we pay for out of capital.

19542. I think I may say that the Commissioners are exceedingly grateful to you, Sir Joseph, for giving us an opportunity of hearing your views upon this question, and all we regret is that we have encroached upon your time at this limited period when you are about leaving this country. We hope that you will have a very pleasant journey home, and that you will feel no worse for your visit to this country.

Examined by Sir Herbert Jekyll.

19543. Might I ask one question? I suppose the original construction of your railroads was comparatively cheap; you had not to pay an extravagant price for land and Parliamentary or Legal proceedings?—No; I am happy to say we are not in that condition. As a general rule, our railways, I think, speaking from memory, have cost about £7,000 or £8,000 a mile.

19544. The whole capital charges?—The whole capital charges. We take the land in a different way from what you do in this country; we require no Parliamentary Bills of any sort or kind in our country. Whatever land we take from a private person we take it under the Public Works Act, and we pay the full value; but we allow the owner the right of arbitration under a proper system. A great deal of the land in our country was originally owned by the country itself, but a very large proportion of it—I do not know how much, but a great deal more than half—has been purchased. We have not got those contingent troubles of that kind that you have got here.

Examined by Colonel Hutcheson Poë.

19545. I understand, of course, that the returns given from year to year are the returns of the revenue that you earn on your capital?—Yes.

19546. And you consider that a return of about 3 per cent. is sufficient, and that anything beyond that has to go in the way of reductions?—Very largely so; we do not always go down to the actual 3 per cent., but that principle is followed, generally speaking. For instance, if we have a very bad year—which we have not had for some time I am glad to say, quite the contrary—but if we had a bad year we should do just the same as a business concern would do, and say, "This is not the time to make reductions."

19547. That is the point I wanted to get at. Even if you only earned 2 per cent. on your capital, still, in the interests of the Colony, you would be prepared to keep the rates as low as they have been?—No; I spoke just now of a section of railways that had been earning, as a portion of the whole railways, a good deal less than 3 per cent., I think under 2 per cent., and what we did at first was to keep the rates high on that particular section. What we did afterwards was to lower all the rates over those railways to the same rates as existed over the larger section, so that the higher rates and the earnings of the other portion of the railways would make up the deficit on those particular railways. But, as a matter of policy, I think in our country now that would be unnecessary. If, fifteen years ago with the knowledge that I have now of the effect of the working of them, I had been able to influence others to think as I think now, and found it necessary to apply it then, I would have said it would have paid the country over and over again to have made a portion of the railways in the less prosperous parts of the country on the lines you are suggesting in order to have more capacity of production for the country itself, because that is the very life blood of our country, and whether we take the large squatter, the small producer, the small dairy farmer, or the timber producer, or what not, we look upon it as more important to our country as a whole that all these should be helping to add to the prosperity of the country, with greater spending power or greater employing power than to keep rates up to a ruinous height to enable us to earn a better return upon our capital outlay on railways. We regard it as better that a portion of it should come out of the general revenue of the country than to carry out such an operation. It is obvious, of course, that nothing but the State—the people themselves—could carry out a policy of that kind.

The surplus revenue from the richer districts devoted to the development of less prosperous parts of the country.

19548. But, speaking generally, your experience in New Zealand has been that any reduction you have given with a view to developing the country has, after a longer or a shorter period of time, recouped itself; is that not so?—Yes. I have not the figures here, but I remember on one occasion recommending my colleagues to make enormous reductions in passenger rates, and, although we lowered the rates an average of forty or fifty per cent., we recovered the whole of our revenue within twelve months.

Reduction in rates and fares found to result in increased revenue.

Cross-examined by Mr. Vesey Knox, K.C.

19549. It would assist us very much in working up the case if I could put one or two questions to Sir Joseph Ward. We are trying to get before the Commission figures comparing the various countries with Ireland, and we have received the railway time tables of New Zealand, which seem to give a great deal of information. So far as it speaks for itself, of course, we can table it for the Commissioners, but I should like to ask one or two questions. So far as we can make out, and I want to know if it is accurate, the rate for passengers for distances under twenty-five miles in the cheapest class is one penny per mile plus one penny—it seems to work out in every case at that?—I can tell you this, and you can apply it generally to any number of miles; the initial charge is one penny. Then supposing a person wants to travel a quarter of a mile the charge is one penny plus one penny, that would be 2*d*. We allow no one to run over the line even a short distance without paying a premium. We have got suburban traffic, of course, in New Zealand, and some stations are only a quarter of a mile from the starting place, and if we have a penny rate per mile, and start with a minimum fee of a penny, that is not a high charge. So we start by saying that one penny is charged for the use of the railway station or anything else you like to apply it to. That exists throughout the country.

Basis of passenger fares.

May 17, 1907.

The Rt. Hon. Sir Joseph G. Ward, K.C.M.G., Premier of New Zealand.

Rates once fixed rigidly adhered to on the New Zealand Railway.

19550. It seems that up to twenty-five miles it is a penny a mile plus this initial penny, and then it gets less?—Yes; so as to prevent a very low rate for short distances for suburban traffic.

19551. I do not want to go into details, but I want to know whether you can tell us whether the rates for parcels and for milk and other products, are the real scales on which traffic is carried, or whether it is carried at a cheaper rate?—In our country—you can accept this as being absolute in the examination of the railway charges in New Zealand—no charge can be levied under the railway management unless it is advertised in the public Gazette and until the charge has been passed by the Governor in Council. Once the rates for dairy products or anything else in our country are settled they are gazetted publicly, and then those rates for dairy produce are fixed; they are the same all over the country, and no one can vary them. If you went to New Zealand to-day, and you wanted 10,000 tons of cheese carried 100 miles, you would have to pay the gazetted rate of carriage on that, which is, I think, 7*s.* 6*d.* a ton, or whatever it may be; if you wanted to carry 2 tons, which would be the minimum, you would be charged 7*s.* 6*d.* a ton just the same as for the larger quantity, and if you held out every inducement in the world to get the rate lowered you would still be told that the rate was 7*s.* 6*d.* a ton for 10,000 tons. We cannot vary it in one case without an alteration in the general rate, and that can only be done by the Governor in Council.

Mr. Vesey Knox, K.C.—I am very much obliged to you. That will help us very much. Any other information we want, we can get by compiling it ourselves from the returns in our possession.

The Commission then adjourned till Thursday, 6th June.

THIRTY-FIFTH PUBLIC SITTING—THURSDAY, JUNE 6TH, 1907,

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Col. WILLIAM HUTCHESON POË, C.B.; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. F. J. CRAVEN examined by the CHAIRMAN.

June 6, 1907.

Mr. F. J. Craven, representative of Messrs. Ransomes, Sims, and Jefferies, Ltd., Ipswich.

19552. I think you appear here on behalf of Messrs. Ransomes, Sims and Jefferies, Ltd., of Ipswich?—That is so.

19553. They are, as we know, very large manufacturers of agricultural machinery and implements. I only wish to ask you a few general questions. What is your object in appearing before us to give evidence?—Our object is to get a general reduction of rates on heavy machinery into Ireland; and also our object is to get a reduction of rates in general from English stations to the interior stations in Ireland.

19554. Just let us see how it bears upon our inquiry. First of all, have you considerable trade with Ireland in connection with agricultural machinery?—In what way, may I ask?

19555. First of all, do you supply much agricultural machinery in Ireland?—I should think that my firm supply as much or more than any other English firms manufacturing heavy machinery.

19556. What are the particular machines you are referring to?—Heavy traction engines and threshing machines, and also agricultural implements—ploughs, lawn mowers, and so on.

19557. Do you exhibit at the various shows in Ireland?—We do.

19558. And you send your machinery from England to Ireland?—Yes.

19559. Just carry it on. I want to see how your evidence is germane to our inquiry. You know the object of this inquiry generally?—Yes.

19560. Would any of the suggestions that you have got to make help to improve the industries of Ireland?—I certainly think they would. In the first place we send this heavy machinery into Ireland practically on sale. Our object is, of course, to sell this stuff either at one show or another in Ireland. The main show we are concerned with is the Royal Spring Show in Dublin, to which we send a quantity of this class of traffic. From there, if it is unsold, Belfast comes next; we usually send there such pieces as we have unsold at Dublin.

19561. Are the rates in Ireland comparable in any way with the rates which you pay in England?—Well, as far as our experience goes, we are charged the same in the interior of Ireland that we are in England—the rates are practically the same.

19562. Are there any differences in what we call show traffic as regards rates in Ireland as compared with England?—Shortly the difference which we complain of is this—that whereas English companies carry show-to-show machinery at half rates—that is to say, they carry unsold machinery from one show to another at half rates—we have to pay in Ireland the full rates practically in a line with ordinary English scale rates.

19563. In that respect you have to pay considerably more?—We have to pay considerably more in proportion to what we pay in England.

19564. In moving from one show to another?—That is so.

19565. And you think that is detrimental to cultivating trade in Ireland?—It is detrimental to the general trade in Ireland.

19566. Just go to page 4 of your proof and give us certain rates for agricultural machinery which you have noted down there?—You mean the rates in comparison with the Scotch stations of equal distances.

19567. Very well. There is a remark on page 4, something about the absurd method of charging machinery in Ireland. Now, I want you to give us figures to prove what you say. Just mention two or three?—Take, for instance, the question of a traction engine, weighing seven tons, from Ipswich to the interior Irish station of Birr. At the present time we are charged with local rates from Ipswich to Liverpool, 26*s.* 8*d.*; Liverpool to Dublin Quay, 25*s.* 5*d.*; Dublin cartage 3*s.* 6*d.*, and the Irish carriage, Dublin to Birr, 13*s.* 2*d.*

Alleged excessive rates for conveyance of heavy traction engines to interior Irish stations.

19568. Those are all per ton?—All per ton—amounting in all to 68*s.* 9*d.* per ton, or £24 1*s.* 3*d.* for the engine which we maintain is preposterous.

19569. Can you tell us what the same rate would be if that went the same distance in England? Take the railway proportion—it is no use dealing with the sea. It is easy to say that a rate is absurd, but it must be absurd as compared with something?—It is absurd in comparison with the charge on a 5-ton engine.

19570. Give us some rates on a 5-ton engine?—The rate charged on an engine weighing 5 tons is only 48*s.* 3*d.* per ton, as against 68*s.* 9*d.* per ton for a 7-ton engine, so that in the latter case we have to pay about £6 per ton for the extra two tons over and above the five tons.

19571. Does the same apply to England?—Certainly not. In England we get a through mileage rate which is actually the same rate per ton in each case, and there is no extra charge over five tons.

19572. Surely there must be for ten tons?—If it is ten tons the charge per ton is the same as for five tons.

19573. The rates are the same per ton for five to ten tons?—The same per ton.

19574. That is the rule in operation in England?—Yes; whereas in sending the same engine into the interior of Ireland we have to pay practically 68*s.* 9*d.* against 48*s.* 3*d.* per ton.

Machinery traffic with Ireland handicapped for want of through mileage rates to interior towns.

19575. Have you represented that to any of the Irish railway companies—have you brought it under the notice of any of the Irish railway companies?—I do not know that we have specially to the Irish railway companies; we have to the carriers from Ipswich—that is, to the Great Eastern Railway Company.

19576. That they are not carried at a through rate?—That is our complaint—that they are not carried at a through rate—and we have correspondence from various railway companies stating that they were not able to arrange through rates for five-ton weights, but they must be charged at the local rates.

19577. *Mr. Acworth.*—You can arrange them from all parts of England to all parts of Scotland?—From all parts of England to all parts of Scotland we get through mileage scale rates, whereas to Ireland alone we have to pay the very heavy charges, which are very

June 6, 1907.

Mr. F. J. Craven, Representative of Messrs. Ransomes, Sims, and Jefferies, Ltd., Ipswich.

detrimental to English manufacturers and to the users of the machines in Ireland.

19578. Would you be content with the answer that the Irish companies cannot arrange it although you never got a reason?—We have not been content. Right away from 1901, when they commenced to demand these very heavy local charges, we have resisted it and deducted the extra through rate over and above the mileage amount, and we have now deducted a great number of these local rates and have a considerable amount outstanding.

19579. These Irish companies—are they still claiming these local rates, or have they given up doing so?—They are still claiming the local rates.

19580. *Chairman.*—Is the amount outstanding?—It is to a certain extent.

19581. You are speaking of Ireland now?—I am speaking of Ireland now, but practically we have circumvented the conference companies by sending goods by non-conference boats.

19582. But I am speaking of rates in Ireland—railway rates in Ireland?—We are dealing with the question now of through rates from Ipswich into Ireland.

19583. To begin with, you say there are no through rates, but you arrive at a through rate by adding together these various charges?—The railway companies do.

19584. You do it yourselves; the Great Eastern do not quote you a through rate?—The Great Eastern do not; they make through charges at local rates.

Comparison of through charges on machinery from England to Scotland and to Ireland

19585. I understand that your complaint is that as soon as you get into Ireland your rates are 50 per cent. more for large machines than they are in England?—No, that is not our main contention; our main contention is that the general rates throughout from Ipswich to the interior of Ireland are in excess of the rates on similar lots which go up to Scotland.

19586. Did you not tell us there were no through rates?—The through local rates I should say—the through rates charged to us comprising all the local rates.

Mr. Aspinall.—Mr. Chairman, this list of rates which the witness puts in on page 5 is not a list which compares as between Ireland and Scotland, but a list which is made upon the one hand from English rates plus the local rate in Ireland; but to Scotland it is a through rate.

19587. *Mr. Acworth.*—But I do not think that is so. I understand you to say that under five tons you have through rates in Ireland?—Up to five tons we have through rates into Ireland from Ipswich.

19588. So that these charges for agricultural implements, ploughs, lawn mowers, and castings, would be presumably under five tons?—I am speaking now of heavy machinery.

19589. Mr. Aspinall was asking you on the point where you make a tabulated comparison between Irish rates and Scotch rates. Those are charges you say on agricultural implements, ploughs, lawn mowers, and castings?—Exactly.

19590. There you are comparing under five tons?—Under five tons, certainly.

19591. So in that case you are comparing through rates with through rates?—Yes.

19592. *Colonel Hutcheson Poë.*—They do not refer to heavy machinery—those rates?—No. If you will allow me, I think I can put it plainly in a very few words by showing the documents which I have here.

19593. Just put it in your own way—I want to get at what your complaint is?—We will take heavy threshing machines and traction engines which are charged at a special mileage scale rate.

Instance of an excessive rate from Ipswich to Ballywilliam.

19594. In this country?—Yes. I have accounts here dated 1898 and 1900, rendered by the Great Eastern Company, who are the contracting carriers as far as we are concerned of this heavy machinery—this machinery weighing over five tons—into the interior of Ireland. Take, for instance, February 4th, 1898; we are charged by the Great Eastern Railway Company on 10 tons 4 cwts. to Ballywilliam at a through rate of 50*s.* per ton. If the same engine is carried now over the same route we are charged at local rates made up of various items such as I have mentioned, and amounting in all to 68*s.* 1*d.* as against the former rate of 50*s.* That is to say we are charged 18*s.* 1*d.* more per ton at the present time than was charged in 1898 for the same engine.

19595. *Lord Pirrie.*—It was 50*s.*?—In 1898 we were charged a through rate of 50*s.* whereas now we are charged at local rates on the various sections of the journey amounting in all to 68*s.* 1*d.*

19596. *Chairman.*—Are we to understand that since the first period you mentioned the through rates have been cancelled?—Through rates have been cancelled as far as we know. Prior to 1901 we were charged at through rates irrespective of weights at a through mileage rate of 50*s.* as against local rates charged at the present time of 68*s.* 1*d.*

19597. For the same kind of machine?—Exactly.

19598. *Mr. Aspinall.*—Do you say that that difference has been made on the Irish railways?—Over the Irish portion. The Irish railway companies now get their local rate from Dublin to the interior Irish station.

19599. Your assertion is that it is all on the Irish side?—I do not say the whole of it—a proportion of it, of course, is due to the English companies and the steamship companies.

19600. *Lord Pirrie.*—He says he does not know where it is?—It must be over the English and Irish railways and the cross-Channel.

19601. *Mr. Acworth.*—Can you still get a through ten-ton rate from Ipswich to Dublin?—No; that is our complaint.

19602. Not to Dublin can you get it?—To Liverpool only.

19603. Then it is not all the Irish railways?—It is not all the Irish railways.

Mr. Croker Barrington, Solr.—The rates for agricultural machinery are the same in England and Ireland, but with regard to what has been said about cross-Channel rates, the steamship companies have considerable difficulties in dealing with these heavy pieces of machinery, and they have consequently advanced their rates. But the rates are actually the same in England and Ireland; we get no increase on account of that increase in the steamship rate.

Lord Pirrie.—You do not mean to say the steamship companies get the 18*s.* per ton over the 200 miles.

Mr. Croker Barrington, Solr.—I do not think so.

19604. *Colonel Hutcheson Poë.*—What is the rate from Ipswich to Liverpool—you say you can get a through rate to Liverpool?—We get the English scale on a ten-ton lot—from five to ten tons—26*s.* 8*d.* per ton.

19605. When that engine goes across Channel to an inland Irish town, do you pay the same rate?—Based on the same scale in Ireland, but not across Channel.

19606. You cannot say whether the through carriage from Liverpool is in excess of what is only going to Liverpool?—I cannot say.

19607. *Chairman.*—What I understand is this—that in the last few years an alteration has been made in the rates for your traffic which has largely increased the cost of getting those machines into Ireland?—That is quite correct.

19608. And that up to a certain date you had through rates?—We were charged through rates.

19609. But since then, for some reason or other, the railway company—the contracting company—can now only book locally to Liverpool; then it is booked from Liverpool to the port, and then from the port to the interior station, and that some of these local rates are largely in excess of what you formerly paid when you had through rates?—That is the case exactly.

19610. We shall perhaps understand by-and-bye how it is that that alteration has been made, but that is what it really is?—You have quite grasped the case.

19611. Did you send anything to the last Spring Show at Dublin?—Yes.

19612. Just for the sake of information, what was about the weight that you sent?—You mean the present year, I take it?

19613. Yes?—We should send slightly over 100 tons.

19614. When was the Spring Show in Dublin?—Early in April, I think—the third week in April I believe it was.

19615. Do you know whether that particular traffic was carried at a through rate to Dublin?—In this particular case my firm proposed a through rate of 30*s.* having regard to the amount of traffic which we sent. In previous years we have generally sent from thirty to forty tons only. This year, in our desire to do a little more trade with Ireland, we decided to increase our Show exhibits, and I think practically

they amounted to about 110 tons, taking them altogether, and on account of the heavy increase we proposed a rate of 30*s.* as against a special rate of 35*s.* which had been previously charged to us for this special sending of the Show traffic.

19616. Was the particular consignment of 110 tons sent about the same time?—Practically all about the same time.

19617. And was one consignment made for one show?—Yes.

19618. Did you get that rate you asked for?—Not up to the present; we have been informed by the contracting company, the Great Eastern, that the various companies have not yet agreed to the 30*s.*

19619. The subject is outstanding?—The subject is outstanding. It has not yet been charged to us.

19620. Do you think that it would encourage the farming industry and the agricultural industries in Ireland if there were low through rates from England to Ireland for these machines?—Most certainly, because the user—the buyer—in Ireland pays from the Irish port, and if we can get through mileage scale rates to the customer's station in the interior of Ireland, his proportion is very much reduced, because we only charge him the proportion of the through rate, viz., from the Irish port to destination.

19621. Do you know from your knowledge if these particular machines are made in Ireland anywhere?—I do not think they are manufactured in Ireland at all.

19622. They must come from England?—They must come from England, or from American makers; and while speaking of American machinery, I might say that I am given to understand that American implements are delivered from the American seaboard into Ireland cheaper than it is possible to send them from Ipswich.

19623. Is that within your own knowledge?—Well, I am given to understand that. I have nothing to confirm it.

Examined by Mr. Acworth.

19624. One thing more about the show, which I do not think you cleared up. As I understand, in England you pay the full rate to the first show, and half rate to each other show, and so on all the way back again if it comes back?—That is so.

19625. In Ireland you pay full rates on from show to show, and if it were coming back to a point in Ireland—if your works were in Ireland—coming back free?—That is so.

19626. As your works are not in Ireland you do not get that advantage?—Certainly not.

19627. It is fair to say that the Irish companies do make a concession although in a different shape from the English companies, only you do not get it?—We maintain the concession made by the Irish companies is not so advantageous as the English custom, because we do not want to bring the machinery back to our works.

19628. It is clearly not as advantageous to you; it might or might not be equally advantageous to an Irish customer?—That is so.

19629. We have surely got to this, have we not—that this difference between the rates over five tons and the rates under five tons is not all taken by the Irish Railway Companies; it is pretty clear that the steamers take some part?—I should say so. The Steamship Companies have a great advantage in charging the local rate.

19630. We cannot deal with steamers. You say there is an extra charge which is unjustifiable?—Exactly.

19631. As it began it looked as if it was a charge made wholly by the Irish railways; it is now clear that it is partly made up by the cross-Channel steamers, but how much of it you do not know?—I am not prepared to say.

19632. Have you ever gone to the Board of Trade and asked them to get this out for you—to find out where the difference comes and the reason for it?—I think the Board of Trade is a body to be avoided. We do not get remedy through them so quickly as we might do.

19633. This difference occurred to you beginning in 1901?—1904 is when we got a combined letter from the Railway Companies—the Great Central, the Great Eastern, the Great Northern, the North Western, and the Midland Railway Companies stating they would in future be unable to charge weights over five tons at through mileage rates. There were differences between 1901 and 1904.

19634. It does come to this—that in 1901 there was a change made?—In 1901 there was a change made.

19635. You were notified of it?—Only through the charges in our account. Later, in 1904, we received the joint letter signed by the various managers of the railway companies stating that from that date they were not prepared to carry these heavy weights through.

19636. Ever since 1904?—And we have protested in each case.

19637. And the matter is not yet settled?—And the matter is not yet settled.

19638. In all that period you have never asked the Board of Trade to try and supply it. I am not arguing that you ought to have done so—I merely want the fact?—No.

No appeal against the increased rates made to the Board of Trade.

19639. As I understand, you have got round it as well as you could by employing a non-conference steamer, and in that way you got to Dublin, Waterford, or wherever it was, and then you paid the local rate into the interior?—Yes, but wherever we can, to save the Irish customer expense, we arrange to steam the engine to whatever point the customer may require, and in consequence the Irish companies lose the traffic.

Machinery shipped to Ireland by non-conference steamer at low rates.

19640. How much do you save by taking a non-conference steamer, say, to Waterford. Perhaps you would not like to say that?—I do not know that it matters—it only shows that we do get them through cheaper than ordinary local rates.

Traction engine steamed by road to interior places in Ireland to escape excessive railway freights.

19641. I was wondering whether you would save the 18*s.* you gave?—I should say over and above the 18*s.*

19642. So that the result of this charge that you find unreasonable has been to force you to find out another route and to save money?—I would much rather send it at a through rate, because it entails a great deal of work, and sometimes delay in arranging shipment by the infrequent sailings of the non-conference boats.

Infrequent sailings of non-conference steamers an objection to their use.

19643. Just one other thing. I am not quite sure whether your complaint is practically that you are hampered in getting into Ireland?—It is.

19644. I have noticed since you came this morning that the reference to this Commission is to consider how far the railways afford adequate facilities for traffic "within the island and to Great Britain." Not "from" Great Britain. It is a slip really, I dare say, but it is merely traffic to Great Britain?—We have Irish cases where we have traffic from the Irish seaboard. I have one case in particular—that is an engine from Drogheda into the English station; we were charged 40*s.* per ton from Drogheda to Liverpool and the local rates; 17*s.* 7*d.* per ton from Liverpool to Darlington. After a lot of writing and correspondence with the Steamship Company we got that reduced.

19645. That is not an Irish railway?—No.

19646. The thing you are speaking about is, of course, rates. You want lower rates, or better facilities for the same rates, from England to Ireland?—From England into the interior stations of Ireland.

19647. I do not know how far you have seen the evidence before this Commission—you probably have not seen it much?—None at all.

19648. You ought, I think, to know that we have had a great deal of evidence to the effect that the rates from England to Ireland are too low at present, and therefore enable the Englishman to cut the trade of the Irish manufacturer?—But I maintain in the case of this heavy machinery about which we complain that there are no manufacturers of heavy machinery in Ireland.

The importation of heavy machinery alleged not to compete with any existing industries in Ireland.

19649. Your answer is that you are not competing?—We are not competing with Irish makers.

19650. But what do you say about lawn mowers and ploughs and things of that kind?—I do not think there are many manufacturers of those things in Ireland; they are in the main supplied by English and American makers.

19651. But supposing an Irish maker came and said that he had not a chance of starting such a manufactory because the Englishman is given the advantage in starting in Ireland, what would be your answer? We were told of a manufacturer in Wexford, for instance. What is your answer to that?—I think that, taking into consideration the long distance that we are away, the Irishman would have quite as much advantage as the English maker and more so because of the price the English maker has to pay on the

June 6, 1907.

Mr. F. J. Craven, Representative of Messrs. Ransomes, Sims, and Jefferies, Ltd., Ipswich.

machinery from the English centre to the Irish seaboard in comparison with the Irish maker. Of course the English have to pay in addition to the Irish maker freight over a long distance to the English port plus water freight.

19652. Your answer would be that you think you ought to be allowed to compete in Ireland?—Certainly.

19653. You do not think railway rates ought to be adjusted so as to prevent you doing that?—I think it ought to be fair all round both to English and Irish.

19654. You would say in any case that even if you get lower mileage rates the fact that you are further off must help to some extent the Irishman?—To a great extent, I should say.

19655. I only wanted to call your attention to the evidence that had been given, because we have had a great deal of it.

19656. *Mr. Aspinall.*—Your serious competitors are the makers of a large quantity of American machinery?—That is so.

Examined by Colonel Hutcheson Poë.

19657. I think you say that for show purposes there is a specially low rate into Dublin?—We have in past years had one.

19658. And you are trying to get it now?—Yes.

Low rates for machinery to Irish shows asked for large quantities only.

19659. Supposing there is a show in Belfast or Cork, and you wish to send machinery there direct, have you ever had occasion to see if you could get a through rate to Cork or Belfast, for instance?—I do not know that we have had any great weight which entitled us to ask a specially low rate to either Belfast or Cork. We have had occasions where we proposed to send an engine or machine—one set—but we have had no occasion to send any large quantities which we could send to Dublin. Dublin is our main show in Ireland.

19660. You consider it is only where you are sending large quantities that you are entitled to ask for a specially low rate?—For a specially low one—yes.

19661. The effect of the present system with regard to engines over five tons weight is that in the case of a seven-ton engine at present sent to Birr, for instance, you are paying £24 1*s.* 3*d.*, I think it works out to that?—Yes.

19662. And if that was charged at the ordinary 44*s.* 4*d.* a ton it would come to £15 10*s.*?—That is so.

19663. In other words, practically a difference of £9?—Owing to the high local charges there is a difference of £9.

19664. There is a difference on the carriage amount of £9?—That is so.

The possible effect of low through rates on competing Irish manufactures.

19665. You said in reply to Mr. Acworth that you considered in consequence of the longer distance over which you have to send goods to the port of shipment from England you were not inflicting any injustice on the Irish manufacturer by sending your goods in at a low figure?—I should say not, having regard to the short distance paid for by the Irish manufacturer as against our long distance from England.

19666. But against that is there not something to be said in favour of entitling the Irish manufacturer to some difference owing to the fact that he has to import raw material very much higher than you?—I should say he could import his raw material at practically the same cost as we can in England.

The facilities for obtaining raw material in Ireland as compared with East Anglia.

19667. As a matter of fact, we have got no iron and coal in Ireland?—Neither have we in East Anglia. We have to pay for our raw material from the centres the same as the Irish people have. Take, for instance, the raw material which we get. I should say the Irish manufacturer would be able to get from South Wales and Scotland even cheaper rates than we could from Scotland, from the North Country, or from South Wales.

19668. In other words, you consider that you and the Irish manufacturer are practically placed on an equality as regards raw material?—I should say so.

19669. With regard to this small agricultural machinery of a light class, I see the figures you have given on page 5 of your proof show with respect to Ireland that there is an increase of about twenty-five per cent. on the Scotch charges?—It amounts to that, yes.

19670. Of course there are plenty of manufactories of small mowing machines and agricultural implements in Ireland. Do you not think the fact of your being able to send them over at this rate would very seriously affect their output?—At a cheaper rate than Ireland?

19671. Yes, as regards the light machinery I think you will find a considerable number?—I think you would find the Irish manufacturer has a considerable advantage as compared with the very heavy rates paid from the English stations.

19672. The whole of the evidence given before this Commission has been to the effect that the local rates from station to station are so high compared with the English through rates that the Irish manufacturer is unable to live?—I should say that is an additional reason why Irish railways should reduce their rates. We have to pay local rates in the same way that the Irish manufacturer does, with the addition of the long mileage to the Irish seaboard.

Examined by Sir Herbert Jekyll.

19673. Is this a very large trade—the export of agricultural machinery to Ireland?—I do not know that I am at liberty to say the amount of traffic we do actually send into Ireland, but I think it is sufficiently heavy to warrant our asking for a smaller charge.

19674. Cannot you say the value of the agricultural machinery exported into Ireland?—I cannot. I have not the information on the point.

19675. Do you think it is a substantial amount?—Quite substantial enough to warrant our objecting to these high rates.

19676. *Mr. Aspinall.*—Can you give the tonnage?—I cannot give the tonnage or the value.

19677. *Sir Herbert Jekyll.*—Has it occurred to you and other manufacturers to set up works in Ireland and so save the whole of the railway expenses?—I do not suppose it has; all we have done is to practically start agencies whereby we send as much machinery as we imagine will be used during a certain season. We have warehouses—that is the only extent to which we have gone at present; I do not know that we have contemplated starting works in Ireland at all.

Examined by Lord Pirrie.

19678. You have spoken about the through rates from Ipswich to parts of England and Scotland, and you complain of the through rate to Ireland being very excessive. Have you considered that for that nine-ton or ten-ton traction engine you have to pay the craneage in Liverpool, taking off the wagon at the steamer at Liverpool; the same when it arrives at Belfast or at Dublin, and the same when it comes back again to this country; you have to pay the craneage of from £3 to £5 a lift, according to the particular Harbour Board or Trust you are dealing with. Is that not where the cost comes in, and not what Mr. Barrington suggests—the steamship freight?—We have also taken the craneage into account, and we have actually offered to pay the extra charge for craneage on heavy pieces from seven to twelve tons; we have offered to pay the extra charges for craneage over and above the through mileage rate if that is put into operation.

19679. That is what I wanted to be clear about—you have absolutely undertaken that. Then in that case you have got a very strong claim, I take it, for the through rates being the same?—We maintain that out of your profit the craneage charge is reduced to a minimum. I do not think your figure of from £5 to £6 for the lifting of an engine is based quite as low as you could make it.

19680. The first lift is £3, and that will cost you, say £15, and if you have a dozen of them you can take it by the hour, and you can get all that done at the same price?—We are prepared to pay extra craneage charges in reason for extra heavy weights.

19681. I only want to point out that given a free passage to Scotland or any part of England, it remains the same, and you have to pay the extra craneage in connection with that?—Exactly.

19682. *Mr. Aspinall.*—In connection with Lord Pirrie's point about craneage; are you aware that if at Liverpool a large engine weighing ten tons had to be lifted into a Belfast Steamship Company's boat, the Belfast Steamship Company would have to arrange with the Mersey Dock and Harbour Board for one of their floating cranes to come alongside, and very likely the ship itself would have to be shifted from its berth, and all this has got to be taken into consideration in the case of lifting one little parcel of your goods?—Exactly.

Lord Pirrie.—If you go to Belfast a ship has to go a certain distance from its own crane and back again. I only want to have it right on the minutes.

Mr. Aspinall.—I do not think your suggested charge of £5 in some cases would cover it.

Mr. Croker Barrington, Solr.—I do not think it would.

Witness.—I maintain that a non-conference boat can take these things and quote a through mileage rate from Ipswich to Belfast, if one can do it the other should be able to do it at the same figure.

19683. *Lord Pirrie.*—Your evidence is on the broad lines that you want the Irish people to get the goods as cheap as people in Scotland or England?—Yes, providing for ourselves at the same time; we do not want to pay these very heavy rates; we have very serious competition to fight against in Ireland from the American manufacturers, and our object is to meet this competition and give some advantage to our customers in Ireland.

19684. *Chairman.*—I think I understand you clearly to state that goods exhibited at a Show in Ireland, if removed to another Show in Ireland, are charged at the full rates?—That is so.

19685. Whereas in England, if they are exhibited at a Show at Derby and sent on to another Show at Nottingham, they are charged half rates?—Yes.

19686. And in that respect it is quite different in Ireland from what it is in England?—That is so; we have been charged by an Irish railway company reduced rates from Show to Show, and our object is to bring the remainder of the Irish companies into line with the English companies who do so charge. We have actually been recently charged by Irish companies reduced rates from Show to Show.

19687. I understood from the other end of the table that the arrangements in Ireland were precisely the same as in England, but in this respect the arrangements absolutely differ.

Mr. Smyth (representing Mr. Tatlow).—The case he mentioned was from Dublin to Belfast.

Chairman.—I will lay down the principle—what it is in England and what it is in Ireland. I look at your Irish regulations, and I find that that particular regulation is not adopted.

Mr. Smyth.—The rates for Agricultural machines and engines were—as the witness admitted—the same in Ireland as in England; but in England there seemed to be a charge for exhibits of half rate "from Show to Show," which was not generally recognised in Ireland, although in the particular case that had been mentioned, namely, that of goods taken from Dublin to Belfast, the half rate had been conceded.

19688. *Chairman.*—I merely want to have it clear on the notes, and I think Mr. Smyth has correctly stated the arrangement. Just one other question. You said that about 110 tons were sent to that Show in Dublin—the Spring Show?—Yes.

19689. Was that traffic removed to any other Show or was it brought back—were the articles not sold?—In this particular Show the portion of the goods unsold remain in our warehouse in Dublin practically on sale; we may send them to other Shows in Ireland or sell them direct to customers.

19690. Have you anything on exhibit now?—No. In addition to the Belfast Shows, we have been offered by another Irish railway company the same reduced rates that we were able to obtain from Dublin to Belfast, from Belfast to Cork providing that the remainder of the companies interested would agree to that reduction. The same company who allow us reduced rates from Show to Show agreed to allow us the same reduction.

19691. *Mr. Acworth.*—Do I understond that your feeling is that your competitors in Ireland are the American and not the Irish manufacturers?—Americans principally, I should say.

19692. In competing you have to keep your eye on the Americans and not on the local people?—The majority of our trade, yes.

June 6, 1907.

Mr. F. J. Craven, Representative of Messrs. Ransomes, Sims, and Jefferies, Ltd., Ipswich.

Conformity of the Irish with the English railway rates, etc., for "show to show" traffic urged.

Mr. JOHN M'LAUGHLIN examined by the CHAIRMAN.

19693. What part of Ireland do you come from?—From Buncrana, County Donegal, near Londonderry.

19694. What particular trade or industry in Ireland do you represent—The white shirt manufacture.

19695. And that is a very important industry in Donegal?—It is.

19696. Are you a manufacturer?—Yes.

19697. What railways in particular serve your district?—The Londonderry and Lough Swilly, the Great Northern, and the Northern Counties (Midland).

19698. Now, with regard to those particular railway companies, have you any substantial complaint to make with reference to the rates on the staple article of manufacture in your district?—I have.

19699. First of all, let us deal with it in two parts, if you do not mind. Let us deal with what I call the unfinished article, and then with the finished article?—Yes.

19700. You do not manufacture cotton?—No, we have to import.

19701. You have to import the calico, or linen, or whatever it is, into your district?—Yes, from Manchester.

19702. Are the rates from Manchester to your district fair and reasonable?—Yes to Londonderry they are, but the rate from Manchester to Londonderry on the raw material is 22*s.* 6*d.* per ton.

19703. Just explain what you mean by the raw material?—The cotton.

19704. The cotton cloth?—Yes, but there is also linen, which we have to get from Belfast, and the rate from Belfast for the linen is 20*s.* to Londonderry.

19705. What is it from Manchester to Londonderry for the cotton cloth?—22*s.* 6*d.*

19706. 22*s.* 6*d.* from Manchester and 20*s.* from Belfast to Londonderry?—Yes.

19707. Is that for any quantity?—Yes, for any quantity.

19708. Any quantity above three cwt.?—Any quantity above three cwt.

19709. Do the rates in both cases include collection and delivery?—They do.

19710. The Manchester rate includes collection and delivery?—Yes.

19711. And the Belfast rate?—Yes.

19712. What you say is, I suppose, that the rate from Belfast to Londonderry is out of all proportion to the rate from Manchester to Londonderry?—Quite so.

19713. And that is your complaint?—That is my complaint.

19714. Have you represented that to the railway companies at any time?—No, I have not represented any comparison of the rates.

19715. That is with regard to what you call the raw material?—Yes, but of course when the raw material comes to Londonderry I have to get it sent to Buncrana on the Lough Swilly Railway, and my complaint is that I have no through rates from Manchester to Buncrana. To the 22*s.* 6*d.* I have to add 7*s.* 3*d.* for the rate on the Lough Swilly Railway, or a station-to-station rate of 4*s.* 10*d.*

19716. What is the distance?—I believe the distance is about twelve miles.

19717. That seems a very low rate—4*s.* 10*d.*?—It does, but when you consider the terminal charges——

19718. But that rate includes the terminal charges?—But by an arrangement with the various carrying companies in Londonderry any goods consigned for stations on the Lough Swilly Railway are not delivered to the Lough Swilly Railway Company in Londonderry. They allow the Lough Swilly Railway Company's carters to lift it, and they impose a charge for cartage at Londonderry.

19719. But I understood you to say that the rate was "collected and delivered"?—So it is. The rate from Manchester is 22*s.* 6*d.*

19720. To Londonderry?—To Londonderry.

19721. That goes, I suppose, from Manchester to Liverpool, or Fleetwood, or Heysham, and then by trading steamer to Londonderry?—Yes.

19722. When it gets to Londonderry it has to be delivered to the consignee, whoever he is?—Yes.

19723. The consignee in your case is the Lough Swilly Company?—Yes.

19724. It is delivered free to them?—It should be delivered free, but it is not.

19725. Then it is not a collected and delivered rate?—It is, but by an arrangement——

19726. Will you tell us your story in your own way?—I should explain to you that the carters in Londonderry for the Lough Swilly Company are

Mr. John M'Laughlin, Shirt Manufacturer, Buncrana.

Alleged excessive rate for linen, Belfast to Londonderry.

Complaint as to want of through rates from Manchester to Buncrana.

Complaint of added cartage charges in Londonderry on goods transferred from steamers to Lough Swilly Railway.

June 6, 1907.

Mr. John M'Laughlin, Shirt Manufacturer, Buncrana.

Messrs. M'Crea and M'Farland. The Chairman of the Railway Company is a proprietor of Messrs. M'Crea and M'Farland, and in order to provide work for his carts, any stuff consigned to the stations on the Lough Swilly and not delivered, his carts are allowed to call for, and they impose a charge for cartage on top of the 22*s.* 6*d.*

19727. It is easy to say that, but have you any proof of that?—I have.

19728. With you?—Yes.

19729. Would you mind showing it?—I will read you a letter written in 1905.

19730. To whom is that letter addressed?—To myself.

19731. From whom?—From the Glasgow, Dublin, and Londonderry Steamship Company.

Instances of cartage charges imposed by Lough Swilly Company for transfer at Derry on goods booked from Manchester at "collected and delivered" rates.

19732. You are entitled to read it?—"Your favour of the 4th inst. Our charges on the lot in question were 6½ cwt. at 27*s.* 6*d.*—8*s* 11*d.*, and this is all we charged on. Then at certain intervals, as you are aware, we refund you 5*s.* per ton in the way of rebate, which brings our rate down to 22*s.* 6*d.* per ton. The difference between our charge, 8*s.* 11*d.*, and the amount shown on the account, 10*s.* 3*d.*, appears to be charged on for Derry cartage, and this you have no right to pay. We are always agreeable to deliver these goods free at the Lough Swilly station here without any cartage, but some time ago we were informed by the Londonderry and Lough Swilly Company that their rates had all been made to include cartage, and that in future their own contractors would be made to do the work. This was why these goods were handed to Messrs. M'Crea and M'Farland, but if you are going to be charged extra cartage in this way, then we will in future deliver the goods at the station ourselves, and we have given instructions for this to be done. It will be well for you to ask the Railway Company to refund you the difference, as we only charged forward 8*s.* 11*d.*"

19733. *Mr. Acworth.*—Have you got the Lough Swilly Company's account of that particular transaction?—No, I sent it to the Steamship Company, and I did not get it back.

19734. *Colonel Hutcheson Poë.*—I suppose your contention would be that the Lough Swilly Company are really charging two cartage rates—they are getting one from the forwarding company and charging you another?—Yes; and also if you look at one of their bills, you will see they include the cartage in their paid-on steamer charge, so that we have no means of checking it except by going round to the various companies and comparing their books with the rates of the paid on charge. In one instance where the total charge was 11*s.* 7*d.* I went round to the various companies and found that 11*s.* was their charge, and that 7*d.* was charged by the Lough Swilly Company for cartage. There is another case of 7*s.* 3*d.* "paid on" and the amount was 6*s.* 9*d.* actually; and in another case where 4*s.* 10*d.* "paid on" was charged the actual amount was 4*s.* 7*d.*

19735. Is it all sent by cart?—Some comes by rail; they come by various routes.

19736. *Mr. Aspinall.*—Where did that particular consignment come from?—*Via* Heysham, I think, from Manchester.

19737. *Mr. Croker Barrington, Solr.*—Would you ask the witness, before you leave that, if he ever made any complaint of this special refund? On the face of it there seems to be an overcharge.

19738. *Chairman.*—These are all instances confirming the same thing. But there is a paid-on steamer charge in every case by the Lough Swilly Company although the traffic has been brought direct into Derry—by steamer. (*To the witness*).—When you got that letter did you write to the proprietors—what action did you take on it?—I wrote back and told them that I claimed the refund of them—that they had a right to deliver the goods to the Lough Swilly Company's premises, and not allow Messrs. M'Crea and M'Farland to handle them at all.

Alleged refusal of the Lough Swilly Company to investigate complaints relative to improper cartage charges at Londonderry.

19739. Did you write to the Lough Swilly Company?—No, because previous to that they refused to investigate anything with regard to paid-on charges. There is a letter from them on the 14th May, 1902, on the disputed charges on a truss and a package from the Belfast Steamship Company.

19740. Then you wrote to them?—I may say that when I dispute the charges they take back the stuff to the station and hold it until the matter is investigated. They will not deliver the stuff, no matter how exorbitant the charges are, if you dispute them; they will carry it back half a mile to the railway and hold it until the matter is settled. So I found it always inconvenient, being sometimes in a hurry and wanting the goods; my cutters would be standing waiting, so rather than see it go back to the station I paid the charges.

19741. That action did not encourage you to communicate with the Lough Swilly Company?—No.

19742. And that is the reason you did not?—Quite so. But another reason was that the station-master had replied to my complaint, "Our charges are correct in all the attached bills. I have no means of checking paid-on charges. I have looked up every account, and I do not think there are any overcharges."

19743. What is the date of that?—14th May, 1902.

19744. That is their general answer?—Yes.

19745. And therefore you fell back on the Belfast Steamship Company?—Yes.

19746. That was put right as far as you were concerned?—It was put right, yes.

19747. Has the matter been put right since?—No; it is continuing up to the present day with other companies—the same method.

19748. But I thought that letter stated that for the future they would cart their own traffic to the Lough Swilly Company?—Yes, but they did not do it. They stated so.

19749. That letter states so distinctly?—Yes. There is one of their bills (*producing same*) of the 26th December, 1906, with a paid-on of 6*s.* 7*d.* charged by the Lough Swilly Railway Company, where the actual charge should be 6*s.* 2*d.*—5*d.* is put on for cartage.

19750. Therefore the practice of which you complain, and which the Lough Swilly Company admit is wrong, is still going on?—It is.

19751. And you are paying practically cartage twice over?—Yes.

19752. And you cannot get any remedy—I mean you have not got any remedy?—I am not constantly at home, and the man who pays these charges looks at the paid-on charges, but he has not the knowledge sufficient to enable him to check them, and the result is that these bills are paid, and when I go back there is a batch of them. I would almost have to keep a man to check these. I cannot afford to keep a man to look only after the paid-on charges, as I am only a manufacturer in a very small way.

19753. We will pass on to the rates for the finished article—the shirts after they are made, you know?—Yes

19754. I assume—in fact I think I know—that this is a very important industry in your district?—It is.

19755. And although the traffic is not heavy in so far as tonnage is concerned, the consignments are numerous?—Very numerous.

19756. Small consignments?—Yes.

19757. Have you anything to say with regard to the rates on shirts? First of all, have you got the rates, say, from your station, Buncrana, to, say, another station in Ireland, Cork or Waterford, for instance?—I have not the rates from Buncrana, but I have them from Derry to Cork and Waterford—the rate from Derry to Cork and Waterford is 62*s.*

19758. One minute. That is again in lots above the small scale, I suppose—above 3 cwt.?—Yes.

19759. Very well; go on with your illustration?—The rate from Buncrana to Derry is 7*s.* 3*d.*, which would leave it about 69*s.* Well, a Glasgow manufacturer can send his goods from Glasgow to Cork for 28*s.* 9*d.*

19760. The same goods?—Yes, exactly.

19761. Shirts?—Yes.

19762. *Colonel Hutcheson Poë.*—That is all sea carriage?—It is all sea carriage.

19763. *Chairman.*—Just make that very clear, will you?—The rate for shirts from Buncrana to Cork, I should say, would be about 69*s.*; the rate from Glasgow to Cork for a Scottish shirt manufacturer would be 28*s.* 9*d.*

19764. That is all the way by sea?—It is.

19765. Of course it operates against you, I admit, but is there a sea communication from Londonderry to Cork?—Yes. I have very little trade with Cork, and I think it is only once in twelve months I send any to Waterford. When I do I ship over to Glasgow, and there re-ship from Glasgow to Waterford.

19766. Yes, of course that is all the way again by sea, and therefore the rate is much lower than if sent throughout by rail; but, as you frankly say,

you have not much business with Cork and Waterford, and therefore I think we will leave this illustration. I suppose you consign from your station practically to Dublin?—Yes, I do, but I should explain that. I only started the business in 1902—it is only five years since I started. At first the shirts are made in the country. I have a small factory in Buncrana; they are made in the country and they are sent to Derry to be laundried—to be dressed. At first I took the shirts back to Buncrana to examine them and box and pack them. I found that it was far cheaper for me to employ a man in Derry and take a place in Derry and ship them direct rather than bring them back to Buncrana. The delay would not compensate me for the charge for the rent that I had to pay in Derry and for keeping an extra man.

19767. Then practically the finished article is sent from Derry?—The finished article is sent from Derry. London is my principal market.

19768. As I say, the finished article is sent from Derry, not from your little station?—Yes, that is so.

19769. Have you anything to say with reference to the small parcel scale?—Yes, the tendency in the white shirt trade now is altogether in the way of special orders.

19770. Say a dozen shirts?—Say three dozen on an order.

19771. I suppose an individual can order a dozen shirts?—Quite so. An individual can enter a hozier's and order a dozen shirts there, and we have to send them over in a special parcel.

19772. What would that dozen shirts weigh about?—A dozen shirts would weigh, with boxes, roughly, about 11 lbs.

19773. What have you got to say about the rate, say, for a 12 lbs. parcel?—I had the scale for the small parcels, but I have mislaid it; but here is a railway receipt I have where I bought some French embroidery for shirts in London last April, and there were two parcels consigned of 80 lbs.—5*s.* 6*d.* it cost for 80 lbs. There was 4*s.* 2*d.* of paid-on charge and 1*s.* 4*d.* charged by the Lough Swilly Railway Company to Buncrana.

19774. Where was that from?—From London.

19775. How was that to be sent from London, do you know?—It was sent by the London and North-Western.

19776. That would go through Holyhead, I suppose?—Yes.

19777. *Lord Pirrie.*—It would go through Fleetwood in all probability, would it not?—Or Greenore. The charge of 1*s.* 4*d.* is what I paid on over the Lough Swilly for 80 lbs. They justify it in this way—that it is sent by the passenger train, but there is no such thing as a passenger train on the line.

19778. *Chairman.*—They are mixed trains, I suppose?—They are mixed trains. For instance, a parcel handed to them on Saturday at two o'clock is not delivered by them in many cases until the afternoon of Monday; yet they charge at the rate of an express service for that, and if you hand in a parcel at their passenger platform—very often in Derry I get special orders down on Saturday evening to send by post to customers, and if the van-man from the laundry hands it in at the passenger platform instead of going down to the goods, they charge me passenger rate.

19779. I think that is right?—Although they send them by luggage train?

19780. Oh, I assume they were sent by passenger train. But why do you not send these small parcels by post?—A parcel of over 40 lbs. you could not send by post.

19781. I am speaking of 11 lbs.?—I am not complaining so much about parcels of 11 lbs. as about parcels of 80 lbs. and upwards.

19782. What would be the goods rate?—7*d.*

19783. And for goods they send by passenger train they charge how much?—1*s.* 4*d.*

19784. Your contention is that they are mixed trains, and that all articles sent should be charged at the goods rate?—Quite so.

19785. That is your contention?—Yes.

19786. Why have not you through rates from England *via* Londonderry to your station. I do not know. I had an interview with Mr. Moore, the Manager of the Lough Swilly Railway, in 1903, previous to taking his place in Derry, about through rates, and he could not see his way to give them.

Alleged refusal of Lough Swilly Company to arrange through rates from England to Buncrana.

19787. Did he give any reason why?—I think he said my traffic was not of sufficient dimensions at the time.

19788. Are there any through rates for anybody?—I believe there are through rates for fish but not for anything in my way.

19789. But yours is a large industry up that way?—Oh, yes; it is the staple industry of Londonderry.

19790. Have you anything to say in reference to the owners' risk rates and the company's risk rates?—Yes; those parcels I speak of, for instance, from Belfast, if we are getting a parcel they charge a penny on it, but if we sign this agreement upon owner's risk, they will take them at a halfpenny a pound. I paid on 47 lbs. in April 3*s.* 11*d.*, and if it had been sent at owner's risk it would have been half of that.

Complaint as to scale of charges for small parcels between Londonderry and Buncrana, "ordinary" and owner's risk.

19791. Why do you not sign that owner's risk note, and get your traffic carried at 50 per cent. below the ordinary rate?—It rests with the people who consign the goods as to what way they should be sent.

19792. But of course this risk note only refers to traffic from Derry to your station?—That is so.

19793. Is that a general risk note applicable to Ireland, or merely to the Lough Swilly Railway?—Merely to the Lough Swilly Railway.

Mr. Balfour Browne, K.C.—That is general, sir—half parcel scale.

Chairman.—We are not talking about the rate. The point is, that whatever the rate is, if that is signed, they carry it at half rate.

Mr. Balfour Browne, K.C.—Those are the conditions in force all over Ireland, and, I believe, England, too. Mr. Aspinall can tell you.

Mr. Acworth.—The quaint thing is that this does not say to what it is applicable at all. They have two rates for the carriage of certain merchandise by merchandise or passenger trains. It might apply to coal, or salmon, or anything; there is nothing to show.

The Great Northern Company's rates for goods by passenger train.

Mr. Balfour Browne, K.C.—I have here, sir, the Great Northern of Ireland time-table, and this says: "Traffic conveyed at half parcels rates, at owner's risk, unless otherwise stated, between stations locally on Great Northern Railway (Ireland)." And then it fills in a scale—bread, so many pounds at a certain rate; butter, so much, and so on. With the two together, you can make out what it is.

Mr. Acworth.—That is headed, "Half Parcels Scale." This applies apparently to merchandise in any quantity. That is the queer thing about it. I think we all know the half parcels scale in England—it is quite common—but never on that standard.

Mr. Balfour Browne, K.C.—I think if you will read it, it is a form to be filled up. It says:—"I beg to inform you that the Londonderry and Lough Swilly Railway Company have two rates for the carriage of certain merchandise on passenger trains, at either of which rates the same may be consigned at the sender's option: one, the ordinary rate, when the company accepts the ordinary liability of a railway company; the other, a reduced rate, adopted when the sender agrees to relieve the company and all other companies or persons over whose lines the merchandise may pass, or in whose possession the same may be during any portion of the transit, from all liability for loss, damage, mis-delivery, and so on. Then he accepts one of those rates on the form below.

Mr. Acworth.—But my point is this: it is quite common to sign a document like that on English railways if you send your linen to be washed from your London house into the country; but the form I have seen applies to parcels by passenger train, while this applies to parcels up to any quantity, and I think that is exceptional.

Witness.—When you add on the terminal charges to the ordinary traffic charges and the owner's risk charges are practically the same. For instance, a packet of 3 cwt. from Derry at the ordinary scale amounts to 1*s.* 4*d.* At the owner's risk rate it amounts to 11*d.*, but when you add 3*d.* for the cartage at Derry, and 2*d.* at Buncrana, it amounts practically to the same thing as the company's risk.

19794. *Chairman.*—Do two railway companies deliver at your station?—Two.

June 6, 1907.

Mr. John M'Laughlin, Shirt Manufacturer, Buncrana.

19795. First of all, you complain about the rates being, in your judgment, excessive, and secondly, about the want of through rates?—That is so.

19796. Are there through bookings for passengers on the whole of the system?—No not to England.

19797. Not to England?—No.

19798. Take your own station for instance?—Buncrana.

19799. Yes. Supposing you want to get to England, how do you go?—I have to go to Londonderry first.

Inconvenience caused by absence of through passenger bookings to England from Lough Swilly Railway Stations.

19800. And then from Londonderry you can book anywhere?—Yes. There are not through bookings on their own line; you could not book from Buncrana to Letterkenny on their own system.

19801. Do you mean to say that on the system of the Lough Swilly Company they do not book from any station to any station on that railway?—If I wanted to go to Letterkenny, I have to take a ticket to Londonderry, and then another ticket to Letterkenny.

19802. You could not book through?—No; the train does not stop there all times.

19803. *Lord Pirrie.*—It is quicker to go to Derry than to wait on the platform?—Yes.

Mr. Balfour Browne, K.C.—I am told, sir, that really the practice or custom of the company is that they do book through where there is a connection, but where there is no through connection they do not book through.

Lord Pirrie.—But a junction should be a connection, should it not?

Mr. Balfour Browne, K.C.—In some cases there is a connection with the junction, and then I find that where there is a local fare there is a through booking, and where there is no local fare they do not book through.

Witness.—There is never connection at the junction.

Mr. Balfour Browne, K.C.—That may be an answer.

Reduction in freights and improved facilities generally called for to develop local industries.

19804. *Chairman.*—Do you think that if better facilities were given, and these charges that you mention abolished—this extra cartage charge, and so on—it would tend to increase the industries of your neighbourhood?—It would.

19805. Do you think that those what you call vexatious charges and this want of facilities, operate against the development of industries in this district?—Along with other things, I think they do.

19806. I see you refer to arrangements on the railway—I do not know that I need go into that—with reference to free passes and other things?—No, I do not think it is necessary.

Complaint as to frequent delays to traffic in transit from Derry.

19807. Generally speaking, do you complain of delays in connection with the traffic from Derry to your station?—May I give you an instance that happened on the 8th May last with me? I got an order from London on the 2nd May for thirty dozen of a shipping order for South Africa. Unless the order was delivered in London on the 22nd May, the goods were useless, as they had to catch the connection for the Cape. Some of the material I had in stock, and what I had not I wired to Manchester for. On the 8th May the stuff had not arrived at Buncrana. I went down to the station, and I asked the clerk to telegraph to Derry, to the goods station, to see if there were any goods for me, and he said, "Yes I will." So he wired to Derry, and they said they had just got them from the Midland Company; they would send them down by the 6.30 train. (This was about three o'clock in the afternoon.) I came down about 6.30, and they were not on the 6.30 train. He wired and they said they would send them on by the half-past nine. The next morning, when I went to get them out, they were in a wagon in the middle of the way; they were not near the platform. The stationmaster said he had got only three porters instead of five, and one of those was at his breakfast. I asked him what had happened to the other two. He said they were taken off to run the train at half-past nine on the previous night, and that in order to give them the two hours extra they did not resume their work until ten in the morning. But, I said, "If so, why did you not pay them something extra?" "Oh," he said "they were paid 2*s.* extra a week up to this, but now the company are going to save this 2*s.* a week by allowing them to come at ten in the morning." The result was I did not get my goods till two in the afternoon.

19808. May I ask, did you lose the order?—No.

19809. You do not seem to get on very well with the staff at your station, do you?—Well, fairly well.

19810. What you are telling us now is an exceptional thing, I suppose?—It is exceptional.

19811. Then we will pass it over, if it is exceptional thing, I suppose?—It is exceptional.

of complaint with reference to the delays?—Oh, yes; the delays are by no means exceptional; they are quite the rule.

19812. And you consider that is detrimental, at any rate, to your trade, which is one where orders are received almost by telegraph, and have to be executed promptly?—Yes.

19813. And that is the essence of doing your business, I suppose, really?—It is.

19814. Small profits and quick returns, is it not?—That is it in a nutshell.

19815. Have you considered the question generally with reference to Irish railways?—We have had various suggestions made as to the remedy that should be applied. Have you considered that an amalgamation of the railways of Ireland into two or three large systems would be of benefit to the country?—Yes, I think so.

19816. Have you considered the subject?—I have merely considered it as it affected my own trade.

19817. That is perhaps the best way of considering it?—My most formidable competitors here in London are the Belgians, the Austrians, and sometimes the Americans. They can send their shirts here—the Belgians pay 20*s.* a ton for the goods we are paying 45*s.* 10*d.* to send.

19818. *Mr. Aspinall.*—How do they go?—I am not sure. This is a letter from one of my best customers in London—a firm who take about 100 dozen a month from me, though they also buy shirts from the Belgians which they would buy from me if I could compete with them.

19819. Will they not come direct from Antwerp to the Thames?—I am not certain.

19820. You can send, can you not, from Londonderry to London direct by water?—No.

19821. *Chairman.*—The letter which you have handed to me merely points out that from a Belgian port they get their goods into London at about half the rate that they have to pay from Manchester to London?—Yes.

19822. But it is all by sea, and you can see that that makes a vast difference, can you not?—I can, but in the case of the American goods they can send them for 16*s.* from New York to London, and send them by rail from Liverpool to London.

19823. Oh, no, that is impossible, because the rate from Liverpool to London is about 25*s.* So you see it must be by direct steamer into London. There are steamers direct from New York into London—you know that—a regular service of steamers?—Yes. It mentions that they can deliver them in sixteen days, I think it is.

19824. At any rate, have you considered the question of whether it would be an advantage to your district and your trade and your industry if the railway were owned by the State?—I think it would.

19825. You said just now you thought it would be better to have them in three or four large railway companies?—I understand they would be under the control of the State.

19826. If the State control them, why should it control three or four?—I mean that the State should have control of all the railways.

19827. In other words, that the State should buy the railways, the same as the State-owned railways in our colonies—is that what you mean?—Yes.

19828. Or as the Germans, for instance, in Prussia—all the railways there belong to the State. In that sense, should the Irish railways be placed in precisely the same position—is that your idea?—That is my idea.

19829. And your idea is that if that were done your industry and others of a similar character in Ireland would be still further developed—is that your idea?—Yes; they would treat us more sympathetically than the other railways do.

19830. More sympathetically than the Lough Swilly Company?—Yes.

Examined by Colonel HUTCHESON POË.

19831. You say you complain of the absence of through bookings on the Cardonagh and Buncrana line. Are you aware that under the Burtonport and Carndonagh Treasury Agreements, there is a special clause providing for the railway company, after the line opened, entering into an arrangement for

through bookings?—But Buncrana is not a part of that.

19832. It is part of the Carndonagh extension, is it not?—No. Buncrana is the terminus of the original Lough Swilly Railway.

19833. The Treasury agreement says:—"The Company shall, on the completion of the railway, enter into the necessary arrangements with other Companies for through booking of passengers and goods to the satisfaction of the Board of Works." I take it that if that clause is inserted it means that from any place on that system the Railway Company (that is, the Lough Swilly Company) were bound to enter into arrangements with all the other carrying companies for through rates. You say you believe they have given it in respect of fish, but I take it that as they have never given you through rates in respect of other goods, they are not conforming to that agreement?—It was in 1903, when I had the interview with Mr. Moore. At that time they could not give it, and I then made arrangements to have my shipping place in Derry, and I have not asked ever since.

19834. I only wish to make it clear that there is a provision in those Treasury agreements making arrangements for through rates for passengers and goods. Whether they have carried it out or not we shall probably hear afterwards, but at any rate there is a provision. We have had a good deal of evidence with respect to the general working of the Lough Swilly Company. I understand you have only been in business in Buncrana five years?—I had been in business previous to that, but not as a shirt manufacturer.

19835. Were you resident there?—Yes.

19836. It would be interesting to the Commissioners to know what your views generally are as to the facilities, both as to the train service and the rates and fares and the facilities generally, on the Londonderry and the Lough Swilly system?—My experience is that there is no idea of a connection at all. The trains run without any idea at all of a connection with other lines. There is the time-table, and I will point out, if you will allow me, what I complain of. For instance, if you want to go from Buncrana to Belfast there is a train leaving Buncrana at 7.10 in the morning which is scheduled as arriving at Londonderry at 7.45 to catch the morning train at eight o'clock, but it never catches it in nine cases out of ten.

19837. Is that habitual—the missing of that connection?—One morning out of ten you would manage to catch it, perhaps, by driving across the city; but if the train did arrive in time to make the connection a quarter of an hour is too little. There is not a car on the Lough Swilly station at that hour of the morning generally, and you have to walk to the waterside, a distance of about a mile and a half.

19838. With regard to the return journey, is there a reasonable through connection back to Buncrana?—If you are leaving Dublin at three o'clock in the afternoon you arrive at Londonderry at ten minutes to seven in the evening, and have to stay there for the night—except for three months in the summer time.

19839. So that, generally speaking, there is not a widespread feeling of satisfaction with the way the railway company manage the line?—The feeling is quite the other way.

19840. I am only going to ask another question or two. With regard to the order which you say you fulfil with your London customer of one hundred dozen shirts a month, you say if you could be put in a better position to compete with either Americans or Belgians, you would probably increase that order by three or four times the amount?—Yes, I am almost positive I could increase it by twice the amount, at all events.

19841. So that even allowing for the fact that where there is sea competition goods must be carried at a lower rate, you consider it is essential in the interest of your trade and other similar trades that there must be, in order to develop them, an appreciable reduction in the rates charged for those articles?—It is essential, and more than essential.

19842. And one reason for your advocacy of State control or State purchase is that you assume that under no system of commercial enterprise such as that under which railways, at all events, are now administered, is it possible for railway companies to give you such an appreciable reduction?—Yes, I am aware it is not possible.

19843. But you hope that if the State take them over they would be prepared to undergo some loss for the time being in order to develop the manufacturing industries of the country?—Yes.

Reduction of rates under State Control anticipated and required for the development of industries.

Examined by Mr. Acworth.

19844. Why did you set up at Buncrana?—Well, it was my native town, and the district also was one that was most suitable for that enterprise.

19845. You get of course very cheap labour—there is a lower standard of wages than in a big town, of course?—No, I cannot say that there is, because my workers are earning as good wages as they are in Derry. I pay them the same rate of wages exactly that is paid in the big factories in the City of Derry.

19846. Then what was the advantage—apart from the feeling that you wanted to stay at home, what advantage have you?—I have an advantage in the rent. I have a place there at Buncrana and the rent is £9 a year; in Derry I would pay, I suppose, £60.

19847. Then you do get some advantage by being in an out-of-the-way place?—Yes.

19848. On the other hand, too, you must have expected when you went there that the communications would be worse than in Derry?—I was quite aware I would be handicapped in that way.

19849. You said that it was with London that you had your main business?—Yes.

19850. What is your rate to London?—45*s.* 10*d.* from Derry.

Rate for shirts Londonderry and London.

19851. And you have to pay the local rate in addition—4*s.*, or something like that?—7*s.* 3*d.* The parcels are generally under 3 cwt. or about 3 cwt.

19852. What do you really pay per cwt.?—I think it is about 2*s.* 3*d.*; I am not quite sure.

19853. That must be wrong, must it not, because that would be only 45*s.* a ton?—Oh, yes; it is from Derry I am speaking of.

19854. Take it at 3*s.* That is something like what you have to pay to get into London?—Yes.

19855. Have you no competitors inside the United Kingdom?—Yes; there are competitors in West Somerset, I think.

19856. Do you know anything about what they have to pay?—No, I do not know anything about that.

19857. Do you know anything of your own knowledge of what they have to pay from other countries?—Nothing more than that letter.

19858. I have read the letter; you would not pin your faith to it, would you?—Oh, yes, I would.

19859. I would not advise you to. At any rate, it is not within your knowledge, so I will not ask you. At any rate, you cannot give me positive evidence as to what your competitors have to pay?—No, I cannot give positive evidence upon that.

19860. Taking your rate of 3*s.* per cwt., supposing it came down to 2*s.* 8*d.*, that would establish a reduction of eight per cent., would it not?—2*s.* 8*d.* per cwt.?

19861. Yes—it would be a reduction of eight per cent. on the rate?—Yes.

19862. Would that make any serious difference to you?—No appreciable difference at all.

19863. I daresay you see that if the railway company reduced all the rates by eight per cent. it would knock its whole dividend off, and yet you say it would not be enough to help you?—Yes, I see the point, but your calculation is somewhat wrong, as I do not send any of my stuff by Lough Swilly Railway to London. I have to keep my place in Derry and ship direct to London, and so the carriage is only 2*s.* 3*d.* per cwt.

The reduction in rates necessary to materially affect the cost of production.

19864. But take it that you pay 3*s.*, and supposing that you get it down eight per cent., that would be enough to more than sweep away the Great Northern dividend, and yet it would not be enough to help you?—It would be something, but it would not be worth speaking of.

19865. It would not be worth speaking of from your point of view, but it would mean absolute ruin to the railway company?—Yes, according to that view. But if you assume the reduction of 3*d.* per cwt. on these goods reduces the income of the railway by 8 per cent., I take it the 8 per cent. lost by the railway will be added on to my income and it would be something then.

Effect of a serious reduction in rates on Railway dividends.

19866. But that is just what I want you to see; you have a great many expenses, and the railway carriage is only a small part of your total cost?—It is more

June 6, 1907.

Mr. John M'Laughlin, Shirt Manufacturer, Buncrana.

than a small part. You are speaking now of railway carriage on material going out. There is also the carriage on material coming in and, besides, I have to send the undressed shirts by cart to Londonderry, because I find it cheaper. The carts will take it for 4*d.* per cwt. and deliver by road. So, taking all, railway carriage is a big item.

19867. I want you to get to this point: your expenses for rent and material and so on are bigger than your expenses for railway carriage?—Much—oh, yes.

19868. No doubt if you got eight per cent. on all that you would get fat, but eight per cent. for railway carriage only would not help you very much?—No.

Proportion of transit charges to total cost of production.

19869. On the other hand, the railway company have nothing to live on but carriage?—They have their passenger rates.

19870. Oh, yes, of course. Is there any reason why shirts should be treated better than passengers?—I think there is.

19871. What do you think the passenger would think? You see what I am driving at. If you cut down your railway rate, how is the railway to live?—The State could come in.

Question of whether the State should meet any loss to Railway Companies arising out of reduction in rates.

19872. Supposing it does; as a taxpayer in Ireland, are you prepared to pay taxes to make up the deficiency of the railway rates?—We are paying sufficient taxes; I would not like to pay more, but I think even from what we pay there might be a corner that would go to the alleviation of railway taxes.

19873. But would it not have to be new taxation?—I suggest it should be taken up by the British Exchequer.

19874. Provided the British Exchequer pays the eight per cent.?—I think they could very well afford to pay it.

19875. You would not be surprised if some of us who do not live in Ireland took another view?—I should expect you to take another view.

Cross-examined by Mr. Balfour Browne, K.C.

Complaints made to the Manager of the Lough Swilly Railway.

19876. Would you look at this gentleman?—Yes.

19877. Do you know him?—I think so.

19878. Who is he?—Mr. Moore, of the Lough Swilly Railway.

19879. He has been general manager since 1901?—He has.

19880. Have you ever made a single complaint to Mr. Moore?—Yes, decidedly.

19881. When?—In 1903, in the office of the Lough Swilly Railway Company in Ship Quay-street, Londonderry.

19882. What did you complain of?—Of the want of through rates, before I took my place in Londonderry.

19883. And without through rates you took your place in Derry?—Yes.

19884. Now the original railway ran from Londonderry to Buncrana?—Yes.

19885. The new railways up to Carndonagh and away to the West are State railways?—Quite so.

19886. I suppose that even if the State owned all the railways in Ireland they would still have to be worked by men?—They would, but I take it they would be men.

19887. What do you mean by that?—I mean that the men at present working some of the railways in Ireland could be better.

19888. And I daresay even some of the shirt manufacturers could be better?—Oh, yes.

19889. With regard to this train in the morning—the 7.45—do you know it was never put on for the purpose of allowing people to go to Belfast, but was intended to carry working girls to Derry?—There never has been a working girl travelling by that train to Derry since it has started to the present day.

19890. Have you gone every day to the station to see?—I have been there pretty often—three mornings in the week sometimes.

19891. Do you go by that train?—Occasionally when I am going to Derry.

19892. Without wanting to go to Belfast at all, but going to Derry?—Yes.

19893. Are there seven intermediate stations between Buncrana and Derry from which working girls travel to Derry?—Yes, and we shunt at every one of them—I know the number.

Mr. C. S. R. Palmer, M.Inst.C.E., examined by The Chairman.

Mr C. S. R. Palmer, M. Inst. C.E., Engineer for the Western Australian Government.

19894. Mr. Palmer, I think you are the Railway Engineer for the Government of Western Australia?—I am at present the London Engineer for the Government of Western Australia.

19895. And you are acquainted with the railways in Western Australia?—Entirely. I was for ten years there in the service of the State and latterly as Engineer-in-Chief.

19896. Could you tell us whether the railways in Western Australia are the property of the State, or are privately owned?—They are, with one exception of 200 miles, owned by the State.

Mileage, gauge and cost of the State owned and privately owned West Australian Railways.

19897. What is the length of the railways owned by the State in Western Australia?—1,612 miles last year.

19898. What is the gauge of those railways?—3 ft. 6 in. gauge; 92 being double track.

19899. Are the privately-owned railways the same gauge?—Yes.

19900. They are all 3 ft. 6 ins., are they?—Yes.

19901. I suppose the bulk of the 1,612 miles are single lines?—All, except ninety-two miles of double track.

19902. Can you tell us the total cost of those railways owned by the State?—£9,965,940.

19903. Were the railways originally made by the State?—All except two—one that is still a private line, and the other that has been purchased.

Method by which purchase money was raised.

19904. By the State?—By the State.

19905. How have the State raised the money for the purchase of those railways?—With the exception of about one-sixteenth of the capital, which has been found from revenue, it has been raised entirely from loan funds borrowed on the security of the State at a rate of interest on an average of 3½ per cent. secured on the whole of the revenue of the State.

Date of the commencement of construction of the State Railways in Western Australia.

19906. When did the Western Australian Government begin to make State Railways?—As far back as 1879, but there was very little progress until 1893.

19907. Then they are practically all of recent construction?—Practically; since 1893 there have been 1,410 miles brought into working.

19908. Can you give us any information as to the origin of those railways. First of all, I suppose the Government of Western Australia decided whether a railway should be made?—That is so.

19909. Then when they decided that, did they take into consideration the fact that the railways should be so constructed as to develop what I call undeveloped country; is that the policy of the Western Australian Government?—Practically. I may say that the lines of my State have never been built into an absolutely uninhabited country as some of the American lines perhaps have been. On the other hand, at least one-half of the lines that we have built could not have been expected when built to pay even working expenses for several years, and some do not do so now. The policy, therefore, has been one of creating and developing industries and of opening up lands for agricultural settlement, and it is not too much to say that not one of our industries and but little of the agricultural settlement could have been established without railways, and nothing but cheap construction could have enabled this to be done; we could not have got the money for expensive lines.

19910. Have you before you the average cost per mile of the State Railways?—I think I have it here.

19911. We will leave it now if it will come up later. In raising these loans for the construction of the railways, do the Government make any provision for a sinking fund?—They have a sinking fund for all Government loans, but that is a question apart from railways.

19912. In other words, I suppose a loan is automatically paid off in a certain period?—Yes.

19913. And that is set forth in the prospectus when the loan is invited?—Yes, it is part of our Constitution Act.

19914. Is the period thirty or sixty years?—I could not tell you because the amount of the sinking fund

varies according to the purposes for which the loan is obtained. Sometimes we have as high as a three per cent. sinking fund.

19915. For the loans to construct these railways there is not only a certain interest to be paid, but also a proportion for sinking fund?—Not necessarily so.

19916. Not necessarily so?—Not from railway revenue. There is interest certainly. The reason, I understand, is that we cannot expect the railways to pay for a sinking fund; they are for the benefit of the whole State.

19917. Having got the railways, we should like to know how they are worked by the State. Is there a separate Department for railways in the Government?—There are two Departments. The construction is in the Public Works Department, and there is a separate Department entirely for the working of the railways which is under its own Minister.

19918-19. The working is absolutely distinct from the new works?—Quite distinct. There has been some variation of policy back and forward as to improvements of existing lines, but mainly the improvements have been carried out by the construction staff.

19920. That is what we may call permanent improvements?—Yes.

19921. But for ordinary working?—For ordinary working and betterment there is a separate Department.

19922. And with that Department you are quite familiar, I suppose?—I am familiar with it. I have never been employed in it, but I am perfectly familiar with it.

19923. How are the railways managed at present?—At present there is a Commissioner appointed under an Act of Parliament who has the control of the railways subject to the Minister responsible to Parliament. The Minister, however, does not interfere in details unless there may be special reasons for it.

19925. May I ask, is there only one Commissioner or more?—There is only one at present. The Bill provided for three, but for some reason this was not carried through.

19926. Were there three appointed in the beginning?—No.

19927. Never?—No. There were to have been three, but this was a tentative policy on our part, and only one was appointed.

19928. Colonial Governments have three?—Yes with the exception of South Australia, which has only one.

19929. Victoria has three?—Victoria and New South Wales each has three.

19930. The Western Australian Government railways are worked by a Commissioner of Railways?—That is so.

19931. Is that a permanent appointment or for a term of years?—For five years, subject to renewal.

19932. He is responsible for the working of the railways subject only to the control of the Minister for Railways?—Yes, for the working.

19933. With regard to the betterment or new works; that is another Department altogether, is it not?—As I say, the policy has varied; sometimes the railways have done it themselves and sometimes the Public Works have been called upon to do it. There has been no hard and fast line for that; the idea being generally that large sums of loan money should be controlled by the Minister for Public Works; but expenditure from revenue on the railways by the Minister for Railways. I think it is the same policy in New South Wales, Victoria, and South Australia.

19934. The same policy is adopted there, is it?—Yes.

19935. I notice that between 1893 and 1906 about 1,410 miles of new railway were constructed by the State?—That is so.

19936. And were those railways constructed for the purpose of developing industries already there or in the hope of developing industries?—Partly both.

19937. Would you, as a practical man, tell us whether private enterprise could have constructed those lines with any hope of making profit?—I do not think private enterprise could or would have done so, but we have not lost on them as a whole.

19938. The State being owners?—I think they could do better. I think, the State being the owner, can do better than a private company as regards the establishing of a new railway. I think the history of our two privately owned lines has shown that.

19939. Are they successful?—They were not. It is partly a question of land policy.

19940. Your opinion is that very little of the agricultural settlement could have taken place or industries fostered had it not been for the construction of those railways by the State?—That is so.

19941. What has been the expenditure; I see you have the figures here for the cost per mile inclusive of equipment of the State railways?—£5,900 per mile inclusive of equipment, on the average.

19942. *Mr. Acworth.*—That is all railways?—All the railways of the State.

19943. And they are 3 feet 6 inches gauge?—Yes.

19944. *Chairman.*—That figure may appear rather high for a narrow gauge railway, but, of course, all your equipment had to be imported?—That is so. But I think that is about the lowest amount anywhere where we can get any public figures; I do not think there is any country where we can be beaten on the average of the railways, and this notwithstanding our position and high labour rates.

Improbability of private enterprise ever accomplishing the results achieved by the State in developing industries.

19945. As a matter of fact, all your rails and everything have to be imported?—Rails, fastenings, ironwork, machinery, equipment, tools, cement, and light timber, all have to be imported from this side of the globe, and wages are thirty per cent. over those in America; the minimum for any class of labour being 1s. per hour.

19946. At any rate, the cost of the State railways, including equipment, has been £5,900 per mile. That was the cost up to 1905, was it not?—1906. We now have some exclusively agricultural railways in hand, costing from £1,000 to £1,100 a mile exclusive of equipment.

Capital cost per mile of the State railways.

19947. I suppose you have no lands to buy?—We have no land to buy, very little at any rate.

19948. And no great physical difficulties?—No, not on these lines. We have on the ordinary lines; we have a whole tunnel.

19949. Have you really constructed any railways in Australia at £1,000 or £1,100 a mile?—Yes, we have just built 100 miles of line at that cost—£1,050.

19950. *Mr. Acworth.*—What gauge?—3 ft. 6 ins.

19951. *Colonel Hutcheson Poë.*—What weight rails?—45 lbs.

19952. *Mr. Acworth.*—New?—New.

19953. *Chairman.*—You are not hampered there in any shape or form by any regulation with regard to block-signalling, interlocking, and all that sort of thing—I am speaking of these agricultural lines?—No, not there; but the whole of the rest of the lines are either absolute block or train staff, and ticket under rules in accordance with the Board of Trade regulations in England.

System of providing cheaply constructed lines for agricultural districts.

19954. They are worked as similar railways are in England?—That is so. We have pretty stiff gradients on some of our lines. To show the character of the country, there are 1 in 40 and 1 in 45; those are the ruling gradients. 1 in 75 is about the flattest ruling grade.

19955. Have you found these cheaply constructed railways in agricultural districts have been of any benefit to the districts?—They could not settle the land without the railways.

19956. Have you any figures before you to show us the result of the working of any portion of the line which has been opened?—There was one line opened prior to these. These that I have been speaking about are later lines, but there was one opened in July, 1902. This line in 1904-5 had a gross goods tonnage movement of 20,320 and gross revenue of £4,049, with working expenses of £5,020.

19957. Then that was worked at a loss?—That was worked at a loss.

19958. Do you know what has been the result since that period?—No, I have not the figures since then. As a matter of fact, this was some special information; the Government do not publish these figures as they take the railways as a whole.

19959. Of course they do not publish the sectional receipts and expenditure?—No.

Surplus revenue devoted to reduction of railway rates.

19960. That was the policy adopted on that particular part of the railway with regard to the rates when it was found that the railways were not earning a profit?—I cannot say that it was with reference to that one particular line, but generally speaking, as soon as it has been found that the railways were more than paying interest and working expenses, the rates have been reduced, and that affected that line as well as the others.

June 6, 1907.

Mr C. S. R. Palmer, M.Inst. C.E., Engineer for the Western Australian Government.

19961. The rates for agricultural produce?—For agricultural produce, yes.

19962. And the result has been satisfactory to the State?—Quite satisfactory.

19963. That is to say, the reduced rates for carrying agricultural produce have largely increased the traffic on the line?—Yes.

19964. And also increased the nett profits?—Well, I think we are too new to say that yet. The State is developing its property, and there is no doubt whatever that our earnings are developing also.

Surplus railway revenue devoted to the reduction of rates

19965. Are they paying interest now?—The lines?

19966. Yes, as a whole?—Yes, the lines as a whole have paid for the last three years 4¾ per cent.

19967. Then there is a considerable profit?—1¼ per cent. over the loan interest, but we have reduced the rates, so that I do not think in the coming year there will be that profit. The rates have been reduced mainly on industries that required help.

19968. In other words, when it is found that there is a substantial profit in the working of the railways the policy of the State seems to be still further to reduce the rates?—That is so.

19969. That is the policy?—That is so.

19970. So that they do not work the railways with the sole object of getting the largest amount of interest out of them?—No.

19971. If there is a substantial profit they make a further reduction in the rates so as to give the country the benefit of it?—So as to give the producers the benefit, yes.

19972. That is the country?—And the consumers, yes.

Method of dealing with receipts and providing for the expenditure.

19973. Could you tell us in your own words how the receipts are dealt with?—The receipts all go into the Treasury as part of the revenue of the State. And the expenditure is budgeted for and passed by Parliament.

19974. That is to say there is an estimate made by the Minister as to what he wants for the working of the railways, and that is passed as part of the Budget?—As part of the Budget, yes.

19975. And the receipts go to the Treasury to swell the receipts of the States?—That is so.

19976. *Mr. Balfour Browne*, K.C.—Do you mean the gross receipts?—The gross receipts.

Mr. Acworth.—Just like the English Post Office.

19977. *Chairman.*—Of course, dealing with it in that way members of the Parliament of the country have every opportunity to discuss questions of rates or anything appertaining to the working of the railways?—When the estimates are presented.

19978. I mean when the estimates are presented?—Yes, and also by resolution at other times.

19979. But more especially when the estimates are submitted?—Exactly.

19980. I mean there is a free discussion then?—Absolutely free—very free.

Position and authority of the Commissioner of Railways.

19981. I think you told us that since 1902, previously there had been some alteration made, and that the responsibility for the working of the railways rested with the Commissioner?—Prior to 1902 there was a General Manager who was entirely under the direction of the Minister. Now the Commissioner has powers of his own irrespective of the Minister and subject only to his general political control. The position is this—the Commissioner is not interfered with unless there is some real reason to do so.

19982. Has that system worked well?—Unless there is some strong reason to do so the Commissioner is not interfered with.

19983. But has the new system worked well up to the present time?—Yes. There is the usual reaction, I suppose. It is now stated that he wants to make too much money.

19984. That the Commissioner does?—That the Commissioner wants to make too much money. But, as I say, the Government have taken that in hand and have reduced the rates.

19985. But you think, putting it in the interest of the Colony, that the change which was made in the management of the railways has been for the good of the Colony?—Certainly.

19986. You think so?—I think so. That has been the experience I may say of the whole of the States I am acquainted with.

19987. The Commissioner really has practically the sole responsibility, as I gather?—He has.

19988. I do not know, but it has been suggested here that the Commissioner might be subject to political influence. Do you know whether any great political influence has been brought to bear upon the Commissioner in the working of these railways?—Not on our Commissioner. I know it has occurred in the Eastern States sometime back; I know that by hearsay.

19989. But not in Western Australia?—No; it has not been successful at any rate.

19990. He is really an independent responsible person?—An independent responsible person.

19991. And the only complaint is, as I gather, that some people think that he is working the railways and making too much profit?—That is the present claim.

19992. But Parliament steps in there and reduces the rates?—The Government have.

19993. I mean the Government?—I think, speaking personally, that that was really following on a resolution placed before Parliament in August of last year and accepted, that the rates should be reduced—a general resolution.

19994. In other words, that the increased profits should go to the benefit of the Colony?—That is so.

19995. I mean to the benefit of those using the railways?—To the benefit of those using the railways.

19996. I suppose you have no figures to place before us with reference to rates?—I have some here that may be of interest.

19997. If you have any rates so that we could have them on the notes to make our own comparisons, it would be advisable that you should give them to us?—Taking passenger rates, our general passenger rate is 2*d.* per mile, first-class, and 1¼*d.* per mile, second-class; return fare one-half.

19998. What is your third-class rate?—We have none; we have only two classes.

19999. Those rates are higher than the rates in this country?—I think not, for the accommodation.

20000. What do you mean by the accommodation? Surely the third-class accommodation in this country is equal to your second-class?—It is all a question of comparison in the country to which one goes. One cannot expect on bush railways the same facilities as are provided at home here. But we have sleeping berths, restaurant cars, corridor carriages, and so on.

20001. But still the lowest rate at which a passenger ordinarily can travel is 1¼*d.* per mile?—That is for the single fare; return fares are one-half.

20002. It is 1¼*d.* against 1*d.* in this country?—That is the general passenger rate, but there are very considerable reductions in suburban areas and also in season tickets. I know that I pay at present here over £6 for a season ticket which in Western Australia would cost £5 4*s.* 2*d.* for the same distance.

20003. You pay £6 here for what in Australia would cost £5 4*s.* 2*d.*?—That is so, for my season ticket.

20004. There is not much difference there?—But it is on our side.

20005. I do not know where your season ticket is to, but probably you have five times the number of trains here?—Undoubtedly; many more trains on main lines, but not over 50 per cent. extra in suburban areas in my experience. Then, besides, we have workers' tickets.

20006. What we call workmen's tickets, I suppose? Yes, at ⅜*d.* per mile.

20007. I am afraid we are much cheaper than that here?—We also carry every one learning at a quarter fare.

20008. That is school children?—Up to twenty years of age.

20009. That is what we call school children's fares?—We also carry clergymen at reduced rates and commercial travellers. Then as regards goods rates——

20010. One moment. With regard to passenger rates you have a lot to learn yet in Australia?—Yes, but our wages scale has to be remembered.

20011. And a good many reductions to make before you come down to our standard?—Yes, it will be coming down in receipts.

20012. Now as to goods rates?—We carry our coal at ½*d.* a ton per mile.

20013. Is that for any distance?—Any distance over five miles.

20014. Do you mean to say that six miles would be 3*d.*?—No, it would be ½*d.* a ton per mile over five miles; five miles is 1*s.* 3*d.* The first five miles is 1*s.* 3*d.*

20015. That is your minimum rate?—Yes.

20016. And after that it is ½*d.* a mile?—Yes.

20017. *Mr. Balfour Browne*, K.C.—Have you terminal charges?—No charges besides that.

20018. *Chairman.*—That is the charge to the public?—Yes.

20019. It is rather interesting to have this on the notes carefully. Let us see if I follow you correctly. You have a minimum charge for the carriage of coal; do you find the wagons?—Yes.

20020. You have a minimum charge in Government wagons of 1*s.* 3*d.* per ton for any distance up to five miles?—That is so.

20021. That is the minimum charge?—Yes.

20022. But above five miles it is ½*d.* per ton per mile, plus the 1*s.* 3*d.*?—That is so.

20023. And that applies generally over the Western Australian railways?—Yes.

20024. That is very interesting in regard to coal. Now, have you anything else?—Our hard woods are 1*d.*

20025. That is what we should classify as timber, I suppose?—Yes; that is 1*d.* in the same way.

20026. With a minimum?—Yes.

20027. *Mr. Acworth.*—With an initial 1*s.* 3*d.*?—An initial 2*s.* 6*d.* for ten miles; 100 miles would cost 10*s.* 1*d.*; 150 miles 13*s.* 2*d.*, and so on in reducing ratio.

20028. *Chairman.*—For ten miles the minimum rate for timber is 2*s.* 6*d.* per ton. Above that it is 1*d.* per per ton per mile. I think that is what you said?—Those were our rates in 1905, but since that date there have been the reductions which I have spoken of.

20029. By resolution of the House?—Yes, which reductions, I am sorry to say, I have not by me at present.

20030. We will assume that they are percentage reductions?—They are pretty serious—pretty large I know. But I could get you the figures if it would be of interest to the Commission.

20031. *Mr. Acworth.*—Could you give it in percentages?—I could not, at present.

20032. *Chairman.*—This information is of considerable value to us. Have you anything else besides timber?—I have grain.

20033. That is interesting. First of all, do you carry grain in bulk or in sacks?—In sacks.

20034. Is there any question about the quantity carried, or is the rate for any quantity?—For peas, wheat, oats, maize and rye there is no minimum; for other grains, truck loads, four tons constituting a truck load; in the same way with the others.

20035. Your truck load is four tons?—Yes.

20036. Of course, on narrow gauge railways you have not such good trucks?—That is what we call a truck load; it is not a full truck load, but what we call a truck load.

20037. For rating purposes?—Yes.

20037A. What is the rate for grain?—For grain we had, up to ten miles, 2*s.* 6*d.*; eleven to twenty-one miles a further 2*d.* a mile; twenty-two to sixty miles 4*s.* 9*d.* more; then ½d. a mile. All cumulative charged to eighty-five miles.

20038. *Mr. Acworth.*—But you would not pay the same for ten miles as for for forty-nine?—I have given you the total amount; it is graded.

20039. There are intermediate points between ten and fifty?—Yes; so much per mile.

20040. *Mr. Acworth.*—Does it run the same per mile for each of those forty miles; it is a little under 1½*d.*, which does not seem to fit.

Colonel Hutcheson Poë.—It is 2*s.* 6*d.* for the first ten miles, and 4*s.* 9*d.* for sixty.

Witness.—They go on reducing as one goes on; they reduce by distance; as the carriage gets longer the rate per mile gets less.

20041. *Chairman.*—Speaking generally, can we take it that the rate for ten miles is 2*s.* 6*d.* for grain, and that after that it is about 1*d.* per ton per mile?—It is close on 2*d.* per ton per mile up to twenty miles.

20042. *Mr. Acworth.*—2*d.* for the next ten?—Yes; they do not charge in halfpennies, and therefore sometimes there is an increase of 1*d.*, and sometimes an increase of 2*d.* per mile, until you get to the figure that I gave before—up to sixty miles.

20043. What would be the cost for carrying four tons of grain for sixty miles?—£1 16*s.* 4*d.* for four tons.

Mr. Acworth.—That is 9*s.* 1*d.* per ton.

20044. *Chairman.*—In this country it is lower than that?—When you get to 100 miles, we only charge 11*s* 9*d.*

20045. "Only" 12*s.* 5*d.*; I wish we could get 12*s.* 5*d.*?—Of course we pay pretty heavily for other things.

20046. This is all interesting to us. Now, let us have, if you can give it, the rate for manure. But manure, I suppose, is not wanted in Australia; it is virgin soil, and therefore you do not use it. But you use lime, do you not?—Yes, for building purposes; you might take it that the rates for that are five-eights of the one I have just given you.

20047. That is slightly more than one-half?—Yes.

20048. If you could give us one other case; we will say draperies—something that is carried. Have you draperies or groceries; take it broadly, anything in the drapery line, or tea, tobacco, or sugar?—It will be remembered, of course, what we pay for our labour.

20049. Oh, yes; we are not making any comments on these rates; we want to get them on the notes, so as to see what sort of rates they are getting as compared with what are charged in Ireland; that is all. Have you any rates for draperies, or groceries, or general merchandise, or any broad term of that sort?—These are box goods.

20050. We know what that is?—The rate for box goods is about two and a half times what I have given you for grain.

20051. That is 2½*d.* per ton per mile?—Two and a half times.

20052. *Mr. Acworth.*—What is the initial rate for a short distance?—6*s.* 6*d.*

20053. 6*s.* 6*d.* is the lowest rate for which it can be carried any distance; that is ten miles?—Of course, it will be remembered that we have not those short distances to carry.

20054. No?—That goes on to twelve miles, and there are comparatively small increases after that. That includes all terminal charges.

20055. *Chairman.*—Does it include collection and delivery?—No. Of course there is a great difference with regard to the distance that we have to carry. I have brought a plan to show it; ours is long-distance carriage. That has to be remembered.

20056. You go to Coolgardie?—Yes; that is 360 miles from the port.

20057. Can you give us any rate from the port to Coolgardie for anything?—£1 6*s.* for grain.

20058. *Mr. Acworth.*—That is ⅝ths of 1*d.* per mile exactly. Can you give us the drapery rate?

20059. *Chairman.*—What you call box goods?—We have a 600-mile rate, if you would like to have it—£1 12*s.* for grain.

20060. And the bulk of your traffic is carried long distances?—No, but a very large proportion of it is.

Mr. Balfour Browne, K.C.—I suggest that these distances are too large for Ireland. If we could get shorter distances we might be able to compare our rates.

Chairman.—360 miles.

Mr. Balfour Browne, K.C.—But the witness was giving 600 miles just now.

The Witness.—The reason I gave that was that the policy in our country would vary according to the interest to be served. One-fourth of our population lives inland at these distances.

Chairman.—Of course 600 miles did not apply to Ireland, we know.

20061. *Mr. Acworth.*—Can you give us the box goods rate to Coolgardie?—I will get it for you.

20061A. You might add it to your evidence; I think it would be useful?—Mixed groceries for instance, £6 5*s.* 3*d.* for 360 miles, without minimum limitation of weight, and at railway risk.

20062. *Chairman.*—I think you told us that last year's working, or the last published returns at any rate, show that these railways about which you have been speaking, earned 4¾ per cent. on the borrowed capital?—4¾ per cent.

20063. I think you told us that that profit was considered too large, and that the surplus was really devoted to reductions in rates?—That is so.

20064. And that those reductions were substantial?—Were substantial.

20065. But the exact amount or percentage you are not quite sure about?—I have not got that figure; I know there was a reduction which they claim will cost £16,000 on timber.

20066. That goes to the benefit of the timber trade?—To the benefit of the timber trade. I regret I cannot give you the other figures, but they have not come out to us yet.

June 6, 1907.

Mr. C. S. R. Palmer, M.Inst. C.E., Engineer for the Western Australian Government.

The system of State ownership of the railways a great benefit to Australia.

20067. From your knowledge of Australia are you of opinion that these State-owned railways have resulted in great development of the country?—Yes; I am definitely of opinion that the country could not have developed without the railways; that is my definite opinion.

20068-9. And I think you are also of opinion that private enterprise could not have done it—could not have been expected to do it?—I do not think they could have done it; they could not have got the money to do it with. That is what I have seen there. They certainly could not have got it at the prices at which we can get it.

20070. In your judgment, are there any drawbacks to State ownership?—Yes; one is more expensive working than privately-owned railways, due to the fact that the public require more from a Government railway than they would accept from a privately-owned railway. That is what I have seen in Western Australia at the present day.

20071. You mean that the staff exact more?—No; not the staff, but the public. The public desire better facilities—more trains.

20072. You spoke about working at greater cost?—That is so.

20073. That must mean that more wages are paid?—Higher wages are paid, but apart from that, there are more trains put on, and that adds to the expense really much more than paying higher wages.

20074. In spite of those drawbacks these particular railways pay 4¾ per cent.?—In spite of those drawbacks.

20075. Are there any other drawbacks that you wish to mention?—No; I do not think there are beyond those.

20076. Then on the whole, speaking for your Colony, do you think there has been—I think you said in fact that it had been of great advantage to have these Government-owned railways?—I think so, yes.

20077. And that the development of the country has practically followed from the development of the railways?—That is so; there is no question about that, I think.

Examined by Mr. ACWORTH.

20078. You were saying, I have no doubt truly, that the money to make the railways would not have been got except by the State taking over the responsibility?—Yes; it would not have been got at the price.

20079. You would not have got it, or if you had got it, it would have been on very expensive terms?—Yes.

The possibility of applying the Australian system of raising capital to Ireland.

20080. That view would not necessarily apply to a case where the railways were already made, would it. I mean if you were to translate that into Ireland, where the railways are made and the capital has been found. So far as you base your argument—and I gather it is a very strong argument in Australia—on the fact that that was the only feasible way of getting the money—that would not apply to Ireland, because the money has been got?—Yes.

20081. Would you agree?—Yes; but I do not know at what percentage it has been got.

20082. But there it is; it has been obtained and the railways do not want making again, although, no doubt, there are extensions, and so on?—Yes.

20083. I want to go over a good many of the points you have raised, as it is the first time I have had the opportunity of asking any questions of a gentleman coming from Australia. Would you tell us what your annual receipts are?

Gross earnings per mile of the Australian railways.

Mr. Balfour Browne, K.C.—I have it here; the gross earnings were £1,588,084.

Mr. Acworth.—That is on 1,600 miles of lines, roughly speaking a thousand pounds per mile per annum. That is what I wanted to get at; it is roughly about the same as Ireland—about £1,000 per mile.

Mr. Balfour Browne, K.C.—Ireland works out at £1,250.

20084. *Mr. Acworth.*—I thought it was not quite so much. Then about capital, if my recollection is right, Western Australia used to pay a good deal more than 5 per cent., did it not, in the very early days?—We never paid more than 5 per cent.

20085. Not in 1888, or something like that?—There was one loan in 1872, but that was only——

20086. I do not mean paid for money; I mean that the railways paid a bigger percentage of profit; that is my recollection?—Western Australia has paid as high as 11 per cent.

20087. I think it paid a very high rate in one year?—In 1896.

20088. Then they developed their lines very fast—they had to, no doubt—and the interest ran down a great deal—the percentage of earnings to the capital involved?—Yes, but there were also heavy reductions of rates.

20089. Can you tell how low it went?—The lowest percentage earned on capital has been 3·75.

20090. Then it has very nearly paid its way all the time?—Excepting up to 1891, when we were just balancing; there was a very short length of line constructed.

20091. In this worst year it very nearly paid, is that the position?—Yes.

20092. And on the whole, it has more than paid?—Certainly.

20093. That is therefore a great deal better than the average of any other State in the Commonwealth?—Yes; that is so. We have paid better on the whole.

20094. Am I not right in saying that Queensland, for example, has never paid full interest on their capital?—I think they have paid their way—more than done that.

20095. Have they?—Oh, yes. What Queensland has not done recently at any rate is to cover the whole of its interest.

20096. That is what I mean; I do not mean that they have not always paid working expenses. The Queensland Railways' net receipts have never covered the interest on the Queensland Railway debt?—Not quite.

20097. In New South Wales only in a few years?—New South Wales has varied; I think it would be found that she has done so on the whole.

20098. Barely, I think?—One point has to be remembered, and that is the cost of construction in these Colonies.

20099. We will go back to that afterwards, if necessary. As to Victoria, only two years ago there was a deficit?—I daresay there was.

20100. In New Zealand there has generally been a deficit until quite recently?—I could not tell you that.

20101. So that, if I am anything like right, though we are told that the policy of Australian States is to keep down the net receipts to the point where they pay the interest on their capital, the fact is that as a rule they have had difficulty in getting them up to that point?—I would not put it in that way. I think I might fairly put it another way, and that is that they have kept their rates persistently low in order to develop industries.

20102. They have got rid of their surplus before they have got it, so to speak?—In some cases.

20103. They have not really had a large surplus that they could afford to distribute, but they have distributed before it accrued?—Not always.

20104. But in many cases?—In some cases.

20105. I think that represents the history. Your figure of £5,900 a mile does that include the new railways at £1,000 a mile, which you are building?—No.

20106. It does not?—No; that was up to 1906, and the new railways have just been built.

20107. That would bring the figure down further?—Yes.

20108. Do you suggest, leaving out these new railways, that practically £6,000 a mile, which I may translate as $30,000, is other than a full ample price to pay for a single narrow gauge line across a flat plain?—It has more than paid for a single narrow gauge line across a flat plain in our case, because we have some rough country also, and our position and wages have to be allowed for.

20109. But broadly, I think you said it was a flat country?—In the interior, yes, but we have a range that we have to penetrate.

20110. You do not suggest that it is exceptionally cheap?—£6,000 a mile, no—not what you can construct a railway for, for first purposes, but this includes much well developed line.

20111. It includes equipment?—Yes.

20112. *Chairman.*—It depends on the equipment of course?—Our equipment is about the same as Irish railways, I believe—quantities of equipment per mile.

20113. *Mr. Acworth.*—I am very much struck by your figures of £1,000 or £1,100; I find that it means seventy tons of rails a mile?—That is so.

20114. What would the rails cost on an average—£6 10*s.*?—They cost under £6, delivered there.

20115. That is £420 for rails without fastenings; there is no ballasting?—No.

20116. Just laid on the soil?—Graded, of course, and there is a local ballasting—earth ballasting.

20117. Practically on the soil scraped up with the sleepers that are in that neighbourhood?—We use fairly good sleepers.

20118. You perhaps get them along the line. There is nothing in the nature of road crossings to provide for?—There is, but we use cattle pits in most cases.

20119. You say that the whole of the receipts from the lines are passed through the Treasury and form part of the general revenue of the State, and that each year's proposed expenditure is placed before Parliament and voted?—That is exactly like the system of the English Post Office?—Yes.

20120. You know that the Swiss have nationalised their railways within the last year or two?—No, I did not know that.

20121. Well, they have done. They, having seen what had been happening in the rest of the world, made it a part of the law that the railway budget should be kept entirely separate from the budget of the country. Which do you think is the right system?—It depends on the country, but certainly, in my opinion, our system is the better one.

20122. That Parliament should control and vote the salaries of the stationmasters and vote the rates for grain?—Except that Parliament does not go into details; it could not possibly go into details, but they have the right to do so.

20123. I want to ask some questions on that presently. All these questions could, of course, be raised on the railway budget?—They could.

20124. You could move that in the opinion of the House the grain rates ought to be reduced, or that no stationmaster ought to get less than £3 a week, or anything of that kind?—Yes.

20125. You think on the whole that has more advantages than the other system?—I think so. I think it gives a power of interference which naturally would not be taken advantage of unless there were reason for it.

20126. You spoke of these large reductions in the grain rates and other rates. Are those borne on the railway systems; does the railway stand the racket of that?—Yes.

20127. You know, no doubt, the Victorian system, under which if the Commissioners say, "We think the rates are low enough," and Parliament says, "We think they ought to be lower," then the Commissioners say, "The difference will mean £10,000 a year, and you must vote £10,000 a year subsidy to the railway budget." You know that system?—May I point out that the Commissioners were appointed there to undertake the railways at a time when they were very badly off, and the country was prepared to submit to anything, the railways were not paying at all, and, therefore, it has not been a case of handing over surplus revenue, but of making the railways pay. We are in a more fortunate position.

20128. And under that other system Parliament voted last year or the year before in Victoria to reduce the rates for coal from ¾*d.* to ½*d.*; the railways are getting ¾*d.*, but the people are paying a ½*d.*, and Parliament makes up the other farthing?—That is very likely to benefit that particular industry.

20129. Similarly, they are now going to vote a reduction of the grain rate. Do you think that is a good system, or would you rather leave it without any special regulation?—No; I would rather see Parliamentary control than have anyone absolutely independent.

20130. I see. In fact you prefer the Parliamentary system to the Commissioners' system?—No; I prefer a Commissioner to a certain extent with full powers; but, on the other hand, with reserve powers for Parliament to interfere if necessary.

20131. You recognise, of course, that this is really one of the cruxes of the matter—what is to be the power of each?—I quite recognise that.

20132. And I gather that you think that the Commissioner ought to be under the Minister for Railways?—Yes; which Minister for Railways would be responsible to Parliament.

20133. And would you give the Commissioner definite limits within which he could do what he liked, or would the Minister always have to control him?—Give the Commissioner full powers subject to revision by the Minister when there was necessity.

20134. That means to say that the Minister can always interfere if he chooses?—If he chooses.

20135. I only want to understand where you are. You said that in 1902 the management was directly controlled by the Minister responsible to Parliament, and that since that time Parliament has ceased to have detailed control, and powers have been vested in an independent head called a Commissioner?—That is so. That appears to be very largely what I have been saying as to what I think is the correct way. The Minister does not interfere with the Commissioner except when there is special reason to do so.

20136. Why was the change from one system to the other made in 1902?—Because there was too much interference in the previous case. It was acknowledged that there was a right to interfere the whole time and every time, and that was taken advantage of politically.

20137. Do I understand that there was too much political interference?—There was.

20138. And accordingly a barrier was erected in the shape of a Commissioner?—That is so.

20139. Can the Minister now interfere if he likes?—Yes, that is my opinion.

20140. And that is the legal position?—Yes in my opinion.

20141. Is the difference that "Commissioner" sounds a bigger person than "General Manager" and Ministers are afraid of him, or what makes the difference?—No. Parliament has now definitely placed a certain responsibility on the Commissioner which was not on the general manager, who was supposed to be an officer entirely subordinate to the Minister at all times.

20142. Taking it as a broad question, in practically every State of the Commonwealth they have gone through one, or two, or three phases; first of all, they were under Parliament?—Yes.

20143. Then, to use your own phrase, confessedly for the purpose of escaping from political influence they set up a Commissioner?—Yes.

20144. In New Zealand and South Australia I think they pulled him down again?—South Australia still has a Commissioner.

20145. They pretty well pulled him down again in New South Wales, I think. Then in New Zealand they pulled him down again?—Yes.

20146. Do you think they are likely to put him up again when there is confessedly too much political influence again?—It depends there now on the Government again. If you have a strong Government and a strong Minister that influence cannot obtain.

20147. If, on the other hand, you have a strong Commissioner, he will keep it down?—Yes.

20148. But if you have not, it may get in?—The great strength of the Commissioner's position is that he is not dependent on the public vote.

20149. I think in no case is he appointed for more than five years, is he?—I think not.

20150. So that he is to some extent dependent on the public vote?—I would not admit that, because the Government have power, and actually have done so, to appoint and re-appoint a Commissioner without its being made public; they have an absolute right to do that.

20151. He has to be reappointed; we can draw our own inference as to what that means.

20152. *Mr. Balfour Browne*, K.C.—Is he removable after five years?—No. The appointment simply terminates if not renewed, I believe.

20153. *Mr. Aspinall.*—By a vote of both Houses?—I think that is not the case with our Commissioner unless he is found incapable or something of that sort.

20154. *Mr. Acworth.*—I do not know whether your attention was ever called to it, but I have been reminded of it in this inquiry. Were you in Australia with Sir Robert Hamilton, who, curiously enough, had been Under-Secretary for Ireland, and went out there as Governor of Tasmania?—I was there in 1894.

20155. In the *Nineteenth Century* for April, 1892, he talks of the difficulty of the Commissioners—the difficulty that there has been money spent which ought not to have been spent, and he speaks of how the Commissioners were set up to stop it. The point he raises is this: "Our Parliamentary representatives are the guards, and I believe that any guard upon them in the shape of permanent Commissioners appointed by them to exercise their powers must, as experience appears to be already showing, break down." Would you agree with that—

June 6, 1907.

Mr. C. S. R. Palmer, M.Inst. C.E., Engineer for the Western Australian Government.

The extent to which the Railway Commissioner's powers should be independent of Parliamentary interference.

The experiences of other Australian Colonies of the system of control of the railways by a Commissioner.

June 6, 1907.

Mr. C. S. R. Palmer, M.Inst. C.E., Engineer for the Western Australian Government.

The position and powers of the Railway Commissioner.

if the railways belong to the State, Parliament does represent the owners?—That is so.

20156. And Parliament is the right body to control?—Yes.

20157. If the people control, they must control?—Yes.

20158. And I gather your attitude to be that you would agree with Sir Robert Hamilton, that you cannot put up a Commissioner to protect the people from themselves?—You can to a certain extent, but the Commissioner might go to a further extent than is necessary; in that case you ought to guard yourself from the Commissioner.

20159. If the people own the railways, in the long run, the people must have the power to run them, and the Commissioner could only be an obstacle to a certain extent; that is what you think, I gather?—Yes.

20160. He may be an obstacle to prevent good as well as to prevent evil?—He can be certainly.

20161. So that in the long run you come back to this, that no machinery can protect the owners of the railways from mismanaging them if they like?—No, but the Commissioner could put on a considerable braking effect.

20162. That really is the point, I think. I wanted to ask you about the rates. You do not know in any shape what the reductions you speak of are going to work out at?—No, not at present.

20163. You cannot do it in money, in percentage, or any way?—The only thing I can tell you that I know is that the profit was £100,000 over and above interest, and that £16,000 of that has been conceded at once to the timber trade.

20164. There are other reductions, but you could not price them?—No.

Particulars of ton-mile rates on Australian railways not available.

20165. In Western Australia you do not publish ton mile figures?—I do not think they do in any of the Colonies.

20166. They have them in some?—They may have, but I have never seen them.

20167. Do you know whether they have them in Western Australia?—They have not.

20168. So that in taking the specimen rates, we cannot tell what really the average charge is?—No.

20169. We cannot compare it with other countries, where they exist?—No.

20170. *Mr. Aspinall.*—They have them in Victoria?—Possibly, but they are not published.

20171. *Mr. Acworth.*—Can you, in any way, give an idea of what you believe the average length haul to be; it must very much affect the question of rates. The only railway that ever got it out in this country got out an average haul of twenty-two miles as against about 80 in Germany, and 140 in America?—All I can tell you is our distances, and where, approximately speaking, the main industries are located.

Question of the average length haul of traffic in Australia.

20172. Is there much local traffic—that is to say, traffic that originates fifty miles from Perth and goes 100 miles, or is it nearly all backwards and forwards to Perth or Albany?—No; there is a very great deal of local traffic.

20173. There is?—Yes. There is also a great deal of traffic between Perth and the port, which is only twelve miles.

20174. Do you mean that it starts from Perth and goes to the port?—It starts at Fremantle and goes into Perth.

20175. And does not go further?—And does not go further. That feeds perhaps one-third of the population of the whole State.

20176. Goods for consumption in Perth would not go beyond?—No.

20176A. You would not care to suggest any figure which you think would represent the average haul?—I have never attempted to get it out.

Percentage of short and long distance passenger traffic.

20177. With regard to passengers, is the suburban short distance traffic a very large percentage?—There is a large percentage, because Perth and Fremantle represent one-third of the population; then, again, Coolgardie and Kalgoorlie, where again the suburban traffic is large, and Boulder, represent another one-sixth or one-seventh of the population.

20178. So that those two places have a very considerable local traffic between themselves?—Yes.

20179. How long does it take to get from Coolgardie to Perth?—It is about twenty miles an hour, all stoppages included.

20180. That is a through train?—Yes, from twenty to twenty-five miles an hour.

Examined by Mr. ASPINALL.

20181. What bearing has your system of management of Government control got upon labour questions in this sense; if you have a demand on the part of the men for an increase of ten per cent., or whatever it may be, can the Commissioner decide that?—Yes.

20182. Absolutely?—Yes.

20183. So that he has not to go to the Minister at all?—Not necessarily.

20184. If that results in an increased expenditure which is abnormal in relation to the working of the railway, what would happen to the Commissioner?—I suppose he would be found incapable.

20185. But he cannot be removed, can he?—Yes, he can, for being wanting in capability.

20186. How can he be removed; what is the method of procedure?—It is part of his contract, as far as I know; they have the power of removing him, but, of course; it is a power which it is very difficult to exercise.

20187. But am I not right in saying that in Victoria he is practically appointed for life, except in case of misconduct, and then if he is removed he has to be removed on a vote of both Houses of Parliament?—I could not tell you.

20188. Assuming that you have the other method of control, where the Commissioner is not responsible, have you no cases where any great pressure has been brought to bear on the Commissioner to employ a number of men through political influence?—Yes. There are more or less constant requests for employment, but I should not like to say that it was any form of political dishonesty at all.

20189. Was not that a source of complaint in New South Wales some years ago?—Yes, and not so very long ago, that men have been employed at higher rates, but I do not think that affected the railways.

20190. Before the appointment of the Chief Commissioner in New South Wales, was there not a very strong complaint that political influence resulted in large numbers of men being employed who were not necessarily required for railway work?—I believe that was the case in New South Wales.

20191. That, therefore, is a danger which has to be guarded against in some way?—I think the Commissioner would guard against that danger.

20192. Therefore, the Commissioner must be an exceptionally strong man to withstand any Parliamentary influence?—Not quite. I think his mere position gives him a power of withstanding Parliamentary influence that anyone directly elected by the people can never have.

20193. But you like the present system under which you are working?—Yes, I think so.

20194. You are quite satisfied with that?—Yes. There has been no complaint about it except the one that I have spoken of, namely, that the Commissioner is trying to make too much money.

Examined by Colonel HUTCHESON POE.

20195. I think you said that the public were rather complaining that the Commissioner was making too much money, and that that was practically the only charge they had against him?—Yes.

20196. In such a case, I presume, though the Minister for Railways presents the estimates to Parliament, they are practically framed by the Commissioner, to a great extent?—Yes.

20197. He is an expert, and the Minister for Railways may or may not be an expert?—Yes.

20198. And he depends upon the Commissioner for the preparation of the estimates which he submits to Parliament?—Yes.

20199. Therefore, naturally if he is prepared to support him he must be largely guided in any statement he makes to the House by the estimate which has been given him by the Commissioner?—That is so.

20200. To take an extreme view. Supposing, in the opinion of the Commissioner, he had gone as far as was necessary in the matter of reduction of rates and charges, and that the House was opposed to the view that he took, and that the Minister took the same view as the House; in such a case would there not be great risk of the Commissioner being thrown to the dogs; I mean if the Minister took the same view as the House, that the charges were too high, and that there were undue profits, and the Commissioner said that in his opinion he considered the estimates he had framed were necessary and could not be legitimately reduced?—There are two ways of answering

that. One is that if the Commissioner was wrong in his figures he is an incapable man.

20201. Quite so; but I am assuming that he is a capable man?—The other is that the profits must come out, and if it is laid down that the Commissioner must not earn more than a certain percentage, it would solve itself in that way.

20202. If it is a case of profits only; but there might be other questions upon which the Commissioner expressed strong views, as to the working lines on which he should administer the railways, and those views might be antagonistic to the majority of the House. Is it your experience that in such a case the Minister, if he has confidence in the Commissioner, would support him against the views of the House?—I think so; yes.

20203. That is your opinion?—Yes.

20204. In that way the Minister for Railways acts more as a buffer to protect the Commissioner against the despotic exercise of the powers which the House would possess?—Yes.

20205. And that has been your experience in Western Australia?—Yes.

20206. With regard to the profits themselves, we had before us Mr. Anderson, a gentleman who gave us interesting evidence with regard to Australian railways, and he said that the policy had been that two-thirds of any surplus profits were devoted to the reduction of rates and charges, and one-third to increasing the salaries of the railway employees. Is there anything of that kind in Western Australia?—No.

20207. You do not give any portion of your surplus profits to increasing the salaries of the staff?—No, we have nothing of that sort.

20208. *Chairman.*—I think the statement about giving a portion of the surplus to the staff referred to New Zealand.

20209. *Colonel Hutcheson Poë.*—I think it applied also to Australia, because Sir Joseph Ward said that the whole of the surplus was given in one year. —(*Witness*).—At any rate, there is nothing of that kind with us.

20210. There is nothing of that kind in the other Colonies?—Not that I know of. May I just point this out? I have seen that point in Mr. Anderson's evidence as published in the papers, and the question of staff there refers to the wages staff; I do not think he was referring to the salaried staff.

20211. Is there anything of that kind in Australia?—Not that I know of.

20212. You do not think there has been any increase given to the wages staff?—I think not. With us we have the Arbitration Act, and of course the men could always claim an increase under that.

20213. With regard to new works, I understand that they are under a different minister entirely?—Entirely.

20214. Are they under a commissioner, under a minister?—No, the engineer-in-chief.

20215. He is responsible for the preparation of the estimates, and they are dealt with by another minister in the House. I suppose there is not likely to be any undue pressure brought to bear upon the Minister by the House itself as regards that; they are not likely to oppose anything, to bring political or any other pressure to bear upon him?—Not as regards the cost of construction, but as to whether a railway should or should not be constructed, the House has to vote the funds, and pass the Bill.

20216. As a rule, does that lead to any friction or differences of opinion?—No, not to any extent. These things are so largely thrashed out beforehand, that they very seldom lead to any friction.

20217. With regard to these cheap railways, that have been constructed at £1,000 to £1,200 per mile. I take it that they are of a temporary nature?—No, I think they are intended to be permanent.

20218. That is a point upon which Mr. Anderson distinctly said that in Victoria, these lines were cheaply constructed with a view to seeing what possibilities there were for traffic, and that subsequently as time went on, it was intended to replace them by more solid lines?—I consider that is not the case here. The 45-lb. rails have carried a very large amount of traffic in Australia, and the sleepers that we use are permanent ones. The only thing is the ballasting and giving more facilities.

20219. In other words, you think the rails as laid are perfectly able to cope with the traffic as it develops in that particular district?—Yes.

20220. *Mr. Acworth.*—What weight do you allow on these rails?—We follow the English rule of so many lbs. per ton in weight. There are twelve tons to a 60-lb. rail.

Weight of rails used on the West Australian railways and speed limits.

20221. Twelve tons per axle, and what on a 45-lb. rail?—Nine.

20222. *Chairman.*—There would be a speed limit, I suppose?—It depends on the speed. On our Southern Railway, 280 miles long, the rails are 46½ lb. to the yard; the heaviest loco axle weighs 10 tons 1 cwt., and the speed of passenger trains, exclusive of timed stops, but not of optional stops, is twenty-five miles an hour on the average. Similarly on 58lb. rails the axle weight is 12 tons 12 cwt., and the speed twenty-four miles on the average in a run of 170 miles.

20223. But there is a speed limit?—We have a speed limit.

20223A. *Colonel Hutcheson Poë.*—Is there any public authority in Western Australia similar to the Board of Trade in this country?—No.

The Commissioner and Minister of Public Works the judges of construction, safety, &c., of the lines.

20224. So that any provision as regards safety, speed limits, signalling, and so on, is entirely in the hands of the Commissioner and Minister?—Yes. The safeguard is that the Public Works constructs the railways and the Commissioner has to certify that they are fit for public traffic.

Preferential rates given to Colonial produce.

20225. With regard to rates of produce, do you give preferential rates from inland stations as against seaboard produce?—We always try to do so if we can, but Federation with a possible Inter-State Commission has been called into existence, and it is not quite possible to do it. For instance, there are two coals in use in Western Australia, one from the eastern seaboard and one our own. We used to give a preferential rate to our own, but now the rates of carriage for both are the same.

20226. Is that the policy in Australia generally?—It is a policy which has to be adopted wherever it is drawn attention to.

20227. In Victoria they have a ½*d.* a mile rate for Colonially-produced coal and one penny for sea-borne coal?—I do not think we are allowed to do that now; we are not supposed to; since we were federated we are not allowed to give preference to our own over other Colonial goods.

20228. *Chairman.*—I think that is what you wanted Colonel Poë; you mean where there is a differential rate for sea-borne traffic as compared with inland traffic?—(*Witness*)—As regards export traffic to other parts, to England for example, we would certainly give preferential rates wherever it benefited us.

20229. *Colonel Hutcheson Poë.*—Do you actually give them in practice?—We do; we have started to give preferential rates with grain.

20230. *Chairman.*—Exported grain?—Exported grain.

20231. Of course, you do not import grain; you grow your own?—We have advanced so rapidly in our industries that we are just overtaking our own consumption of grain, and now we have started to export; our first ship load came away last year.

The West Australian railways treated financially as a whole, the more profitable districts helping to pay for the less prosperous.

20232. *Colonel Hutcheson Poë.*—I think you spoke of one line which is working really at a loss of about 25 per cent.?—I gave that as an instance.

20233. But I take it that though possibly the railways in Western Australia have barely sufficed to pay interest on capital the policy of the State is to incur a loss in certain directions and let that loss be borne by the earnings of the other lines?—Yes.

20234. If by so doing the development of a particular district would be served?—Yes; the railways are treated as a whole.

20235. The earnings of one make up for losses on another?—Yes.

20236. And you even go further and give that other line any benefit in the way of reduction of rates which you give to the rest of the system?—Certainly.

Cross-examined by Mr. Balfour Browne, K.C.

Gauges of the Australian railways.

20237. May I ask just two or three questions? The gauge in your State is 3 ft. 6 in.; in the other States I think it is different?—In Queensland it is 3 ft. 6 in., in South Australia 3 ft. 6 in., in New South Wales 4 ft. 8½ in., and in Victoria 5 ft. 3 in.

Each State's railways a separate undertaking.

20238. Have you any junction with any other railways, or are your railways self-contained?—We have none.

20239. Therefore, you have no questions arising as to through rates. When you made the railways for

June 6, 1907.

Mr. C. S. R. Palmer, M.Inst. C.E., Engineer for the Western Australian Government.

the State did you get the land for nothing?—There has been a payment.

20240. But it is nominal?—There has been a heavy payment in certain cases, but there is nothing like what has occurred here.

20241. Going into Perth, for instance?—Going into townships, yes. There has been a great deal of land alienated.

Initial cost of land and promotion expenses.

20242. There were no Parliamentary expenses in connection with the promotion of railways?—No.

20243. A shilling an hour is the minimum wage, you say?—Yes.

20244. Is that determined by Parliament?—No.

20245. By the Commissioner?—No. That is the custom of the country; you cannot get a labourer for less.

20246. There must be some prohibition?—No; it is a case of supply and demand.

Decisions as to rate of pay and hours of employment of workmen subject to court of arbitration.

20247. Is there a maximum day with regard to the number of hours?—Yes, eight.

20248. Then you have the Arbitration Act, which enables the workers to go before a Court or Judge to have a rate raised or reduced, as the case may be, but generally raised, I suppose?—Mostly.

20249. And the railway officials or the railway workmen might go before that Court?—Certainly.

20250. Then the Court or Judge could decide that altogether independently of the Commissioner or Parliament?—Yes.

20251. You said that large reductions had been made in rates, and you added—which I am not certain that the Commissioners quite caught—mainly on industries which require help?—Yes.

Government enforcement of rate reductions to encourage industries where necessary.

20252. Who determined the question as to whether the reduction was to be made?—Perhaps that was not put as clearly as it ought to have been. Generally speaking, reductions have been made, but in addition there have been heavier reductions on certain industries which, in the opinion of the Government, required help, and it is the Government which made the reductions on that particular industry.

20253. I quite understand that if it was done by the Government it was done independently of the Railway Commissioner. The Government indicated, we will say, that a certain trade required assistance, and that trade had a reduction?—Yes.

20254. In Free Trade England that would be impossible, I take it?—I do not know about Protection versus Free Trade.

20255. But that is in the nature of Protection?—Yes.

20256. You said that the complaint against the Commissioner was that he was making too much money out of the railways for the State?—Perhaps I should not have said that the complaint was made of the Commissioner; it was made of the fact.

20257. It is quite natural that he should do the best he could with the railways?—Yes.

20258. You also said that the matter was taken in hand by the Government, so that the question of making too much at once became a political question?—I do not think so, any more than in the case of the Post Office here.

20259. But are not the wages of postal employes apt to become a political question?—Yes; but on the other hand our Arbitration Court takes that away from Parliament.

20260. I daresay you know that the Arbitration Court in New Zealand while it was scaling up wages was very successful, but now that it seeks to scale them down it is a question whether it is to be continued; do you know that?—Yes, possibly.

20261. Then about the rates. I have worked out one rate in Ireland as against your coal rate. 1*s.* 3*d* for five miles and ½*d*. a ton after for a distance of 49 miles brings out 3*s*. 1*d*. You may take that from me. It is simply a question of arithmetic. The Sligo, Leitrim, and Northern Counties Railway carries 49 miles for 2*s*. 6*d*., so that in that case the benefit is on our side?—Yes, but our rates apply all over the State and our wages scale is high.

The Commission adjourned till the following morning at 11 *o'clock.*

THIRTY-SIXTH PUBLIC SITTING.—FRIDAY, JUNE 7TH, 1907.

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminister, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel WILLIAM HUTCHESON POË, C.B.; Mr. W. M. ACWORTH, and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN (Secretary).

Chairman.—I think Sir George Holmes has an application to make.

Sir George C. V. Holmes, K.C.V.O., C.B. (*Chairman of the Irish Board of Works*).—Mr. Chairman, we at the Board of Works find great fault with the accuracy of the evidence given before this Commission by Mr. Spence and Mr. M'Farland on behalf of the Lough Swilly Company. I ask permission to put in a rebutting statement, which I hold in my hand, and which covers the whole case.

Chairman.—I think I had better say at once that the Commissioners have looked through the rebutting statement, and they are of opinion that it should not be received. But they are quite willing that a letter, dated the 23rd October, 1903, sent by the Board of Works to the Lough Swilly Railway Company (which has not been brought officially before the Commission) should be printed as part of our proceedings. I think, however, that we must decline to receive any further rebutting evidence with regard to the Lough Swilly Railway Company.

Sir George Holmes.—In that case, sir, I formally tender the letter in question.

The letter was handed in, and is as follows:—

14,747/03.

OFFICE OF PUBLIC WORKS,

DUBLIN, *23rd October,* 1903.

SIR,—I am directed by the Commissioners of Public Works to acknowledge receipt of your letter dated 26th ultimo, received in this office on 29th, two days after a Dublin paper had refused to publish it. The Commissioners consider that the letter is inaccurate in several respects; that you have omitted to mention important facts, and that it is calculated to create prejudice.

You state (1) "that the engines were supplied contrary to the best expert advice." They were supplied upon the advice of Mr. Livesey, the Locomotive Superintendent and Manager of the longest narrow gauge line in Ireland, a gentleman who was trained as a locomotive engineer, and who has had a quarter of a century's experience as Locomotive Superintendent on narrow gauge lines. You describe this gentleman as "only an amateur in locomotive engineering." As you have brought the question of his qualifications forward, the Commissioners would be pleased to learn if you employ the services of a qualified engineer as Locomotive Superintendent. They are informed that the gentleman who serves you in that capacity was the foreman in the engine shed of the Donegal Railway Company, under Mr. Livesey.

You state (2) "That their performance has fully shown the accuracy of this advice, and the folly of disregarding it." The Commissioners, as soon as they became aware that you were having trouble with the locomotives employed Mr. Basil Hope of the Midland Great Western Railway to investigate the matter. His report shows that the condition of the engines was disgraceful, that it was due altogether to the incapacity of some of the drivers, and to the lack of proper supervision and control. The Board have, since the receipt of your letter, conferred with Mr. Hope, who confirms these statements, and explicitly informs the Commissioners that the type of the engines is in no way to blame for their bad performance.

On the 7th July the Board communicated to you the substance of Mr. Hope's report. After quoting numerous instances of gross incompetency on the part of some of the drivers he summarizes the causes of failure in these words:—

"Briefly these three heads are the causes of failure:—

"Firstly. The qualifications of the drivers.
"Secondly. The mode of washing out the boilers.
"Thirdly. The mode of coaling."

Your Company was so impressed by Mr. Hope's statements that you wrote to the Board on the 13th July in the following words:—"On the general question I am to state that my Directors have taken very serious notice of the failures in the Locomotive Department so far as they have been found to be of an avoidable nature." You dismissed one of the drivers who, on the 6th June, with the 6.45 p.m. train, Letterkenny to Burtonport, Engine No. 3, having forgotten to take water at Letterkenny, after an hour's shunting, had to stop between Kilmacrennan and Creeslough to bucket water into his tanks, and who, two days subsequently, with the same engine and train, melted out his fusible plugs, showing that he had allowed his furnace crown to become bare of water. On the other hand you retained in your service another driver who failed to get up steam on the 18th June, and who on the 22nd of that month melted both his fusible plugs when driving No. 2 engine with the 7.50 a.m. train from Burtonport to Letterkenny. The first driver referred to had been dismissed from the Cavan and Leitrim Railway for a similar offence, and nevertheless with a full knowledge of the facts that he had been dismissed for a fault, you had taken him into your service and entrusted the lives of your passengers and the safety of property, confided to your care by the State, to his safe keeping. It is somewhat astonishing, in the face of these facts, and of the refusal of Mr. Hope to modify his opinion as to the causes of failure, that you should continue to ascribe the bad performances of the engines to other than the true causes.

You have been good enough to forward to the Board extracts of Mr. Malcolm's recent reports on the condition and the unsuitability of the engines. I am to inquire whether you placed before that gentleman the conclusions at which Mr. Hope had arrived; whether you informed him of the incompetence of the drivers above referred to, and whether you further informed him that you had taken into your employ two other men dismissed from the Donegal Railway for incompetence. One of these men understood his duties so imperfectly that you had to dismiss him for hooking off his engine and leaving his train standing on a bank while he went for water.

The Commissioners will be glad to learn if you consider that the engines have had a fair trial and fair treatment in the hands of drivers such as these, and they also wish to know if you can quote any instances of the engines having failed to do their work when in proper condition, in the hands of competent drivers, and supplied with good coal. Have they ever, under such conditions, arrived at Creeslough short of water,

June 7, 1907.

Letter dated 23rdOct.,1903, sent by the Irish Board of Works to the Lough Swilly Railway Co.

Investigation by Mr. Basil Hope, M.G.W. Railway.

The suitability of the engines supplied to work the Burtonport line and the causes of failures.

June 7, 1907.

Letter dated 23rd Oct., 1903, sent by the Irish Board of Works to the Lough Swilly Railway Co.

The suitability of the engines supplied to work the Burtonport line, and the causes of the failures.

or at their destinations short of water, or of fuel? If so, will you be good enough to give instances and dates. When the engines are allowed to leak at every tube end, and when you provide coal, such as the Chairman of this Board, Mr. Batchen, and Mr. Robertson saw at Pennyburn and Burtonport on their recent visit, it is not to be wondered at if they run short of both fuel and water.

In connection with the question of fuel, I am to inform you that Mr. Basil Hope did not suggest that bags of coal should be kept at roadside stations to replenish the bunkers. What he did suggest was, that the coal at terminal stations should be kept in bags, because the quality you supplied was so inferior that when kept, as at present, in bulk, all the good fuel was picked out by the drivers who first served themselves, and little but slack and dross was left for those who came after them. The suggestion that you should keep coal in bags in roadside stations was made by this Board to meet the difficulties due to the condition of the locomotives as an alternative to the method adopted by you of running a wagon of coal, often in the rear of the train, and relying on the assistance of your passengers to bring the fuel to the engines.

You charge the Board with trying to force an interpretation on a portion of Mr. Malcolm's report by publishing a "truncated" sentence in which he admits that the line from Letterkenny to Burtonport could be worked by tank engines, and goes on to state his preference for tender locomotives, but you appear to forget that there was no necessity for the Board to call your attention to this preference because it was communicated by Mr. Malcolm to yourselves. The object of the Commissioners was to show you that Mr. Malcolm admitted to them that the line could be worked by tank engines, and this admission having been made, they saw no further reason for disregarding the advice given to them by a Locomotive Superintendent and Railway Manager so experienced in the working of light railways as Mr. Livesey. The interpretation which you have forced on Mr. Malcolm's statement, that it was to be taken in the same sense as an admission that the line could be worked by horses, is contradicted by the context, and is, moreover, one which the Board, entertaining as they do the highest respect for Mr. Malcolm, cannot insult him by adopting.

The Board were informed, independently, by both their representatives at the Conference that Mr. Malcolm's views on the type of engine were largely determined by the consideration that it was desirable to run the engines right through from Londonderry to Burtonport, and *vice versa*, and in his letter to this Board Mr. Malcolm himself uses the following words:—

> "I may mention that when considering this matter I have not overlooked the fact that for the efficient and economical working of the line it will be necessary to use engines capable of running through from Burtonport to Londonderry, a distance of seventy-four miles."

But your Directors must be aware that, however desirable you may consider it, from the point of view of the convenient working of the line, to use the Burtonport engines between Londonderry and Letterkenny, it is not possible to do so with due regard to the safety of the public, because the Letterkenny line is laid with rails too light to admit of such heavy engines passing over them continually. Furthermore, even if the rails of this line were of the same section as those on the Burtonport line, you could not, under the agreement with the Treasury, use the engines belonging to the latter line over your own system. This difficulty could only be met by your company providing additional engines suitable for interchanging, and in number proportionate to the increased mileage, for assuredly you could not expect the State to provide you with hauling power over your own system. A similar remark applies to passenger carriages and other rolling stock. If there is to be interchange of rolling stock you must contribute your proportionate quota, a fact which you appear to have lost sight of in recent correspondence.

Before leaving the subject of the locomotives I am to refer to your statement that the tender engines recommended by you could have been obtained at a cost of only £5 each in excess of the price ultimately paid by the Board for those supplied by them. The Commissioners were at a loss to understand on what figure you could have based such a remarkable statement. They have, however, accidentally discovered that, under the pretext of asking their contractors to quote for an extra engine of the same type as those supplied for the Burtonport line, you obtained a quotation by making use of the Board's name. The correspondence has been sent to them. I am to inform you that the figure given to you is not even approximately the same as that paid by the Board, though no doubt the Commissioners would have to pay the figure quoted if they were now to order a single engine. Hence you have been led into a serious error and your deductions are entirely wrong. I am also to remind you that the Board were advised that the type of engine recommended by you would have been unsafe for use on the Burtonport line, unless a leading bogey were fitted at considerable extra cost. The true figures were communicated to you in the Board's letter of the 29th August, 1901. The difference in cost between the tank and tender types for four engines would have amounted to, not £20, but £1,344.

In regard to your strictures on the quality of the material used in the engines, I am to inform you that the Board's Inspector, who carefully tested all the materials used, reports that everything was of the best quality. The tyres, of which you cannot find the maker's name, were manufactured by the eminent firm of John Brown and Company, of Sheffield, and if you look a little more closely you will probably find the name partially concealed by paint. The draw pins which broke were, at your request, made of the very best iron. The Commissioners are not surprised at drawpins breaking when some of the engines are in the care of drivers who charge through gates at level crossings, who overrun their stations, knock out the ends of carriage and engine sheds, and even demolish heavy stops.

The Commissioners are perfectly satisfied with the capacity of Messrs. Barclay, Sons, and Co., Limited, the contractors for the locomotives. Before placing the order with that firm they made ample inquiries, and received strong recommendation in their favour from some of the leading Scotch railway companies.

As to the annual mileage, viz., 15,000, which you say is sufficient for narrow gauge engines, I am to inform you that on the Donegal line, under the management of a skilled locomotive superintendent, with drivers who know their business and who are carefully supervised, several engines have accomplished with perfect success considerably over 30,000 miles per annum, and in one case as much as 37,776. These figures are exclusive of shunting, ballasting, and piloting. The average *train* miles for the four years 1899 to 1902 of the six engines less than 22 years old which had been running throughout that period were—

Engine,	No. 4	No. 5	No. 6	No. 7	No. 8	No. 9
Train miles,	19310	22877	29189	22568	27583	21834

It is not necessary further to labour this point, as the Board have already requested you to furnish them with full information on the subject of the traffic and the suitability of the time tables, in order that they may be enabled to arrive at a fair conclusion. The Board will require to know, amongst other things, if, in the opinion of your directors, the third train per day, in each direction, will be made permanent.

With reference to your remarks relating to the Board's urgent recommendations to your directors to put on the third train per day in each direction, I am to state that you apparently endeavour to raise a point against the Board by "truncating" one of the sentences in their letter to you of the 21st ultimo. Had you published the sentence in full you would have failed to make your point against this Department.

In the same paragraph of your letter you resort to still more questionable methods of effecting the same object, for you state that your company received about the time of the opening of the line a time-table prepared by the Board's "railway experts," which, amongst other objectionable features, would have involved a daily collision between trains travelling in opposite directions. I am to state positively that your company neither asked for nor received any such document. On probing the matter the Board have ascertained that one of your employees, in order to assist himself in the preparation of a time-table, privately asked the Board's railway engineer to lend him a copy of a time-table which had been prepared some years ago, not for the purpose of working the line, but of forming an estimate of the amount of rolling stock

that would be required in certain assumptions. You have consequently made use of the good nature and desire to assist a member of your staff of one of the Board's employees in order to create prejudice against the Department. Apart from the above circumstance, you apparently forget that the Burtonport line is equipped with the electric block system, and that a collision is not possible unless your drivers run their engines without the train staff, an irregularity which I am to remind you one of the drivers has recently been guilty of, as has been pointed out to you in the Board's letter of the 5th ult. On the occasion in question the driver of the 1.10 p.m. up train from Burtonport started his train from Churchill Station without taking the staff, and upon reaching Foxhall he sent his fireman back for the staff, while he himself proceeded to work the train singlehanded into Letterkenny. The fireman was obliged to walk into Letterkenny with the staff, with the consequence that the trains were delayed for two hours.

Your statement that an urgent letter of your Directors on the subject of the sufficiency of rolling stock was not replied to for five months is perfectly true. During the intervening months the Commissioners were collecting information from other narrow gauge railways in Ireland for which they were dependent on the courtesy of the officials of those lines. I am to point out that you have been engaged, by your own admission, for the last three-and-a-half months in making similar inquiries, and that your information is not yet complete. Apart, however, from this consideration the Commissioners are of opinion that your Directors are hardly entitled to make a complaint as to delay in answering correspondence, seeing that at the date on which your letter was published no less than twenty-four letters of the Board to you remained unanswered (notwithstanding repeated reminders), some of them dating as far back as May, 1902.

On the subject of the delay in watering engines and your statement that on the 28th February, 1899, your former general manager wrote to Mr. Radcliff strongly objecting to the use of four-inch stand-pipes (which had been fixed on by your company), and demanding that they should be made six-inch, you omitted to mention that Mr. Radcliff in his reply pointed out that it was then too late to make alterations, as all documents were in the contractor's hands. Your chairman's statement that it takes on the average fifteen minutes to water the engines is not borne out by the report of our agent on the line, who has been instructed to inquire carefully into this question. He reports on the 2nd inst. that he has never observed that more than from four to seven minutes were spent in watering, and that sometimes it can be done in three minutes. In this connection I am to refer to your challenge of the accuracy of our inspector's report on the abundant supply of water in the engine tanks both on arriving at Creeslough and Burtonport on the occasion of his recent visit, and to inform you that you are inaccurate in stating that he failed to take account of the height of the feed pipes, etc., that on the contrary, he took full account of all those factors, and that his original statement was perfectly accurate.

June 7, 1907.

Letter dated 23rd Oct., 1903, sent by the Irish Board of Works to the Lough Swilly Railway Co.

Before concluding I am to refer to your statement that "as regards the design and construction of the "railway, the question of this company's responsi- "bility for the plans and specification, and the ex- "tent to which they were departed from in some cases "and not in others, and the reasons why, will shortly "form the subject of an arbitration *asked for by us* "in accordance with the terms of the Treasury agree- "ment," and to inform you that the Board have not, so far, received any request whatever for arbitration from your Directors. It is true that they offered you arbitration on certain limited matters, to which offer they have not yet received a reply. The Board must not be taken as assenting to the admissibility of arbitration until they learn definitely from you the points on which you seek arbitration. On this subject I am to refer to the Board's letter of the 31st July, 1903, in which it was stated that your company must specify the points that they wish brought before the arbitrator, and that they should not be allowed to delay doing so indefinitely.

Question of the design and construction generally of the Burtonport Railway.

While the Commissioners have no desire to prolong this controversy in the public Press, I am directed to state that they give you full permission to publish this letter provided it appears *in extenso*, if your directors are of opinion that it will serve their interests to do so, and they have so informed all those newspapers which published your letter of the 26th ultimo.

I am, Sir,

Your obedient servant,

H. WILLIAMS,

Secretary.

The Secretary,
Londonderry and Lough Swilly Railway
Company, Londonderry.

Mr. THOMAS O'DONNELL, B.L., M.P., examined by the CHAIRMAN.

20262. You are a member of Parliament?—Yes.

20263. And Chairman of the Tralee and Dingle Railway?—Yes.

20264. What particular trade or industry do you represent this morning before this Commission?—I am not myself, unfortunately, engaged in any industry, but the railway which runs from Tralee to Dingle passes through a district which is engaged largely in the fishing industry, and of course we have the ordinary trade of most agricultural countries. We have cattle, sheep, and pigs; we export them very largely. In addition, of course, we have eggs, and poultry is a very important industry; we export them to English markets—Liverpool, London. But the main industry is the fishing, and that is the one which of course is most largely concerned with railway fares.

20265. Now, this little Tralee and Dingle Railway, how long has it been open?—It was opened in 1891.

20266. Before it was opened how was this fish business dealt with?—Before the opening of this railway the fishing industry could not really be developed at all, and no fresh fish could properly be sent to the English market.

20267. What was the nearest railway station?—The nearest railway station was Tralee, a distance of over 32 miles, and it was impossible to carry fish by road.

20268. This little railway has really developed the fishing industry?—Naturally it has done a great deal, but then we had a long way ahead to start.

20269. Have you formed any opinion as to the benefit, as far as reduction in cost was concerned, in dealing with traffic from this district since the railway was opened?—Reduction in cost of what?

Mr. Thomas O'Donnell, B.L., M.P., Chairman of the Tralee and Dingle Light Railway.

20270. Of transit by rail as compared with road?—Well, taking the flour, meal, and other articles of consumption in the district that had to be taken on to Dingle and Castlegregory, of course they are brought considerably cheaper by rail now than they formerly were by road.

Reduction in cost of conveyance of goods between Dingle and Tralee since opening of railway.

20271. Have you any figures?—For flour stuffs from Tralee to Dingle, before our railway was opened, the cost was £1 per ton; now it is, roughly, one-fourth of that. Fresh mackerel used to be sometimes taken at the same rate; now it is 12*s.* 5*d.* per ton, and of course it has the advantage of being delivered earlier in the English market—it makes a difference of half a day or a day.

20272. And it means getting better prices for the article?—Certainly. Then the salt for the curing of the fish is also brought over the railway.

20273. Where is the curing done?—Locally. We have in Dingle and the district one-seventh of all the fishermen engaged in all Ireland. When I say engaged in Dingle and district I mean the peninsula of Dingle. We have one-seventh of all the fishermen—of all the different classes of men engaged in the fishing industry engaged in that coast district.

Extent of the fishing industry of Dingle peninsula.

20274. *Mr. Acworth.*—Would you give the numbers?—I can get the numbers for you possibly more accurately from the returns the Fishery Board has.

20275. Could you give it roughly—when you say one-seventh, one-seventh of what?—The

June 7, 1907.

Mr. Thomas O'Donnell, B.L., M.P., Chairman of the Tralee and Dingle Light Railway.

total of the whole number of fishermen in Ireland is, I believe, more than 20,000, and I should say we have in that district nearly 2,500.

Trade with French and English fish markets opened up.

20276. *Chairman.*—Of course, all that employment given to these people, and, in fact, all that industry, has been developed by the construction of that railway?—Considerably so; before the railway came they used to cure the fish and send it off by steamer. Now they cure also, but we send off a considerable share of the fish fresh to the French and English markets; before the railway was opened we could not do that.

20277. Before the railway was opened that was impossible?—Impossible.

20278. How did you deal with the passengers?—Before the railway passengers were very rare, especially in the winter period of the year. It meant driving on an open car thirty miles, so that very few would travel. In addition, of course, the fare was very high. Now it is one-quarter of what it was then, and of course there are considerable advantages in other respects.

Development of passenger traffic in the district.

20279. Do you issue cheap tickets in addition to the ordinary tickets on that railway?—Oh, yes, we have market fares three days in the week, and in addition, during the summer months, we give exceedingly cheap fares to Castlegregory, which is not only a fishing town, but a sea-bathing town with a lake fishing beside it—trout-fishing. We issue tickets at 8*d.* return for sixteen miles—that is to say thirty-two miles the double journey—a farthing per mile.

20280. Do you say that markets are held on three days a week?—Yes—Tuesdays, Fridays, and Saturdays.

20281. When did you say the railway was opened?—In March, 1891.

Length of railway.

20282. What is the length?—There is a junction at Camp. The total distance from Tralee to Dingle is thirty-one miles, and there is a little junction of six miles—about thirty-seven and a half miles altogether.

20283. That is the total length of the railway?—That is the total length of the railway.

Guaranteed capital of line and its allocation between the baronies.

20284. Do you remember what the total capital of the railway was?—This is a guaranteed line; some of the baronies of the county had to guarantee the capital before the line was built. The guaranteed capital was £120,000.

20285. Will you just explain, in order to get it clear on the notes, how that capital is allocated to the different districts?—Between the different baronies; Corkaguiny (that is, of course, the barony through which the line runs) contributed £60,000, or one-half of the whole; Trughenackmy, £39,000; Clanmaurice, £15,000; and Tralee Urban District, £6,000—all paying interest at 4 per cent.

Liability of the baronies.

20286. Are these guaranteed areas liable for the loss on working?—Yes; in addition to the rating for the interest on £120,000, they are also liable for any deficiency per year.

Cost per mile for the construction and equipment of the railway.

20287. What was the average cost per mile?—The average cost per mile in our line (that is, including all expenses, buildings, rolling stock, and all), was £2,400, which, of course, means that the line must be very imperfectly laid.

20288. Are you right about that figure?—I got it from the engineer—the gentleman who is our engineer at the present time, and who was also engineer at the time the line was being promoted.

20289. I have another figure here?—I have tried my best to get the correct information—it is £2,700.

20290. You said £2,400?—I beg your pardon—it is £2,700.

20291. That seems a very low price?—It does. I do not think it would be regarded as too low if the condition of the line after it was built were taken into account.

20292. Did the Government give any free grant to that railway?—No; the Government gave no free grant.

Government's aid to the railway.

20293. What was the Government's assistance then—just say what it was?—We had a guaranteed capital of £120,000, and half of that, or, we will say, 2 per cent. on the £120,000, was to be borne by the rates of the guaranteeing baronies, and the 2 per cent. on the £120,000 was to be borne by the Exchequer—£2,400 a year by the baronies and £2,400 a year by the Exchequer. The baronies may be called upon for any amount in addition to that £2,400. You will see that after the Act of 1895——

20294. One minute. Was this railway built under the Tramways Act?—Under the Tramways Act of 1883.

20295. Not under the Light Railways Act?—No; it was before that; we were unfortunately too early. Under the Act of 1895 (which gave certain enabling powers to districts such as ours, where the line was not paying, and the guaranteeing areas had to find more than the interest) we got the Government to redeem their annuity of £2,400 at thirty-three and one-third years' purchase, and they paid us £80,000, which we placed to the redemption of capital, and thus our guaranteed capital then stood at £40,000 instead of, as previously, at £120,000. We undoubtedly made a saving—we paid 4 per cent. then on £40,000 instead of 2 per cent. on £120,000, so that we made a saving of about £800 a year on that particular transaction, and the Government also made something, because Consols were then pretty high—about 112.

20296. That went to the benefit of the baronies?—That went to the benefit of the baronies.

20297. *Sir Herbert Jekyll.*—When was that carried out?—In 1897 or 1898.

20298. *Chairman.*—You have referred to the very small cost per mile of this railway. I suppose it was not very well constructed, was it?—No, that is unfortunately the cause of accidents that have occurred, and of the great outlay in the upkeep of the line since it has been taken over by the county authorities. We believe—in fact, it has been reported by Board of Trade officers—that the accident was entirely due to the original faulty construction.

20299. *Mr. Acworth.*—That is the Camp accident?—The Camp accident.

20300. *Chairman.*—I suppose a good part of that railway was laid on the public road?—Sixteen miles of the whole length—nearly half—was laid down the public roads.

20301. Simply sleepers laid down and rails put on them?—Yes; we have done great execution amongst the hens and poultry.

20302. Were they Baltic sleepers?—I could not say that. I am told plain wood sleepers, but I cannot speak personally as to that.

20303. What are the worst gradients?—I think our line—it is rather hard to advertise the fact here, because we have a district which, if properly supplied by railways, would be one of the most interesting in the British Isles at the present day, so far as scenery, and antiquities, and everything else is concerned; still, we have to advertise the truth, and I think the gradients are absolutely the worst in the United Kingdom.

20304. What is the worst gradient?—The worst is put down at one in thirty, but I think part is under one in thirty, and that continues for three and a half miles—that is the Camp gradient—and at the end of the gradient there is a very high bridge passing over one of the mountain gorges, and the curve on that bridge is a three-chain curve. It was there the famous and disastrous accident occurred in 1893.

20305. Were there many lives lost?—There were three lives lost, and a couple of men very seriously injured, and any amount of damage done to stock on travelling the line.

20306. And that, after investigation was found to be attributable to the faulty construction originally of the railway?—Yes.

20307. Of course the faulty construction and insufficient rolling stock in the beginning has landed you in a very large expense, I suppose, in keeping the road up?—An exceedingly large expense. Of course after this accident it was necessary to do everything in our power to keep the rolling stock, engines, and permanent way in the best possible condition so as to ensure against a further accident, and the county authorities who are now managing the line (it is under the control of the County Council) have spent on the line a net amount—not including the Government grant—of £110,000.

20308. What did the Camp accident cost you?—It cost a considerable amount. We paid £5,000 for compensation alone to those parties who were injured, and for cattle, pigs, flour, and other articles destroyed; but it cost us fully £5,000 more before we had the carriages, engines, etc., put right.

20309. Well on to £10,000?—Well on to £10,000.

20310. In addition, you say you spent out of revenue £110,000 in necessary improvements?—Absolutely necessary.

20311. Necessary improvements, I mean, in the interests of safety?—Yes; almost the amount of the original capital of the line.

20312. Just tell us, if you can, the rates paid in the barony for this Dingle Railway. You might as well give us the figures since the opening—have you got them there?—Yes. The rate—that is, the charges paid by the barony of Corkaguiny in their annual rate—in 1891, was 1*s.* 3·99*d.*

20313. That is 1*s.* 4*d.*, roughly?—Roughly 1*s.* 4*d.* In 1892 is was 2*s.* 3½*d.*; in 1893 it was 2*s* 5½*d.*; in 1894 (that was after the accident) it was 3*s.* 10½*d.*; in 1895 it was 3*s.* 6½*d.*; in 1896 it was 2*s.* 3¾*d.*; in 1897 it was 1*s.* 5¼*d.*; in 1898 it was 2*s.* 1½*d.*; in 1899 it was 1*s.* 7¾*d.*; in 1900 it was 2*s.* 10½*d.*; in 1901 it was 9½*d.*; in 1902 it was 10¾*d.*; in 1903 it was 1*s.* 10¾*d.*; in 1904 it was 1*s.* 6½*d.*; in 1905 is was 1*s.* 11*d.*; in 1906 it was 2*s.*; and in 1907—which you have not got there, but which I know now, because the rate has been struck—it is 4¼*d.*

20314. I see it was brought down in 1901 from 2*s.* 10½*d.* to 9½*d.*?—That was not due to any saving in the railway expenses; there was an old balance of a Treasury grant which the county then got of £2,500, and that was allocated that particular year to the relief of the rates.

20315. In 1902 it was also very low—10¾*d.*?—Yes; that was due to the amalgamation of the Great Southern Railway and the Waterford and Limerick. We got a refund of £33,000 as our part of the bargain—the county authorities did. They had been guaranteeing this line for a considerable number of years, and had paid this amount, and this line got its part of this refund, reducing the rate to 10*d.*

20316. I think you told us just now that after the Camp accident a Board of Trade Inquiry was held?—Yes.

20317. What recommendations, do you remember, did they make in connection with the line?—They made a number of recommendations. Major Marindin and Judge Adams held the Inquiry.

20318. Was he an Irish judge?—A County Court Judge in Limerick. They recommended the expenditure of £12,800 as absolutely necessary, and immediately necessary, to alter curves and gradients. We are making some of these now. We have got a grant of £23,000 recently. They also spoke with regard to Glenagalt, where this gradient of one in thirty continues for three and a half miles. Mr. Barton, who spoke at the time——

20319. Who is he?—I think he was an engineer who was with those gentlemen at the time.

20320. Quite right?—He, reporting on this, said—"It would effect a saving of coal and wear in every train, and would no doubt be a great improvement and facilitate regularity in all weather"; and he estimated the cost as £22,000, and we believe that this tunnel is absolutely necessary in order to make the line safe, or to enable us to work the line cheaply.

20321. That is a tunnel in substitution of the excessive gradient?—Of the excessive gradient.

20322. And that has not been carried out, of course?—No; the English Treasury would not give us the money.

20323. You have applied to them?—Oh, several times; it is not for want of applying that we have not got it.

20324. *Sir Herbert Jekyll.*—Where did the grant of £23,000 come from?—That did not touch the tunnel; that is from Irish money, not from the Treasury; the Treasury had nothing to do with it—it is from the Development Grant.

20325. *Chairman.*—I think there is a celebrated judge on your Bench in Ireland who has given an opinion on this question?—He spoke very strongly.

20326. That would be in connection with the accident?—Yes. An action was taken by those men who were injured for the recovery of damages, and he spoke pretty strongly of the Board of Trade.

20327. *Lord Pirrie.*—Of the Board of Trade?—Of the Board of Trade, yes.

20328. *Chairman.*—Just read what he did say?—This is just an extract from what he said:—"The law provides a certain inspection of railways, and the regulations of the Board of Trade impose certain restraints on the construction of railways, and require certain conditions to be satisfied, and it is quite clear that either from the defective inspection of the Board of Trade or want of vigilance in the supervision of construction of that line, this great loss has fallen on the county." Of course, this district is an extremely congested and poor, mountainous district, and these heavy rates in a rich district, of course, would not represent the same relative burden as they do in a poor district such as this. He further said, "It is a terrible thing to think of the great burden this line has cast on the barony through which this railway passes—£2,500" (of course this was a half-year's levy) "to be levied upon such a poor class of persons engaged in agricultural pursuits—persons really, I am sure, whose humble condition and the hardest degree of self-denial and industry represents scarcely a margin for existence."

Hardships entailed on the taxpayers by reason of the heavy railway charge.

20329. That is very strong language, but I suppose it was justified at the time?—He knew the district.

20330. I do not think we need refer to the other opinions that you quote here?—No.

20331. These ratepayers that the Judge refers to have been paying these rates now for the last fifteen years?—Yes; the rates which I mentioned a little while ago.

20332. Of course, you have told us that they have to pay also any loss on working expenses; but, as a matter of fact, have there been any losses?—Oh, yes, certainly—unfortunately, every year from the beginning.

Annual loss on working expenses since opening of Tralee and Dingle line.

20333. But now, recently?—Yes. I have here a table showing the losses from 1900 to 1906. It is at page 7.

20334. I will come to that later—I have overlooked that. Of course, as Chairman of the railway you know all about it and the circumstances of the district. Is it your opinion that it is impossible to make that line pay except those gradients are altered?—I am perfectly positive of that; I have got all the expert evidence it is possible to get.

Improvements in construction a necessity to the railway paying.

20335. And you further say, I suppose, that it is practically impossible for the district to raise the money?—Oh, impossible; we are paying £20,000 a year for railways and harbours.

20336. Now?—At the present moment. Of course we get a refund out of the local taxation account, The county pays, roughly, an average of 1*s.* in the pound for the railways of the county, but then, of course, that is not evenly distributed—the parts adjoining the sea pay more.

Inability of the district to provide the money necessary for improvements.

20337. The poorer pay the larger percentage?—And they can least afford it.

20338. I gather it would be a great benefit to the district and the industries of the district if this money could be found for making the tunnel, and to obviate the expense of working the railways over these steep gradients?—I believe it would be of the greatest possible advantage to the district. Dingle has two great industries, as I have said—its cattle fairs are the largest, certainly, in Kerry, and they are a splendid breed of cattle; they thrive very well in all the better lands of the county, and when we try to bring their cattle on fair days, we have the greatest possible difficulty—our trains must necessarily be small, passing over this high gradient, and we cannot accommodate the buyers. Then there is the fish—we have to go very slowly, and have to take small loads; our load is very limited. The result is, of course, that these men are not nearly so well accommodated in the carriage of their fish as they would be if the line were of a different gradient.

Development of industries retarded owing to the present condition of the line.

20339. Would you just tell us what you referred to a moment ago with reference to the receipts and expenditure of the railway just over the last three or four years?—Yes; these are half-yearly receipts, taking 1900 as the first—they are the half-yearly receipts. Of course each half-year is practically the same as the next half-year.

20340. Which half-year have you taken?—The December half-year.

20341. Then we understand that the receipts and expenditure you are now going to mention are for the half-years ending December in each year?—Yes. In 1900 the receipts were £3,663.

Receipts and expenditure for years 1900 and 1903.

20342. Why did you not give the figures for the year?—There is really no difference between them.

20343. Shall we assume that the deficit is £2,000?—Practically double it.

20344. Then as long as we know that you need not give the figure?—The receipts were £3,663, the expenditure, £6,066, and the deficit, £2,403.

20345. Now let us go to 1903?—In 1903 the receipts were £4,160, the expenditure, £7,019, and the deficit, £2,859.

June 7, 1907.

Mr. Thomas O'Donnell, B.L., M.P., Chairman of the Tralee and Dingle Light Railway

Receipts and expenditure for years 1904 and 1906.

20346. Now take the year of the accident?—The accident was previous to all these years.

20347. Oh yes, I see—you are quite right. Take 1904, then?—The receipts for the half-year were £4,343, the expenditure, £8,339, and the deficit for the half-year £3,995.

20348. Now take the last year?—In the last year—1906—the receipts were £4,441, the expenditure, £5,298, and the deficit, £856 for the half-year.

20349. Then that seems to have been the best half-year you have had?—Well, it is the best in the matter of expenditure very considerably, of course. It is slightly better in receipts, but scarcely appreciably better.

20350. But it has the largest receipts?—Naturally the largest receipts from the beginning.

20351. And the smallest expenditure?—Yes.

Train accident on a steep gradient in year 1907.

20352. I see you have had an accident in 1907—what was that?—We had an accident just in one of those same gradients—those 1 in 30 gradients. It is a part of the line where we have only nine curves passing over a gradient of 1 in 30, and also ending in a bridge.

20353. That is where the accident happened?—The brake-rod broke, and immediately the train went down. Fortunately there were no passengers.

Decreased deficit on working in 1906 alleged to be due to control exercised by the County Council over the management of the line.

20354. *Mr. Acworth.*—Is that on the road?—No; it is not. I might mention with regard to the deficit of 1906, it is, of course, considerably less than it was in any previous year. That is due largely to the control exercised by the County Council. It was then that it really got into county control, and expenditure was considerably reduced; men were sent to do something else, and other expenditure was cut down.

20355. But not at the expense of the efficiency?—No; there was an increase in efficiency, and a decrease in expenditure.

20356. *Sir Herbert Jekyll.*—Comparing the table on page 4 with the table on page 7, I see that in 1906, the year in which the deficit was so small, the rate of the barony was 2*s.*?—Yes; I will explain that. Of course you will understand that the rates are estimates for the current year, and are based on the previous year.

20357. And that, perhaps also accounts for the very small rate in the current year?—Yes.

20358. *Mr. Acworth.*—And the 4½*d.* for 1907 is based on the large reduction in the expenditure of 1906?—Exactly.

Heavy payments of railway guaranteed by Kerry county.

20359. *Chairman.*—I think we have heard sufficient about the particular railway with which you are connected. Now two or three general questions about the railways in the County of Kerry. I think you are of opinion that the ratepayers of Kerry have done considerably more than ratepayers in other counties in connection with these railways?—I think so, and I think the returns of the Board of Trade show that.

Railways a necessity for proper development.

20360. Still, you are of opinion that it has been a great boon and a great advantage to the district to have the railways?—I believe that any country that wants to progress must do all in its power to get facilities of this kind, and even though we have had to pay for railways, we believe they are worth it, though we would rather somebody else paid.

£20,000, or one-third of the total railway guarantees for Ireland (excluding Co. Cork), paid by Kerry in 1906.

20361. What is the total amount that ratepayers of the County Kerry have had to pay?—The gross for the last year I have been able to get is, roughly, about £20,000.

20362. That is to say, the ratepayers of the County Kerry?—They get a refund from the local taxation account, of course. Under the Local Government Act of 1898, wherever the rates on a particular barony exceed 6*d.* in the pound for these purposes, one-half that excess is refunded by the Treasury to the County Authorities, so that out of £20,000 gross levy we get back from £5,000 to £6,000 per annum.

20363. That leaves £14,000 or £15,000 about?—Yes.

20364. That is in your county alone?—In my county alone.

20365. What is it in the whole of Ireland?—Cork is, of course, a very large and rich county, with a high population, but if you exclude Cork the gross total for the whole of Ireland is only £60,000, and our gross total, as I have said, is £20,000.

20366. That is to say, excluding Cork and taking all the other counties in Ireland, the gross amount is £60,000?—That is roughly, of course.

20367. As compared with the £20,000 in the County Kerry?—Yes, that is right.

20368. What was the total amount of railway guarantees in Ireland in 1899?—In 1899 the total amount of railway guarantees, up to 1899, was £1,068,910. That was the total amount paid out of the rates for railway guarantees, and Kerry had paid up to the same year out of its rates £189,157, or one-sixth of the total for all Ireland. Taking the individual year, the amount paid for all Ireland for 1898 (the last year given in the return was £99,539, and Kerry paid in that year £19,103, or about one-fifth of the whole.

20369. Just mention so as to get it on the notes the free grants as well as the 2 per cent. interest on the guarantees given to the various railways that you have taken out. Take first the Downpatrick and Ardglass?—The free grant in that case was £29,980. That I have got from the returns.

20370. *Colonel Hutcheson Poë.*—I think Mr. O'Donnell has made a mistake in saying that the guarantees were in respect of all these railways mentioned?—Did I say that?

20371. Yes, you say free grants as well as 2 per cent. interest?—I do not think I could have said that. Some guarantees were given, but I do not think for all. I did not mean that the guarantee was for all. In the case of the Downpatrick and Ardglass, the free grant was £29,980; in the case of the Baltimore and Skibbereen, £56,700; the Bantry free grant was £14,940; the Donegal and Killybegs, £121,436; the Stranorlar and Glenties, £123,886; the Killorglin and Valentia, £85,000; the Headford and Kenmare, £49,984; the Ballina and Killala, £44,000; the Westport and Mallaranny, £131,400; the Achill Extension, £72,578; the Galway and Clifden, £264,600 (as usual Connaught comes off well); the Collooney and Swinford, and the Claremorris and Swinford, £146,042; and Expenses, etc., £7,321—making a total of £1,147,867.

20372. *Mr. Acworth.*—These are outside Kerry?—Oh, no; there are in Kerry the Killorglin and Valentia, and the Headford and Kenmare.

20373. *Colonel Hutcheson Poë.*—Perhaps Mr. O'Donnell would now give the lines on which there is a Treasury contribution?—The Donegal and Killybegs, £1,000; the Stranorlar and Glenties, £1,000; the Headford and Kenmare, £60,000; the Killorglin and Valentia, £70,000; the Collooney and Swinford, £80,000; and the Claremorris and Swinford, £40,000. These are in addition to the free grant. I might explain that the interest on the £70,000, the capital of these lines, was framed at a certain amount; the Government, in addition to giving a free grant, said, "We will give interest at 2 per cent. on a certain capital," fixing the capital for the Killorglin and Valentia at £70,000.

20374. *Mr. Acworth.*—That was one of the Balfour lines?—There is no Treasury contribution at all in that.

20375. *Colonel Hutcheson Poë.*—The note at the bottom of page 8 of your proof was that a free grant was given as well as the 2 per cent. to all railways. That is the point I wanted to make clear?—Not to all of them.

20376. *Chairman.*—I do not know whether it is necessary to go into this next paper. I think we will leave that. Now we come to another general question which I will put to you. Have you considered the question which we have heard so much about—the nationalisation of railways in Ireland?—Might I, before we pass to that, deal with a question which we would regard in Kerry as getting rid of our guarantee under the Act of 1895, as we have done with the Dingle Railway. I deal with it shortly in page 10. We are paying a guarantee of 2 per cent. on the Headford and Kenmare line of £105,000, and the Treasury is also paying a guarantee, we are also paying a guarantee of 2 per cent. on £70,000 in the case of the Killorglin and Valentia line, and we believe by arrangement with the Great Southern, and with the Treasury, we could capitalise and make a saving each year of roughly, I calculate, about £1,100 to the county.

20377. How do you suggest that that should be done?—Of course, the Great Southern and Western Railway is the company to which the county pays this interest at the present moment. We, the county, guarantee interest at 2 per cent. on £175,000 to the Great Southern in Kerry, and the Treasury also gives an annual sum of 2 per cent. interest on the same amount. That is £3,500 from the county, and £3,500 from the Treasury per annum to the Great Southern; and if that were capitalised at the number of years in the Act it would mean really about £116,000, which the Great Southern would be expected to take instead

of the annual amount they get of £7,000. That would leave to the county roughly about £60,000 to pay interest on. That would be only £2,400 per annum that the county would have to pay if that were done, whereas now we pay £3,500. That would give a gain to the county of £1,100, and we believe the Great Southern would gain also in the matter.

20378. At any rate they would not lose?—Certainly not, and I think the Treasury, with their usual generosity, would be only too ready to join if the Great Southern and Western and ourselves did.

20379. *Colonel Hutcheson Poë.*—You say the guarantee in respect of the Headford and Kenmare line is upon £165,000?—It is a barony guarantee.

20380. Is not that, properly speaking, only in respect of £60,000?—No, it is considerably more in our guarantee books.

20381. I think it is only £60,000.

Mr. Shanahan.—Yes. It is only on a portion of the capital.

Witness.—We pay on that amount to the Great Southern, I think.

20382. *Colonel Hutcheson Poë.*—The Treasury guarantee is in respect of only £60,000?—I cannot say as to the Treasury guarantee.

20383. But the difference between £60,000 and £165,000 you are liable for?—I only assume the Treasury guarantee was for the same amount.

20384. *Chairman.*—Would you suggest that if the amounts were capitalised in the way you speak of there would be an immediate saving to the county of £1,100 per annum?—Yes.

20385. Unless you wish to say anything more on that we will go on to the general question. Do you wish to say anything more upon that?—No, I think not.

20386. Then I repeat the question I put to you just now with reference to the consideration you have given to the nationalisation of the Irish railways?—Well, of course, the nationalisation of the railways is a very large question, and men would hold very different views upon that matter; both in Ireland and in England at the present time we seem to be groping in the dark so far. I must state at the outset that if our railways in Ireland are to be nationalised, as I hope they will be, I hope that they will be nationalised under an Irish State Government, and that we would not have to apply to the English Treasury for money when we wanted it. But I think, speaking on the general principle of the advantages which a country does derive from the control of its own railways, the example of all other countries where it has been tried and properly worked is in itself a proof, and a conclusive proof, that it is a great advantage to any country. And so far as we in Ireland are concerned, I think that most people who know Irishmen will believe that with this control we should turn it to good account and do as much good for the people of our country as any other country has done where this system has been adopted.

20387. Are you acquainted with any of the colonies where the Government own the railways?—Well, I do not say that I am personally acquainted.

20388. I did not know whether you had been to any of the colonies?—I have travelled over the Canadian railways; but I could not say that I have sufficient knowledge to give evidence about them.

20389. Did you see the report of the evidence given by Sir Joseph Ward before this Commission with reference to the New Zealand railways?—I do not know that I specially directed my attention to his evidence. Of course I have read a great deal about all these systems; and I see the great advantages in the case of the carriage of goods and in the case of passenger fares. I think the accommodation is quite equal to the best that can be got where so-called competition exists in railways.

20390. I think you have really covered the ground in the general answer you have given, so that we need not go into all these details. Of course we have had before us the question of capital and everything of that sort, and I do not think it is necessary to go into all that. But you are clearly of opinion, I suppose, that it would be in the interests of Ireland generally if the railways were owned by the State and managed by some Irish authority?—Undoubtedly. I have no second opinion on that matter.

20391. As to the detail of how it should be done, that you have not considered?—Well, of course, that is a matter for after consideration. I have not given this information in my notes, but I wanted to see the Belgian State Railways, and I paid them a visit just in preparation for the evidence I was to give here, because I think the Belgian system is about the best example that any person could have of the advantage to a country of a system of railways owned by the State.

20392. Are all the railways in Belgium owned by the State?—Not all absolutely owned, but they are all controlled.

20393. We should like to hear what you have to say upon that question?—First of all, of course, the natural question would be—How does Belgium stand with regard to the transit of goods on those State-owned railways. They divide their goods, as of course you are aware, into four classes: I will take the fourth class, coal and other stuffs of that class.

The Belgian State-controlled railways:—Instances of low goods rates.

20394. The classes in Belgium are just the reverse of the classes in England, that is, their fourth class is our first class?—Yes. A ten-ton load would be carried at 5*f.* 11*c.* for 100 miles; and for 200 miles 6*f.* 7*c.* Then I will take the third class, flour and meal; for 100 miles a ten-ton lot would be carried at 7*f.* 11*c.* per ton—roughly 6*s.*; and for 200 miles it would be carried for 8*f.* 72*c.*

20395. When you say a ten-ton lot, do you not mean ten tons in a wagon?—Well, that would be for the company; I do not know if their wagons do actually carry ten tons.

20396. But if they do not carry ten tons you will find those rates very much exceeded?—The company in their tables have stated——

20397. Is it not what is called a complete and an incomplete load?—An incomplete load would be, of course, different and a higher rate.

20398. Certainly?—But in their tariff they have given these figures.

20399. I know, for a complete load; but you must have ten tons in order to be charged for ten tons. If you put only eight tons in a wagon you are charged for ten tons, are you not?—I cannot possibly answer that.

20400. That is my recollection of what was the custom years ago; I do not know what it is now. Very well, you have given us the grain and you have given us the coal. What is the next?—Take earthenware, fruit, fish, salt, etc.

20401. What is the load there?—I am taking a five or ten-ton lot.

20402. Take a five-ton lot?—The five-ton lot is the same as the ten-ton lot, so I think that gets rid of the other point: For 100 miles the charge is 9*f.* 72*c.* per ton; and for 200 miles 12*f.* 94*c.* per ton. Then, of course, in the first class various articles are pretty dear: for five-ton lots it would be 15*f.* 26*c.* for 100 miles; and for 200 miles 22*f.* 48*c.* Then I will take lesser distances; for, say, ten miles and anything under five tons the rate varies, according to class, from 1*f.* 46*c.* for the lowest class to 2*f.* 70*c.* for the highest class; that is per ton per ten miles. Also I may mention what seemed to me an interesting fact, that is to say, that in the case of parcels prepaid you can get in Belgium by fast goods trains, travelling about twenty-five miles an hour (and the trains go several times a day), 1 cwt. of goods carriage any distance up to 250 miles for one franc.

20403. Station to station?—Any distance.

20404. But it is station to station—it is not delivered?—Oh, no.

20405. But parcels in this country are delivered, are they not?—In England?

20406. Yes?—Oh, I expect so.

20407. Collected and delivered?—This is not delivered.

20408. No, it is station to station?—Station to station. That is all I have to say with regard to goods; of course it is only a rough general list.

20409. You think those low rates are the result of State ownership?—I do.

Reference to low passenger fares.

20410. And that private enterprise could not work the railways and charge such rates?—I do not think it could where you have, as we have in Ireland, forty companies worked and managed each by a separate Board. I do not think it would be possible. Then take the passenger rates. Of course upon the general question of passenger rates it is a matter of public knowledge that passenger rates are considerably lower in Belgium than in this country. There is one rate which must strike any person as rather interesting, and that is the tickets which are issued for five days or fifteen days by which you can travel over the whole of the Belgian lines (somewhere about 2,800 miles) third class for 9*s.* 9*d.*

June 7, 1907.

Mr. Thomas O'Donnell, B.L., M.P., Chairman of the Tralee and Dingle Light Railway.

20411. For a week?—Five days. Another interesting thing is the tickets that they give to boys going to schools which enable them to come in from the country and attend a university or a higher school. I think that is an excellent thing, and certainly it would be of the greatest possible advantage if we had it in Ireland, because I believe our boys would be extremely anxious to avail themselves of secondary education if they could get cheaply by railway to these university colleges and higher schools. Certainly in Belgium the system is availed of very largely. Undoubtedly it has operated in helping to make Belgium the industrial and progressive nation they are. I do not think companies could do it. We have done it, but then we have the rates of the county to draw upon.

Reduced fares charged to school boys.

20412. Will you give us the rate charged to these boys?—It is extremely low. For the whole year a journey of twenty kilometres third class would be 160*f.* A journey of 120 kilometres would be about seventy-two miles, and 160 francs would be just about six guineas. Of course 120 kilometres is a pretty long journey—quite as long as would be required.

20413. Have you any of the rates for shorter distances?—Oh, yes; a journey of ten kilometres would cost thirty francs for the whole year.

Workmen's fares.

20414. *Colonel Hutcheson Poë.*—And the first class would be fifty-six francs?—Well, I do not think that children travel much first class. Then there is also the workman's ticket, which I consider of the greatest possible advantage to Belgium, and certainly it would be of the greatest possible advantage in England if you were considering that question, and in Ireland also. A workman who works in a town can go out into the country; he can go, we will say, five kilometres for ninety-five centimes, or three miles for 9½*d.*, every day in the week and get home at night. He can go a distance of sixty-two miles into the country at night——

20415. I think that is out of the question?—Of course; I put it as a maximum.

20416. *Mr. Acworth.*—Mr. O'Donnell is quite right—a large number do live habitually sixty-two miles away from their work. Did you happen to see in a recent number of the *Economic Journal* an account of these Belgian fares by a Belgian professor?—I did not see that.

20417. He says that quite a number of workmen are away from their homes for about eighteen hours out of the twenty-four, living at those distances?—I do not give the sixty-two miles as being at all common, but a large number do live out ten or twenty miles.

20418. *Chairman.*—They do in England. Give us the short distance workmen's fares?—Ninety-five centimes, or roughly 9½*d.*, will take them three miles out from the town, travelling six days a week.

20419. That is for a week?—For a whole week. Then if you take a worker who is six miles out, or ten kilometres, he gets a ticket which takes him in and out each morning and evening for one shilling a week.

20420. Those are the most interesting figures. Will you go up to twenty kilometres?—For twenty kilometres, or twelve and a half miles roughly, he gets a ticket for 1*s.* 2½*d.* Take thirty kilometres—that would be eighteen miles roughly. For that he pays 1*f.* 75*c.*, or about 1*s.* 5*d.* Then take thirty-one miles—that would be 1*s.* 9½*d.* for a week, or 372 miles total travel for 1*s.* 9½*d.*; and for 2*s.* 6*d.* a man can travel on a labourer's ticket 744 miles.

20421. That is including the double journey each day?—Oh, certainly. That is the total number of miles travelled.

20422. Did you in the course of your inquiries ascertain or make any inquiries in reference to their system of export and import goods traffic?—No; these are all inland rates.

Statistics showing the commercial growth of Belgium under the State railway system.

20423. I know; but did you inquire further?—No, I did not. I do not want to speak of things I have not inquired into. Of course I did look up the growth of Belgium. I do not mean to say that the growth of Belgium is entirely due to these State railways, but the system of State control has no doubt largely entered into and helped the undoubted growth of Belgium. At the time it started these railways its imports were £8,000,000 and its exports 6¼ millions, and if you take 1904 its imports are £177,000,000 and its exports £154,000,000. So that in this period its trade increased twenty-three-fold. Its population doubled in that period.

20424. Of course you know that the exports and imports of Belgium are mostly transit traffic?—I will give you the home traffic. In 1835 their special home-import traffic, quite apart from the international, was £6,000,000, and the exports £5,000,000. In 1904 the imports were £110,000,000 and the exports £88,000,000—on their home traffic imports and exports were, roughly, £200,000,000.

20425. That is Belgian traffic proper?—That is Belgian traffic proper.

20426. Those are official figures?—Yes. Or, roughly, for home consumption, taking imports and exports, the value amounted to £28 per head of the population; and seventy years ago it was only £2 19*s.* per head of the population. The same home traffic of England is only £20 per head of the population, and of Germany £9 13*s.* With regard to the coal, at the beginning of this national railway system its value was only about £1,000,000.

20427. Is that coal exported?—Coal produced. Its value in 1904 was £16,000,000, roughly. As to the number of passengers carried, I think it is the largest for any country of its size—152,000,000 passengers travelled in 1904. The number of trains over the system is undoubtedly the largest—nearly one million trains went over the system in the year 1905. Another interesting thing, certainly, with regard to Belgium is that its National Debt is, roughly, £120,000,000, and if you take its railways and canals, it is a free country—there is no debt. I should like Ireland to be in that condition.

Chairman.—Those are all very interesting figures.

Examined by Sir Herbert Jekyll.

20428. Do you happen to know whether the workmen carried at these extremely low fares are at liberty to use any train in the day; or are they restricted to particular trains running at specified times?—It would not be natural to expect that a workman should use any train; he would only use those trains which would suit his hours of work.

20429. But, is it open to him to do so?—I could not say as to that.

20430. Do you know whether there are any means of restricting those privileges to *bonâ fide* workmen; or, whether they can be enjoyed by anyone who chooses to call himself a workman?—A man cannot travel by a workman's train if he earns more than 35*s.* a week.

20431. But he may be a clerk, or anything else?—Yes, a clerk or anything else.

20432. *Mr. Acworth.*—I think you are wrong about that, and I think you will find that clerks cannot use those trains. I will not say positively, but I am pretty sure that I am right?—But I think they give a fairly liberal meaning to the word "workman."

20433. It is restricted to, what one may call, the rough-coated people, I think?—But I know that it goes up to 35*s.* a week.

20434. *Sir Herbert Jekyll.*—Do they take steps to ascertain what the earnings of these people are, who take those tickets?—I should say they do; but I do not think they push it too far.

Examined by Colonel Hutcheson Poë.

20435. I think your connection with the Tralee and Dingle Railway is recent?—It has extended just over two years.

20436. You knew that district before that, did you not?—I was born there.

20437. You were there when the line was promoted, I suppose?—Yes.

20438. It was constructed under the Act of 1883, was it not?—Yes.

20439. And under that Act the estimates and the preliminary expenses are chargeable on the local authorities in the first instance?—Yes.

20440. Subsequently, the engineering questions had to be considered by the Board of Works, and, when they were approved, the plans were submitted to the Grand Jury, and subsequently went before the Privy Council?—Yes.

20441. How came it that, when that line was under discussion, such an extraordinary sum was estimated

as £120,000 for a line practically forty miles in length involving a cost of about £2,700 a mile—how came the Grand Jury to entertain the line at such a low cost?—Really, it is very hard to explain, and I do not know that I can give any explanation; but I might submit as a possible one, that the Grand Jury were very anxious to get the line, and possibly they could not find more capital.

20442. I think that under the Act of 1883 the Board of Works had to submit an estimate as to the capital expnediture required?—Yes, I think so.

20443. So that, to a certain extent, I suppose, they were answerable for the extraordinarily low price at which that line was proposed to be built?—I do not think we have any cause to be thankful for the action of the Board of Works at that particular period.

20444. At any rate, supposing the line had to be rebuilt, no such absurd estimate would be adopted for its re-construction?—Oh, no. I think that if there was any law in the country which would take up the Boards and deal with them criminally, the Board of Works would be indicted, and convicted. We would convict them, at any rate—a jury of Kerry men.

20445. I think you said the capital of that line was £120,000, and that the cost of the line was, roughly speaking, £2,700 a mile; in other words, that the actual cost, exclusive of promotion, expenses, and law costs, was £100,000?—Yes.

20446. So that, practically, out of the amount of £120,000, £20,000 went in the shape of promotion and legal expenses?—An enormous amount.

20447. It works out at £20,000 all but a few shillings. On a capital expenditure of £120,000, £20,000 went in promotion and legal expenses?—Yes.

20448. However, I take it that assuming the line had cost twice the amount it did—supposing it had cost £5,400 a mile, which is rather less than the average cost of construction in Ireland, the capital promotion and legal expenditure would have remained constant, and the total capital you would have been called upon to bear would have been something like £220,000?—Yes.

20449. That would have involved a guarantee on behalf of the baronies of £8,800?—Yes.

20450. Whereas the guarantee that you were called upon to pay was £4,800?—Yes.

20451. Of which the Treasury recouped you half?—Yes.

20452. Or, in other words, if the line had been properly constructed, your county and the guaranteeing areas would have had to pay double the guarantee you were called upon to pay all those years?—Yes.

20453. So that that must be taken into account?—Yes; but I might remark that the guarantee itself is really small as compared with the amount of our working expenses.

20454. Quite so?—We believe that if the line had been properly constructed at the beginning, although some of the £110,000 which we have since had to expend upon the improvement of the line would have had to be spent, not nearly so much would have had to be spent. And we further believe that the fish traffic, which now gets on to Cahirciveen because they can carry it quicker and at a cheaper rate, would have come over our line and have made our receipts greater.

20455. *Chairman.*—And the working expenses would have been considerably less?—Yes.

20456. *Colonel Hutcheson Poë.*—Taking the figures you have given us for the five years ending 1895, the average of the baronial contributions works out at £6,492—the average yearly contributions?—About that.

20457. Of which £2,400 is in respect of the guarantee?—Yes.

20458. In other words, for those five years, there was an annual deficit on the working expenses of £4,092 a year?—Yes; but we have changed it since then.

20459. I know; I am coming to that. For the five years ending 1905, the average annual deficit on working expenses came to £2,721?—Yes, about that.

20460. And your baronial contribution now, since the Treasury liability has been redeemed, comes to £1,600?—Yes.

20461. So that your total contributions come to £4,321 for the last four years, as against £6,490?—Yes.

20462. That is really what it comes to; and I think that involves in respect of one of the baronies a levy of 2*s.* 6*d.* in the pound?—It has averaged during the fifteen years a little over half-a-crown.

20463. And that, I think, looking at the Board of Trade Returns, is considerably more than double the levy in respect of any other railway built in Ireland under any of those Acts?—Yes.

20464. I think the highest other levy is in respect of the Cavan and Leitrim Railway and amounts to 1*s.* 2½*d.*?—Yes.

Average baronial levy since opening of Tralee and Dingle line the highest in Ireland for Light Railways under Act, 1883.

20465. But this is 2*s.* 6*d.*, which is, of course, an enormous rate to levy. Looking at your proof, you say that since the opening of the line, in 1891, that is practically fifteen years, the net amount levied, after deducting the local taxation re-fund, was £92,000 for a period of fifteen years; and that practically works out at £6,000 a year for the whole time?—Yes.

20466. And, if it had not been for the Local Government Act of 1898 and the re-fund to which you were entitled under that Act, you would have been swamped out of existence?—Yes, we could not have stood it; and we should have been inclined to have torn up the line.

Inefficient working and heavy liability on guarantors the result of original faulty construction of line.

20467. I think it goes without saying then, although it has been argued before us sometimes that the cost involved in the construction of these different railways under various Acts has been very excessive, that this is an object-lesson showing that where a line has been constructed on manifestly a very low estimate, as in this case, the result is—inefficient working and ultimate heavy liability both on the part of the contributing areas and also, eventually, on the part of the Treasury?—Undoubtedly; nobody would deny it. Cheap construction can be carried too far.

Necessity for some relief to be afforded the ratepayers by the Treasury redemption of other guarantees in Kerry urged.

20468. And you consider, of course, arguing on the same basis, that as you have been relieved of your liability in consequence of the Treasury redemption in the case of the Tralee and Dingle line to the extent of a reduction from £6,490 to £4,321 a year, some relief would also be afforded if the Treasury would agree to capitalise some of their other guarantees?—It would mean a saving of over £1,000 a year; and, in a county so severely taxed as Kerry, that would be a very important consideration.

Impossibility of any large reductions of rates and fares under the existing railway system.

20469. I quite agree, it would relieve you very appreciably. As regards the general question, I presume you admit that under the present system it is impossible that there could be any very large diminution or reduction in either passenger fares or goods rates?—I do not think it is possible. Companies have to look after the interests of their shareholders, and I do not think it is a question of blaming them at all.

20470. You do not consider that under the circumstances either the passenger fares or the goods rates on the Irish railways are, in your experience, unduly high, taking into consideration that they have to pay their shareholders, not a large dividend, but at any rate a reasonable dividend?—I do not think they could be reduced much.

State purchase of Irish railways would induce large savings, which would be applied to reductions in rates and fares with consequent development and increase of traffic.

20471. That is one argument why you think that if the State were to take over the railways it might possibly be prepared, in the interests of the country, and especially a backward country like Ireland, to undergo some loss at first?—If the State takes over the railways and manages them as one body, there is no doubt about it; there will be considerable saving in the working of the lines; and it is also a fact that when better facilities are given to people to travel—and now that the Irish tenant-farmer has purchased his land and is more anxious to improve his methods of tillage and to produce crops and articles for sale that he did not produce before, something of that sort might be done. I think if fares and rates were reduced there would be more travelling and more traffic on the lines; that has been the experience of Germany. And also if you reduced the rates for goods to cross over to England—whether it be market-garden produce, butter, eggs, small parcels, or what not, I believe the farmer would produce more; and I do not believe the State would be called upon for a great deal, if anything at all, in the nature of loss.

20472. But, granted even that all these assumptions of yours would be verified, it can hardly be expected that a railway company should experimentalise in that direction?—I do not think any sensible man expects that.

20472A. You do not give us particulars; but, if you will refer to your notes, I would rather take them

June 7, 1907.

Mr. Thomas O'Donnell, B.L., M.P., Chairman of the Tralee and Dingle Light Railway.

from you. Have you ever heard of the growth of traffic which has resulted in Belgium in consequence of the operation of the extraordinary system of fifteen-day and five-day tickets, which you mentioned?—Oh, yes, I have it somewhere.

20473. I think that in 1893 the fifteen-day ticket was introduced, and perhaps you will give us those figures?—The number of passengers was 19,828; and the total receipts, 632,724 francs.

Reference to the great growth in passenger traffic in Belgium following concessions in fares.

20474. Those figures show the growth of the traffic that has ensued in consequence of putting into force the fifteen-day and the five-day tickets. That is the number of passengers who have taken those tickets in the year when the fifteen-day ticket was introduced?—Yes. In 1900 there were 72,944——

20475. *Chairman.*—Why not go to the last year?—In 1904 there were 75,604 passengers with total receipts of 2,182,137 francs.

20475A. That is an enormous growth?—It is enormous.

Colonel Hutcheson Poë.—That is about £80,000 for 75,604 passengers.

20476. *Mr. Acworth.*—That is an average of over £1 a passenger?—There are first, second, and third-class. Of course, the first-class passenger will pay more. The figures I gave were only for third-class.

20477. The people you gave were five-day ticket passengers?—Yes.

20478. *Colonel Hutcheson Poë.*—The price of the first-class fifteen-day ticket is 51*s.* 3*d.*; second-class, 34*s.* 2*d.*; and third-class, 19*s.* 7*d.* The first-class five-day ticket is 25*s.* 7½*d.*; second-class, 17*s.*; and third-class, 9*s.* 9½*d.*; is that so?—Yes. The number of passengers in 1903 on the five-day ticket was 67,698; and the receipts 936,715 francs. In the next year, 1904, there were 137,375 passengers, with receipts of 1,913,524 francs. That is for five-day tickets. For third-class ordinary passengers the fares are §*d.* per mile; for the second-class, 1*d.*; and for the first-class, 1½*d.* per mile, with a reduction of 20 per cent. on return tickets.

20479. *Chairman.*—Those are the ordinary fares charged in Belgium, are they?—Yes, on the ordinary tickets.

Examined by Mr. ASPINALL.

Estimated amount necessary for improvements on Tralee and Dingle line.

20480. In your proof you speak of £30,000 as being necessary for some improvements?—Yes.

20481. And you seem to be satisfied that you would get considerable savings if that money were spent in that way?—Yes.

20482. Do you feel quite certain that you would get, say, the £1,000 per annum which would be necessary to produce the interest upon that?—Well, we have gone into it—I have got the Manager, the Engineer, and our Locomotive Superintendent each to work out his own particular side of the case; and I have taken all three results myself, and with my lay knowledge have tried to find how it would work out. And we have undoubtedly come to the conclusion that we would be able to make the extra amount of money which would pay the interest on that amount. £7,000 is only half a year's expenditure.

Prospects of saving in expenses and increase in traffic discussed.

20483. It is a large proportion of your working expenses. You spend something under £14,000 a year; and, to hope that you would be able to reduce your expenditure by £1,000 a year is a little sanguine, is it not?—We did reduce our expenses in one year by £3,200. I am but two years Chairman, and we have reduced our expenditure to that extent.

20484. Have you any great hope of increasing your receipts upon this line?—That is the great point to which we look for improvement. As I have said, a great number of cattle are at the present time driven along the roads, instead of being taken by our trains; and the fish traffic, which at present goes by the Great Southern to Cahirciveen, would undoubtedly go over our line; and, as for passenger traffic, a number of passengers at the present time will not travel by it on account of the name the line has got for accidents.

20485. I see that you speak in your proof of the difficulty of doing your repairs at the end of a little light railway?—Yes.

Necessity for a central works in Ireland for building and repairing the rolling stock of small lines.

20486. I suppose you have to do everything there of an ordinary character, but anything you require of a heavy character you have to bring to England?—Yes.

20487. While agreeing generally with you that it would be far better for that work to be done on the line itself, if you could possibly get it done, would not that difficulty be met if you were permitted to get the work done at some of the larger works of the larger railways of Ireland, and if you were able to put your narrow gauge engine on to a truck and send it either to Broadstone or to Dundalk or to Inchicore, as the case might be, and get the repairs done in Ireland. Your object is to get the work done and the money spent in Ireland?—Yes.

20488. That you cannot do under the present state of the law?—No.

20489. Therefore, if some trivial alteration were made in the law it would achieve what you want?—Well, it would be a considerable advantage I feel if we could be relieved of the expense of attempting to build and repair engines and carriages, which must necessarily be badly equipped. In the case of all small lines with small capital and with very bad equipment in their shops, it is impossible for them to do proper work in those shops; and, of course, if something like that could be done with some central place, such as Dublin, I suggest that would be a considerable advantage over the present system.

20490. The general question of construction of rolling stock has been mentioned by several witnesses who have come before us; and, in looking through the Board of Trade Returns, and taking out the rolling stock which has been added to the capital stock of the railways of Ireland during the last ten years, and looking at it with some knowledge of the amount of money which could be spent in wages in Ireland upon the construction of that rolling stock, I find that even had all that rolling stock been built in England and not in Ireland—though we know that a very large quantity of it has been built in Ireland—unless my figures are very wrong, the amount of wages which it represents that could be spent in Ireland only comes to about £10,000 a year?—Only in the matter of carriages and engines. Do you refer to the extra money spent on building carriages and engines?

20491. Additional carriages, wagons, and engines.—all kinds of wagons and carriages?—It may be so.

20491A. It is really a much smaller thing than at first sight it appears to be, as so much is already done by the larger railway companies in Ireland in building their own rolling stock both on renewal and on capital account.

Examined by Mr. ACWORTH.

20492. Your railway was built under the Tramways and Light Railways Act, 1883; was it not?—Yes.

20493. That is dead and buried, and nobody is ever likely to build another railway under it?—I do not think so.

20494. So that it is hardly worth abusing it?—No.

20495. Nobody has ever defended it for many years past. Am I to understand that your position is practically this:—Would it be fair to say that the Dingle Peninsula is just as poor a part of the country as Achill or Galway?—No, I do not think so.

20496. Not as poor?—No, not as poor.

20947. Is it as poor as many of the parts that under the Balfour Grants of 1890 got railways free, gratis, and for nothing?—Yes. I think that in the list I gave there are some districts that got railways free, gratis, and for nothing which really could not, from the point of view of the necessitousness of the district, make out a better case than could this district.

20498. What about the Letterkenny and Burtonport line—that is an example of the Balfour policy?—I have not that case before me.

20499. Without giving an instance then, I gather your position is, that some lines, in districts not more necessitous than is the Dingle Peninsula, were made free, gratis, and for nothing by the Government?—Yes.

20500. If that be true, you are penalised because you were more energetic and went ahead?—That is so.

20501. And your argument would be, that you having borne a burthen for many years that they have never borne at all, you ought to be relieved now in part, or in whole, if you can get it?—Yes.

20502. That is what I understand is your position as far as that is concerned?—Yes.

20503. Your line is under the control of the County Council, is it not?—Yes, entirely.

20504. Are you Chairman of the County Council Committee?—No, I am not a County Councillor at all. I am Chairman of the Railway Committee appointed by the County Council; they appoint the Committee.

20505. Did the County Council make a representation to the Lord Lieutenant that the line was inefficiently worked?—The Grand Jury had got it for some years before County Councils were established. I think the company did not exist more than the legal two years' limit; and after that it was taken over by the Grand Jury and afterwards by the County Council.

Mr. Balfour Browne, K.C.—I think that was under the clause by which, if the receipts did not cover the working expenses for two years in succession, it then fell automatically into their hands.

20505A. *Mr. Acworth.*—Is there any other instance in Ireland of that sort.

Mr. Balfour Browne, K.C.—I do not think there is.

Mr. Shanahan.—Yes, there are several; there is the Donoughmore Extension of the Cork and Muskerry, and there are the Timoleague and Courtmacsherry and the Schull and Skibbereen, all in County Cork. There are those three at least.

Witness.—I wonder if they are completely and solely under the control of the County Council without any of the old directors?

Mr. Shanahan.—Yes, solely and completely.

20506. *Mr. Acworth.*—The Grand Jury, now the County Council, have the control, and they have appointed a Railway Committee?—Yes.

20507. Independent of the shareholders; they may, or may not be shareholders, but they can appoint anybody they please?—Yes.

20508. Not necessarily members of their own body?—Not necessarily.

20509. Whom have they appointed in your county—who are they?—As a rule, of course, since the County Council came into operation and got control of the line, they have always looked to the guaranteeing districts; they do not appoint men outside the guaranteeing districts. I am Chairman of the Committee, and I represent that district in Parliament; and then there are in the barony County Councillors for the districts concerned; they are also members. Then, the Urban Council of Tralee appoints the Chairman, and he *ipso facto* gets in. Then, I think, there is another man, the Rev. Canon O'Leary, of Dingle, which is the capital of the barony—the parish priest.

20510. The people whom the County Council have appointed are people appointed as representatives of the district and of the interests of the ratepayers and of customers, not people supposed to know anything about railway management?—Not necessarily.

20511. I mean, with great respect to the Chairman and the Council, they would not presumably be experts?—They are not selected for that reason.

20512. And that, obviously, must be the weakness of the situation?—Possibly, but I do not think so.

Mr. Balfour Browne, K.C.—I see, sir, now that you are upon the point, that the names of the Committee of Management are given in a Report which I have, and also the names of the Arbitrators appointed by the Board of Trade. You might elicit who they are.

20513. *Mr. Acworth.*—Would you go on and tell us that, because I think this is all new to the Commission?—At the end of each year when making up our minds as to allocating our deficit plus the baronial guarantee, we have to allocate it for the guaranteeing areas, which I gave at the beginning, half to one barony, and so on. The Board of Trade then has two arbitrators appointed to inspect our accounts, and to see if the figures are right, and, if they are, divided between the different baronies properly according to the original schedule of distribution.

20514. Those are more in the nature of auditors; they are practically not concerned with the earning of the money, but only with its apportionment?—Yes.

Mr. Shanahan.—These arbitrations are statutory under the Act of 1883 in every case.

20515. *Mr. Acworth.*—I want you to tell me how you explain the fact that the receipts are pretty nearly stationary?—Well, I am afraid it is due to the fact that our line has remained in almost the same condition. I said a while ago that the receipts from our passengers had not gone up as much as we would expect. Tralee is at one end of the railway, a fairly good business town; and Dingle at the other. People do not like to travel over the mountain, a high gradient with a bridge at the end of it; and if they are coming to Tralee from within ten miles they will take a car; and the same on the other side. But I believe that if this line were made safe for the travelling public it would be considerably patronised. As I said before, it passes through a very interesting peninsula with beautiful mountainous scenery, and there are numerous fine old buildings, which are most interesting. I believe we would have a splendid passenger and tourist traffic. No tourists will touch us now.

20516. Then you think really the line has such a bad name that they say, "Hang it," practically?—Yes, I believe that is so.

Alleged diversion of fish traffic from Dingle.

20517. But, what about the goods; is not the fish traffic from Dingle increasing?—Yes; I said with regard to that—you will pardon my mentioning a point which I think I forgot—Caherciveen and Dingle are on opposite sides of Dingle Bay, in which the fish are caught. In Dingle Harbour the line comes down just into the Harbour, and it is the only place for vessels to come in with their fish; it is beautifully land-locked and a very safe harbour. We have to compete with Caherciveen on the other side of the bay, and vessels will come in from the bay and bring their fish into Caherciveen and have it conveyed over the Great Southern—whereas if we had a proper railway on our side, on account of the harbour being better, they would come to our side. To show you the disadvantage which the fishing district suffers from that, Cahirciveen is able to send its fish to English markets, say, to London, at owner's risk at 4*s.* per cwt. The ordinary rate is 6*s.* 2*d.* from those places; and from Dingle to London the fare would be, at owner's risk, 4*s.* 6*d.* per cwt., and the ordinary rate is 6*s.* 11*d.*

20518. Yes, it is a little additional. But the Killorglin and Valentia is a broad gauge, is it not?—Yes, a splendid line, under the control of the Great Southern Company.

20519. You are not proposing to make your line a broad gauge line, are you?—No, we are not.

20520. I presume you think it ought to be thrown into a big system in some shape or form?—I should like to see that, if it could be done.

20521. Even supposing the railways of Ireland were not nationalised, you would still desire that the independence of it should be swept away?—If we had a nationalised system——

20522. Then it would go—that is clear?—Yes.

Amalgamation of the Tralee and Dingle line with the Great Southern and Western Railway disapproved.

20523. But supposing, on the other hand, you did not have a national system, but remained under private ownership, I suppose you would still desire that this little line should be part of a big system, on financial grounds?—I do not think so. If the present system of company management does remain, I do not think the county, even with the heavy charge it has to pay, would give the line over to the management of any company.

20524. You would really prefer the independence of this small line?—We are a very liberty-loving people in Ireland.

20525. I will not argue about it; I only want to get the facts. You are not proposing to broad gauge it?—No.

20526. Then, in that case, you would remain narrow gauge?—Yes.

20527. You would remain an independent company with not the same influence in getting traffic as a great company like the Great Southern, for instance?—The Great Southern gives us every assistance in the matter, I am happy to say.

20528. But they would, of course, prefer to get it for themselves?—They get everything; we are really their feeders, and that is a great advantage to the Great Southern.

20529. But you agree that they would rather the traffic came to Valentia?—Naturally.

Nationalisation of the railways under an Irish statutory authority urged.

20530. But, of course, what you desire is that the railways should be nationalised under, as you said, the Irish Government?—Yes.

20531. I do not know whether I quite understand what that means. Does that mean that you propose that Ireland should take its own responsibilities independently of Great Britain?—Well, we will not enter into that larger question.

20532. What I mean is: supposing the railways are to be bought, there will be a sum of money to be found?—Apart altogether from the control of other

June 7, 1907.

Mr. Thomas O'Donnell, B.L., M.P., Chairman of the Tralee and Dingle Light Railway.

national questions, I would assume that, if we did not have general control of Irish affairs until this event does come about, there should be established in Dublin a Department, added to the present large number of Departments, which would have the control of the railways.

20533. Yes. Assuming that, what I want to understand is, would it rest financially on the British Treasury, or would it rest financially on Ireland, and on Ireland alone?—Well, I certainly would not wish to be dependent on the British Treasury. I should say that, in the beginning, some arrangements should be made to finance the Department in Dublin, which would have this control; and that if they were put on a proper basis at the beginning I do not believe they would ever have to appeal to the British Treasury.

The method of guaranteeing the purchase price of the Irish railways.

20534. Is it your view that Ireland ought to be left to "dree its own weird," as they say in Scotland, and to be responsible—that, having been started, they should take the consequences entirely; or would you rather have the British Treasury in the background?—I think that England need not be troubled with any fears of further applications being made to her in future years if, at the beginning, she deals fairly with Ireland.

Guarantee of British Government not required.

20535. Supposing such a Department were started on the basis you have suggested, would it be your view that the English Treasury ought not to be asked to guarantee any loan of money, but that it ought to rely solely upon an Irish guarantee?—Well, as I said, if the thing is properly started, I am perfectly satisfied that the working of the railway would be properly carried on, and that if there were a loss, which is a doubtful question, the Irish people would be quite prepared to bear that loss themselves, seeing that the scheme would be to the advantage of the country. But as to the question of loans, of course your market is an excellent market for borrowing money in, or it used to be, and I do not think you would exclude us from the advantages of that market, if there were any in the future, seeing that it would be no burden to yourselves.

20536. Clearly, Ireland would be as well entitled to float a loan on the London market as Kent or any other county; but would that be a loan secured on particular revenues or on the guarantee of the British Government?—I do not think we should ask the British Government to become guarantors.

20537. You think that if there was a loss, and if the lines did not immediately pay, Ireland would be prepared to take it up?—Yes, I think Ireland would be only too ready to do so. Already in the poorest county in Ireland we are paying 2*s.* 6*d.* in the £.

20538. And, as I gather, you say that, in spite of that cruelly heavy contribution, you are better off than if you had not the railway?—We feel that in the struggle we are better off by taking risks ourselves.

The probability of effecting economies under unified management.

20539. You spoke of unification and of the economy you were going to gain from putting the railways together?—That was an estimate, of course.

20540. You are a member of Parliament, and you know something about what is going on on the other side of the road; you have had your attention called, no doubt, to the London Water Board?—I have heard something about it.

20541. You remember that, three or four years ago, eight individual companies in London were bought up and converted into one London public system?—Yes.

20542. One of the arguments for that was that there was going to be great economy in management. Do you know that evidence was given a week or two ago across the road that that unified system was costing as much in management as the original eight companies cost?—Well, of course that may be so; but I do not think that particular instance is of itself sufficient to disprove my argument that unification would be an economy.

20543. Of course not; but it is an instance of where expectations were disappointed?—And while human nature remains as it is expectations will be disappointed. But, with great respect, London is not to be compared with Ireland in this matter at the present moment. I must not be taken as saying anything reflecting on London; but still those who know Ireland at the present day feel that there is a great desire on the part of everybody, all classes and all sections, to do something to help towards the industrial and material advantage of the country; and I do believe—I think our County Councils have proved—that when they have got control of these affairs they have done their work pretty well.

20544. Please do not think that I am wishing to say anything in contradiction of that?—No, I quite understand; I am only arguing the point.

20545. Yesterday we had Mr. Palmer, from Australia, who told us that he was greatly in favour of State ownership, but admitted that State management was more expensive than private ownership?—I do not think that is the experience of Europe; I think the figures for France and Belgium do not bear that out.

20546. Let me take you on that point. As you no doubt know, the Northern of France Railway runs into Belgium?—Yes.

20547. They have, I forget exactly what, but, 200 or 300 miles, if I remember rightly, of line in Belgium running into the Belgian State Railway system?—Yes.

20548. There was a very elaborate calculation made by an expert a few years ago showing how very much more economically the Northern of France was operated alongside the Belgian State Railway system. Has your attention been called to that?—No.

20549. Well, that is another instance of expectations being disappointed. Now, just one other thing. Did you, when in Belgium, pay attention to the light railway system there?—No, I did not; I had not sufficient time.

20550. I will just ask you this. You would not suggest that Ireland is lucky enough to have coal, butter, meal, or anything of that kind carried 200 miles?—I have been looking over Mr. Drummond's report, which is a very interesting report; and in that report the country is divided up. Not only does it deal with the question from a railway engineering point of view, but also from the point of view of the possibility of coal and other commodities; and it is very interesting to see the prospects held out in various parts of Ireland as to the finding of coal and so on: but I do not think we know much more on that subject now.

20551. But supposing you worked coal to any considerable extent at any of those places in Ireland, you would not have got a 200 miles' haul, from the nature of the country?—Certainly not; but we should have a larger haul than the Belgians have.

20552. Not as long a haul as the Belgians have?—Oh, yes.

20553. I think you will find, if you look at Belgium, that a very large amount of the traffic starts right away at Liege, and comes the whole length of the country?—But it is not a third the length of our country.

20554. I think you will find that they must have a longer haul, from the nature of the country; everything comes from or goes to the nearest point of the sea?—In my own country I have got lots of men who tell me that it has great possibilities. An expert, from Klondyke, who was talking to me the other day, inspected our mountains and the district generally; he took me down to the river, and he guaranteed to find a bit of gold. I laughed; but we walked along, and he picked up sundry pieces of quartz; and at last he picked up one piece of quartz with a bit of gold right in the centre. He had been to the mountains, and he told me that undoubtedly coal is to be found. This was in Kerry. I do not assume that we are going to make a lot out of it at present; but that coal is to be found in Kerry and places like it is undoubted; and we might haul that to Londonderry or to Belfast.

20555. Would it not go from Tralee to Belfast by steamer?—Possibly; it would go the cheapest way, of course.

20556. In mentioning the Belgian rates, are you suggesting that under the circumstances of Ireland it would be ever possible that you could have the Belgian rates?—I am, certainly. I think that with the present system of company management of railways in Ireland some parts of Ireland are unknown to other parts; and that, so far as inter-trade communication, we will say between Tyrone and the southern parts of Ireland is concerned, we live almost in different countries; and the man from Londonderry and the man from Belfast will seek his market abroad rather than in the South of Ireland. I say that all that would be changed, and we would travel from North to South, meet and mix together, and send our goods in the same way from one part to the other. I think the State control of the railways would bring about

as great advantages to the people of Ireland as it has done in Belgium.

20557. I will not argue it?—That is my belief.

20558. Your belief is that you could develop in Ireland the intense trade that there is in a closely settled country like Belgium, and that therefore you could get something like Belgian rates?—I do think that.

20559. Now, I would just like to ask you about the workmen's tickets, because that is very interesting. You mentioned sixty-two miles. Now, I happen to know, as I said before, that that is a thing that actually exists: a man living sixty miles off his work at, say, Liege—he works for perhaps a few months in the year when the works are particularly busy; he leaves home every morning at two o'clock and gets back at ten o'clock at night; and that goes on for some time. But he remains a peasant and lives in his own house in the country which belongs to him; and when the work gets less pressing at the town centres he relapses into being a peasant?—Yes.

20560. Do you really think that that could have any application to Ireland?—I believe that in Ireland we suffer from a great drain of emigration from the country—of course, that applies to most countries at the present day—the people desire to run away from the country and get into the towns. But, unfortunately, the Irish people who run away from the land do not get into our towns, but they get into American towns. So that we are worse off than other countries in that respect. But still the towns are undoubtedly crowded in Ireland and slums do exist. If facilities were given for the people who earn small wages, anything from 15*s.* to 20*s.* a week, to travel out of those districts at the cheap rates of Belgium, I do believe that after a while—of course, it would not come suddenly—the condition of the poorer classes in the towns would be considerably better, and that numbers of those people would go to the country.

20561. Taking the big towns, such as Dublin City, Cork, or Belfast, there is quite enough labour there to do the work of the towns, is there not?—Yes.

20562. There is rather a surplus of labour than otherwise, certainly in Dublin and Cork?—Yes.

20563. It seems to me that they do not really want to bring in extra workmen from outside?—But my idea would be to get the men who are at present in the towns to go out into the country.

20564. Then your idea is that the effect of those workmen's trains would be rather to depopulate the towns?—To depopulate the towns at night.

20565. And that, you think, would have a good economic result?—Undoubtedly.

20566. Because the people would get more wholesome surroundings, and get to a place where they could obtain employment upon their own farms when they were not engaged in the towns?—Yes, in the idle times.

20567. *Colonel Hutcheson Poë.*—Do I correctly understand you to say that failing, or pending, any general transfer of the control of local affairs to Ireland, in the event of the State being willing to take over the lines of the Irish railways on satisfactory terms to the shareholders, you would have no objection to another Department, a Railway Department, under the State, and analogous to the present Departments being added to the existing Departments?—So anxious am I for the establishment of a State system of railways in Ireland that I would go any distance in order to have it established; and, even although my disbelief in the generosity of the English Treasury to Ireland is great——

20568. You would not see any objection to another Department being added?—No.

Cross-examined by Mr. Balfour Browne, K.C.

20569. I should like to ask a few questions, sir, if I may. Besides Valentia is there also a harbour at Fenit?—Yes, that is eight miles from Tralee. I have mentioned that in my list here.

20570. And is there a broad gauge line running to Fenit?—Yes.

20571. And your line, of course, is a narrow gauge line?—Yes.

20572. Therefore, of course, you are under a disability as to carrying fish rapidly to centres like Dublin—I am only speaking of the present conditions?—Oh, yes; that is so.

20573. Just a question or two about Belgium. Belgium is, of course, an industrial country?—It has become one.

20574. Quite so; and it has the two great elements of which industry is made up—coal and iron?—Recently developed.

20575. Well, we hope, of course, for development in Ireland; but, in the meantime, you cannot call Ireland a coal and iron country, can you?—Not for the present.

20576. Now, you gave some illustrations of 200 miles' rates. As Mr. Acworth has already elicited, at the present time in Ireland there are no such rates?—I gave 100 miles' rates.

20577. I know; but do you know that the average carrying in Ireland would be from 15 to 50 miles?—Possibly.

20578. Because, of course, in the meantime seeing that it is not an industrial country it is only for distribution that they carry?—I think that would be too small.

20579. Upon the question of State-owned railways as compared with privately-owned railways, do you know that the Belgian privately-owned railways are worked at a less percentage of the receipts than the Belgian State-owned railways.

20580. *Mr. Acworth.*—What private railways are you speaking of?

Mr. Balfour Browne, K.C.—We have taken the private railways in Belgium, and we find that the percentage is less?—Is that a proper test?

20581. I do not know that it is a proper test, but it really bears upon the question whether the gentleman who spoke yesterday about the Australian railways was correct when he said that privately-owned railways were less costly than State railways. At the present time you have no workmen travelling backwards and forwards on the lines in the South of Ireland, have you?—I should like to see them travel twenty times as much, but that must be encouraged by cheap fares.

20582. You took Belgium as a good illustration of cheap fares, and you also said that you had travelled upon the Canadian railways; they are not State-owned, are they?—My travelling was only through the country, and I have no special knowledge of the Canadian railways.

20583. But, of course, they are owned by companies. I have here a statement recently made by the President of the Brussels Chamber of Commerce, and I daresay he is a great authority, is he not?—I should think so. I hope politics did not enter into his statement.

20584. I am sure politics do not enter into my questions to you—you will admit that I have avoided both the larger and the smaller questions. This is what the President of that Chamber said:—"Our Chamber does not regard with favour the way in which railways are administered in this country; for, if we compare what passes at home with what passes in surrounding countries, we see that we have much to learn in regard to many of our railways and to everything that is here administered by the State"?—Well, I think my previous remark answers that. I am afraid politics did enter into that.

Then I will put his politics against your politics; you shall pair.

Chairman.—May I say, Mr. O'Donnell, that the Commissioners have been very much interested and pleased with your evidence, and we thank you for the information you have given us. We are very much obliged to you.

The analogy between the conditions in Belgium and Ireland as regards traffic.

Mr. Thomas Corscadden, J.P., Cattle Trader, Manorhamilton, County Leitrim.

20585. Mr. Corscadden, you are a Justice of the Peace?—Yes.

20586. And you are from Manorhamilton, County Leitrim?—Yes.

20587. And what trade or industry in Ireland do you represent before us to-day?—The cattle trade particularly.

20588. And what particular district?—Manorhamilton principally, and some in Cavan.

20589. I think you are more particularly identified with the cattle traffic?—Well, not more particularly, but I have a good deal to do with it.

Complaint of delay to cattle in transit between Westport and Manorhamilton.

20590. I think you want to give us some information with regard to the transit of cattle in Ireland?—Yes. I think it is not at all satisfactory. I have an instance where I myself sent cattle into Westport; I put them on rail at Westport to be sent to Enniskillen or to Manorhamilton on the line between Sligo and Enniskillen. Instead of that they kept them all night at Claremorris and sent them on to Mullingar, and sent them down next day, the cattle being all night in the wagons, and one of them died a few days afterwards, or at any rate sometime afterwards, though I do not say it was in consequence. But the cattle were greatly deteriorated, and the distance travelled was 110 miles more than necessary.

20591. How long were they in the wagons altogether?—They were in the wagons from, I suppose, 12 o'clock in the day or 11.30 until 5 o'clock the next day, and at that time they got them off.

20592. According to that they were in the wagons about twenty-eight hours?—Yes.

20593. And, of course, all through that time they were without food or water?—Yes.

20594. What railway company was that?—The Midland all through.

20595. Had you a through rate for the cattle?—Not at all; in the ordinary way I do not deal in cattle.

20596. Did you communicate that complaint to the railway company?—I did not. I refused to pay at first, but the stationmaster was so pressing that I sent them on a cheque. It was only £3 something.

20597. But you paid whatever it was?—Whatever the charge was I paid.

20598. I suppose this was quite an exceptional case?—I think it is not an exceptional case, or I would not have been here to say anything about it. But I was telling this to some of the principal dealers in Edinboro', I think it was, and they asked me to put it before the Commission. I wrote to the Secretary and he arranged that I should be examined as a witness.

20599. What date was that?—In 1902, I think.

20600. Have you had any dealings in cattle since then?—Yes, but I was not aware until I got the cattle home, where they had gone to, but they came home, and I did not say anything about it. The last time I bought two beasts in Westport I put them on in the usual way for Claremorris, and the booking-clerk said that they could not book them further than Claremorris, and when I came to Claremorris I said to the stationmaster: "You sent my cattle to Mullingar and kept them twenty-eight hours; if you do not send these properly I will take action against the company. I will not be accountable for any damage," and the cattle were home at Manorhamilton by the Sligo-Leitrim line by seven o'clock.

20601. You have no complaint with reference to that?—I have not with reference to that. On the contrary, I thought it was doing splendidly.

20602. Have you any recent complaints?—No, I have no recent complaints.

20603. Do you pay for cattle so much per wagon, or so much per head?—So much per wagon.

20604. Do you approve of that arrangement?—Certainly not.

Proposal to substitute a rate per head for cattle for the wagon rates.

20605. What is your suggestion?—I think cattle should be carried at so much per head, at the same rate as a wagon will take, and it should be seen that more were not put into a wagon than it is able to carry. It would be far more satisfactory to pay so much a head. Small dealers go to fairs, and if they only buy two beasts they have to amalgamate and get up to ten so as to take a wagon.

20606. Do you suggest that the railway companies should find a wagon for one beast, at the same rate?—I do not see why they should not find a wagon for one, as well as they find a carriage for one person or for two. I know that a wagon sometimes goes quite empty; cattle are crowded ten or twelve into a wagon while the next wagon is quite empty.

20607. But there are half-wagon rates, are there not?—Yes.

20608. But nothing lower?—Nothing lower than a half-wagon; it is very exorbitant.

20609. And your suggestion, in the interests of the dealers, is that it would be much better if there was a rate at so much per head instead of the half-wagon rate, or the wagon rate?—Yes.

20610. At a *pro rata* charge?—At a *pro rata* charge.

20611. That is your idea?—Yes, I think there would be far more cattle bought if that was the case.

20612. Have you anything to say with reference to the local goods rate from small stations to other small stations?—I should like to say that I think there is too much cruelty used in putting cattle on the rail; I have seen them beaten terribly.

20613. We have had evidence before us to show that a vast improvement has taken place in recent years in the loading and unloading of cattle?—I should say that it requires improving still.

20614. Still further?—It requires further improvement.

20615. You know that there is a Government Department that send inspectors round the various fairs to see that cattle are properly treated?—I have never seen them in my part of Ireland.

20616. We have had evidence that inspectors were sent round to fairs, and that a vast improvement during the last few years had taken place in the transit of cattle in Ireland?—The police used to sometimes, but they do not attend the stations now.

20617. There was an order issued by the Agricultural Department, I think?—There may have been, but it is contrary to my knowledge; I have never seen them at Sligo or Collooney or the other principal places.

20618. Are you speaking of quite recent instances?—I have not seen them.

20619. But are you speaking of recent instances of cruelty to cattle?—Decidedly, every day.

20620. Every day?—Yes.

20621. Will you give us one instance of cruelty such as you suggest?—I have seen half-a-dozen whips at one unfortunate horse that would not go into the wagon. Perhaps I would not say half-a-dozen, but it was beaten until it had to go in. I have seen that on the Midland and the Sligo and Leitrim. That is a year ago, I think.

20622. But you have no special instance?—I have had instances myself. One time going down to Derry, some cattle got down in the wagon, the smaller beasts got down under the others, and I said to the guard that the bullocks would be killed, and we had to take them out at Newtownstewart, and a bullock was so exhausted that they had to blow tobacco in his eyes to make him get up in the wagon. That is an instance where they were too much crowded.

20623. Have you ever represented these instances to the railway company?—I never have.

20624. You have never mentioned them?—No.

20625. Either verbally or by correspondence?—No; the fact is, that all parties who put cattle on the rail are anxious to put in as many as they can, and they sometimes put in too many. In this instance there were too many put in the wagon.

20626. Do you not think that that is the fault of the sender?—It was the fault of the sender in that instance, I admit. But it is a common thing for cattle to be got down in the wagons.

20627. But that happens in every country?—I suppose it does, but I cannot speak for any country except my own.

20628. You say that the average load is about ten in a wagon?—About ten.

20629. Suppose a dealer has got eleven; do you not think that he would try to get the eleven into one wagon so as to save the extra wagon?—Decidedly.

20630. What has the railway company got to do with that?—I do not say they have anything to do with it.

20631. Oh, I beg your pardon, I thought you were complaining of the railway company?—I say that it is cruelty. It is the fault of the dealers.

20632. You are not reflecting on the railway company?—Not in that case; decidedly not.

20633. What have you to say about the local goods rates at small stations?—I think that is in connection with through rates.

20634. Yes?—I think through rates between the larger towns and the smaller are not doing any good service, but the reverse. It is handicapping the smaller towns. For instance, the town in which I live myself, one of the principal merchants told me—he is dead now, poor fellow—that he could take his porter cheaper from Sligo in his own carts, which is fourteen miles further, than he could take it off at Manorhamilton in consequence of the through rates.

20635. The through rates were too high?—No, the through rates were too low, and the goods were sent to merchants in Sligo, and he had to pay the extra cost of carrying from Sligo to Manorhamilton; it went through Manorhamilton.

20636. Your complaint is that to large towns there may be a through rate which is lower than would apply to intermediate stations?—Yes, that is what I mean.

20637. *Mr. Acworth.*—Where was that coming from?—I should say it was from Dublin.

20638. But you do not know?—I do not know, but I should say it was from Dublin—from Guinness's.

20639. In that case, it might not have gone through Manorhamilton.

20640. *Chairman.*—I gather that you are in favour of equal mileage rates?—I am in favour of equal mileage rates.

20641. In all circumstances?—In all circumstances. I think the small towns should have as good a rate as the large towns.

20642. That is your suggestion?—That would be my suggestion.

20643. And that through rates should be given to all these small stations?—That a fair rate should be given.

20644. A through rate, I said, so that the traffic is not sent to one station and re-booked to another?—That would be my suggestion.

20645. Then what about passenger fares?—Passenger fares, I think, on the whole, are very reasonable. If a person can be carried for a penny a mile in rural districts like parts of Connaught and parts of Ulster, I do not think they should be carried more cheaply.

20646. Very well, then, we will leave that?—But I think the second-class fares are far too high. I believe there are parts of England where they only charge twenty or twenty-five per cent. over third-class fares. But in some of the districts of Connaught it is very hard for a woman to travel in the third-class carriages, and they cannot afford to pay second-class fares.

20647. Second-class fares being about fifty per cent. more than third-class, I suppose?—I think it is far more than that; it is sometimes nearly double. The second is about double the third, and the first about three times. That is my opinion.

20648. According to what you say, the third-class are about a penny a mile, second-class twopence, and first-class threepence?—I think so.

20649. But you have not any instances?—No, I have no instances at all.

20650. Are you sure that threepence a mile is charged for first-class?—I am not sure; I did not look it up. I am only giving my evidence as an ordinary individual living in the country.

20651. But your suggestion is that the second-class fares should be a small percentage above the third?—Well, a fair percentage above the third.

20652. What do you call a fair percentage?—Twenty-five per cent.; I would be glad to pay that myself.

20653. Do you think that would encourage travelling in Ireland?—I think so; and I think the railway companies would not lose anything by it, because I know there are a great many people would travel second who are now compelled to go third.

20654. I do not think you have any complaints to make with reference to the service of trains?—I do not think so; I think we are well enough supplied with trains.

20655. I do not think we can deal with your suggestion with reference to canals, that is rather beyond the scope of our inquiry?—I was asked to mention some of the canals in Leitrim, not in my own part, but in the southern part.

20656. By some public body?—No, by private individuals. The Keenagh Coal Mines are within two miles of the canal, and could be put in perfect order, I was told, for £3,000.

Improved transit facilities sought for Keenagh coal mines. Extension of the canal suggested.

20657. Is there not some proposal for a railway to Keenagh now?—Yes, but the canal would be much cheaper.

20658. Your suggestion is that the canal might be extended to the coal mines, is it?—It is extended within, I think, 2½ miles from the coal mines.

20659. But you are suggesting that the canal should be extended?—Not extended to the coal mines, but that there should be some facilities. If the canal was in working order, coal could be carted from the mines, and it could go down to Limerick or to the northern counties.

20660. What is your knowledge with reference to what you call undue preferential rates?—The instance I mentioned with regard to porter—that is an undue preferential rate.

Equal mileage rates between all stations advocated.

20661. Then you come back to your suggestion as to a mileage rate?—Yes.

20662. And that would do away with what you call preferential rates?—Yes

20663. That is your suggestion?—Yes. If some Sligo merchants want to get their goods cheap they could get a special train for them, but not at the expense of Manorhamilton and of these other towns.

20664. I understand what you suggest perfectly well—that these smaller towns should have just the same mileage rates as the larger towns?—Yes. It does not apply to porter specially. The same thing applies to all heavy goods—coal and everything else.

Amalgamation of the railways approved.

20665. I understand that. On the whole, I gather that you have no really serious complaints against the management of the Irish railways?—Oh, on the contrary, the only complaint I have is that the managers are too anxious to make their own lines pay, and that if there was an amalgamation of some kind it would be far better; for instance, our line from Sligo to Enniskillen is practically a feeder for the Great Northern.

20666. You are of opinion, I believe, that a motor service might be established with advantage in those districts where there are at present no railways?—I think so. I think it would be a great advantage.

Motor services between Bundoran and Manorhamilton, and between Sligo and Bundoran suggested.

20667. You think it would tend to develop the industries of the particular districts?—I think so. I could give you instances. From Bundoran to Manorhamilton is about fourteen miles, and of my own knowledge there are half-a-dozen cars going now on market days, and a great number of parties would take advantage of such a service, I think, and it would tell whether a railway would pay or not. Then there is from Sligo to Bundoran. One place is the terminus of the Northern and the Midland and the Southern and Western, and the Sligo and Leitrim has its terminus at Sligo, and such a service would be a great advantage there, as people would be able to get to the railway. Then I recollect that since the Midland was made they have advocated a railway being made there, and there is a very large population and a great deal of business done.

20668. Do you suggest that these motor cars should be supplied by the railway companies?—I have never thought about by whom they should be supplied.

20669. But you consider that such a service would be of value?—I think it would develop the country very much.

20670. And benefit the railways?—And benefit the railways besides.

20671. But as to how they are to be provided, you have not considered?—No, I have never thought of it.

Amalgamation of the smaller with the larger railways considered advisable.

20672. Do you consider that it would be advisable for the larger railways to take over these smaller companies?—I think so, decidedly.

20673. Do you consider it advisable, for example, for an authority to take over the large railways?—That would be another question. I think it is too big a question for an ordinary man like me to answer.

20674. You have not considered the question?—Oh, I have considered it, and I have my own opinion.

20675. And you are here to give us your opinion?—With regard to State purchase?

June 7, 1907.

Mr. Thomas Corscadden, J.P., Cattle Trader, Manorhamilton, County Leitrim.

20676. Yes?—I think it is too big a question for me; it would be a question that would take a great deal of consideration from all parties. But if I had railway shares, and I thought the railway was to be given over to the State, I would sell them at once; I would sell them before I left London; I would have nothing to do with it.

State purchase of the railways objected to.

20677. In other words, you are against State purchase?—Decidedly. I do not like to mention politics, but I am afraid it would be made a political business.

20678. You have considered the question, and you are very strongly of opinion that the country would not be benefited by the State purchase of railways?—On the contrary, I think it would be only a disadvantage.

20679. Do you agree with the present system of appeal to the Board of Trade with reference to complaints against railway companies?—I think it is too cumbrous.

20680. I am speaking of applications to the Board of Trade, which only cost a penny postage?—The impression is that it is very hard to get to the Board of Trade.

20681. Why?—For any complaint and anything of that sort.

20682. Are you not confusing two things?—I am speaking of the Board of Trade in this country.

20683. Anybody in Ireland could write a letter to the Board of Trade?—But they cannot get satisfaction from them.

Alleged difficulty in moving the Board of Trade to deal with complaints.

20684. I think we have had instances of a great many complaints having been satisfactorily dealt with by the Board of Trade?—The impression that ordinary individuals in Ireland have is that the Board of Trade is very hard to move.

20685. Evidently they do not know anything about the Board of Trade?—I do not know anything about them.

20686. Are you not confounding the Board of Trade with the Railway Commission?—No; I am not.

20687. Do you know anything about the Railway Commission?—I do not.

20688. Then we will not ask you anything about it. What do you suggest would be the best means of settling grievances between the public and the railway companies? Supposing you had a grievance and wanted to settle it, and could not settle it with the railway companies, what would be your suggestion as to a tribunal in this country to settle it?—I think the best way would be for the large railways to take over the small ones.

20689. That is one way. But if you had a complaint against a large railway company, what do you suggest as a remedy?—I am sure that if the large railway companies took over the small railway companies they would work them to advantage, and if they were open to criticism with regard to rates or anything, they would not charge unduly.

20690. But supposing they did. Supposing they charged something which you considered was too high?—There should be an appeal to some court—something like the Board of Trade, or a similar body that could be easily approached.

20691. In Ireland?—Something like the County Court.

Necessity for a cheap and easily accessible court to settle complaints urged.

20692. You would be satisfied to go to the County Court to settle any difference you might have between yourself and a large railway company?—Well, they do not always settle questions to my satisfaction, but I think something like that would be better.

20693. What you mean really is that you would like some cheap and easy court to which you could go?—Yes, decidedly.

20694. Without incurring any great expense?—Yes.

20695. But you are of opinion that if the large railway companies took over the smaller companies you would have no complaints, but that the railway companies would do what was right and fair?—I think they would; I am quite sure they would

Examined by Mr. Acworth.

20696. When coal is got on to the canal at Keenagh where does it go to?—It goes down to the Shannon.

20697. That would not take you to the North of Ireland?—I think it could by the Ulster Railway.

20698. But you would have to put it on the railway again afterwards, or do you mean the Ulster Canal?—I am not sure, but I think the canal opens up to the Shannon.

20699. When it gets to the Shannon that will not take the coal to Derry?—No.

20700. You would have to get it on to a railway?—Yes.

20701. Would it not be simpler to make the railway there at once?—I do not know; that is a question of money.

20702. You are, say, 500 miles from London?—Yes.

20703. And you send beasts to be sold in the London cattle markets?—I have very seldom sent them so far.

20704. Where do you send them then?—To Liverpool and Glasgow; they are the principal markets.

20705. But they go beyond that; they go to York and Wakefield, do they not?—Yes.

20706. Take York and Wakefield; I suppose they are 350 miles off, or something like that?—I do not know the distance.

20707. Supposing there is another man in the East Riding of Yorkshire who is twenty miles from York. Would you like to pay a rate twenty times as high as his?—I would not.

20708. Then how about equal mileage, if he is one-tenth of your distance from York he would pay one-tenth of the rate?—He would, but there are special rates to York.

20709. Do you want to keep the special rates?—I never thought of that. You are too clever for me in that way. I would not like the York Market to be broken up, because I send a great deal of cattle to York.

20710. You would like what is sauce for the goose not to be sauce for the gander?—No, I would like what is fair for both.

Examined by Colonel Hutcheson Poë.

20711. You spoke of the canal as being a factor in the situation—that it would be a considerable factor in regard to the coal traffic if extended?—Yes.

20712. As a matter of fact, is not the whole service by the canal down to the Shannon at the present moment very unsatisfactory?—Very unsatisfactory.

20713. Do you think there is room for the canal system and the railway system in Ireland side by side, or that any considerable expenditure would be justified in putting that and other canals into an efficient condition?—I think so, on the ground that water carriage is far cheaper than rail carriage.

20714. Granted, but in Ireland, with small traffic and few industries, do you think there is room for both canals and railways?—I do not think there is room for both, but if the canals could carry more cheaply than the railways I do not see why they should not be used. For instance, it is the impression that the canal from Dublin to Mullingar has been closed up by the Midland Railway for the purpose of doing a service to the Railway Company, and that it is not used as much as it should be,

20715. I do not want to go into the question, because it is not strictly within the terms of reference of this Commission, but, incidentally, I wish to ask your opinion as to whether you think there is sufficient trade and traffic in Ireland to justify expenditure on both canals and railways. It is manifest that to make them both efficient money will be required?—That is a question I could not answer, but I think that it is not right that canals should be made, and then left to be shut up.

20716. I daresay you have followed the evidence given before the Canals Commission?—No. I have not.

20717. Speaking generally, the evidence is that a considerable expenditure of money would be required to make the canal service really efficient?—I do not come here as an expert by any means, but just as an ordinary resident in the country.

20718. But assuming that both the railway service and the canal service require money, and that there is not sufficient money to provide for both, would you be in favour of the money being spent on the railway system rather than on the canal system?—I think I would put it on the railway system.

20719. Of course, you must admit that except for heavy articles, that do not require quick service, the bulk of traders must be depending on rapid transit?—Decidedly, it is for the heavy traffic I should have thought it would be of great service to have canals.

20720. Now, with regard to the motor service. Do you know that the Great Southern and Western Railway Company did put on a motor service, and that they had to take it off, after a year or so, because of the opposition they met with from those in whose interests it was provided?—I never heard that they had to take it off.

20721. It was boycotted?—I do not think it would be in the district in which I live. But I do not see why they should have been allowed to take it off.

20722. But it was given in evidence before us?—I think the Government should step in in a case of that sort, and say, "You shall not take it off."

20723. We have had evidence with regard to the Cavan and Leitrim Railway and the proposed grant of public money for the extension of the railway to the Arigna Coal Mines, and that grant fell through owing to opposition, and the pressure brought to bear by the local carters, and other people who carried the coal; they brought so much pressure to bear on the Leitrim and Cavan County Councils that they practically forewent that grant of public money?—That was the grant of £23,000.

20724. £24,000?—I know that it fell through, but I do not think that that was the whole story.

20725. It had a great deal to do with it, had it not?—It had a little to do with it—not a great deal. Only five or six men who owned horses were concerned in that.

20726. Did not the Leitrim and the Cavan County Councils approve of the grant and the guarantee?—I know the circumstances of that, and that is not all in connection with it. The circumstances were these. I was on the Grand Jury at the time the guarantee was granted for that, and the Bill said, if I recollect aright, that 5 per cent. was to be paid to the shareholders in the first instance, and then that the rest would be made up by a Baronial Guarantee. It did not turn out as we expected, and the Baronial Guarantee went down to two shillings in the pound, and to one shilling.

20727. We are on a rather different point. I am talking of the extension of the Cavan and Leitrim system?—This is in connection with that. In consequence of that they got into such a terror in connection with the guarantee that they went in their hundreds to the County Council and actually made the men who voted for the guarantee in the first place vote against it. Then another railway, the Sligo and Leitrim, with which I was connected. I am asked by a good many of the Guarantors to mention that. They were deterred so very much by the very name of a guarantee that if it were a farthing in the pound they would not give it.

20728. They were not really asked in the last instance to give any guarantee?—But they were afraid they would be.

20729. I think you are aware that when the last offer was made it was simply contingent—that in the event of the £24,000 not being sufficient to fully build the line, they would make good the deficiency; that is a very indirect guarantee. The promoters said it would be ample, and it was only in the event of its not being sufficient that they were asked to agree to make good the deficiency, and they refused to give such a guarantee. But you say there was considerable opposition on the part of the carters?—On the part of the cesspayers generally.

20730. With regard to this motor service; do you not think there would be opposition on the part of carters generally?—I do not think so.

20731. That was the experience in the south?—I do not think it would be, so far as Sligo and Bundoran are concerned, or any part of Leitrim. I think a great deal with regard to that outrage—for it was nothing but an outrage, I think—there was a great deal of private spleen connected with it.

June 7, 1907.

Mr. Thomas Corscadden, J.P., cattle trader, Manorhamilton, Co. Leitrim.

20732. I am afraid they are too conservative. If you want to do anything to benefit them there is great difficulty in overcoming their conservatism?—Conservatism cuts both ways, I suppose.

20733. I understand you to say that you would be opposed to State purchase if it would place the railways under an Irish authority?—Yes, decidedly.

20734. That is quite intelligible from your point of view, but would you have the same disinclination to State purchase if the control of the Irish system were placed under an English Department similar to one of the Departments in Dublin at present?—I would rather have it in England than in Ireland.

Amalgamation of the railways with retention of present system of management preferred to State ownership.

20735. We will not discuss the Irish authority; I will only say that you have an objection to an Irish authority?—Yes.

20736. Have you the same objection to an English authority?—I think it would be too cumbrous for them to manage.

20737. You would be in favour of amalgamating the smaller lines with the larger?—Yes.

20738. One effect of that would be that if there were an amalgamation of the Irish systems you might not have such instances of cattle being dragged round by Mullingar. Naturally, it was the interest of the Midland Railway to carry them the whole way on their system?—Yes.

20739. Your cattle went round the country by the Midland instead of going by the Great Southern and Western?—Yes.

20740. I presume one effect of amalgamation would be that it would prevent such a possibility?—They would be carried at a fair rate in every way. The larger line would carry at a fair rate, and if they would not it would be open to somebody to show that they must carry them at a fair rate.

20741. Do you say there are actually no through rates between the Midland and the Great Southern and Western; you said that you booked to Claremorris and that they had to be re-booked?—I am not sure.

20742. I think it must be a mistake?—Through rates or not, they had no right to send the cattle 110 miles round.

20743. That probably was due to some error. I think you must be in error in saying that there are no through rates.

20744. *Lord Pirrie.*—But you do not say there were no through rates?—Not at all.

20745. *Col. Hutcheson Poë.*—Not for cattle; he said that he was told by the booking-clerk that he could not book them further than Claremorris?—Then there could not have been through rates.

20746. *Mr. Acworth.*—Supposing you amalgamate the Sligo and Leitrim and Northern Counties, to whom do you want to go; what railway do you want to take you over. The Great Northern, the Midland, or the Great Southern?—The Great Northern would be the natural line to take it over.

Protest on behalf of the Guarantors of the Cavan and Leitrim Railway of unfair treatment in the matter of State aid.

20747. To bring the Great Northern on to Collooney?—Yes. I am asked by some of the guarantors of the Cavan and Leitrim Railway to mention that a large guarantee was paid for the railway, and we think we have been badly treated. They paid £60,000 to build; the Sligo, Leitrim, and Northern Counties Railway got a free grant, and the line in Donegal got a free grant, but we have been very badly treated.

20748. *Lord Pirrie.*—You have been asked to say that?—Yes.

Mr. John Carvill examined by Lord Pirrie (in the Chair).

Mr. John Carvill, representative of the Newry Urban District Council.

20749. You are a large merchant in Newry?—I would not say a "large" merchant.

20750. And you are a timber merchant?—Yes.

20751. You are also a member of the Newry port and Harbour Trust?—Yes.

20752. You are also a member of the Carlingford Lough Commission?—Yes.

20753. Are you connected with any other public body?—I am not.

20754. Whom are you asked to represent here?—I have been asked by the Urban District Council of Newry to give some evidence before the Commission.

The evidence of a previous witness (Mr. Currie, Belfast) discussed.

20755. What class of evidence do you want to give?—Mr. Currie, who represented the Belfast Harbour Board, gave evidence before the Commission, and made a statement that Newry was getting preferential treatment as against Belfast, and I think that that statement gave rise to my coming here to start with. It is principally with regard to that I come on behalf of the Urban District Council of Newry. At the same time, if I may be permitted, I would like to divide my evidence into two parts. The first part will have reference principally to Mr. Currie's evidence.

June 7, 1907.

Mr. John Carvill, representative of the Newry Urban District Council.

20756. *Mr. Acworth.*—Can you give us the date of Mr. Currie's evidence?

Mr. Shanahan.—It was the 14th of March.

(*Witness*).—The first part will have reference principally to Mr. Currie's suggestion that Newry received preferential treatment in railway rates over Belfast, and that in consequence the imports of coal to Newry have increased by thirty-four per cent. since 1900, while those from Belfast have only increased by about two and a half per cent. during the same period.

20757. You do not object to that, do you?—I am not objecting to it.

Suggestion that Newry gets preferential treatment by the Great Northern Railway as against Belfast in the matter of coal rates contradicted.

20758. Why do you wish to give evidence here if you are getting such a benefit; do you want to drive the trade to Belfast?—No, but the evidence suggested that that increase of traffic in Newry was owing to the preferential treatment of Newry, and it is rather to combat the idea that we are getting preferential treatment in Newry that I have come here to-day.

20759. But have you got that increase of thirty-four per cent.?—He is correct in stating that.

20760. And you are not afraid of interfering with that traffic; would you not be wiser to leave it as it is?—We suggest that we are not getting preferential treatment, but rather the reverse.

20761. In other words, if you got fair treatment you think you would have increased beyond that thirty-four per cent.—to fifty or sixty per cent.?—That increase is not due to any preferential treatment shown to Newry.

20762. What is the second part of your evidence?—The second part will have reference to some questions regarding the control and management of Irish railways generally, and will be the expression of my individual opinion only, the Urban District Council not having given me any expression of opinion on these matters one way or the other.

20763. That portion of your evidence will be your own purely?—Yes.

Comparison of distances from Newry and from Belfast to Armagh, Portadown, and Banbridge.

20764. You have some figures in regard to mileage which you want to put forward, have you not?—I do not know whether it will be allowable for me to read what I have stated in my proof, but to help me in placing my evidence before the Commission it will be well to remember the distances from Newry and from Belfast to certain important points through which all, or nearly all, competitive traffic from Newry and Belfast must pass. The distance from Newry (Edward-street) to Armagh is twenty miles sixty-nine chains.

20765. Just state mileage only?—To Portadown, eighteen miles; to Banbridge, seventeen miles. From the Albert Basin-quay it is about three-quarters of a mile more than those distances.

20766. That is from Belfast?—No, from Newry and the point at which coal is shipped from Newry. From Belfast (Grosvenor-street terminus) it is thirty-five and a half miles to Armagh as against twenty and a half from Newry; it is twenty-five to Portadown and twenty-four to Banbridge. From these figures it will be seen that Newry in every case is a shorter distance from these points than Belfast. To assist me in making my statement as intelligible as I can, it will be necessary for me to give as short an account as practicable of the relations that existed between the town of Newry and the Great Northern Railway Company, and the litigation that has taken place between that company and the Newry Town Commissioners—now the Urban District Council of Newry.

20767. Did the opening of the Newry and Armagh Railway in any way affect you?—The Newry and Armagh Railway was opened with great expectations. However, it was a line only to Armagh. I suppose the Great Northern Railway Company or the lines that now compose the Great Northern Railway Company, were too strong for a short railway, and by their harassing that railway I suppose it proved of little use to the Newry people. They were compelled to confine the advantages of the railway to Newry; they stopped the advantages at Armagh. Of course, it shortened the distance to Armagh as against the old route *via* Portadown by a good many miles.

History of the Newry and Armagh Railway and of its subsequent absorption by the Great Northern (Ireland) Railway.

20768. Do you remember by how many?—By about eight miles. They eventually bought the railway for about £225,000; I am not quite sure about the figure.

20769. You do not give that figure as the actual figure?—I think that figure is correct. I think it cost about twice that sum.

20778. Did that make the Newry people feel more disheartened?—I suppose it did not put them in any better heart any way. The Great Northern Railway were perfectly entitled to harass the Newry and Armagh Railway if they liked while it was an independent railway. I do not complain of that in the least.

20771. You do not?—They were absolutely entitled to do that while it was an independent railway. It is after it became a part of their system that the point arises.

20772. You consider now that it is a part of their system that they are not treating Newry properly?—I will give you the history of what they have done, and you will be better able to follow what they are doing.

20773. Put it as shortly as you can?—Eventually, in 1879, the Great Northern Railway Company bought the Newry and Armagh Railway, and so it became a part of their system, and up to 1889, a period of ten years, they pursued a policy of preferential treatment to Armagh, as well as other towns, in favour of traffic from Belfast as against that from Newry. In 1888 the Railway and Canal Traffic Act was passed, enabling town boards and other bodies to cite railway companies before the Railway Commissioners. Exasperated by the unfair treatment that their town had been so long subject to, the then Newry Town Commissioners cited the Great Northern Railway Company before the Railway Commissioners, and, after a protracted hearing of many days, in which the railway company sought to justify their position by alleging extra expenses in working caused by gradients, etc., on the route *via* Market Hill, an order was made by the Railway Commissioners (a copy of the final paragraph of which is given on the last page of my proof) directing the Great Northern Railway Company to desist from giving Belfast preferential treatment as against Newry, and thus was swept away, in part at least, the old preferential rates from Belfast to Armagh, Portadown, Banbridge, and all towns served through these points, the removal of which Armagh rates from the rate-book was so much deplored by Mr. Currie in his evidence before this Commission.

20774. What happened after that decision?—Shortly after that decision the Great Northern Railway Company issued new rates based on a charge of three miles (over and above the actual distance) for gradients, etc., on traffic from Newry to Armagh *via* Market Hill. The Newry Town Commissioners refused to accept this as a compliance with the Order of the Railway Commissioners, and a correspondence ensued between the parties without any practical result. Eventually, wishing to avoid further litigation, the Newry Town Commissioners invited the Railway Company to appear before the Board of Trade, who appear to have had some conciliatory authority in such matters. The meeting took place before Mr. Courtney Boyle on the 21st of October, 1890, and a short time after the Board sent a written communication, dated 12th December, 1890 (a copy at the same time being sent to the Great Northern Railway Company), the concluding paragraph of which communication is as follows:—"After careful consideration of all the circumstances referred to in the correspondence on the subject with this Department, and stated at the interview already alluded to, the Board of Trade are of opinion that the addition of three miles to the actual mileage results in the present case is a charge that is not fair or reasonable."

20775. Did the Railway Company admit that after that they had no such charge on any other part of their system?—I do not understand you.

20776. What followed after that?—The Great Northern Railway Company appear to have received the decision of the Board of Trade with indifference, or perhaps contempt, and again a correspondence ensued between them and the Newry Town Commissioners. Finally, getting no satisfaction from the Railway Company, they again cited them before the Railway Commissioners. That was to carry out the Order of a year and a half previously. The Railway Company replied with an explanation (and a further amendment of rates, I believe) to the effect that their rates were amended and based on the assumption of Newry (Edward-street) being fourteen miles nearer Armagh than Belfast (Grosvenor-street Terminus) is to the same town (the real difference being, however, fourteen miles sixty chains), with an added charge of 2*d.* per ton on first class traffic under the old

classification, and 3*d.* per ton on second class traffic, and 4*d.* a ton on third, fourth, fifth, and sixth class traffic. The case went to hearing, and in the result the Railway Commissioners confirmed these charges, but marked their sympathy with the Newry Town Commissioners by refusing to give the Great Northern Railway Company any costs against them.

20777. They admitted that the charges were correct?—Yes, but the Great Northern Company had to pay their own costs. The net result of this litigation, spread over nearly two years, was that the Great Northern Railway Company were forced to fix the rate from Newry (Edward-street) to Armagh at, roughly speaking, twenty per cent. below the rates from Belfast (Grosvenor-street Terminus), and to similarly fix the rates from Newry to Portadown and Banbridge at reductions on their former practice as compared with the rates from Belfast. There was a general system on the Great Northern Company to send goods from Belfast to these towns which were nearer Newry at preferential rates as against Newry.

20778. The Railway Company did that?—Yes, because, as you will see, that in the final paragraph of the Railway Commissioners' Order they referred to the towns of Armagh, Portadown, Dungannon, Cookstown, Omagh, and Banbridge.

20779. Have the Railway Company recently told you anything, or informed you in any way about these rates?—I got into some communication with them when I was appointed by the Newry Town Commissioners to come here, and I asked them whether they were carrying out the Order of the Railway Commission—at least, were they continuing to give Newry the advantages under the decision of the Railway Commissioners, and, as far as I can recollect, they told me that they had been practically maintained.

20780. Are you satisfied, from the investigation you have made, that Belfast is getting yet some slight advantages over Newry?—I am satisfied of that, if my information is correct, and I have taken infinite pains to ascertain it.

20781. Can you give us any accurate statement or any example of what takes place?—I may inform you that I asked for a list of rates, and I was refused them. I was told that I must get them in the ordinary course. They are perfectly entitled to do that, but I think they might have given the rates in a case of this sort.

20782. Are you entitled to go to your own station and look at the rates?—Yes, but that led to a considerable loss of time at the hearing before the Railway Commission. There were several days lost, and the judge specially referred to it.

20783. But you would not have lost time?—I had to go to Belfast five times to get the information, and very often, if you are not an expert in rates, when you go to get the list and get back you find you have forgotten to look up something else that is suggested by the rates you have got.

20784. Will you give us an instance?—The first is coal to Stewartstown—six tons. This coal goes through Portadown in both instances from Belfast, and the distance from Newry is about six miles less. Portadown, through which this traffic all goes, is about six miles nearer Newry than it is to Belfast.

20785. In other words, it is forty-eight miles from Belfast and forty-two miles from Newry?—The distance from Newry is forty-two miles fifty-five chains. These chains sometimes make a difference in the rate. From Newry (Albert Basin-quay) the class rate is 4*s.* 5*d.* to Stewartstown, and the actual rate is 4*s.* 5*d.* From Belfast (Queen's-quay) the class rate is 5*s.* 5*d.*

20786. What is the actual rate?—The actual rate is 4*s.* 8*d.* I took considerable trouble to find out what the actual rates were by going to the station in Belfast and inquiring.

20787. You based your figures on the information you received?—From a young man going to the point and getting the rate.

20788. *Mr. Acworth.*—When you say "actual rate," do you mean the special rate recorded in the rate-book?—Yes, recorded in the rate-book.

20789. You found a rate in the rate-book of 4*s.* 5*d.*?—Yes, from Newry, as against 4*s.* 8*d.* from Belfast.

20790. Take Newry for example. You found no rate in the rate-book except 4*s.* 5*d.*?—That is all.

20791. When you came to Belfast you found two rates in the rate-book?—The class rate and what you call the actual rate.

20792. The class rate would be 5*s.* 5*d.*?—Yes.

20793. You also found in the rate-book, as I understand, a special rate for coal at 4*s.* 8*d.*?—That is right.

20794. You do not know what is actually paid by a trader; it might be something different from that; you are not giving evidence on that?—I have not got that. The only evidence I am giving is that I have inquired for the rates as far as I could. I went to the railway station.

20795. When you say "actual rate," you mean the rate recorded in the rate-book; you do not mean that you are giving evidence that somebody paid it?—No.

20796. *Lord Pirrie.*—If you go back to 1894 do you find any difference in the rate?—I find that for this traffic in 1894 the actual rates were from Newry (Albert Basin-quay), 4*s.* 5*d.* I can give you the actual document for that if you want it.

Coal rates, Newry and Belfast to Stewartstown.

20797. We will accept that as being correct?—It is to be noted that Newry Quay is five miles sixty chains nearer Stewartstown than Belfast (Grosvenor-street). Therefore, to the charge for this difference in distance there should be added the charges for the Belfast Central Railway. I think there is a general added charge for traffic over the Belfast Central Railway of about 7*d.* on this traffic.

20798. You mean ordinary traffic?—Yes; low class traffic.

20799. Do you know that yourself?—I have got it from the rate book. I will perhaps show that later.

Timber rates from Newry and from Belfast to Ballyroney and Cootehill.

20800. Have you any case of timber or any other commodity?—Timber to Ballyroney five tons. From Newry (Edward-street) the distance is 26 miles 75 chains; the class rate is 5*s.* 6*d.*, and the actual rate 5*s.* 6*d.*

20801. Now, again, you are speaking from the rate book?—I am speaking from information from the rate books in Belfast.

20802. Being a timber merchant, I thought these were actual rates you were actually paying?—We do not pay carriage. The consignee pays carriage. From Belfast (Grosvenor-street) the distance is thirty-three miles thirty-six chains. The class rate is 6*s.* 3*d.*, and the special rate is 5*s.* That means that the distance is greater and the rate is less.

20803. It is actually less in this case?—And the distance is greater.

20803A. Have you timber to other parts of the line?—The next place is Cootehill. The distance from Newry (Edward-street) is 54 miles 66 chains.

20804. What is the class rate there?—8*s.* 6*d.*

20805. And the actual rate?—7*s.* 8*d.*

20806. What percentage of the class rate is 90·2?—From Belfast (Grosvenor-street) the distance is 88 miles 28 chains, and the class rate is 11*s.* 8*d.*

20807. What is the actual rate in that case?—The actual rate is 10*s.*, so that the percentage of the class rate is 85·7 as against 90·2 in the Newry case.

20807A. In that case Newry has the cheaper rate?—Yes; but it is not a similar percentage.

Cement rates from Newry and from Belfast to Ballyroney and Portadown.

20808. You have given us coal and timber. Have you any other commodity?—Here is cement to Ballyroney. From Newry (Edward-street) the distance to Ballyroney is 26 miles 75 chains. The class rate is 5*s.* 6*d.*, and the actual rate is 4*s.* 9*d.*, the percentage of the class rate being 86·4.

20809. What is Belfast?—The distance from Belfast to Ballyroney is 33 miles 36 chains. The class rate is 6*s.* 3*d.*, and the actual rate is 5*s.*, so that the percentage of the class rate from Belfast is 80 as against 86 from Newry.

20810. I think we will pass on. You need not go into other instances?—They are details, and if you want more we can supply them. The rates I have bothered about are only connected with my own trade, so that if others are not given it does not show that they do not exist. But there is the Portadown rate that I should like to call your attention to.

20811. This is one of the towns mentioned in the decision of the Railway Commissioners?—Yes. From Newry (Edward-street), the distance is 18 miles 63 chains. The class rate for cement is 4*s.* 6*d.*, and the actual rate is 3*s.* 4*d.*, which is a percentage of 74 of the class rate. From Belfast (Grosvenor-street) the distance is 25 miles 30 chains. The class rate is 5*s.* 3*d.* and the actual rate is 3*s.* 6*d.*, which is 66·6 per cent. of the class rate. That is one of the towns specially mentioned in the decision of the Railway Comissioners. That means that there is an overcharge of 11 per cent. so far as Newry is concerned.

June 7, 1907.

Mr John Carvill, representative of the Newry Urban District Council.

20812. But you still keep below Belfast as far as the rate is concerned?—Yes. But we do not look upon that as carrying out the decision of the Railway Commissioners.

20813. We will assume that these other rates are correct. Have you any other point you wish to mention as regards Belfast?—I am inclined to think that Newry is the step-child of the Great Northern Railway Company generally. I think there is a tendency as far as I can see in fixing these rates that in arranging the proportion we should get rather the worst of it generally.

20814. But have you as many large steamers trading into Newry, whether carrying timber or cement, or coal, and if you have sufficient to make train loads, would it not be cheaper for the railway company to carry to Belfast, the longer distance?—My trade is not carried in train loads.

20815. Do you mean to say that you are speaking merely of six-ton lots?—In Ireland there are very few train loads unfortunately. Guinness's stout is about the only one.

20816. You do not think the difference should make any difference to the railway company?—The traffic in timber and cement and all these things is not carried in train loads.

The rates issued in connection with a new station opened at Belfast alleged to be unfair to Newry traders.

20817. Have you anything to say about the Great Northern Railway Company opening a station at Belfast for any special purpose?—They have a new station at Belfast, and it seems to me that it is not fair to Newry, because it shortens the carriage for the merchants in Belfast and it lengthens the distance for the railway company.

20818. But it is a convenience for the traders?—Yes; and, therefore, they ought to pay for it in the railway rate.

20819. But it is against the interest of Newry?—Yes. That station has been opened on the Great Northern Railway, and they got special maximum powers to charge high rates, and yet they seem to throw that in with the traffic that comes from Belfast, as if it were of no account whatever.

Complaint of insufficient passenger train service between Newry and Bessbrook.

20820. The Urban District Council of Newry asked you to call special attention to certain matters. I should like to hear what they want you to call our attention to?—They are important from our point of view. The Bessbrook Station from the Newry passenger point of view is important, and it is especially important to the Bessbrook Spinning Company. I think this point was suggested by them because they do not feel that they are sufficiently catered for in trains stopping at Bessbrook Station. I understand from them that only two trains in the day stop at that station, and it is suggested that the 7.30 in the morning should stop there, and that the limited mail from Belfast in the afternoon should also stop there.

20821. That is a suggestion from them. Have they passed any resolution, or have they only verbally told you?—That is verbally given to me.

Alleged excessive charges on nurserymen's exhibits.

20822. Have you any other complaint about another trade, such as the nurserymen?—The nursery people complain that they have to pay passenger rates, whilst in England and Scotland if they are exhibiting at shows they get their exhibits carried at goods rates.

Insufficient supply of wagons at Newry for coal traffic.

20823. Is there a general complaint amongst the Urban District Councillors and others of want of wagons?—The only thing I know is that I see coal constantly thrown on the quay for want of wagons.

20824. Do you know that from your own knowledge?—Yes, I have seen coal on the quay.

20825. Is it not there for the convenience of steamers getting away quickly?—The two things are mixed up together. If there were wagons to take the stuff it would be as easy to put it in the wagons as to throw it on the quay. If there were the wagons it would not be put on the quay, as it means sixpence a ton probably of a loss in one shape or another when it is thrown on the quay.

20826. Have you any other information you wish to give us; have you any special desire to say anything as to any conclusions you have arrived at as regards this mismanagement, as you consider it?—I would not like to say that it was mismanagement, because the railway company have to take care of their shareholders, and perhaps they can see a profit by squeezing Newry as against the bigger port. But as I understand, this inquiry is of a more national nature.

20827. But have you any conclusion after reading the evidence which has been given; you have read a good deal of the evidence, I suppose?—I have read some of it, not all.

20828. Have you come to any conclusion as to what is proper to be done?—These are my own views. I do not suggest that they are the views of the Town Commissioners or anybody else. I cannot say more than I have put in my proof. From the first part of my evidence it will be seen that I submit that Newry has maintained for a long period a most exhausting struggle against the influence of a large station like Belfast operating on an indifferent, if not hostile railway company—as hostile as the Great Northern Railway Company surely was from 1865 to 1891—that is the period up to the Railway Commission decision—and as proof of that hostility I can hardly believe the company would otherwise have so relentlessly sought to charge, and still do charge, for gradient to Armagh had Belfast been Plaintiff in the matter instead of Newry.

20829. Really you have given that so clearly at the beginning of your evidence that I would rather you passed on to your own conclusions?—I think the opening of Maysfield Station in Belfast for receipt of traffic without any extra charge is only a continuance of the same policy.

20830. You have already said that. You have given that in your evidence. Perhaps you will give us your conclusions?—But you need to see the previous part before you can come to the conclusions.

20831. We have already had the previous part so clearly, and some others of the Commissioners will probably wish to ask some questions?—This leads me to the conclusion that unless the Irish railways are in some way more effectually restrained than they are at present the small centres will be sacrificed to the large ones, and in my opinion the process is even now in full swing. Mr. Heyn's evidence disclosed his dislike to a central management of the Irish railways. He looked upon a "boss" official competent to fix rates with him in Belfast as a necessity for progress, but he did not say how other ports were to fare without such a luxury at their door. To prevent this crushing out process, I think the State must become the owners of the railways in Ireland, and if the finding of the Financial Relations Commission some years ago has any force or reality, it is not hard to suggest where the money to buy them should come from. But even failing this, I think the ratepayers of Ireland would be justified, if not wise, in undertaking part of the necessary liability, the price not to exceed 5 or 10 per cent. premium of the average price of the last five years.

20832. That is your own personal view of what you would recommend to be done with the Irish railways?—That is very much my view.

20833. But it is not the opinion of the Corporation or Board which you represent; there was no resolution passed, was there?—No. I do not think the thing was discussed; I never asked about it.

20834. If the railways were bought up by the State you would not dread their being under Irish control?—I really do not care what authority they are under so long as it is a central authority, and so long as the smaller places are not sacrificed to the larger ones, because that seems to me to be the tendency at the present time. In this system of grouping rates the very first-class ports always get the benefit. We in Newry, for instance, are an inland port and have paid for getting into the heart of the country and our position is not recognised.

20835. And you think it will be recognised under a central board or an amalgamation of the railways?—I think it should be.

20836. Supposing it was done, do you suggest any special court to which traders could apply quickly and at little cost to settle any differences?—I think the present Railway Commissioners ought to be open to any trader. So far as my opinion is concerned, I think there should not be any counsel on either side in the first instance.

20837. You would have a County Court Judge?—No; he is totally incompetent for the purpose.

20838. But you would have no counsel or solicitors at all?—No. I think the Railway Commissioners as at present constituted are perfectly competent to inquire into the whole question as it comes before them.

Examined by Colonel HUTCHESON POË.

20839. The whole gist of your evidence, as far as I understand it, is to complain of the pressure and the unjust treatment you have received at the hands of the Great Northern Company?—Yes.

20840. But I understood you to preface your remarks by saying that you considered the Great Northern Company was perfectly justified in using all the pressure they thought fit on the smaller line—the Newry and Armagh line—in order to buy them out?—Up to the time they purchased.

20841. That is a very dangerous doctrine if you follow it to its logical conclusion. You suggest that a big, powerful railway company, such as the Great Northern, is at liberty to use its powers and its large financial means to bring pressure to bear on a small line. If that policy is to be followed by all the other large lines in the country in the way of squeezing the Cavan and Leitrim, the Sligo and Leitrim, and all the small lines throughout the country, that is not likely to conduce either to efficiency, economy, or harmony?—I quite agree, but the difficulty I see is this. They are within their rights in doing so, and I do not want to cringe or cry over things that we could not meet.

20842. But apparently you think they are justified in buying you out on the best terms they can, and having succeeded in effecting their object, it appears that they use their powers to squeeze you still further?—They did until the Railway Commissioners came in, and I believe that even since then the pressure has been more or less going on, influenced, perhaps, by the pressure from Belfast, or I do not know where. At any rate we are not so important as Belfast.

20843. The result in your case has been manifestly to your disadvantage?—That is so.

20844. I think Mr. Greer, who gave evidence before us, said that when the Great Northern Company bought out that line the price they paid was insufficient to discharge the preference shareholders' claim in full. They paid nothing to the ordinary shareholders, and the preference shareholders did not receive the full amount they were entitled to, so that evidently that could not have been a profitable transaction for the shareholders in that line. I thought we had had also from him that he had nothing to complain of as to the rates under the present system; he admitted that in the first instance they had been preferential as regards Belfast, but that subsequently, owing to the action of the Canal Commissioners, that had been remedied. Looking over the rates which you have given us, the first one—coal from Newry to Portadown, I have worked it out to a mileage rate, and it comes to 1·25*d.* per mile for a distance of forty-two miles. Now, with regard to Belfast to Stewartstown, a distance of forty-eight miles, it worked out at 1·18*d.* In other words, there is a difference only of ·07*d.* in favour of Belfast. Certainly the distances are nearly approximate, but when it is only a difference of ·07, which is less than one-tenth of a penny, it is not a very serious inequality to complain of?—In the case of coal the difference of 3*d.* or 6*d.* in the rate would draw the traffic from Newry to Belfast absolutely.

20845. You gave another rate with regard to timber from Newry to Ballyroney. That works out at 2·53*d.* from Newry to 1·80*d.* from Belfast. The difference there is greater undoubtedly. That is a difference of nearly ¾*d.* in favour of Belfast. As far as I can see, that is about the only serious inequality of which I think you have any right to complain?—If these inequalities are extended more or less over a large area they become of importance.

20846. I think that is undoubtedly a very great disparity. But I will take another which is not so favourable to you. It is more favourable to Belfast. Timber to Cootehill works out at 1·70*d.* from Newry and 1·40*d.* from Belfast. That is a difference of a farthing in favour of Belfast. But against that the distance is very nearly double. In one case it is 54 miles, and in the other it is 88, so that, therefore, the longer the haul the less the rate?—May I say that the class rate is reduced in proportion; as the distance increases the class rate is reduced.

20847. I do not think that affects the question in this particular instance, because we are dealing with what is actually charged?—No. The class rates presumably are made up on a fair basis; therefore, if the class rate for 88 miles is fair, the class rate for 45 miles, or whatever our distance is, should also be fair, and the proportionate reduction should be equal if the rates are equal.

20848. It would be largely in your favour to work on the actual rates charged. In that particular instance where you have twice the distance to carry coal, it only amounts to a difference of about a farthing, which is not excessive considering the distance. That would be a fair charge, I think. I only take it for what it is worth. You made some reference to the difficulties of through connections and the disabilities which passengers living at Newry are under in meeting the mail train?—Yes.

20849. That is at Portadown?—No; Bessbrook station is 1¼ miles from Newry, and the connection with Newry to catch the English mail is very awkward, because that mail train passes Bessbrook station about six o'clock in the evening, and that catches the English mail. If you want to catch the English mail from Newry at present you have to leave at a quarter or twenty minutes past three.

20850. *Lord Pirrie.*—You have to go to Dublin?—Yes.

20851. *Colonel Hutcheson Poë.*—Has that been represented to the Great Northern Railway Company by the local authority?—Long ago, when I was mixed up in these questions more closely than I am at present—I was in this fight when the Urban Council was at loggerheads with the Great Northern Railway—this point was raised. I believe the Bessbrook Spinning Company, who are the chief people in Bessbrook, have spoken to the Great Northern Railway Company repeatedly about getting more trains from Belfast and Dublin to stop at Bessbrook Station.

Alleged inefficient mail train service for Newry passengers.

20852. But their representations have not led to any improvement?—I believe not. They have generally been answered by—"The Postmaster-General informs us," and so forth. But against that the Great Northern Company have a train running between Belfast and Greenore—the Greenore boat express—that stops three times and does 46 miles and a half, Belfast to Newry, in 59 minutes, so that I cannot see much force in the contention that they cannot stop the limited mail at Bessbrook, which does not go so fast.

20853. With regard to the general question, are you in favour of amalgamation generally of Irish railways, or would you prefer that they should remain in their independent state?—I prefer that they should be under some State control.

20854. You would be in favour of some central State authority taking them over?—Yes. We in the small towns think—or at least I do—that we would get fair treatment as compared with the large towns and would get our fair share of the advantages.

State purchase and control of the railways recommended to ensure fair treatment to all interests.

20855. You would get the benefit of your geographical position, which at present you do not?—Yes.

20856. I do not understand what you mean by saying that the ratepayers in such an event might pay from 5 to 10 per cent. premium on the average price of the last five years?—I mean that the country would have to take all the lines, and the Irish ratepayers at present do take a certain liability for railways, and I thought it might be extended. The chance of their having to pay so severely in the purchase of existing railways which pay a dividend would not be so great as in the exploiting of new railways.

20857. The effect of that would simply be to reduce the financial burden which the State would have to undertake?—Yes. I thought perhaps that if the State as a whole did not undertake it, the Irish ratepayers might go in for it in some shape or form.

20858. That would be a joint undertaking?—Something of the sort.

20859. But you would prefer that the State should undertake the whole responsibility?—I think so. If you can get somebody else to pay over your debts, so much the better.

Examined by Mr. Acworth.

Cost of the Newry case before the Railway and Canal Commission.

20860. As I understand, your position is this. You say that you went to the Railway Commissioners. We have heard a good deal about the Newry Railway Commission case. Do you happen to know what it cost—how much did Newry spend on that fight?—We had not to pay our costs, so I cannot tell you.

20861. Anyway, it was not very serious to you then?—It is a very long time ago.

20862. We have heard so much about the tremendous expense of that court, but yours, which was a famous case, did not cost you anything?—That was because we won.

June 7, 1907.

Mr. John Carvill, representative of the Newry Urban District Council.

20863. You went to the Commission, and after a great deal of trouble you got them to lay down a rule which worked out that you were to get something like 15 per cent. advantage over Belfast?—In certain directions.

20864. *Via* Portadown?—No, *via* Armagh, and lesser reductions *via* Portadown and Banbridge, which previously we had not been getting.

20865. You were to get 15 per cent. reduction *via* Armagh?—Yes, something like that.

20866. The special rates, which you have got up with great care and put in come to this. You still get your 15 per cent. by the class rate?—Yes.

20867. But they have put in special rates?—Yes.

20868. And the special rate from Belfast does not give you anything like 15 per cent. preference?—It is whatever this list shows.

Alleged failure of the Great Northern Railway Company to fully comply with the Railway and Canal Commission's decision as to Newry rates.

20869. It shows that you do not get the same percentage of difference where it is a special rate as you do under the class rate?—Precisely. But may I explain? I do not think that in the class rate they charge us the 2*d.* that they are probably entitled to charge, but the quantity of stuff carried at the class rate is infinitesimal—perhaps 5 per cent., so that really they are not giving us anything.

20870. As I understand, taking, for instance, cement to Portadown, from Belfast it is 5*s.* 3*d.*, from Newry 4*s.* 6*d.* on the class rate?—Newry is 4*s.* 6*d.* against Belfast 5*s.* 3*d.*

20871. That, you think, is a fair proportion?—I have not inquired into whether the class rates are fair or not.

20872. Does it seem to you that that carries out the decision of the Commission?—Looking at it casually, I think it does.

Instances of rates alleged to be disproportionate.

20873. When it comes to the actual rate, the difference is only 2*d.*; 3*s.* 4*d.* as against 3*s.* 6*d.*?—Yes.

20874. Is your complaint that that does not carry out the decision of the Commission?—Yes.

20875. Is that the gist of it?—Yes.

20876. It seems to me that the railway company ought to answer that point.

Mr. Balfour Browne, K.C.—There are only two cases where it does not carry out the decision of the Commission, and I think they require explanation.

20877. *Mr. Acworth.*—It does seem to me that that wants explanation. I would like to bring out a point which you did not give in answer to Lord Pirrie. You say that it is true that your coal traffic has increased more rapidly than that of Belfast, but that the reason is that you have put on new steamers and worked much harder to get the traffic?—Yes.

Increase in coal traffic through Newry port; not due to any concessions in rates.

20878. It is not the result of advantage of rates—it is due to working much harder to get the traffic?—Yes.

20879. And that you deserve the credit for your energy, and that it is not the railway rates—that is your point?—Yes.

20880. When you speak of Bessbrook; how far is that from Goraghwood?—About two and a half miles.

20881. Goraghwood is the junction?—Yes.

20882. Does the limited mail not stop there?—No.

20883. You would not expect it to stop at both places?—No. The reason we suggest that it should stop at Bessbrook is that if it stopped at Goraghwood we would have to have a special train to run into Newry, but you can drive down in a car from Bessbrook.

Better mail train connection for Newry urged.

20884. You would leave it to them how to give it, but you think that Newry ought to have the advantage of the limited mail connection?—I think so.

20885. With regard to the Railway Commission, as I understand, you suggest that there should be a Railway Commission without counsel or solicitor, and that then there should be an appeal; to whom should there be an appeal?—To themselves.

20886. To themselves?—Yes.

20887. They are to hear the case twice, once without the help of learned gentlemen, and then when they find they cannot do it in that way, they are to get learned gentlemen to help them?—It is not when they find they cannot do it; it is when some of the litigants are dissatisfied.

Proposal to exclude counsel from Railway Commission Court cases discussed.

20888. That is a new proposal; we have had many proposals before the Commission, but that is quite new?—When a trader goes before the Railway Commission he does not know where it will end. I have been in three railway cases, and, as far as my experience goes, the Commissioners are perfectly competent without any help from any legal gentlemen to decide the points at issue.

20889. Far be it from me to say they would not be. I gather that one of your main reasons for wanting the railway management to be concentrated in Dublin is that you think every part of the country would get fair treatment?—That, roughly speaking, is my idea.

20890. Are you quite sure that Dublin would not tend to get an advantage?—Possibly. Wherever the centre was there might be temptation that way.

20891. You know that there are Government railways in New South Wales?—I imagine that there are.

20892. Do you know that there is a standing complaint in New South Wales that the merchant in Sydney can get through rates, but that if a man in an inland town wants to distribute his goods he has to pay two local rates. Supposing Dublin treated Newry in that way?—Of course that is corrupt.

20893. No, they say it is business?—Ah, no; I do not agree with them. I think it is fraud.

20894. I am sure you would not like to suggest that a State railway would be corrupt?—I do not suggest that.

20895. What do you mean when you say that the railway company ought to be bound to supply a list of rates. I sympathise very much with the difficulty you have in getting the rates you want without a deal of trouble and expense?—If you send to the railway company, and say, "I want to know the rates from Newry to Jericho, or anywhere else," and you pay the money that is necessary for their clerk to supply those rates, I think you ought to be entitled to get them.

20896. Just as you are entitled to go to the Registrar-General and say, "I want the birth certificate of John Jones"?—Precisely.

20897. You agree that you ought to pay for the time of the clerk?—Certainly.

20897A. I have never heard that suggested before, and there is a good deal to be said for it.

Mr. Balfour Browne, K.C.—You can do it now. Any person who is intending to send traffic can have the rate by writing to the secretary of the company.

Mr. Acworth.—But supposing I do not intend to send traffic.

Mr. Balfour Browne, K.C.—Then I do not think you should have it.

Mr. Acworth.—I am proposing to send traffic from Newry to, say, Portadown. What I want to know is not only what I shall be charged, but what the man in Belfast will be charged. I cannot say that I am intending to send traffic from Belfast.

Mr. Balfour Browne, K.C.—Under those circumstances you could go to the rate book in Belfast and see.

Mr. Acworth.—But you must go to Belfast to get it.

Mr. Balfour Browne, K.C.—I am not making any suggestion, but would it not be an intolerable thing if you could ask for the rates from every place?

Mr. Acworth.—Not if you were prepared to pay.

Mr. Balfour Browne, K.C.—Oh, if you pay the expense; I beg your pardon.

Mr. Acworth.—This gentleman has suggested that. It is a new suggestion altogether, but it is one worth considering, because it is a common grievance.

Mr. Balfour Browne, K.C.—I think there would be some reason in it if you paid for it.

Mr. Acworth.—There are many Acts of Parliament which provide that you can have things copied out for you at a price.

Cross-examined by Mr. BALFOUR BROWNE, K.C.

20898. (*To Witness*).—Do you know that quite recently there was a large deputation of chairmen of Chambers of Commerce and others who waited upon the Great Northern Company?—I do, but I was not there; I was asked to go, but I did not.

20899. You could not be there, I think. Do you know that the question of the mail train being stopped was discussed then?—It was not on the Agenda; I did not know that.

20900. Do you know that it was explained that this was a notice train and could only be stopped by permission of the Postmaster-General?—I have heard that answer given so frequently that I am tired of listening to it.

20901. But you must tire of the Postmaster-General and not of us?—The question of the mail train being stopped is mixed up with the arrival in Dublin, and if you are able to run a train over parts of the system sufficiently fast and at such a speed that if you ran the mail train at the same speed you could arrive in Dublin in time, I think that point disappears.

20902. Do you know that we applied to the Postmaster-General and he refused to allow us to stop that train?—I was not aware of that.

Mr. Balfour Browne, K.C.—It is one of his notice trains, and he declined to allow us to stop it.

Mr. Acworth.—Even if you got to Dublin at the same time.

20903. *Mr. Balfour Browne*, K.C.—No; we could not do that; we asked extra time for the stop. (*Witness*)—I say that it is unnecessary to have extra time, because the company are running a train at a faster rate.

20904. Is Mr. Irwin Chairman of the Harbour Trust?—He is.

20905. Do you know that he gave evidence before this Commission?—I heard that he did.

20906. Do you know what he said—"The Urban District Council sent out circulars in reference to this inquiry, and the Harbour Board and Trust co-operated with them, and we asked them to state any grievance, to make any objections or any observations as to the objections they had to raise to the service, and there was nothing of the kind"?—I cannot tell you what is in other people's minds.

20907. "We only got one single complaint, and that was with regard to rolling stock"?—I cannot tell you.

Lord Pirrie.—He says he is only giving evidence for himself.

20908. *Mr. Balfour Browne*, K.C.—I am not objecting. With regard to these rates, do you know that everyone of them except two—that from Newry to Ballyroney, where I think there must be some mistake in the information you have got but we will look into it—and the one with regard to cement to Portadown—in every one the difference between the rates from Belfast to the place of destination and Newry comply with the order of the Commissioners?—I do not know it at all.

Lord Pirrie.—Do you mean the class rate or the actual rate?

Mr. Balfour Browne, K.C.—The actual rate.

Lord Pirrie.—How does it go in reference to the 15 per cent.?

20909. *Mr. Balfour Browne*, K.C.—If you look, there is the rate from Newry 7*s.* 8*d.*, and from Belfast 10*s.*?—What rate is that?

20910. Timber to Cootehill. I ought to remind you that these comparisons are not accurate, because according to the decision of the Railway Commissioners we were entitled to add to the Newry rate a small sum ranging from 2*d.* to 4*d.* according to the class on account of the heavy gradient between Newry and Armagh. That is the position. I am reading from Sir Frederick Peel's decision. In every case you have to add that 2*d.* in order to find whether the rates are comparable or not. But still there is the discrepancy in the two cases I have mentioned?—What is the rate that you are referring to now?

20911. Timber to Cootehill from Newry, 7*s.* 8*d.*, and from Belfast 10*s.*

Lord Pirrie.—That is for timber.

Mr. Balfour Browne, K.C.—Yes.

20912. *Lord Pirrie.*—Witness stated that he was quite satisfied with that?—(*Witness*).—I do not know that.

20913. *Mr. Balfour Browne*, K.C.—Then I am satisfied? May I make a remark on that?—You are entitled to charge 2*d.* or 3*d.*

20914. 4*d.* according to the Commissioners?—4*d.* is on the higher class. It might be 3*d.* or 2*d.*, but it could not be 4*d.*

20915. Very likely?—If you will observe the difference in the percentage of the class rate is 5 per cent., which, on 120 pence, would be 6*d.* If you take off 3*d.* you will be still charging us 3*d.* too much.

20916. You have not taken off the terminals; you are dividing the whole lot. You must take off the terminals which are common at each end before you can divide?—But your class rates include the terminals.

Mr. Balfour Browne, K.C.—Certainly.

Mr. Acworth.—As long as you are dealing with class rates, there is a percentage difference of, we will say, fifteen. When you come to compare actual with actual, which I suppose is special rate with special rate, that difference drops to 3, 4, or 5 per cent. Is not that the general impression of the table on your mind?

The percentage difference in the Newry rates to interior stations as compared with the rates from Belfast.

Mr. Balfour Browne, K.C.—I do not think it is. The difference between 7*s.* 8*d.* and 10*s.* is far more than 2 or 3 per cent.

Lord Pirrie.—Take the case above that—timber to Ballyroney. The actual rate is 5*s.* 6*d.*

Mr. Balfour Browne, K.C.—If that is accurate we are entirely wrong; I admit that. I am going to check it and see if it is accurate, because the Belfast rate is absolutely below.

Mr. Acworth.—Take the next one. Timber to Cootehill. You have a difference of 3*s.* 2*d.* between the Newry and Belfast rates?—Yes; that is on the class rates, but on the actual rates you come down to a difference of 2*s.* 4*d.* That is a less percentage difference than on the class rate I think.

Mr. Balfour Browne, K.C.—It may still be 15 per cent. The difference between the class rates is 23 per cent.

Mr. Acworth. Then take the next one—cement to Ballyroney.

Mr. Balfour Browne, K.C.—That is wrong; I admit that at once. If these figures are right we are wrong.

Mr. Acworth.—Then, take the next—cement to Portadown. There is a difference of 9*d.* on the class rate, which comes down to 2*d.* on the actual rate.

Mr. Balfour Browne, K.C.—I do not believe that is so. These are the two cases I am going to inquire into. The others, I say are right.

Mr. Acworth.—Then, cement to Cookstown. Do you give that up?

Mr. Balfour Browne, K.C.—I have not got that.

Colonel Plews.—May I say that every rate from Newry is made proportionate to the Belfast rate in accordance with the Commissioners' decision?

Lord Pirrie.—In that case these rates must be wrong?

Mr. Balfour Browne, K.C.—I should say so, but I will have them checked to-night. (See pp. 302 and 313).

Lord Pirrie.—Then, why discuss them to-night?

Mr. Balfour Browne, K.C.—We will put in a table showing them exactly.

Lord Pirrie.—There are others besides those we have mentioned.

20917. *Mr. Balfour Browne*, K.C.—Might I have them all?—(*Witness*).—With regard to Cootehill—Mr. Balfour Browne especially challenged me with regard to Cootehill.

20918. *Lord Pirrie.*—No, he did not challenge it?—He said it was a charge for a gradient. This does not go over the gradient at all; it does not go that route, so that the gradient charge is lost, and they have no right to charge for the gradient, so that they are still 5 per cent. against us.

Mr. Acworth.—They agree that you have made a case, and that they have got to answer it.

Lord Pirrie.—They agree that either their figures must be wrong, or that they must explain them?—Here is cement to Portadown. The rates in 1894 were 3*s.* 4*d.* from Newry, and 4*s.* from Belfast, a difference of 8*d.* in a five-ton lot.

Lord Pirrie.—Mr. Balfour Browne agrees that if your figures are right they have to apologise. We cannot put him in a white sheet to-night.

Mr. Balfour Browne, K.C.—So far as I see I am wrong in two as they stand.

Mr. Acworth.—You are wrong in more if these figures are right.

Mr. Balfour Browne, K.C.—But I have not seen them all.

The Commission then adjourned till Monday, the 10th instant, at 11.30 o'clock.

THIRTY-SEVENTH PUBLIC SITTING.—MONDAY, JUNE 10TH, 1907.

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners Present:—Sir CHARLES SCOTTER, Chairman; LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel WILLIAM HUTCHESON POË, C.B.; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. JOHN DAVIES examined by the CHAIRMAN.

June 10, 1907.

Mr. John Davies, General Manager of the Midland and South Western Junction Railway and ex-General Manager of the West Australian Government Railways.

20919. You are the General Manager of the Midland and South Western Junction Railway?—I am.

20920. How long have you been in that position?—Four and a half years.

20921. What were you before taking that position?—I was General Manager of the West Australian Government Railways for a perioid of ten and a half years.

20922. Then, you had ten and a half years' experience in the Colonies?—I had.

20923. Prior to that, you had general railway knowledge in this country?—Yes; seventeen years.

Population of the various States in Australasia.

20924. I think you are prepared to give us some particulars with reference to the working and management of the railways in Australia, and, first of all, to get it on the Notes, will you just tell us the population of the various States in Australia—I suppose it is according to the last Census returns?—Yes; according to the Victorian Year Book of 1905, the population of Western Australia was 254,874; of South Australia, 374,398; of Victoria, 1,218,571; of New South Wales, 1,491,763; of Queensland, 528,048; of Tasmania, 181,106; and of New Zealand, 882,457.

20925. In Australia proper, that is a population in round figures of four millions?—The Commonwealth of Australia—4,052,570.

20926. That will do as far as that is concerned. Now, with regard to the administration of railways—first of all, in Australia. What was the railway mileage in 1906?—In 1906 the railway mileage was 17,489.

Mileage of Australasian State and privately owned railways in 1906.

20927. That is, in the whole of Australia?—Yes.

20928. Just give us the several totals?—I will give them in the same order as I gave the population. In Western Australia, the railway mileage is 2,260 miles, 1,611 of which are Government, and 649 private. In South Australia, the railway mileage is 1,926, of which 1,746 are Government railways, and 180 privately owned. Victoria has 3,394 miles, all owned by the Government. In New South Wales there are 3,390 miles, all owned by the Government. Queensland has 3,381 miles, 3,138 owned by the Government, and 243 privately owned. Tasmania has 619 miles, 463 owned by the Government, and 156 privately owned. New Zealand has 2,519 miles, 2,406 owned by the Government, and 113 privately owned; making a total of 17,489 miles of railway, 16148 of which are owned by the States, and 1,341 are owned by private companies.

20929. I see Western Australia has the largest proportion of privately-owned railways?—That is so. The Midland Railway, a privately-owned company, which does a fairly large business, is 277 miles long.

20930. We will take the total. There are 1,611 miles of Government railways, and 649 miles of private railway?—Yes.

20931. Now, do you know whether there were any negotiations in reference to the taking over of these railways in Western Australia?—I was going to explain. The Midland Railway is really the only railway that does anything like a large business, and the Government has been negotiating with them for some years with a view to purchasing. The other mileage is made up of about a dozen small companies running into what we call in Australia "the Bush," chiefly for timber purposes, and hauling timber. They cannot be classified quite on the same lines as the Midland Railway, which conveys passengers and general merchandise.

20932. In other words they are what we should call tramways?—That is so.

20933. *Mr. Acworth.*—The same would be true, would it not, of the other private lines—they are tram lines, mineral lines, and so on, very largely?—That is so.

20934. Practically the Midland is the only exception in Australia of a reasonable railway system that is in private hands?—Yes; excepting in New Zealand; there is one private line there of eighty-one miles in length.

20935. *Chairman.*—All the railways worked for goods and passenger traffic, broadly speaking, are in the hands of the Government?—Yes, all the railways that you can reasonably compare with British railways.

20936. What about the gauges of those railways—they vary, do they not?—They vary very considerably. In Western Australia they are all 3 feet 6 inches; in South Australia there are 499 miles with 5 feet 3-inch gauge, and 1,427 miles of 3 feet 6 inches; in Victoria there are 3,313 miles of 5 feet 3-inch gauge, and 81 miles of 2 feet 6-inch.

20937. Those are the little tramways which we have been talking about?—Yes. In New South Wales they are all 4 feet 8½-inch; in Queensland they are all 3 feet 6-inch; in Tasmania, the same, and in New Zealand, the same.

20938. Is it within your knowledge that any effort has been made to have the gauge made uniform in Australia?—No very serious effort has been made, but a good deal of talk and correspondence has taken place with regard to it.

20939. Just let us have a few figures with reference to the capital cost of these railways. First of all, what is the cost, per mile, generally speaking, of the railways in England and Wales—abstracted, of course, from the Board of Trade returns?—For the year 1905 it amounted to £67,618.

20940. It is merely to get these figures on the Notes?—Quite so.

20941. Now, in Scotland?—In Scotland it amounts to £47,501.

20942. And in Ireland?—£11,596.

20943. Now, have you got the average cost per mile of the railways in Australia?—In Western Australia the average cost is £6,186; in South Australia, £7,797; in Victoria, £12,194; in New South Wales, £12,869; in Queensland, £6,930; in Tasmania, £8,490; and in New Zealand, £9,410.

20944. In ascertaining these figures, you have taken into consideration the total mileage in those various Colonies?—I have.

20945. That is what we call the tramway mileage (which are called railways there), and also the Government railways; you have taken the whole of them?—No; I have not. I have given you now the cost per mile of all the Government railways.

20946. That is what I wanted to have clear. So that the tramway lines are not included?—They are not included in the figures I have given.

20947. Then the comparison is the cost per mile of an ordinary railway in Australia and New Zealand as compared with an ordinary railway in Ireland?—Quite.

20948. *Mr. Aspinall.*—That column shows the figure of 16,148 as being the total mileage in the several Colonies?—Of the Government lines—the total of the Government mileages in the different States.

20949. *Mr. Acworth.*—Have you worked out the average?—Not the average for Australia.

20950. I make it £5,600 a mile for the average; you have not checked that?—I have not; no.

20951. I am taking the 16,000 miles at 156 millions; I think I am pretty correct.

Lord Pirrie.—That would be correct.

20952. *Colonel Hutcheson Poë.*—When you say that in those figures you do not include the tramway lines as comparable with the lines of England and Ireland, you do in fact compare with Irish railways, because in Ireland we have a number of 3-feet gauge railways which we call light railways. I presume those figures cover the cost of such lines in Ireland?—No, the figures given cover the cost of the State railways only, because the Bush railways in Australia would not compare favourably with the light railways you have in Ireland.

20953. *Chairman.*—They are simply tramways?—They are practically extended sidings.

20954. You gave an instance of some being only 2-feet gauge?—That is so.

20955. *Mr. Acworth.*—All the Government railways are included?—All the Government railways are included in the figures I have given you.

20956. We had an engineer the other day from West Australia—Mr. Palmer—and he told us that some of the West Australian railways cost as little as £1,100 a mile?—It is an experiment, and they are not included in these figures, because Parliament only authorised the construction of those railways about twelve months ago.

20957. But for instance, what they call the pioneer railways in New South Wales, which are estimated at about £2,000—they are all in—they are ten years old?—They are all in from 1855.

20958. There are some quite as cheap as any of ours?—And some quite as expensive; I can give you details of them.

20959. *Chairman.*—Now, let us have just a few figures with reference to the receipts. As I understand, the last authorised published return is for 1905?—In England?

20960. No, in Australia?—In Australia, 1906.

20961. And the figures for England are for 1905?—Yes. They are latest I could get for Australia.

20962. I do not think we need take the British figures. We will just take the Irish figures. Take the figures for Ireland in the year 1905—what were the total receipts?—For the year 1905 the total receipts amounted to £4,108,678.

20963. Would you just analyse that?—For passengers the railways earned £1,656,753; for parcels, horses, carriages, dogs, and soforth £312,542; for mails, £171,384; making a total for coaching business of £2,140,679.

20964. Now, let us have the goods traffic?—For merchandise, £1,288,908; for live stock, £282,849; for minerals, £255,004; making a total for goods traffic of £1,826,761. Steamboats, canals, harbours, docks, and soforth.

20965. That is the miscellaneous receipts of various railways; those are small figures, but you had better mention them?—£11,626; and for rents, tolls, hotels, and soforth, £129,612; making the total I have already given. The mileage of all the railways amounts to 3,312.

20966. In Ireland?—In Ireland. I mention this because it is a fair comparison with one or two of the States in Australasia.

20967. *Sir Herbert Jekyll.*—Are those the gross receipts?—The gross receipts.

20968. *Chairman.*—Now, having given the receipts in Ireland, just let us see how the receipts compare in Australia. It is a different year, I think?—It is a year later—1906. In West Australia the mileage is 1,611, and the gross receipts £1,634,444.

20969. Now, give us the same analysis as you did with the Irish railways?—For passengers the receipts amounted to £422,113; parcels, horses, carriages, dogs, etc., £66,227; for mails, £18,258; making a total for coaching of £506,598. Merchandise and minerals are lumped together in Western Australia, and the receipts for conveying the same amount to £1,011,813; live stock, £38,890; making a total for conveyance of goods and live stock of £1,050,703. Steamboats, harbours, docks, etc., £33,769; rents and soforth, £46,374, or a grand total of £1,634,444.

20970. Then you keep your accounts practically the same as we do in this country?—Practically the same.

20971. Only you lump together the merchandise and minerals in one?—In one State; in the others we separate them.

20972. Practically the accounts are kept on the same basis?—It is a very fair comparison.

20973. I do not know that it is necessary to go through all the Colonies with these figures?—Shall I give you Victoria, New South Wales, and New Zealand?

Colonel Hutcheson Poë.—New South Wales and Queensland are practically the same length as the Irish railways.

Mileage and Receipts of the Victorian, New South Wales, Queensland, and New Zealand Railways, year 1906.

20974. *Chairman.*—We will take those three, if you please. Take Victoria first?—Victoria.

20975. Yes; I mean I do not want to encumber the Notes with too many figures. Take Victoria; never mind the total figure—just give us the mileage first of Victoria?—3,394 miles.

20976. That is rather an important figure?—Compared with Ireland's 3,312.

20977. That is the mileage. Now, just give us the passengers and goods traffic separately?—Passengers, £1,501,597; parcels, horses, carriages, dogs, etc., £156,528; mails, £61,588; total for the coaching, £1,719,713. Merchandise and minerals (I find Victoria follows the same practice as Western Australia), amount to £1,792,575; live stock, £208,862; total for the goods, £2,001,437. Steamboats, harbours, docks, etc., £10,758; rents, etc., £55,711; making a total of £3,787,619.

20978. That is for the Colony of Victoria?—Yes.

20979. Now New South Wales is about the same mileage, and I think we had better have those figures in the same way?—Yes.

20980. Just in the same order?—New South Wales, 3,390 miles; receipts from passengers, £1,331,696; parcels, etc., £157,365; mails, £74,200; total for the coaching, £1,563,261; merchandise, £1,797,749; live stock, £431,661; minerals, £398,666; total for the goods, £2,628,076. Steamboats, harbours, docks, etc., £6,823; rents and so forth, £36,631; total, £4,234,791.

20981. You might give us Queensland, I think—it is the same mileage, but they are smaller figures?—In Queensland the mileage is 3,138 miles; receipts for passengers, £411,604; parcels, etc., £67,535; mails, £50,000; total coaching receipts, £529,139; Merchandise, £772,058; live stock, £102,562; minerals, £108,200; total goods receipts, £982,820. Steamboats, etc., £20,343; rents and soforth, £13,781; making a total of £1,546,083.

20982. When we had the pleasure of hearing the Premier of New Zealand he was not able to give us the figures, because he had not got them with him, but you have them here, and I think we had better just put those on the Notes for New Zealand. Just give us the figures for New Zealand in the same way as you have given the others?—The New Zealand mileage is 2,406; passenger receipts, £786,872; parcels, mails, etc. (together), £142,643; total coaching receipts, £929,515. Merchandise, minerals, and live stock (all of which are lumped together in New Zealand) amount to £1,346,038; making that the total for goods receipts. Steamboats, etc., come to £38,518; rents are £35,633; making a total of £2,349,704.

20983. What is the grand total for Australia and New Zealand together?—The grand total for Australasia, the mileage——

20984. No, just give the receipts?—The receipts are £15,143,594.

Total of Receipts on Australasian Railways for 1906.

20985. I think that is sufficient. Now, that seems to me to deal very fully with the receipts. Of course, we have not taken all the Colonies, but we have

June 10, 1907.

Mr John Davies, General Manager of the Midland and South Western Junction Railway and Ex-General Manager of the West Australian Government Railways.

taken those which approximate more nearly to the mileage of Ireland. Now, with regard to the expenditure, I will take you very shortly through this, I think. First of all, for 1905, what do you find is the percentage of working expenses in England and Wales?—63 per cent.

20986. And in Scotland?—54 per cent.

20987. And in Ireland?—62 per cent.

20988. Now, just go down to Australia. In Western Australia what were the working expenses there, that is for the year 1906 you were dealing with?—Quite 73·53 per cent.

20989. Now, will you give us the other figures—what is the figure for Victoria?—Victoria is 52·78 per cent.

20990. New South Wales?—54·51 per cent.

20991. Queensland?—55·84 per cent.

20992. And New Zealand—69 per cent.

Comparison of percentage of Working Expenses on British and Irish Lines with Australasian Railways.

20993. What is the average of the whole of Australasia?—58·97 per cent.

20994. 59 per cent. practically?—Yes.

20995. I think we had better have these figures on the Notes. The net receipts after paying the working expenses amounted to how much in Australasia—for the year 1906, I mean?—3·96 per cent. for Australasia.

20996. No, the total amount of net receipts; I mean the money?—The net receipts were £6,212,853.

20997. That is the net receipts after paying working expenses?—That is so.

20998. What is the total capital?—£156,767,471.

20999. And what percentage did that work out at?—3·96.

Percentage of Net Earnings to Capital on Australasian Railways.

21000. Nearly four per cent.?—Nearly four per cent.

21001. Upon the whole capital?—Upon the whole capital.

21002. *Colonel Hutcheson Poë.*—Taking into account the capital of the English, Scottish, and Irish railways, you have included nominal additions to capital?—Yes.

21003. You are aware that in Ireland we have practically no nominal additions to capital, whereas in England and Scotland there are very large additions, and if those are excluded it makes a very large difference, does it not, in the percentage?—That is right. They are included.

Effect of the inclusion of nominal additions to Capital when comparing the Dividends paid by British Lines with Irish Railways.

21004. Are you aware that it makes a difference if you exclude the nominal additions to capital in the case of Ireland, England, and Scotland, and that although the Board of Trade returns for England show that the Ordinary Stock pays a dividend of 3·46 per cent., including nominal additions, when you exclude the nominal additions, it really pays a dividend of four per cent. Similarly in Scotland, which according to the Board of Trade returns, only pays 2·17 per cent. on Ordinary Stock, including nominal additions, when you exclude the nominal additions it really pays 3·98 per cent. In Ireland practically there is no difference whether you include or exclude nominal additions; the return is 3·98 per cent., and if you take the whole of the capital, including all classes of stock, Guaranteed, Preference, and Ordinary, and Debentures, excluding nominal additions, the figures work out at 4·02 in the case of England, 4·24 in the case of Scotland, and only 3·78 in the case of Ireland, showing that, as a matter of fact, Ireland gives a considerably lower return upon all classes of stock than either England or Scotland, though the Board of Trade returns would rather lead one to infer the contrary?—Taking the Board of Trade returns for 1905, the figures came out at 3·61.

21005. But that includes the nominal additions, which makes a great difference?—Yes, quite so.

Comparisons between British and Irish Lines and Australasian Railways:—(*a*) Total receipts per mile; (*b*) Working cost per mile; (*c*) Coal rates.

21006. *Chairman.*—We will just have two or three figures on the Notes with reference to the receipts per mile. We will not go into details, but take the total receipts per mile of railways in England and Wales?—Yes. They are £5,680.

21007. And in Scotland?—£3,107.

21008. And in Ireland?—£1,198.

21009. Just compare the Australian railways with those figures?—Western Australia is £1,017.

21010. We will take those that we have already dealt with?—Victoria is £1,116.

21011. New South Wales?—£1,258.

21012. Queensland?—£497.

21013. And New Zealand?—£980.

21014. Those are the receipts per mile?—Per mile.

21015. Now, just mention the working cost per mile in England and Wales?—64*d.*

21016. No, the working cost. We have dealt with receipts, you see; now we will take the cost?—£3,645.

21017. Scotland?—£1,740.

21018. Ireland?—£758.

21019. And Western Australia?—£748

21020. Victoria?—£589.

21021. New South Wales?—£686.

21022. Queensland?—£278.

21023. And New Zealand?—£676.

21024. Can you give us any authentic information with reference to the rates charged in Western Australia, as compared with the rates in this country?—Yes.

21025. Let me see how far this will go. Take first of all coal. Say coal for fifty miles—what rate do you consider would be charged in this country for coal carried 50 miles in company's wagons?—About 4*s.* 5*d.* Of course, they vary very considerably in this country, but I have taken the Normanton Conference scale.

21026. That covers nearly all the stations in England, but of course beyond that there are special rates?—Quite.

21027. For instance, coal for export is carried considerably lower than coal for towns?—That is so.

21028. But your calculation is that upon that scale—which is a universal scale in England—it would be 4*s.* 5*d.* a ton in company's wagons?—Yes.

21029. What would the same rate be in Western Australia?—They have two rates in Western Australia—one for locally produced coal and one for imported coal. Practically it is ½*d.* per ton per mile in Western Australia. For fifty miles imported coal would be charged 5*s.* per ton—7*d.* in excess of the British rates, and for the local article 1*s.* 3*d.* per ton lower.

21030. In other words your statement is based on the knowledge that in Western Australia for 50 miles coal would be carried at 3*s.* 2*d.* a ton?—That is so.

21031. Local coal?—Local coal.

21032. In England the rate would be about 4*s.* 5*d.*, and in Western Australia, if the coal is imported, the rate would be 5*s.*?—Yes.

21033. *Mr. Acworth.*—The English rates are purely English, I understand—not Irish; the Normanton scale does not go to Ireland?—The bases do not vary very much, I think; in the case of Ireland it is slightly higher.

Mr. Croker Barrington, Solicitor.—We charge 4*s.* 4d. per ton for fifty miles.

Chairman.—This figure is very near.

Mr. Croker Barrington, Solicitor.—Almost the same.

Chairman.—It is not intended to be an accurate statement of fact as to a certain rate—it is an average.

Mr. Croker Barrington, Solicitor.—It is about the same.

Mr. Acworth.—That is a statement, as I understand, of the scale rate for fifty miles in Class A?

Mr. Croker Barrington, Solicitor.—Six ton lots, yes.

Mr. Acworth.—Six ton lots?

Mr. Croker Barrington, Solicitor.—Yes; we get all coals carried in six ton lots.

Colonel Hutcheson Poë.—Does that apply to all the Irish railways?

Mr. Croker Barrington, Solicitor.—Practically they are all the same; that is the Great Southern and Western scale I am quoting from.

Colonel Hutcheson Poë.—To Maryborough, for instance?

Mr. Croker Barrington, Solicitor.—That is the scale.

Colonel Hutcheson Poë.—It is 5*s.* 6*d.*, I think, to Abbeyleix—only another ten miles on—which is a good deal of difference. That is why I asked you.

Mr. Croker Barrington, Solicitor.—You are taking the North Wall, but that is a special rate. What I have given is the ordinary scale.

21034. *Chairman.*—I do not see that there is any great value to be attached to these figures, except—what shall I say—generally. (*To the Witness*).—Just follow me for one moment. You have given us three figures with reference to coal carried fifty miles. Now, what, in your opinion would be the rate for fifty miles for coal if carried in South Australia?—4*s.* 2*d.*

21035. And in Victoria?—*4s.* 3*d.* They make a reduction in Victoria on locally produced coal. They charge there ½*d.* per ton to the trader; the railway company earn ¾*d.*, ½*d.* of which is contributed by the trader and ¼*d.* by the Government from Consolidated Revenue.

21036. Then the consignee, or consumer, who gets the coal would have to pay ½*d.*, and ¼*d.* is borne by the State?—By the State.

21037. That is spread over the taxation of the country?—That is spread over the whole of the population of course.

21038. Then when you say ½*d.* per ton per mile is there no minimum charge?—The minimum for five miles is 1*s.* 3*d.* in Western Australia.

21039. Western Australia—that is within your own knowledge?—Yes.

21040. What is your initial charge for coal?—The minimum.

21041. Yes?—1*s.* 3*d.* for five miles.

21042. If it is carried two miles it is 1*s.* 3*d.*?—Yes; that is the minimum charge.

21043. Do you find wagons for that?—Yes.

21044. Any labour?—Nothing; it is station to station traffic forwarded by the railway from point A to point B.

21045. After the 1*s.* 3*d.*?—A ½*d.* per mile for each additional mile.

21046. Had we not better take it in that broad manner—that the minimum rate is 1*s.* 3*d.* per ton per mile for any short distance, and beyond that it is ½*d.* per ton per mile—would not that cover it generally?—That is so.

21047. And those rates rule nearly the same in the other Colonies?—They do.

21048. But for home-produced coal the rates are more, the difference of rate being paid by the State?—In Victoria, yes.

21049. Paid to the railway company?—Paid to the railway company. The Railway Commissioners in Victoria are paid ¾*d.* per ton for the hauling of coal—½*d.* by the consumer and ¼*d.* by the Government.

21050. According to those figures the longer the distance the greater seems to be the *pro rata* rate?—Quite so.

Mr. Acworth.—It is a mileage rate, is it not, practically?

Lord Pirrie.—It is the same rate as theirs; we reduce, and they do not reduce.

21051. *Chairman.*—It is coming back to what I said just now—whatever the distance the ½*d.* is added to the 1*s.* 3*d.*?—Per mile.

21052. But in England, as you know, the longer the haul of the traffic the less the rate becomes per mile?—That is the tendency.

21053. But in Australia it is just the reverse?—Not quite the reverse; we do not add quite so high a figure as the distance increases, but certainly we add more than they do in this country.

21054. *Mr. Acworth.*—Look at your own figures in regard to the high class rates in Victoria. Take drapery; 50 miles is charged at 30*s.* 3*d.*; 150 miles, 90*s.* 8*d.*—to make it equal it would be 90*s.* 9*d.*, so you have not made much reduction?—150 miles is not a long distance in Australia when you own 3,000 miles of railway.

21055. That is true?—I have only taken distances here to compare with the average hauling in this country.

21056. Would you carry that a little further then. Up to 150 miles you increase exactly at the same rate per mile in the highest class traffic in Victoria, and very nearly so in South Australia—77*s.* as against 75*s.*, and so on. What would Victoria do if it were 300 miles; would it be 180*s.*—can you tell us that?—I think I can. What distance did you ask me?

21057. *Lord Pirrie.*—300 miles?—£8 4*s.* 8*d.*

21058. *Mr. Acworth.*—That is instead of £9—it is beginning to go down a little when you get as long a distance as 300 miles?—For 400 miles it would be £11 14*s.*

21059. 400 miles on the mileage scale would be £12; what do you say it actually is?—£11 14*s.*

21060. *Colonel Hutcheson Poë.*—That is not a great reduction?—That is in Victoria. Possibly you will find that in the other States the reduction is greater.

21061. *Mr. Acworth.*—Would it be true to say that there being practically no sea traffic, the traffic being all between the coast and the interior, they can keep up their mileage rates on the mileage basis for any long distance?—They can and do, but there is another reason for it. The longer they travel from, say, Sydney, or Melbourne, or Perth, or Brisbane, the thinner grows the population, and by the time they are at the end of the line they are practically in the country, or in a desert.

21062. The Bush?—Yes. Therefore the man at the end of 600 miles has not so much to offer the railway as they have at half the distance, and consequently they maintain their rates, because the working expenses for distances, say, in excess of 300 miles up to 600 miles, are greater than where the traffic is thicker and heavier.

21063. *Chairman.*—Because the traffic is very lean there?—Very lean.

Mr. Acworth.—It looks rather more like the commercial principle than the principle of the development of the country.

21064. *Chairman.*—Taking the list here and looking at it, I should say the rates, speaking generally, are more favourable in Ireland and in this country than they are in the Colonies?—Decidedly.

21065. I propose, if you do not object, to have all these figures that you have handed in printed in the Appendix, just as they are?—I do not object.

21066. Now with regard to the administration of the railways. We have heard all about New Zealand from the Premier, but now just tell us about the administration of Western Australia. We also heard a good deal about that from Mr. Palmer, you know?—Quite so.

21067. Is there a Commissioner of Railways in Western Australia?—Yes.

21068. What is he called?—There is one Commissioner of Railways.

21069. In Victoria, how many are there?—Three.

21070. There are the Chairman and two others?—The Chairman and practically two Assistant Commissioners.

21071. Two other Commissioners?—Yes.

21072. There are three Railway Commissioners?—Three Railway Commissioners.

21073. Now, in New South Wales?—There are three in New South Wales, and the title there is, "Railway Commissioners."

21074. Just the same?—In Victoria the official title is "Victorian Railway Commissioners."

21075. In Tasmania I see it is different—there they have a General Manager?—A General Manager.

21076. And in Queensland—what do they do there?—They have one Commissioner of Railways.

21077. In Western Australia, when you were there, how was the railway managed? Did you manage it?—Yes; by myself.

21078. Were you under the direct control of any Minister?—Yes; I was under the direction of the Minister of Public Works and Railways. He had the two departments under his control.

21079. Just tell us in your own words. You had the fixing of rates for goods and passengers practically?—The railways were practically vested in me as General Manager, and I was held responsible for rating passengers and goods, and for working the railways subject to the formal approval of the Government to any rates or fares which I recommended.

21080. You mean any increase, I suppose?—No; any fare.

21081. Any new fare or new rating—is that so?—Yes; it must receive the approval of the Governor of any of the States in Executive Council.

21082. The approval of the Governor?—Yes.

21083. In addition to the approval of the Government?—Certainly; they are not legal until they have been approved in "Ex. Co.," as we call it—Executive Council.

21084. During the ten years that you were in Western Australia was there much increase of mileage? That is not in your notes, you know—we want information. Was there any great increase of mileage in Western Australia while you were there?—A very great increase.

21085. I want to know, if I can, how that increase of mileage was brought about. First of all, did you recommend the extension of a railway?—No; invariably the residents in the different parts of the State pressed the Government to construct a railway through a district.

June 10, 1907.

Mr. John Davies, General Manager of the Midland and South Western Junction Railway and Ex-General Manager of the West Australian Government Railways.

The necessity for high long distance rates in Australia.

(See Appendix No. 28.)

Method of administering the Australian Railways explained.

Commissioners and Assistant Commissioners of Railways.

The fixing of Rates for Goods and Passengers.

Method of securing Rail way Extension in Western Australia.

June 10, 1907.

Mr. John Davies, General Manager of the Midland and South Western Junction Railway and Ex-General Manager of the West Australian Government Railways.

21086. For the development of some particular industry, I suppose, or the agricultural interests of the country?—Yes; agriculture or anything else.

21087. That is similar to what is done here—agitation begins in a particular district. Then those applications went to the Government?—They went to the Government.

21088. Then the Government conferred with you as General Manager of the railway as to what you recommended?—The Government would call for an official report, and the General Manager of Railways would make a close inspection of the districts, as to its probabilities, and report thereon.

21089. Was the first consideration with you in making the report whether the extension would pay *per se*, or whether it would be to the advantage of the district to have the railway so as to develop the agriculture of the country?—So long as we could make the whole of the railways remunerative, then a recommendation would be made to construct that particular line, so long as it did not involve the Government in a loss.

Government Policy as to Extension of Railways into poor districts in Australia.

21090. That is to say, if the whole *corpus* paid an interest upon the outlay, then the extension would be made, regardless altogether whether that line *per se* would be remunerative?—Quite so, because I have here an instance where railways have not paid in Australasia.

21091. Go on a little further. During that ten years how many miles of increased railways were constructed? I have no information here before me, but perhaps you can tell us—about?—In 1891, the year that I was appointed, there were 203 miles of line.

21092. In the Colony?—In the Colony.

21093. Government Railways?—Government Railways.

Growth of West Australian Railways for decade ending 1902.

21094. When you left what was the mileage?—On the 30th June, 1902, when I severed my connection, there were 1,356 miles.

21095. At work?—Working—fully working—an abnormal growth.

21096. It would be interesting to know what was the financial condition of those railways when you first joined it—whether there was a loss in working, or a profit?—The total earnings in 1891 amounted to £64,034, but the working expenses to earn the same reached a total of £63,536.

inancial position of these lines in 1891 and

21097. Then there was a loss in working, setting aside altogether interest on outlay?—A very slight gain.

21098. I beg your pardon—there was a very slight margin of receipts over expenditure?—Very slight.

21099. And nothing to pay the interest on the outlay?—No.

21100. *Mr. Acworth.*—What is the date of that?—1891.

21101. Have you not left out a nought—is it not £640,000?—No; they are very astonishing figures. If you will bear with me just for a minute or two, in 1891, the receipts amounted to £64,034; the working expenses, £63,536—the railways in that year were working at a heavy loss financially.

21102. *Chairman.*—How was the interest on the capital paid—by the State?—It was paid by the State.

21103. By the Government?—By the Government—not on the particular amounts spent by the Railway Department, but upon loans borrowed in this country.

21104. At any rate, interest had to be paid, and it was paid by the State?—That is so.

21105. Now we know the state of things when you went?—Yes. The State, I may say, debits the Railway Department with the money it hands over for construction purposes, and they expect the railways to earn sufficient net revenue to pay interest on the capital.

21106. But it did not in that year?—It did not in that year.

21107. Does that appear against the railways in the accounts kept by the Treasury?—No.

21108. Each year stands by itself?—It does.

in 1902.

21109. You were there ten years. We have heard about the increase in the mileage; now what was the increase in receipts?—On the 30th June, 1902, the receipts amounted to £1,521,429.

21110. And the expenses?—The expenditure was £1,256,370.

21111. And what was the net profit?—The net profit was £300,732.

21112. *Colonel Hutcheson Poë.*—The difference between £1,520,000 and £1,250,000, roughly speaking, would be £270,000?—£265,059. I have the official report here.

21113. *Chairman.*—That was the net revenue at the period that you mentioned, when you left?—Yes.

21114. What rate of interest did that pay upon the capital?—In 1902, 3·58 per cent., which was the lowest since 1895. I have paid the Government as high as 11·48. per cent.

21115. Profits on the railway?—Yes. That is £11 10*s*. In the following year the Government ordered a reduction in the rates, which represented in money about £250,000.

21116. *Colonel Hutcheson Poë.*—Perhaps Mr. Davies will give us some figures to show when the receipts more than covered the working expenses, and when the railways began to grow. In 1891 we find they were practically on an equality; when did they first begin to pay their way?—In 1894.

21117. Three years afterwards?—Yes.

21118. *Mr. Acworth.*—Is not 1891 almost the beginning of the system?—In 1890 the State was granted responsible government.

21119. Yes; and then the system began?—It simply jumped onward.

21120. There were only about 50,000 or 60,000 people in Western Australia before that?—Yes.

21121. Then, of course, the gold was discovered, and the thing went on with a rush; how much was due to the Government and how much to the gold we do not know?—A good deal of it was due to the Government, because they developed the country. The gold might have been there to-day not worked had it not been for a progressive Government.

21122. *Chairman.*—And the making of the railways?—Quite so; they went in for constructing railways at once.

21123. And the construction of the railways led to the development of the great industries—that was to the profit of the State?—Yes. For instance, when we were building 170 miles of railway from Northam to a place called Southern Cross, a goldfields centre, nothing was known of Coolgardie or Kalgoorlie—nothing was known of those places—but immediately prospects of gold were discovered in those neighbourhoods, the Premier, then Sir John Forrest, decided to extend the railway from Southern Cross to Coolgardie, a distance of 120 miles.

21124. We will just go on a little further. In all that period of development of the railways, did you find as a matter of fact any interference—or what you might consider improper interference—on the part of State officials with regard to the management of the railways?—I experienced very little interference for very many years, especially under the premiership of Sir John Forrest and two or three of my ministers; but I experienced a little difficulty with later ministers, who had, I think, promised to the public great concessions.

21125. They made certain promises, and of course they were anxious to carry them out?—A manager is expected to hold the reins pretty tightly.

21126. When did you leave?—In 1902.

21127. Can you tell us whether since then the railways have always paid a fair rate of interest?—The percentages for the following years have been——

21128. Take 1903?—3·75.

21129. The next year, 1904?—4·56.

21130. And the next, 1905?—3·61. Within three points of the year I left.

21131. I suppose the money has been raised at about 3½ or 4 per cent.?—It has. I have the full statement, which averages 3½ per cent.

21132. When the profits begin to increase to, say, about 3½ per cent., is the principle adopted by the Government that of reducing the rates?—It is in all the States; it is not their object to make money by the railways. Immediately the railways earn enough to cover interest on capital, they reduced the rates and fares where they can, and also increase the remuneration given to the staff.

21133. So that the district served by the railway gets the benefit of the increased profits in either a reduction of the rates or additional services, or in some other way?—So to speak, the country at large gets the benefit.

21134. Do you think that in West Australia they would have built all these miles of railway if the necessary capital had had to be found by private enterprise?—I do not think so for one moment.

21135. Then of course it goes without saying that a State is always in a position to borrow money on better terms than private individuals?—Quite so; they have the country behind them.

21136. And that without the Government being behind these railways the districts might have been neglected and might not have been in the prosperous condition they are in to-day?—Yes; and not only that, but locally they have not the men or the means, because they suffer from want of population, and consequently it is necessary to get the investor into the country to do anything privately.

21137. Then you agree that the prosperity of these colonies absolutely depends on the railways?—I do not think there is the slightest doubt about it.

21138. Do you agree with the Premier of New Zealand that the construction of these railways in sparsely populated districts, which could not have been done by private enterprise, but which has been done by the State, has been the primary cause of the prosperity of these Colonies?—It has; and I might explain it in this way. We divide the railways up into five sections in West Australia; there is one section of 161 miles which earns a profit, over working expenses, of £77,827.

21139. That particular section you mean?—Yes, the Eastern Railway.

21139A. Do you keep the receipts separate on the different sections?—Yes, in this instance that is so. I think they have abolished that system since I left. Now, the Southern Railway is a country line of 234 miles long, and the loss in 1902 amounted to £57,437.

21140. The loss?—Yes, the loss. Then, we have the Eastern Goldfields Railway, 415 miles long; that earned a profit of £56,775. The next is the Great Southern, which also runs through a country district; it is 243 miles long; and the loss amounted to £46,638. Another northern country line, 306 miles long, involved a loss of £18,359. But the profits earned on the other two were sufficient to meet the interest on capital, and provide £12,168 to the good as net profit. So that there are five instances with two highly remunerative railways, and three running through country districts involving a heavy loss; but the whole 1,365 miles paid nearly 4 per cent.

21141. That is the principle upon which the State railways have been constructed?—That is the principle throughout Australasia.

21142. With regard to their construction, are they constructed in first-class style?—They vary according to the requirements of the districts. In country districts they are built at as low a figure as possible.

21143. You mean to begin with?—Yes; and betterment takes place when the traffic improves.

21144. Yes, we heard that from Mr. Palmer. For example, he gave us an instance in which very small cost had been incurred. That is done, too, generally in America, is it not?—More so in America, I believe, than in Australia. We go in for safety equipment wherever the traffic is thickest. Of course we are our own Board of Trade, practically; and we do just as we think proper in the interests of the public.

21145. You have no requirements laid down by the Government even; it is all left to the general manager?—Absolutely. For instance, half the mileage in Western Australia would be properly signalled and equipped, as in this country, and the other half, running through lean districts, would not be equipped to anything like the same extent.

21146. I am right in assuming, am I not, that there is great immunity from accident in Australia?—Yes.

21147. There have been no great accidents there at all?—Very few indeed.

21148. Do you know anything about the number of passengers killed—have you got any statistics?—No, I have not got any statistics; but I may say that the number is very small. I think that during the ten and a half years I was out in Australia we killed only two passengers.

21149. During your ten and a half years?—Yes, and we conveyed as many as 12,816,000 passengers in a year.

21150. And there were no serious accidents?—No.

Chairman.—I think that is all I want to ask you.

Examined by Mr. ACWORTH.

21151. Just let us deal first with regard to the block signalling or block working. Where you have a line with, say, three trains each way daily, would you have any blocking at all?—We would have the telephone working between a pair of stations, and the train staff and ticket system.

21152. Oh, you would have the train-staff?—Yes.

21153. But no signals?—We should in most of the places, but not interlocked.

21154. Of course you go very much further than the United States, but you do not go as far as England?—That is so; we go further, very much further, than they do in the United States—I have passed through them—but we do not come up to the English standard.

21155. You having had experience in both countries, do you think there is room for economy on the poor lean lines by making less exacting requirements?—Judging from my experience of Western Australia, we could do with less equipment, undoubtedly.

21156. You could not have less than no accidents, I take it, whatever the appliances?—No.

21157. Your evidence is that in Australia, with less elaborate appliances, there are practically no accidents?—I say that we have steered through without accident; I am not here to advocate the non-equipment of lines.

21158. But you think you can carry it too far?—It is quite possible to carry it too far; but where you have little or no traffic, you do not require interlocking arrangements.

21159. And in Australia you say it has not been carried as far as on the main lines in England?—Not nearly; but where the traffic is thick, it is equal to the English standard.

21160. You cannot reduce the equipment there—nobody is suggesting that, I think. Then, another part of your evidence has been directed to the question of construction by the State?—Yes.

21161. The question in Ireland is mainly, of course, not a question of construction; it is a question of taking over existing lines for which the capital has already been found. It may have been found on a better system or on a worse, but it has been found. How far do you think the construction experience applies to the other question?—I should say it applies very largely, because I consider it would be just as easy to run the 3,312 miles in Ireland as it would be in New South Wales.

21162. Certainly; but one main point you made was that the State had advantages in getting capital?—That is so.

21163. In Australia, railways, I have no doubt you would say quite accurately, would not have got their money by means of private companies?—I do not think they would.

21164. But Ireland has got her railways—they are there?—Yes.

21165. So that there is not the same need for State ownership in order to get the money, is there?—If that is the object of this Commission, simply the working of the railways in Ireland, I say no. But if there is a further requirement, namely, the development of the country, it is just possible that if they were converted into State railways the development would be larger, because the facilities would be greater.

21166. You must, of course, know a good deal—I do not know how far from the railway point of view—but you must, of course, know Ireland in a way. In your opinion is what Ireland wants more mileage or, to put it broadly, better service?—What Ireland requires I am not prepared to say. I am here to state that State railways serve a country admirably.

21167. Oh, yes?—And I believe that if they existed in Ireland they would serve Ireland admirably. I do not question that the efforts of the companies existing to-day are excellent; I do not criticise them for a moment. But I am here to state that it is possible to run a country like Ireland with railways on the same system as that I have worked in Western Australia for 10½ years and as Mr. Eddy had worked in New South Wales for a similar period.

21168. I do not suppose anybody questions that the thing is possible; but the point I was anxious to get at was, that one of the main advantages which I understood you to suggest was the getting of the capital?—That is an advantage; and, if you want to extend railway communication in Ireland, the stronger the financial institution the easier it is to obtain the money at low rates.

21169. Clearly so; it is, obviously, easier for a Government to get money than it is for, say, the

June 10, 1907.

Mr. John Davies, General Manager of the Midland and South Western Junction Railway and Ex-General Manager of the West Australian Government Railways.

Australian Railway experience shows there is no necessity for interlocking signals on lines with infrequent train service.

The advantage of State ownership of Railways as applied to the existing state of affairs in Ireland.

June 10, 1907.

Mr. John Davies, General Manager of the Midland and South Western Junction Railway and Ex-General Manager of the West Australian Government Railways.

Great Northern of Ireland, which is the strongest railway, financially, in Ireland. We are quite agreed about that; but you do not feel inclined to give an opinion as to what is the line of development in Irish railways that would be most advantageous, do you?—I cannot say that I am dealing with that question at all.

21170. Very well—You mentioned that the lines were always very well kept up?—Yes.

21171. I have no doubt that applies to West Australia, because they have never been in financial low-water. But would you suggest that it applies to all the lines. There is, for instance, a little item in the Victorian reports at this moment—I think it has disappeared within the last year or two, and I think it began at £700,000, if my memory is right, for "overdue repairs," or something of that kind; do you remember it?—I do. In Australia, as in other places, they have periods of success, you know, and periods of, I may say, depression.

Curtailment of expenses follows diminution of receipts on State Railways in common with privately owned Lines.

21172. And then they let the lines down, just like an ordinary private company does?—Possibly the pressure brought to bear by the Government of the day may cause a smaller amount to be spent in lean years on maintenance than in good fat years. I think that is the policy of cutting down that is pursued by most private companies under such circumstances, if they cannot afford the outlay. If you have good fat years, like they have on the Great Northern of Ireland, and you are earning a big percentage, you are able to keep things up properly.

21173. Just as shareholders protest when they receive a dividend which comes down lower than can be helped, so the Government protest against being called upon to pay more than can be helped towards meeting the interest on this railway capital?—They try to keep the expenditure down as much as they can in the poor years and they make it up in the fat years.

21174. Of course in all comparisons we have to appreciate the fact that a shilling is a very different thing in Ireland from what it is in West Australia?—I do not know that.

21175. Wages are immensely higher in Australia, are they not?—If you give the Irishman a chance it is just possible he would prefer the West Australian shilling because he would get a great many more there than he does in Ireland.

21176. A shilling will not go as far in Perth, will it, as in Dublin?—Well, 1*s*. 3*d*. in Perth would go as far as would 1*s*. in Dublin. I should think there is about 25 per cent difference.

Rate of pay for unskilled labour on the Australian Railways.

21177. What are the wages for unskilled labour in Western Australia, roughly?—One shilling an hour and eight hours a day.

21178. Is that railway wages or outside wages?—Outside wages for an unskilled man—a labourer.

21179. And is that the railway standard?—No, that is higher?—These are the figures for engine drivers.

21180. But let us take unskilled against unskilled. You say that an unskilled labourer in the open market gets 8*s*. a day for an eight hours day?—That is the average.

21181. What does a plate-layer on the railway get?—Eight shillings a day.

21182. For eight hours?—Yes; and a ganger 9*s*. to 11*s*. a day of eight hours.

21183. But I thought I understood you to say that railways paid a higher rate than the market rate?—Eight hours a day at 1*s*. per hour is the market rate, but the railways pay a higher rate.

21184. They pay above the market rate, do they?—They do, and it is often criticised.

The tendency of State Railways to pay higher wages than the ordinary market rate discussed.

21185. Do you think that is the natural tendency of State railways?—To pay good wages?

21186. To pay higher than the market rate?—It is the natural tendency, I think.

21187. You think it is the natural tendency?—Yes.

21188 Then if that tendency extended to Ireland, would it not be the case that any calculation made upon the existing net revenue would have to be debited with the extra cost for the extra wages?—It would depend entirely upon how the railways were managed. While paying this high rate of wages in West Australia and in the other Australian States, each State pays a higher interest per cent. than any of the railways in this country. So that you get it both ways: the net receipts are higher and the remuneration of the staff is higher.

21189. I want to get at this fact: Is there a tendency on the part of State railways in Australia to pay higher wages than would naturally be paid if you only paid the market rate?—I have already admitted that the rate paid is higher.

21190. That would imply, of course, translating that into Ireland, an additional working cost in Ireland from the fact of their being State railways?—If similar practices were followed in Ireland it might follow that similar results would follow as regards earnings.

21191. Let us keep the things separate. As I understand it you had a pretty free hand. You were not called a Commissioner, but you had a free hand to manage the railways?—I was held absolutely responsible for the management of the railways. I was wholly responsible to my Minister.

21192. Yes, but yet the fact that they were State railways caused you to add to your working expenses by paying high wages?—That is so.

21193. And that, you think, happens in the other Colonies?—Yes.

21194. Whether there is a commissioner or whether there is a manager; whether the arrangement is like that of New Zealand, where the management is under a Minister, or whether there is a commissioner put in between, there is always a pressure for higher wages, and it succeeds?—It does.

21195. Now, will you just tell me this one other point. Changes of rate must receive the approval of the Executive Council, you said?—Yes, the approval of the Governor.

21196. That is to say, of the Cabinet?—The Governor is like the King here, of course.

21197. The Council speaks in the name of the Governor?—That is so.

21198. How do changes of rates get initiated?—Sometimes on the volume of traffic passing reductions are recommended by the manager; in other cases deputations from different districts wait upon the Government and ask for concessions. They give what appear to them good reasons.

21199. Wait upon the Government?—Upon the Government.

21200. Not upon the manager of the railways?—Upon both. If they cannot get a change from the manager they may go to the Government.

21201. Then it is discussed in Parliament and they get it?—It does not follow that they get all they ask for.

21202. I suppose not?—Nothing like it. But if the Government of the State consider it a reasonable request, and they are in a position to make the concession, then they get it.

21203. And Members of Parliament are influential members of the deputations?—Members of Parliament often introduce the deputations.

21204. And represent their districts?—Yes; but the officials are expected to give very reliable information, of course, to the authorities for their guidance.

21205. Oh, yes. I am only wanting to get at the practice?—Just so.

Chairman.—The same thing is done here.

21206. *Mr. Acworth.*—You said something which rather surprised me. You said, I think, that the goods rates in Australia generally were decidedly higher than those in Ireland?—Except those in New Zealand.

21207. Well, New Zealand is of course in a similar position to that of Ireland—they do not get long leads, because everything comes in and goes out by sea at the nearest port. Now, as to passengers; what do you make out to be the effect of your comparison of passenger fares; what impression has that left on your mind?—Passenger fares in Australia are higher than those in this country.

21208. When you say that, are you speaking of the ordinary fares?—Yes, the ordinary fares.

21209. And then, of course, in addition to that, I suppose there is nothing like the concessions in the way of excursion fares and so on that there are in this country?—No, not so many excursions; but the concessions in other directions for students and school children, and for the yeomanry and the volunteers, are practically on the same lines as in this country.

21210. If I correctly understand your position, it is this: that, comparing Australia with Ireland, the goods rates are higher in Australia, passengers' normal fares are higher, and there are fewer concessions of special fares; is that right?—That is right.

21211. Now, taking another point, there is an interesting figure in one of your tables. It seems to me that Ireland and Western Australia are good comparisons, because they are a good deal alike in many

respects: the earnings per mile are not far apart; the Australian railways earn about £940 per mile per annum and the Irish about £1,200?—Taking New South Wales and Victoria, they are between £1,100 and £1,200, and I think they are the same as in Ireland.

21212. Well, of course, if you take the bigger over they are higher, but the others bring it down lower. But they are a good deal alike in many respects. This is the figure I wanted to call your attention to. I do not think the pages of your proof are numbered, but this is the table which gives the receipts "per mile" and "per train mile," and the working expenses "per mile" and "per train mile." Comparing your Colony with Ireland, I see that the working expenses "per mile" of line in Ireland were £758 and in Western Australia £748—almost exactly the same?—Yes.

21213. When we come to the receipts "per train mile" Ireland gets only 53*d.*, while Western Australia gets practically 90*d.*?—Yes.

21214. In other words, the Irish railways give the public nearly double the train service, so that they have to work very much harder for their money?—They do not get as much per train mile, and that is where the advantage comes in of a State-owned railway.

21215. It does in one way?—There is no question of competition and, consequently, of running four trains when one would do—a practice which very frequently obtains in this country.

21216. But to hardly any extent in Ireland. The competitive mileage in Ireland is very small practically, and I suppose Derry to Dublin is the only case worth talking about?—No doubt the managers are just as keen as those in this country.

21217. You have said that the Irish railways give lower fares than the Australian railways, and now you agree with me that they also, as is shown by the train mile earnings, give a much bigger service?—Quite so.

Chairman.—That does not follow, does it?

Mr. Acworth.—I think so, because the expenses are the same.

Chairman.—But the receipts in West Australia are considerably more per train mile, because their rates and fares are much higher than those in Ireland.

Mr. Acworth.—That should be allowed for, of course, but it could not make such a big difference as that.

Chairman.—I think it could, looking at the figures.

Mr. Acworth.—That would imply that the rates were double.

Chairman.—Yes, they are, many of them that I have looked at.

Mr. Balfour Browne, K.C.—Some of them are more than double.

21218. *Mr. Acworth.*—Some of them may be; but 150-mile rates are not very common in Ireland. Now, another point: the Australian revenue is very much larger in every case from goods than from passengers?—Yes.

21219. It looks to me as if it was something like in the proportion of nearly two to one against passengers as compared with goods?—I think nearly that.

21220. Whereas in Ireland the passenger receipts are higher than the goods receipts?—That is so.

21221. Then, as I gather, it comes to this, does it not, that you would not expect greater economy in working if you handed over the railways to the State. Assuming the amount of work done to remain constant, you would not expect to save money?—Well, if the present day conditions were allowed to exist, perhaps not.

21222. On the other hand, at present Ireland is getting more service and lower rates than is Australia?—It may be so.

21223. And the percentage on the capital invested is much of a muchness in the two countries, is it not?—The percentage on the capital invested in Australia is slightly higher than that in Ireland.

21224. Slightly higher, yes. I forget what figure you gave us.

Colonel Hutcheson Poë.—The capital of the three States which you have taken as examples is practically the same.

21225. *Mr. Acworth.*—The figures are not very far off, I think, in each case. The income from the capital is what I am trying to get at?—It is £38,000,000 in Ireland.

21226. Not the gross capital, but the average income—that is what I want. Is not the average income something like 4 per cent. in both cases?—Yes, it is 3·96 in Australia.

21227. And in Ireland?—3·78. For 1905, according to the Board of Trade returns, it was 3·61 in Ireland, and in Australia for 1906 on all the railways it was 3·96.

21228. 1905 was not as good a year as 1906, was it?—It would be about the same result I should say.

21229. I mean to say there is very little in it. Now, I want to ask you one other question about that high long-distance rate. As I understand you, you say that the justification for that is that the traffic is sparse, and, therefore, it costs more to work; when you get into the interior it is less profitable to work?—Yes.

21230. And, therefore, you are going to charge the man more?—I do not know that we charge him more. The tendency is for the charge to grow less per mile as the distance lengthens.

21231. That is the tendency in every country in the world, I think; but I never saw a country where it tended so little in that direction as it apparently does in Australia. You would not doubt, I take it, that a rate of £10 for 300 miles is a much higher rate than a rate of £1 for thirty miles?—It depends altogether upon what a man is paying for his farm.

21232. But, from the railway point of view?—You have to take the two things; you cannot take the railway by itself. I have been trying to point out that the country and the railways run together; and a man, perhaps 300 miles out, has practically got his land for nothing; so that a low rate per ton per mile on his goods is a very small tax compared with the cost to the railway department of maintaining a train service to his district.

21233. I was not regarding the matter from that point of view. What I was meaning was this: supposing it pays a railway moderately well to carry thirty miles for a sovereign, and supposing that is a fairly profitable rate, it would be, naturally, more profitable to carry 300 miles for ten sovereigns, would it not?—It would; but I do not think that is a good view to take. The experience of the Australian railway manager is this: that when he has to send goods long distances, it being so small in quantity, he is practically working over the railway at a loss. The shorter distance traffic, the voluminous traffic, is only conveyed for short distances, and the profit made from it helps to make good the loss on the others.

21234. I follow your way of putting it?—Suppose you are the only man in a district, and a train is run for your benefit twice a week——

21235. I quite see what you mean—it is quite clear?—Yes; it is quite clear that we are supporting that man in the country at a loss to the nation; but it is done to encourage that man and others.

21236. *Chairman.*—And to encourage the district?—Yes.

21237. *Mr. Acworth.*—In other words, under the existing circumstances of Australia, you could not afford to give effect to the ordinary principle, that the rate diminishes as the distance increases?—It does diminish, but not so quickly perhaps as one would like it to.

21238. Not as quickly as it would in any other country; that is the way I put it?—The conditions are altogether different.

21239. I quite see your point. Please do not suppose that I am grumbling; I am only trying to ascertain the facts?—If one traffic worked from London to Newcastle and found in Newcastle only one man, that one man would expect to pay a little more than the four millions catered for in London.

21240. And even in Australia, on a 400 mile run, if you had ships in competition, you would have to come down in the rate?—In the interior, of course, there are no ships.

Mr. Acworth.—That is your protection, of course.

Examined by Mr. ASPINALL.

21241. Are you very familiar with the Irish railways?—I cannot say that I am very familiar; but I have been to Ireland several times.

21242. Knowing what you do of the Irish railways, do you think that a Government management of them would be suitable in that country?—Undoubtedly, the system of State management is a good one; and I take it that the Irish people would be as reasonable as the Australians. And, that being so, the effect would be as good there as it has been in Australia.

Explanation of the cause of high long distance rates on Australian Railways.

State management of the Irish Railways recommended.

June 19. 1907.

Mr John Davies, General Manager of the Midland and South Western Junction Railway and Ex-General Manager of the West Australian Government Railways.

21243. With regard to the question of administration in Australia, I want to know how far the Chief Commissioner, whether in the case of the West Australian railways or in the case of the other Australian railways, if you can tell me about these in New South Wales, and so on, how far the Chief Commissioner is allowed power as to betterment? Supposing you had thought it desirable when you were out there to put in, we will say, a long line running alongside your main line, because you wanted a new passing place, we will say half a mile of line, could you put that down, and charge it against revenue?—Certainly.

21244. Without asking anybody?—I would have formal authority from the Minister in Australia to spend a fixed sum on new works and improvements for that year.

21245. And would that be charged to capital?—Sometimes.

Explanation of the powers of the General Managers of Australian Railways as to expenditure on urgent new works.

21246. I am on the point as to how far you would be able to spend money out of revenue for betterment?—At the commencement of the financial year the Minister representing the Railway Department, in conjunction with the general manager, would go into the requirements of the railways, as far as possible. The manager would estimate approximately the money that would be required for improvements and new works. The Minister would provide for that in his loans scheme, or in his revenue scheme, and get it authorised by Parliament. When it had been authorised by Parliament, the general manager would then see what he had to spend on revenue improvements and on capital works; and all that he would have to do afterwards would be to make a recommendation to his Minister, and get his approval.

21247. That is not quite my point. That assumes an amount of foresight as to what is going to happen during the coming year. Suppose that during the year you have a great increase in your traffic and, for any reason, you have to do such a work as I have indicated, could you do that upon your own authority as Commissioner?—Not unless I had the money at my disposal.

21248. How long would it take you to get that improvement carried out?—Perhaps a week.

21249. So that you could get the work done quickly, if necessary?—Oh, dear, yes; we could draw on the suspense account.

21250. Then the Government ownership does not make the work drag on slowly?—Not by any means. I could, perhaps, within twenty-four hours obtain Ministerial authority to carry out new works.

The system as regards provision for renewals of Stations, &c.

21251. Now, to deal with another matter, namely, the renewals of your stations—is there any sum put aside each year, or each half-year, if you work in half-years, as a renewal fund for your stations, for instance?—Yes. If I estimated that I required £1,500,000 for renewals my Minister would submit that figure to Parliament for approval. Having obtained approval, the general manager would be authorised to draw on the Treasury for £1,500,000 for one year.

21252. What you mean by that is, that each year has to stand by itself, and that you are not putting by year by year a certain amount for the purpose of renewals?—We cannot.

21253. So that, to take the same question through the other Departments, you have no arrangement for charging an annual amount for renewal of permanent way, or an annual amount for the renewal of locomotives?—Oh, yes; that is estimated for in the figures I have just mentioned.

21254. You make an estimate each year?—Certainly; we have to repeat the estimate process.

Annual Estimates prepared.

21255. So that, supposing you had a weak man at the head of the railways, and there was no recognised system of charging on a renewal fund for each of the great items of expenditure, that man, as a weak man, might not be able to convince the Government of the day that it was necessary to spend that money upon the betterment of the railways?—Quite so; just the same as a general manager in this country has to make representations to his directors. He has to convince them that certain things are necessary; and if he requires £3,000,000 or £4,000,000 they provide it. The general manager in Australia, or the Commissioner (call him what you will), makes a similar representation. He tells his Minister, "I want so much for railways, I want so much for reconstruction of engines, I want so much for reconstruction of carriages, I want so much for new carriages and engines and soforth. The money amounts to, say, £10,000,000. Provide that for me."

21256. But all that depends upon the persuasive power of the individual?—Yes.

Chairman.—Has not a general manager to persuade his directors, in the same way, to make a certain outlay.

Mr. Aspinall.—Any well-regulated company has its renewal fund systematically set aside for such expenditure.

Chairman.—It is a percentage set aside upon a systematic basis.

21257. *Mr. Acworth.*—And if there is a surplus at the end of the year, it comes back into the Treasury, just as it would here in the case of the Post Office?—Quite so.

21258. If the Post Office has not exhausted its vote, the surplus goes back into the Treasury—it disappears from the Post Office?—Yes; and they draw again. I may be permitted, perhaps, to tell Mr. Aspinall that it is possibly easier to get money from one man than from a dozen men.

21259. Would you be able to carry over from year to year? Supposing you open a new line, it does not want a penny spent on its rails, for the five years practically does it?—Quite so.

21260. Would you be able to carry over a credit to the time when that railway began to be expensive?—Nothing is carried over by the Railway Department. It goes into the Treasury, and it is re-voted year by year by the Treasury.

21261. Then you may have this position: that the time when your requirements for renewals are heavier may coincide with the time when the State's finances are most inconvenient for you to get the money?—That may or may not be. But the history of Australia is that there has been progress for a period of fifty years. There have been only few lean years here and there; and it is like any business institution; they conduct their business on the same lines.

Examined by Colonel HUTCHESON POE.

21262. Assuming that you make a profit (as you told us you had in some years) amounting to 11 or 12 per cent., and that you made an average profit for the last five years of say, 5 or 6 per cent., if you went to the Minister and said, "I have made this year a surplus of 7 per cent., and you are satisfied with a return of probably 3 per cent. on the capital, and I want £3,000,000 next year," I suppose that when he found there was a surplus like that he would be willing, instead of paying the whole of the surplus into the Treasury, to give whatever the Railway Commissioner applies for?—Yes.

21263. So that in that way, although the surplus above what is a fair return on the capital goes into the Treasury, as a matter of fact, I suppose a good deal is spent on whatever may be considered necessary in the interests of the railway?—On railway improvements for the following year.

21264. Because of course upon a capital of something like £150,000,000, which you gave as the capital of the railways of Australia, the difference between 3 per cent., which you gave as a fair return, and 4 or 5, or more per cent., would be a very large sum?—Yes.

21265. Another point in connection with the questions Mr. Acworth asked you with regard to the train mileage. Could you give us the train mileage for the three Colonies or States, which you mentioned as being fairly comparable with Ireland. If you gave us the figures for Victoria and New South Wales perhaps that would be sufficient—Queensland, of course, is much smaller. What is the train mileage of Victoria, roughly speaking?—I should have to refer to some of these returns.

21266. I see that whilst the working expenses of those three States are practically 52 per cent. in the case of Victoria, 54 per cent. in the case of New South Wales, and 55 per cent. in the case of Queensland, as against 62 per cent. in the case of Ireland, your working expenses per train mile are, in the case of Victoria, 4*s.* 3*d.*, in the case of New South Wales 3*s.* 10*d.*, and in the case of Queensland 3*s.* 3*d.*, as against 2*s.* 9*d.* in the case of Ireland. Well, of

course, at first sight you appear to be working at a very low proportion in comparison with Ireland, but I should think it would be a fair argument, —judging from the high working expenses per train mile—as I understand Mr. Acworth to say, that it must be largely owing to the very greatly diminished facilities which you give both to the travelling public and to the goods traffic, and the only way to institute a comparison would be if you could give us the actual train mileage in Australia, and compare that with our train mileage in Ireland?—I can give you the train mileage. The train mileage in New South Wales is 16,309,907.

21267. In Ireland our train mileage in 1905 was 17¾ millions?—Yes.

Chairman.—That is about the same.

21268. *Colonel Hutcheson Poë.*—That is what I wanted to get. Now with regard to Victoria, what is the train mileage there?—In Victoria it is 10,286,272.

21269. That is both passengers and goods?—Yes.

21270. That, you see, is practically only two-thirds?—Quite so.

21271. That is a very low train mileage?——

Mr. Acworth.—That has been cut enormously since Mr. Tait came from Canada.

21272. *Colonel Hutcheson Poë.*—Do you give exceptional rates for large volumes of traffic?—No.

21273. The big trader has no advantage over the smaller trader?—No advantage beyond passes.

21274. Sir Joseph Ward told us that in New Zealand if a trader consigned 1,000 tons—or he went so far as to say 10,000 tons—of stuff, he would have to pay the same rate as a man who sent only one ton?—He would, or, rather, the same as a man who sent only four tons.

21275. *Chairman.*—That is to say, a truck load?—Yes.

21276. *Colonel Hutcheson Poë.*—That is the same, generally speaking, throughout Australia?—It is—yes.

21277. Then with regard to your passenger fares, I think you have no second-class in Australia?—The classes are called first and second, but our second is equal to the third in this country.

21278. *Chairman.*—They have no third-class?—No.

21279. *Colonel Hutcheson Poë.*—At any rate your second-class, which corresponds with our third-class, is really practically the same fare as our second-class fare for the single journey?—In Ireland?

21280. Yes. Your second-class fare is the same as our second-class fare?—In some of the States.

21281. Our second-class fare is 1·60*d.* to 1·70*d.*?—Yes.

Chairman.—You ought to compare your Irish third-class with their second-class. They have only two classes.

Colonel Hutcheson Poë.—I understand the witness says their second is equal to our second.

Chairman.—No, practically their second is equal to your third, although they call the classes first and second.

21282. *Colonel Hutcheson Poë.*—They are very much higher?—New Zealand is really cheaper than any other country.

21283. Then with regard to your return fares, you only charge 50 per cent. of the single fare additional, whereas in Ireland our first-class return fares are 65 per cent., the second-class 50 per cent., and the third-class 70 per cent.—so that there is some difference in regard to the Australian lines as regards the passenger fares?—Yes.

21284. As regards these goods rates, although there is not much in it, as the Chairman pointed out, still if one works it out upon the mileage rate, bacon is practically the same for fifty miles both in Ireland and in Western Australia; you begin at 18*s.* 4*d.*, which is a rate of, roughly speaking, 4½*d.* a mile in both cases. For 100 miles the Irishman pays 3¼*d.* and the Australian still pays 4*d.* For 150 miles the Irishman pays 2½*d.*, while the Australian pays 3¾*d.*?—Yes.

21285. It has often been said that in Ireland rates are very high as compared with Continental rates, and especially so as compared with Australian rates, but that speaks for itself. With regard to hosiery and drapery the Irishman pays 6*d.* as against the Australian's 7¾*d.* That is for fifty miles, and at the end of 150 miles the Irishman pays 3½*d.* as against the Australian's 6*d.*

Mr. Balfour Browne, K.C.—I think that is not quite right, sir.

Colonel Hutcheson Poë.—I think you will find it is.

Mr. Balfour Browne, K.C.—I find that for sixty miles the rate for class III. is 16*s.* 6*d.*

Colonel Hutcheson Poë.—I am only taking it from Mr. Davies's return.

Chairman.—I really think, Colonel Poë, I would leave those rates, because I am quite sure they are the wrong returns.

Goods rates in Australia and in Ireland discussed.

Colonel Hutcheson Poë.—I am only going by this gentleman's figures. For 100 miles he says it is 37*s.* 6*d.*—that is easily worked out, and it comes to 4½*d.*

21286. *Chairman.*—I thought we had agreed to drop those figures—I do not think they are accurate?—The rates in this country vary so much (in Australia they are a fixture) and the only guide that one has really is the Normanton scale. I cannot tell what they have on the Irish railways, and I cannot tell what they have on the English railways, and I do not suppose anybody in the room can tell me.

21287. All your rates in Australia are station to station, I suppose?—No; not station to station; the numeral classes are the same as in this country.

Facility for obtaining particulars of rates and fares in Australia.

21288. Collected and delivered?—In some places, yes, and in other places simply from station to station. But with regard to the Australasian classification, a trader possessing one of these books can tell exactly what it will cost him to convey anything in the coaching department or the goods department without going out of his office—a thing that does not obtain in this country to-day.

21289. *Colonel Hutcheson Poë.*—The great complaint here is the difficulty in ascertaining what a man has to pay?—Yes.

21290. *Mr. Acworth.*—There are practically no special rates?—In this book you will find all the information—the distances between station and station, the fares—everything to meet the requirements of the trader.

21291. But if you were to put all the special rates in existence in England into a book it would be a library instead of a single volume?—It would be impossible because they vary so.

21292. *Colonel Hutcheson Poë.*—You gave us an instance (in Western Australia, if I understood you rightly) of five different sections of railway, three of which were worked at a loss and two at a profit. Was that in Western Australia?—In Western Australia.

Australian Railway policy of setting off the surplus receipts of paying sections to meet deficits on non-paying sections.

21293. Then I understood you to say that the profit on the two sections of railway was sufficient, not only to cover the loss on the other three sections, but also to pay the interest on the whole of the capital of the railways in that section?—The interest on over £9,000,000, and there was a net profit of £12,000 odd.

21294. That was a point which was a little difficult to understand. As far as my figures went there was a profit of £77,000 on one, and of £56,000 on another?—Yes.

21295. That was £133,000 in round figures?—Quite so.

21296. And there was a loss on another section of £120,000?—Yes.

21297. That left a profit on the whole of very nearly £14,000?—Very nearly.

21298. I rather had the impression that the profit on those transactions practically covered the interest on the capital?—The net receipts amounted to £264,219.

21299. Oh, I see—on the whole of the railways. That makes the point clear?—To pay interest on the capital £253,850 is required.

June 10, 1907.

Mr. John Davies, General Manager of the Midland and South Western Junction Railway, and Ex-General Manager of the West Australian Railways.

21300. I take it that the great advantages which have accrued to Australia from the State ownership of the railways has been very largely due to the fact that in the first instance the State assumed control of the railways?—Yes.

21301. In Ireland we have to face things as they are, but seeing things as they are, do you still think that at this time of day it would be a desirable financial transaction for the State to assume control, on fair terms, of the Irish railways and undertake the management and working of them?—So far as my opinion goes, for what it is worth, I think decidedly that if the State acquired them to-day they could make them a financial success.

State purchase and control of the Irish Railways recommended.

21302. And of course it goes without saying that the State would be in a position to make experiments in the direction of the development of the country in a way in which it is manifest the existing companies cannot do?—Quite so. I may mention to the Commission that I have two statements here—one basing the value of the different stocks of the Irish railways at a figure of my own, and another statement of the market value of all the stocks connected with the Irish railways.

Chairman.—I saw that, but I did not think it advisable to ask any questions upon it.

Greater cost of construction of Victorian and New South Wales lines over the rest of the States explained.

21303. *Colonel Hutcheson Poë.*—The only other question I would ask you is how do you account for the greatly increased cost of construction in Victoria and New South Wales over the rest of the States?—They were constructed at an earlier period, when wages and materials were higher. Construction in Western Australia from the nineties downwards was very much cheaper, and consequently the capital cost was perhaps 50 per cent. less.

21304. In Victoria and New South Wales the price is double that in the other States?—Quite so.

21305. In no case does the State pay for land, I believe?—The land in some parts, of course, is Government land. If you carried out extensions in cities like Sydney, or Melbourne, or Brisbane, then it would be necessary to pay very highly for land there. It depends, of course, whether the land is settled or not.

Examined by Sir Herbert Jekyll.

Australian Railways promoted without legal or Parliamentary expenses.

21306. In addition to getting land for extensions very cheaply or for nothing, I conclude there are no legal or Parliamentary expenses?—None.

21307. Nothing corresponding to the enormous cost of promoting railways in this country?—Nothing. The railways are promoted by the Government in Parliament at no cost to the country.

21308. So that when a line is decided upon the land is furnished by the Government if it is Government land?—Yes.

21309. And the construction can commence forthwith?—Quite so.

21310. *Chairman.*—With regard to capital and revenue, you are acquainted with the system in operation in Australia, and you are acquainted with the system in operation in England. Is there any difference whatever between the two systems. Do you not charge in Australia to capital account any additions to the railway—additional lines and all new works—are not new and additional works charged to capital, and all improvements or renewal works to revenue?—All renewals, of course, are charged to revenue, and we also, in addition, pay out of revenue in many instances for works which could rightly be charged to capital account.

21311. But surely you must be aware that that is done in England?—I am.

21312. Then there is really no difference between the two systems?—The practice is the same in both countries because imported into Australia are Britishers who have been trained in this country, and they are practically running the railways there on English lines.

Cross-examined by Mr. Balfour Browne, K.C.

21313. May I ask one or two questions. Of course you have a very intimate knowledge of Australia, but have you made a study really of Irish railways?—I have not made a study of them.

21314. Have you been in Ireland?—I have.

21315. Much?—Not very much.

21316. Where did you go in Ireland to study the Irish railways?—As I say, I did not go to make a special study of Irish railways, but I have been in Ireland several times, including Dublin and Waterford.

21317. But not to make a minute study of the Irish railway system?—Oh, dear, no.

Chairman.—We are much obliged to you, Mr. Davies, for the trouble you have taken.

Mr. Balfour Browne, K.C.—You will remember, sir, that on the last occasion Mr. Carvill made certain statements with regard to rates from Newry and Stewartstown to Belfast, and so on, and that I promised to have them looked up. I have had this done, and I now hand in a table, for which Mr. Plews is responsible, which gives instances in each case of the actual rates charged. It then takes off the terminals in order to get at what must be divided, and we also take off the 3*d.*, which is the extra charge allowed by the Commissioners for the gradients on the Newry lines. We then compare the rates from Belfast to Stewartstown, Newry to Stewartstown, and all the way down, and you will find they are practically identical rates all through.

Chairman.—Would you like that printed?

Mr. Balfour Browne, K.C.—I think so, sir. You will find that when you have taken off the terminals they are practically identical.

Chairman.—If we print it as it is, as a paper handed in by you, I suppose that will be sufficient.

Mr. Balfour Browne, K.C.—May it please you, sir—that will do very well.

The document was handed in, but subsequently withdrawn. (*See p.* 313).

Mr. A. C. Larminie examined by the Chairman.

Mr. A. C. Larminie, Representative of the Castlebar Urban District Council.

21318. You appear on behalf of the Castlebar Urban District Council?—Yes.

21319. You are instructed by that Council to appear before us?—Yes.

21320. You wish to give us some information with reference to the cattle traffic from Castlebar to Dublin?—Yes.

21321. What have you to say about the charge for a wagon of cattle from Castlebar to Dublin?—The charge for a wagon of cattle from Castlebar to Dublin is £3 5*s.*; it is more than it was years ago, to some small extent.

21322. Do you mean to say the rate is higher than it was many years ago?—It was £3, but it was raised about fifteen or twenty years ago—I forget exactly which.

21323. What is the rate from Westport?—I have made a mistake there; I think it is the same. It is eleven miles further from Dublin.

21324. To what particular place in England does this cattle traffic go to which you refer?—It is sent all over England.

21325. Is there any particular centre where more is sent to than to others?—It depends on the class of cattle. Some finished cattle are sent to the large cities, and lighter cattle, that have to be finished in England, are sent very much to Yorkshire, I think. I have sent thousands of cattle myself to be finished in Middlesex.

21326. Store cattle?—Store cattle.

21327. Have you a through rate to York?—I am told not. I do not send, myself, to York. I used only to send as agent to the Earl of Lucan, who finished in Middlesex from his large farms in Mayo.

21328. What have you to say with reference to rates, generally; do you complain, first of all, of the full-wagon rates?—Yes, they are, I think, on the large side.

21329. What have you to say with reference to the half-wagon rates?—I think for the half-wagon they charge two-thirds or three-fourths—I forget which—of the full-wagon rate, which is very hard on the small men. The big man who sends full wagons—and any number of them—has all the advantage.

21330. Are you quite sure about the proportion? Is the half-wagon charged at two-thirds or three-quarters of the full-wagon rate?—I am afraid I am not quite certain. I think it is two-thirds on the Midland.

21331. That is what I thought?—So that the half-wagon rate is two-thirds higher proportionately?—Yes.

21332. How many cattle are allowed for half-wagons?—It depends a good deal on their size. Eight large cattle will fill a wagon, whereas you can put fourteen or fifteen of a lighter class

21333. Then four cattle would be charged at half-wagon rate?—Yes, in some places, I am told, that is so, whereas locally they are allowed five in the same class.

21334. Do you say that greater facilities are given to the large dealers than to the smaller dealers?—So I am told; for instance, by allowing them to unload and transhipment up the line as it were. A great deal of the traffic in cattle from the west is only to the Midland Counties or the Eastern Counties more than to England. We grow store cattle to be finished.

21335. Let us clearly understand what it is you wish to say. Do you allege that a large dealer is charged less per wagon than a small dealer?—No, I do not allege that.

21336. What are the undue facilities that you refer to that are given to large dealers, as compared with small dealers?—What I say with regard to that is that large dealers may buy at a fair, take their cattle to a certain distance on the line, unload them, and reload them again with others later on without any extra charge.

21337. And those facilities are not given to the small dealers?—No; the small dealers could not want them.

21338. Have you any complaint to make with regard to the transit of the animals?—I think it is much too slow. The animals suffer dreadfully, particularly in summer weather, by being kept so long. In the West, where so very few fairs are large enough to enable the company to give special trains, they may be kept twelve hours in addition at the sending-off station.

21339. And that, you consider, is a detriment to the trade itself?—I think so.

21340. And causes loss to the small dealers?—Large and small. Anything that deteriorates the cattle must cause loss to all parties, except the railway company.

21341. You have no particulars, I suppose, with reference to the general rates for goods traffic, have you?—No, I have not.

21342. You have no details of those?—You have those, I think, very fully.

21343. We have got that fully, but have you any particular remark to make upon it—say, for instance, on the carriage of coal or timber, or feeding stuffs for cattle?—I think the rates for feeding stuffs are particularly high, and there again the large consumer has so much the advantage of the small consumer. If you take a wagon load you get it at very little more than half what you pay for the smaller quantity.

High rates for cattle feeding stuffs.

21344. Have you anything particular to say with reference to passenger fares?—We all complain of them being so high in Ireland, particularly considering the accommodation.

21345. I suppose you are referring more especially to branch lines, are you not?—Oh, no; I am not.

High passenger fares and inferior carriage accommodation on Irish Railways.

21346. Do you say the main line carriage stock of a large Irish railway company is not equal to the main line carriage stock of an English company?—That is so, except in very exceptional cases. I do not think the second class accommodation in Ireland is as good as the third class accommodation in England. The third class accommodation, particularly on the Midland line, which I am more familiar with, is not really much better than that for cattle.

21347. *Mr. Acworth.*—When you say the second class is not better than the English third class, are you speaking of the Midland Great Western in particular, or do you mean to apply it to all Ireland?—The Midland particularly; I am more conversant with that line.

21348. Let us understand which particular line you are referring to?—I am entirely speaking of the Midland.

21349. *Chairman.*—That is to say, you contend that the second class accommodation of the Midland is not equal to the third class accommodation on the main lines of English railways?—I do not think it is.

21350. That is what you say?—That is what I say.

21351. And you are more familiar with that particular company than the other companies?—I have been travelling on it for half a century.

21352. Have you anything to suggest with regard to the market tickets?—I think the market tickets are very badly managed on the Midland system. They are really only in name market tickets. If you ask them for market tickets from one place to another they say it is not the market town of such and such a place.

21353. You mean on market day?—On market day, of course. They will say that Westport is not the market town for Ballinrobe. They will give you a market ticket from Castlebar, but not from any other town.

Policy of the Midland Great Western Railway with respect to the issue of market tickets condemned.

21354. But I suppose the market fares are all published in their Time Tables, are they not?—Yes, but I am not talking of the charges. Take, for instance, from Castlebar to Westport; they give you a return market ticket for a few pence over a single ticket rate.

21355. *Colonel Hutcheson Poë.*—What is the distance?—Eleven miles. I think for their own sakes they ought to issue market tickets to every town in the county from every other town.

21356. *Chairman.*—But not every day?—No, on market days—only on those days.

21357. Do you make a distinction between market days and fair days?—The company does, because if the market day happens to be a fair day they will not give you market tickets for it between Castlebar and Westport. Supposing Thursday is the market day for Westport, if a fair happens to fall on the same day they will not give you a market ticket from Castlebar, which, I think is, most inadvisable, from their own point of view.

21358. Will you make that perfectly clear, because I do not quite follow it? Between Castlebar and Westport you say that when there is a market day at Westport and, ordinarily, the market ticket would be issued, if it should happen that a fair falls on that day the market ticket is not issued?—That is so.

21359. That is the complaint?—That is the complaint.

June 10, 1907.

Mr. A. C. Larminie, Representative of the Castlebar Urban District Council.

21360. The people have to pay the full ordinary fare?—They have to pay the full ordinary fare.

21361. Your idea is that market tickets should be issued between all such towns as you mention, whenever market days are held?—I think so.

21362. And also on fair days?—Certainly on fair days.

Alleged loss of traffic arising from high fares on the Midland Great Western Railway.

21363. If such tickets were issued it would encourage travelling between those places, and enable people to get more readily from one place to another?—Yes, certainly, and enormously increase it. Take, for instance, Westport. Owing to the raising of the fares and the doing away with the market tickets four men will take a car instead of going by the train, because the car will be cheaper for four men than if they took tickets at the full amount.

21364. Then, the railway companies suffer?—The railway companies suffer. I am speaking just as much in the interests of the railway company. I have nothing whatever to say against the company except to wish them well.

21365. Have you through carriages from your place to Broadstone?—No. We change always at Athlone. We used formerly to change at Manulla as well.

Complaint as to want of through carriage accommodation between Castlebar and Dublin.

21366. Is there a regular traffic?—Oh, yes. Castlebar is practically the main line.

21366A. *Mr. Acworth.*—There are through carriages from Mallaranny, are there not?—No.

21367. Not to Broadstone?—No.

21367A. Where do you change?—At Athlone. Sometimes, in the summer, they give them.

21368. On the limited mail there are through carriages?—Never, unless by special arrangement. Sometimes, from Mallaranny, in the summer, when there are a large number of tourists, they may give a through carriage, but, broadly speaking, you always change at Manulla and at Athlone, except as regards passengers from Castlebar, who now only have to change at Athlone.

21369. *Chairman.*—Two changes?—Yes.

21369A. Have you made any representations, or has any application been made by your Council to the Midland and Great Western Railway Company on the subject?—I think there has been, but not recently.

21370. Have you, yourself, brought it under the notice of the railway company?—I have often spoken about it; I cannot say officially.

21371. Not in writing?—No.

Delays arising at Junctions from want of co-operation in the running of passenger trains.

21372. What is your complaint with reference to the facilities for what you call local travelling?—That the trains do not hit it off, if I may use the expression.

21373. You mean do not fit in at the junction with other trains?—Yes.

21374. I suppose they fit in one direction, but not in both?—Sometimes they do, and sometimes they do not fit in. We have two companies crossing at Claremorris, and, generally speaking, we have a long delay at Claremorris. Going out from Castlebar in the morning we have a couple of hours at Claremorris before we can get up or down.

21375. In both directions?—I mean that is on the other company's line. The Great Southern come in there from Sligo.

21376. Surely there must be a connection with the Midland system?—Oh, yes; there is a connection.

21377. But with the other system you have to wait, you say?—Sometimes we have to wait for the other system. Of course the Great Southern are entirely poaching on the Midland there.

21378. *Mr. Croker Barrington, Solicitor.*—They are poaching, by Act of Parliament?—Quite so; but that is where I blame the Midland for letting in the Great Southern.

21379. *Mr. Acworth.*—They did all they could to stop it?—Everything, excepting buying it themselves. They tried to block it, but not to acquire it. That was where their policy was so defective.

21380. *Chairman.*—Do you think that many of these complaints that you have suggested with reference to the rates, charges, and facilities, would be remedied by the State purchase of railways?—I cannot say that I am in favour of State purchase.

Amalgamation of the Railways into three systems advocated.

21381. Do you think it would be any benefit to the public at large, of which you are one, if the railways were amalgamated?—I think decidedly it would.

21382. I gather that you would favour a system of amalgamation of the companies, but not of State purchase?—I think, on broad principles, that State purchase is not advisable. I think that the prosperity of any country depends more on the individual exertions of the people in the country than on the action of the State.

21383. Are you familiar with any particular country where the State owns the railways?—No, not personally; I am acquainted with it on paper.

21384. But you are strongly in favour of the amalgamation of railways?—Yes.

21385. What do you mean by the amalgamation of railways in Ireland?—I think there certainly ought not to be more than three systems in the whole of Ireland.

21386. Would you compel a railway company to be swallowed up in a larger railway company, whether they liked it or not?—I think so, for their own benefit. A small railway cannot possibly exist in this country on its own merits.

21387. The Lough Swilly is one of the best paying lines in Ireland, and that is a small railway?—Of course there may be some trivial exceptions, if they have any special traffic.

21388. Do you know anything about the Lough Swilly Railway?—No.

21389. At any rate, without going into details, what you suggest is that instead of having thirty or forty railway companies it would be better for the country if there were only three or four?—Better for the country, and better for the railway companies.

21390. But you are not in favour of either nationalisation of railways, which is one thing, or the State purchase of railways, which is another?—I am not, on the broad principle.

Examined by Colonel HUTCHESON POË.

21391. Has any representation been made to the railway companies with regard to these market tickets on fair days?—I have spoken about it several times at the local station.

21392. But not to the railway company?—No; but I know we have applied from the Board of Guardians, of which I happen to be a member, for a very long time, for market tickets for various towns for Castlebar.

21393. Castlebar is the capital of Mayo?—Yes.

21393A. And it is the principal fair of that county?—No.

21394. Which is the principal fair of that county?—The principal fair of the county is at a small place called Balla.

21395. Taking Balla, I suppose traders and cattle dealers come to that fair from a considerable distance?—Yes.

21396. How far?—From England, Scotland, and all the upper counties. All Ireland is very much interested with Balla Fair.

21397. You would hardly expect the railway companies to give anything to the cattle dealers coming from England or Scotland? My point rather was to direct attention to their giving what may be considered reasonable facilities and low rates to cattle dealers coming from distances of thirty or forty miles—local dealers?—Do you mean for the transit of cattle?

21398. For these special tickets?—I was not suggesting that.

21399. I know we had some evidence from the North that on fair days, when cattle dealers had to come into town to buy cattle, the railway company, knowing that they must, whether they like it or not, go because they want to buy cattle, absolutely put off the low exceptional ticket which they give on a market day?—Yes, and I think that is very hard lines.

21400. It does seem to be rather so. Then with regard to the question of amalgamation, did the District Council, which you represent, consider the question of amalgamation or of State purchase?—The opinions differed very much.

21401. Did they, as a body, discuss it?—Only in an informal way.

21402. They did not pass any resolution or anything to that effect, one way or the other?—No.

21403. I think you said you are opposed to State purchase because you thought individual effort would do more towards the development of the country than any other system which would be under the control of the State?—I think so, generally speaking, because Ireland is rather exceptional, and unless you can work it with a very considerable amount of through rates at

a low rate I think we shall suffer more than otherwise, because the traffic is so very little. I quite sympathise with the railway companies.

21404. The difficulty that has occurred to me is that the traffic is so small that every railway company in Ireland is always fighting for its existence, and is obliged to cut their rates as low as they can to get any share of the traffic. If you put the present thirty or forty railway systems into the hands of two or three companies it will be simply giving the traffic to those three or four companies instead of to forty; and there will be a struggle for existence amongst those three or four companies, which would disappear if the railways were in the hands of one central body?—No, that is not so, because these companies would be fed by different districts. They would not come into competition, because they would be in different districts.

21405. What districts would you propose to assign to the different systems?—Practically north, south, and west.

21406. But what relation would you establish between the Midland and Great Northern Railways, the former of which has invested a large amount of capital?—That, I see, is a great difficulty, the purchase by the Midland of England of a certain portion of the system in the North.

21407. They have, I suppose, almost as large an interest in the North of Ireland as the Great Northern have at present?—I daresay they have. The only way to remedy that would be to take the London and North Western and the Great Western and purchase the other lines.

21408. At any rate you would have the Great Northern for the North and the Midland Great Western for the centre?—The Midland would take the centre of Ireland.

21409. And the South?—The Great Southern and Western would take all the South-Eastern and the South.

21410. Of course you are aware that the Midland Great Western is not in a very strong financial position?—I think it is most unfortunate it has gone down in that way.

21411. And, as you pointed out, the Great Southern and Western are legalised poachers, to a certain extent, abbetted by Parliament?—Yes.

21412. In any such system of amalgamation, would you propose that that extension of the Great Southern and Western into the Midland system should be taken away and handed over to the Midland?—I think it certainly ought to be under one management.

21413. So that in other words your amalgamation would involve some redistribution of part of the systems as at present owned?—Certainly. I think vested interests ought to be considered. I do not want to do anything that is unfair to anyone, but to benefit the country.

21414. Assuming your recommendations were carried out, and that the railway systems of Ireland were placed in the hands of these three great companies, do you think they would be in as good a position to give such reductions of rates and fares as would undoubtedly lead to the development of the country as a strong central authority in the hands of the State? I daresay you were present when Mr. Davies gave us evidence with regard to Australia, and said that the Government were prepared to suffer a certain loss on certain railways so long as they could make a return on the whole capital by means of the others?—I think in a place like Australia, which is being developed, that you can put up with a temporary loss, and a very large temporary loss, for a future gain. Unfortunately in Ireland we have nothing to develop.

21415. That was the point I was coming to. Is there any hope for the railways, either under an amalgamated system or under a central system, unless it leads to development? Do you think if the rates were materially reduced, and facilities given one way or the other, that that would lead to the creation of industrial activity and to an increase of the agricultural industry, or do you think it is hopeless to expect any great development?—I regret to say I rather do think it is hopeless, under existing circumstances, to expect any great development, because what are you going to develop? I think the fishery industry may be enormously developed, and it is being developed, I am thankful to say.

21416. With the system of land purchase, which is in operation people anticipate, do they not, that the effect of it will be, when the land is transferred to the peasant proprietors, that it will produce 20, 30, or 40 per cent. more than it does at present—do you share that opinion?—I am afraid I do not.

21417. I do not know whether you have had any experience of properties that have been sold under the Ashbourne Act?—I have within the last three years assisted in the sale of land having a rental of £7,000 a year.

Present favourable condition of the farmer as compared with twenty years ago.

21418. Do you not think that the position which the farmer occupies is a very great deal more favourable than it was twenty years ago; that he is in a stronger financial position, and his land is better cultivated and yields more than it did formerly?—I cannot go very far into that. When you reduce a man's rent you make him more comfortable—that goes without saying, and I am altogether in favour of the land purchase system.

21419. Apart from that, do you not think the effect of the land purchase system would be to give a much greater amount of production?—In connection with that you must go into the question of the farming capacity of the people themselves.

21420. But a man will cultivate his lands to greater advantage when he knows that the whole of the output will go into his pocket, than when he knows that a great portion of it goes into the landlord's pocket—that stands to reason, does it not?—Yes, that stands to reason, but of course they have to pay their instalments still.

21421. You apparently seem to entertain very little hope of any great activity or development in agriculture or industry; and that, I should have thought, would rather be an argument in favour of the State taking over the lines rather than putting them into the hands of the railway companies who, unless they do get a large development of traffic, cannot make any appreciable reductions, while the State can do so. It can incur a loss, to be borne by the general taxpayer if it is in the interest of the taxpayer generally that it should be borne, but the railway companies cannot do that?—That is so.

Examined by Mr. ACWORTH.

21422. When you spoke of the bad second-class accommodation, you would not include in that, I suppose, the limited mail between Galway and Dublin—that is as good as you can expect?—Yes.

21423. If you could get more trains like that there would be nothing to grumble about?—No, I do not think so, but I do think the third-class is too utterly bad.

Improvement in travelling facilities, rolling stock, speed, &c., in recent years on Midland Great Western Railway as compared with twenty years ago.

21424. You spoke of having travelled on the Midland for half a century—would you agree that it has improved very much in its accommodation to the public of recent years?—In some cases.

21425. I am speaking of passengers?—In facilities for travelling?

21426. Facilities for travelling, rolling stock, speed of trains, connection of trains, and everything?—Yes, there has been a considerable improvement.

21427. Within the last twenty years or so?—Yes.

21428. I want to understand the market and fair tickets that you have been telling us about. A fair is a place where they sell more cattle than is usual on a market day?—A market is really more for local produce.

21429. And a fair is a special congregation of people?—Yes.

21430. But at a fair are there not a great number of people who go there, not to buy beasts, but to amuse themselves?—Oh, dear no; it is not like an English fair in that respect at all.

21431. It is purely a cattle fair, and nothing else?—Yes.

21432. And you do not understand the reason of the admitted rule that they do not give cheap market tickets for fairs?—I have no idea of the reason.

21433. With regard to the question of the Great Southern Railway, I gather that you would like to see the Great Southern turned out again of the line from Sligo to Claremorris?—I do not say so at all.

21434. You do not say so?—Not at all.

21435. You said they were poachers?—Yes, I said that.

The effect of the division of the Irish Railways into three systems discussed.

21436. Have you any sympathy with poachers?—Certainly, although I have taken out a game licence for the last forty years.

21437. Supposing you did divide the Irish rail-

June 10, 1907.

Mr. A. C. Larminie, Representative of the Castlebar Urban District Council.

The effect the division of the Railways into the three systems discussed

ways into three systems, as you have suggested, would you propose to leave the Great Southern in the heart of the Midland district, or to buy them out?—I think not.

21438. What I thought I understood you to mean was that you did not want competition; you wanted to give each company its own district, and let it do the best it could with it?—Yes, that in a way, but I think the charges should be governed by some supreme authority.

21439. Quite so; but you would like to give a company a district to itself and say, "Now do the best you can with it under State supervision"?—Yes, or you might have only one system for the whole of Ireland.

21440. In other words you would get rid of such competition as there is at present?—Yes, if they were obliged to give certain accommodation, and not to charge over a certain figure.

21441. At present the theory in England, and to some extent the theory in Ireland, is that competition will lead them to serve the public well. If you propose to make three systems, each in charge of its own district, you get rid of all competition?—You have in that way, but then, on the other hand, which is a very much more important thing, you will have uniformity of accommodation.

21442. I quite agree. Do not suppose I am disagreeing with you. I am only trying to follow the point. Now, I want to ask you this. You remember, I daresay, the proceedings in the Amalgamation Bill, of half a dozen years ago, when the Great Southern got possession of the line?—Yes, I recollect them.

21443. Do you remember that the reason Parliament gave it, rightly or wrongly, was that the local authorities and the people in the locality all said, "Come and give us somebody to compete with the Midland"?—I think it is very likely.

21444. What do you think they would say if the competition was now taken away; do you think they would be content?—I do not know that they derive any benefit from the competition. Some of the farmers have derived benefit by having rates with the South of Ireland more readily than they had before.

21445. You have not thought how far your neighbours would resent the taking away of the line from the Great Southern, which was given to them a few years ago?—I do not know that they would resent it really. As one of the public I should not resent it, because I think they work against each other now.

21446. Have you changed your mind? Did you take that line in 1899, or thereabouts, I think it was?—I do not think I took any line.

21447. You did not take any active part then?—No; we were away from it.

21447A. You are at Castlebar, I think?—Yes.

Colonel G. O'Callaghan Westropp, J.P., examined by the Chairman.

Colonel G O'Callaghan Westropp, J.P., Coolreagh, Bodyke, County Clare.

21448. Colonel Westropp, you are a Justice of the Peace, and you come from Coolreagh, Bodyke, County Clare?—Yes.

21449. What are the particular railways serving your district?—At present entirely the Great Southern and Western, formerly the Great Southern and Western and the Waterford and Limerick, with the West Clare terminus at Ennis, twenty miles distant.

21450. Have you anything to complain of with reference to the rates for goods traffic in operation in your district?—As far as my own particular district goes, it is served mainly by the Grand Canal. They are canal rates, and not railway rates. They go into the village of Scariff by canal boat, which is four miles from me. Killaloe Railway Station is fourteen miles, and Limerick and Ennis are both twenty miles.

21451. *Mr. Acworth.*—Are you, roughly, on a line between Ennis and Killaloe?—No, between Ennis and Scariff.

Improved facilities for passenger traffic at Ennis Station since the amalgamation of Waterford and Limerick with Great Southern and Western Railway.

21452. *Chairman.*—We will take your evidence very shortly. First of all, have you any complaint to make with reference to the passenger train service?—As far as Ennis is concerned, there has been a very great improvement since the amalgamation. We have better trains, better rolling stock, more punctuality, and we have through carriages to Dublin, which we had not before. All of these are very great conveniences. In addition, there have been some minor improvements in Ennis Station, which make for the comfort of passengers. That is, as far as the passengers go.

Alleged penalising of Ennis by the late Waterford and Limerick Company.

21453. With reference to the goods, have you anything to say with reference to rates for goods traffic generally. Are the rates fair and reasonable?—No, I do not think so, but I do not blame the Great Southern Company primarily for that. One has to go back into the history of the Waterford and Limerick Company, whose system they acquired. The Waterford and Limerick Company was strongly established at Limerick many years before it came on to Clare. Finally it pushed its system as far as Clare Castle, which is two miles outside Ennis, on the Limerick side of Ennis, some years before it came on to Ennis itself—I cannot say exactly how many years ago. The administration of the company gave us residents in Clare the distinct idea that Ennis traders were penalised, and that an attempt was being made to crush them out of existence in order to divert the traffic, both the custom of the farmers and the custom of the village traders who distributed their goods to the surrounding districts, to Limerick instead of to Ennis. There was a statement which was very common property in the district, which was attributed to a late Chairman of the Waterford and Limerick Company, to the effect that he would make the grass grow in the streets of Ennis. The Chairman referred to contradicted that, and said all that he said was that he would treat Ennis as a wayside station. Ennis is the capital of the County of Clare. It is centrally situated; it is ideally centred, and that did not improve our tempers.

21454. I understand you told us that that has all been improved since?—No; only the passenger service.

21455. I meant the passenger service?—I have some particulars of the goods service here, and you will see that they are rather remarkable.

21456. Just mention them, if you please?—Taking porter from Dublin to Limerick the rate is 13*s.* 6*d.* per ton; to Ennis, which is twenty-four miles further, the rate is 18*s.* 3*d.* per ton. For wines and spirits from Dublin it is 20*s.* a ton; from Ennis to Dublin it is 30*s* per ton—50 per cent. difference for twenty-four miles.

21457. Twenty-four miles extra?—Yes, and the same gauge; no break of bulk, or anything of that kind.

21458. Have you represented that to the railway companies?—It was, I believe, very strongly represented at the time of the amalgamation. I gave evidence as one of the neutral witnesses for the Treasury, before the Hybrid Committee in 1899 in London. The Preamble was not passed then, but it was passed the following year. That was the Great Southern Bill. I was a neutral witness; if anything, I was slightly in favour of the Great Southern, but I say a neutral witness for reasons which I will give you presently. I have eight rates here for staple goods.

21459. If you have two, three, or four rates which you consider are out of proportion to what you think they ought to be you are quite entitled to let us have them, so that we can put them on the notes?—Hardware from Birmingham to Limerick is 48*s.* 6*d.* a ton, and from Birmingham to Ennis, 56*s.* 8*d.* Hardware from Sheffield to Limerick is 55*s.* a ton; to Ennis it is 79*s.* 2*d.* a ton. Drapery from Manchester to Limerick is 43*s.* 4*d.* a ton; to Ennis, 62*s.* 6*d.* a ton.

21460. I suppose they can go direct from Liverpool to Limerick by water, cannot they?—I believe they can, but I understood that these were railway rates.

21461. Yes, but the railway rates are based on the rates that would be in operation by water. I can understand the Limerick rate, where there is direct water competition, being considerably less than for a place where there is no water competition?—Quite so.

21462. Your point is that Ennis is twenty-four miles further than Limerick, and that the percentage of charge to Ennis is, roughly, from 20 to 50 per cent. more?—Exactly.

21463. I think we will take that statement as it is; I do not think you need give us any more particulars. I can quite see what the figures are likely to be?—I

should like to say that groceries from London to Limerick are 47*s.* 6*d.*, and from London to Ennis, 78*s.* 4*d.*

21464. That seems to be the largest difference of all?—Yes, that is a very large difference. I have to thank the Railway Companies for these figures. I applied to them, when I was coming over here, for these rates to Limerick and Ennis, and I have to thank them for their courtesy for giving them to me. Tea, an important item, from London to Limerick, is 35*s.* a ton, and from London to Ennis, 45*s.* per ton. The ordinary goods distributed in a county market town run about the same. The only two that are pretty much the same rate as the Limerick rate, allowing for the extra mileage, are artificial manures and cotton and linseed cake.

21465. *Mr. Acworth.*—They are from Dublin?—They are both from Dublin, and there there is only a very small difference.

21466. *Chairman.*—What have you to say with reference to the East Clare Railway?—The East Clare Railway was first spoken of about the year 1886 or 1887, at the time when the county was being asked to construct the West Clare Railway.

21467. When was it before the Grand Jury?—It would be before the Grand Jury about the year 1885 or 1886. I was in the Army then, and I only came back in 1889 to live in the county.

21468. Did not the Grand Jury pass a resolution about 1892?—Yes, they did. About 1892 they passed a resolution in favour of the construction of that line by free grant. They did not pledge themselves to any guarantee at that time. It is well to make that clear.

21469. As a free grant as a relief work?—As a free grant they considered it would be a proper line to build at that time. The Grand Jurors of East Clare voted for both the West and South Clare lines, on the understanding that if the Government found the money to assist in the construction of an East Clare line, which was the one link required to complete the county system, the gentlemen who had benefited in Western Clare would return the compliment by voting for the East Clare line. That was the understanding. There were three arms to the county system.

21470. What became of the railway that was suggested by this resolution in 1892; what was done subsequently?—A Committee was formed at Scariff, which was the centre of East Clare, and I was appointed chairman of it. We took the matter up, with the assistance of various engineers. There was a larger scheme before us first, which I need not go into now—I can if you like.

21471. No. I want to have this as briefly as possible on the notes. You were Chairman of the Committee appointed in 1895?—Yes.

21472. And that Committee was formed at Scariff?—Yes.

21473. In the course of your negotiations with reference to that railway did you ascertain what the Government were prepared to do?—Yes; there were prolonged negotiations extending over nearly 1½ years with the Government.

21474. Tell us briefly in your own words the result of those negotiations with the Government?—The question was very thoroughly gone into. The Light Railways Act was passed the year after we formed that Scariff Railway Committee—Mr. Gerald Balfour's Act of 1896, and we approached him on the subject. We had prolonged communications with both Mr. Gerald Balfour, and with Mr. Thomas Robertson, the then Chairman of the Board of Works.

21475. Did Mr. Gerald Balfour visit the district?—He did; eventually, accompanied by Mr. Robertson, he visited the district.

21476. What was the result of that; what did the Chief Secretary agree to do with reference to this particular railway?—They asked a good many questions, and negotiations continued for some time after their visit, and eventually Mr. Gerald Balfour undertook to recommend a grant to us of £62,500. That was half the estimated cost of the construction and equipment—£125,000.

21477. What was the length of that line?—The length of the line would be about 22 miles. It was to include, I should say, the workshops at Ennis, proper sheds for sheltering the rolling stock, and also an ample supply of rolling stock.

21478. It was the line and its equipment?—Rather more than its equipment.

21479. The workshop, the repair shops, the carriages, wagons, and so on?—Yes, but under the Railways Act of 1896 we had to get a guarantee from an existing company that they would work it. We were thrown back on the West Clare Company. They were prepared to work it, but they were short of rolling stock, short of wagon shelters, and short of workshops; and therefore part of the consideration was—(we represented it to Mr. Gerald Balfour)—that as we were thrown on a weak company we should be started in a strong position to enable the company to give us fair play.

21480. Tell us now, in a few words, what was the outcome of all these negotiations and these promises on the part of the Chief Secretary?—The preliminary survey of the line was made by Mr. Barrington, the engineer of the West Clare Railway Company, and he took the preliminary steps for bringing the matter before the Grand Jury. It was calculated that in order to meet the Government Grant of £62,500, and to produce the total of £125,000 cash, we would have to guarantee, on the part of the county, £55,000; that is to say, with a four per cent. County Stock we would be able to get £62,500 cash for £55,000 worth of Stock, and that was the proposition which was put before the Grand Jury.

The negotiations with the Government in reference to the proposed East Clare Railway.

21481. Did the Grand Jury approve or reject it?—I do not want to go into greater detail than is necessary for the people I represent, but there was a feeling that the Grand Jury was strongly prejudiced against the line, and I cannot say it got a fair hearing.

21482. What was the result of it?—The result was that it was rejected by the Grand Jury by sixteen votes to six.

Rejection of the scheme by the Grand Jury of Clare, and diversion of the Grant to Donegal.

21483. That was the result; and therefore it was never made?—It was never made, and the £62,500 was allotted to a line in Donegal.

21484. We have had that in evidence before from some other witness. I think I understood from previous evidence that these Grand Jurors were the same as the County Council afterwards?—They discharge the same functions, except that a Grand Jury simply met twice a year at Assizes, instead of having quarterly meetings, as the County Councils do.

21485. The district never got the benefit of it at all?—The district never got the benefit of it at all. I should like to mention, before you leave that question, that had that railway been constructed it would have put Ennis and the County of Clare in a very much stronger position, because it would have been linked with the port of Clare Castle on the west, and its terminus on the east would have been actually on the Grand Canal Company's system; so that we would have had water competition at each end, and from that competition West Clare and South Clare would have derived the benefit. We reckon that in freights on porter alone the gross receipts would have been £1,400 a year, and there were a great many other items of heavy and valuable traffic also.

21486. *Mr. Acworth.*—Was that portion coming from Dublin by the Shannon, by the Grand Canal?—Yes.

21487. Clare Castle is on the arm of the Shannon?—It is just above the junction of the River Fergus with the Shannon. It is really on a tidal estuary.

21488. That is what I wanted to get at; it is not artificial; it is natural navigation?—It is slightly improved; it is a natural estuary.

21489. *Chairman.*—I think you have very clearly given us the history of that?—I felt bound to ask to be heard on that point, because two gentlemen have given evidence from County Clare before you who, I think, were not perfectly acquainted with the length of the negotiations and of the trouble that Mr. Robertson, who was one of our greatest Irish experts, took on the matter. They supposed it was rushed through rather as a relief of distress work or something like that. It was first brought forward in the early nineties as a relief of distress work; but it was as a commercial concern and to put the existing West and South Clare lines on their legs that it was brought forward in 1895-1896.

21490. Now, I will ask you one or two general questions. First of all with regard to passenger traffic, I think you hold the opinion that in Ireland there should only be two classes—first and third?—Yes, I do.

Two classes only for passenger traffic recommended.

June 10, 1907.

Colonel G. O'Callaghan Westropp, J.P., Coolreagh, Bodyke, County Clare.

21491. The same as on the Midland Railway in England?—Quite so.

21492. Your opinion also is that if two classes were established the first class fare should be substantially reduced?—It is. I think the companies could do it with safety and advantage to themselves.

21493. And you think that if the first class fare were substantially reduced, a great many people who now travel third would travel first class?—I do, undoubtedly.

21494. And that the railway companies instead of losing money would be benefited: that is your view?—That is so. At present, travelling a good deal as I do, one sees the first-class carriages practically empty.

Improved sleeping car and lavatory accommodation on passenger trains suggested.

21495. You are also of opinion that sleeping-cars should be provided on night mail trains?—I think that is most important. May I say, to make that clear, that when I say sleeping-cars I do not mean anything like the magnificent sleeping-cars that one sees at Holyhead, for example; but several times, for instance, I have been on military duty at the town of Plymouth, and I have seen some carriages on the Great Western Railway, ordinary first-class carriages, which can be used for a night journey, each compartment making a double sleeping berth. I do not know how they do it, but they are distinctly comfortable; and that would meet our needs in Ireland. For instance, in this way. At Kingsbridge terminus (the terminus we in the South are mainly concerned with) passengers arrive, I will say, for West Clare, which is the great tourist resort, by the afternoon boat from Holyhead, and are, in fact, in Kingsbridge somewhere about six o'clock. At present they cannot get on to Ennis the same night, nor to West Clare; but if those passengers were able to get their dinner comfortably in Dublin, go to bed in a sleeping-car, and find themselves at a siding at Ennis the next morning (just as you find yourself at Euston), get their breakfast, and turn into the West Clare train on the opposite side of the platform, and go on, I believe it would be a great help to the tourist traffic, and the tourist traffic is the one payable traffic I can see ahead of us.

21496. Do you think there would be sufficient passengers to warrant the expenditure on these sleeping cars?—I am myself against the special sleeping cars. I think they should be first-class carriages, with adaptable seats that could be turned into bunks. You do not get people used to these conveniences all at once; it would be two or three years before people realised the comfort of them.

21497. You also suggest that more lavatory carriages should be provided?—That is very necessary on long distance runs.

21498. Is not that being done gradually by all railway companies now?—The Great Southern have gone a long way in that direction, but I hope to see it extended.

21499. In the rolling stock that is being built by all railway companies, is not lavatory accommodation provided?—In the corridor carriages it is.

21500. But independent of the corridor carriages?—Independent of the corridor carriages, only in the first and second class, and not for all of them.

21501. Not for the third?—In the corridors it is all right.

Alleged deterioration of cattle owing to slow transit.

21502. That is with regard to passengers. Now, with regard to cattle, which is a very important item in the business of Ireland. Why do you say that the transit of cattle in Ireland is too slow: have you any particular reason for making that remark?—Perhaps you will allow me to get the question of the rates out of the way first. I know that the Ennis people complain very much about the cattle rates, but you have already got that on the notes. My own rate from Killaloe, which is about £2 16*s.* for a wagon holding nine cattle, to Dublin I am not dissatisfied with; I do not quarrel with it at all. The half wagon rate is rather high, but I do not quarrel with the wagon rate. I find, however, that the cattle reduce tremendously on the journey more than they have any right to do. I weigh my cattle at home, and they are sold by live weight at the big Dublin sales; and I find that an ordinary good-sized beast in forward condition, say a beast that would scale 10 cwt. live weight, will reduce four stones (fifty-six pounds) between leaving my paddocks at home and being put on the weigh-bridge in Dublin, and I have to give them two days' rest in Dublin in addition.

21503. To recover that weight?—To recover from the journey, and that is a very serious thing.

21504. How often do you weigh your cattle—when they start and when they arrive?—Invariably both ways, because I sell by live weight, and I must do it for my own protection. Of course I assume that my salemaster is honest, but I like to tell him what sort of price I expect.

21505. These figures are not assumed; they are actual figures?—Actual figures, arrived at by weighing. Supposing, for instance, I am sending up nine head of cattle, I weigh two to four average beasts.

21506. You say an ordinary beast would lose ½ cwt. What have you allowed for the journey in that case?—I am counting it all on the journey.

21507. Is it twelve hours or twenty hours or what?—On the whole journey, road and rail.

21508. From Ennis to Dublin?—Killaloe. I send from Killaloe to Dublin.

21509. Do they join the railway at Killaloe?—Yes.

21510. You put them into trucks at Killaloe?—Yes.

21511. Supposing I put them into trucks at Killaloe at nine o'clock this morning, at what time do they arrive at Dublin?—In practice they would be loaded at about two o'clock in the afternoon, but I cannot tell you definitely the hour of arrival, because it is the salemaster's men, not mine, who meet them at the other end; but I take it they would get there about four or five a.m. the following morning. Probably the railway people could tell you that.

21512. What is the railway mileage?—About 118 miles.

21513. *Mr. Aspinall.*—They have nothing to eat?—I water and feed them at Killaloe before loading them; I always send my own food. At two p.m. they are loaded at Killaloe, and I should say at about four or five a.m. the following morning they would have arrived.

21514. *Chairman.*—At what time do they leave Killaloe?—They would leave Killaloe at, I think, four o'clock.

21515. Why do you load them at two o'clock?—Because the company, for their convenience, like to have the cattle loaded some time in advance.

21516. Not two hours?—They always ask me. The company are very good in finding me wagons at short notice to suit the markets, and that sort of thing, and therefore I convenience them in every way I can.

21517. But not to that extent, if the train leaves at four o'clock?—I think I may take it this way—that the very latest that I could load them without inconvenience to the company (because there are other trains coming and going, and the company's servants have other things to do) would be three o'clock.

21518. That I can understand; three o'clock, with the train leaving at four o'clock, would not seem unreasonable?—I do not complain of that in any way, but what I mean is that if they arrived in Dublin at ten o'clock that night, so that they could be turned straight into the paddocks and have a drink and stretch themselves, and have a good feed of hay, next morning these cattle would be very much better beasts than they are under the existing system.

21519. Is the journey unreasonably long; that is the point?—I think it is. I think it ought to be possible, loading cattle at Killaloe at three o'clock and despatching them at four o'clock, to unload them at the latest at eleven o'clock the same night in Dublin.

21520. I suppose you have represented all this to the railway company?—As a private individual, I do not see much good in doing so. Under the old system, which prevailed up to 1899, the Grand Jury system, those of us who were members of the Grand Jury (and the Grand Juries were recognised fiscal bodies) were in a position to make representations, but at present, unfortunately, a good many of us are rather out in the cold, with the door locked behind us.

21521. Have you thought of any remedy for the state of things you have brought under our notice?—I have.

21522. First of all, are you in favour of what has been represented to us as being advantageous to the

country—an amalgamation of the railways into three or four systems?—I think, for the present, that is the best that could be done, assuming that the districts were guaranteed against higher rates; that is to say, that they did not lose such benefits as they have gained at present in competitive areas, and guaranteed against an inferior railway service. For instance, take the case I gave in evidence here in London before, of the amalgamation of the Great Southern and Western and the Waterford and Limerick system. If by any chance you lopped off the extreme northern part of the present Great Southern line, that is to say, the line from Tuam to Collooney and Sligo, and gave that geographically to the Midland, you would deprive all that part of Connaught of competition, and therefore they would need to be safeguarded. That was one of the great rocks on which that railway scheme split, first of all, because there was an attempt to divide the line at Ennis, which would have been a most delightful thing for us, but it would have deprived Connaught of competition on the one side, and Limerick and Kerry on the other. I think it was those considerations which eventually lead to the Bill being passed, and in anything like a grouping of railway companies it would be necessary to see that districts did not lose; in fact, I believe so much in competition myself, that the one reason why I would go for these amalgamations would be that there would probably be very considerable savings in staff charges; and I should hope to see the public accommodated perhaps at a great many points where at present, owing to the friction between companies and things of that kind, there may be inconveniences, and connections made that are at present missed, and so on.

21523. I understand from what you say that, subject to some proper understanding, that rates should not be advanced and other safeguards, you are in favour of three systems of railways?—And possibly a fourth.

21524. Three or four?—I do not pretend to be an expert, but it is quite possible there might be a fourth system running down the East coast.

21525. Have you anything to say with reference to the Railway Commissioners' Court; is not that a proper tribunal in which differences between traders and Irish railway companies can be settled?—I have no experience of it, and anything I say on that point I would say, therefore, with great respect; but I believe we will have to come eventually—(not at present; it would not be safe to do it at present)—to something approaching nationalisation of the railways in Ireland, the shareholders, of course, being properly safeguarded—I have no right to begin by plundering them. But, in the meantime, what I should like to see would be, say, two gentlemen of approved experience and position, and one gentleman, a barrister, of considerable experience in railway matters, appointed upon a sort of roving commission, with powers to go round and hold inquiries from place to place. I should like to see those gentlemen appointed at a salary, not in the way in which we commonly do things in Ireland, just paying them enough to secure a second-rate man, but I should like to see them appointed as permanent civil servants on a proper scale of salary and pension, and let them go round holding roving commissions to see how these various groups of systems worked. Then when the time came, as I hope it will come, when we have our wretched land system out of the way, which is obstructing everything at present, then I should hope to see those gentlemen, the experts with all this experience, come in and be of the greatest assistance, from the experience which they would have gathered from their five or ten years' work, to the Government who were running the railways as the State concern. That is the best way I can see. I know that is looked on as a very radical suggestion; but I have occasionally come across cases in which the public, on the one hand, and the railway companies, on the other, were brought into strained relations just by a bit of unreasonableness on the part of the directors. In such a case as that, I think from my own experience of public life, there is no beating the power of surcharge. If a member of the public has to fight a rich corporation like a railway company, he does it under great disadvantages; but if, in the course of inquiry before a thoroughly competent tribunal, it came out that this was a thing that ought not to have been brought into Court at all, or that the company's or the shareholders' money ought not to have been expended in defending a thing that no prudent director would have ever dreamed of defending, I should like to see the Court or tribunal able to order a proportion of the costs to be paid personally by the director or directors who were at fault, and I believe that would have the greatest effect in stopping unreasonable litigation. It is the best thing I can think of.

21526. Do you really think so?—I do.

21527. I don't?—I am very sorry you differ from me; your opinion is worth a great many of mine.

21528. It is valuable to get other people's opinions?—I am very glad to get yours on it. I shall be more careful how I put it forward next time.

21529. Of course, you will agree that, whatever tribunal has to settle these differences between the public and the railway companies, it should be an easy and cheap and quick way of settling it, without any great expense?—Yes. The people who come before it are poor people, and they want to get on with their work and not be kept idling about. There is just a point that I think has not been brought before you, but it is an important point on our own county railway system. There has been a great deal of talk about the Great Southern taking over those lines—I am not going to take you into that—and about converting them into broad gauge.

Question of the proposed conversion of the West and South Clare railways into broad gauge lines discussed.

21530. You mean the West Clare line?—The West and South Clare. I happened to be on a Grand Jury when a good deal of that was going through, and the other gentlemen who have been here were not in a position to tell you about it. The West Clare will have to be completely re-made, because it was only constructed to carry a narrow gauge line; but when we were making the South Clare line we stipulated that the South Clare line should be ballasted and the culverts made of a strength to admit of its conversion to the broad gauge. Therefore the expense of converting the South Clare will be very much less than the expense of converting the West Clare. The only other point on those two lines to which I should like to draw attention, which also came within my own knowledge when I was on the Grand Jury, was that we drove a very hard bargain for the South Clare line with the contractor. I believe he barely made the very minimum percentage of profit that a contractor should make; but the opinion of the Grand Jury was that he made a very good thing out of the West Clare line. The Grand Jury, not knowing much about railway matters, drove a soft bargain over the West Clare, and consequently they did not get the amount or quality of rolling stock, or such a substantial permanent way as they ought to have done, and that is, to a great extent, the cause of the expense which has made these lines unpopular since. If they had been given a better start, they would have been very much cheaper.

21531. *Mr. Acworth.*—Where do the two lines divide?—It is only a theoretical division. The metals are continuous.

21532. Where does the West Clare end?—At Miltown-Malbay.

21532A. It is a continuous run?—Yes.

Examined by Colonel Hutcheson Poë.

21533. With regard to these railways, I think the county pays a considerable amount in the way of county contribution on both of these?—Yes, on an average about £7,000 a year.

21534. Over and above the two per cent. for which the county is liable, I think, as a matter of fact, that to meet the deficit on the working expenses in respect of the West Clare there is an annual contribution of something like £900, and of £1,100 in respect of the South Clare?—I know it is a considerable amount; I do not know the actual figures, because they do not come before me now.

The annual liability of the Co. Clare in respect of the West and South Clare railways.

21535. Those are taken from the Board of Works Returns. Over and above two per cent. which they have to pay on the guaranteed capital, they have also to pay £2,000 a year for the deficit in working expenses?—Yes.

21536. You mentioned that the East Clare people considered that they were rather aggrieved because

June 10, 1907.

Colonel G. O'Callaghan Westropp, J.P., Coolreagh, Bodyke, Co. Clare.

at the time they joined in the contribution it was on the understanding that if there was any money forthcoming in future it would go towards making an extension in their direction?—Yes.

21537. And, as a matter of fact, I believe the whole County of Clare, which was what you were referring to, pays 2½*d.* in the £ in support of that guarantee?—As a county at large charge.

East Clare's contribution to the South and West Clare railways guarantee.

21538. For which they derive no benefit at all?—In East Clare we derive no appreciable benefit.

21539. In the remainder of the county the poundage is from 3*d.* to 1*s.* 1*d.*?—Once I think it has gone as high as 1*s.* 2*d.*; that is in the extreme western barony of Moyarta.

21540. With regard to the receipts from the West Clare Railway, I think the Board of Trade Returns show that the receipts per mile on the West Clare portion are really higher than those of any other of the light railways in Ireland, with one exception. On the West Clare section the receipts per mile come to £8 14*s.* per week?—I have heard it stated; I have not it in my mind at the moment, but I think that is right.

The heavy expenditure on the West Clare railway discussed.

21541. The only other line that approaches that at all is the Cork and Muskerry. Having regard to that high receipt per mile, and to the fact that the expenses work out at such a high figure—the expenditure is £9 2*s.* per mile per week—can you account for that at all?—No, I cannot. I think it is a thing that a man would want to be a director of the company or a trained expert to go into thoroughly before he could express an opinion. A mere casual traveller or a mere resident in the district could not put his finger on it properly.

21542. You spoke of the West Clare being in a very bad state as regards permanent way and equipment generally?—Yes, but it has been improved, and that is the reason of these increases. We have no borrowing powers on those lines, and all repairs and renewals of rolling stock have to be paid for out of revenue.

21542A. *Chairman.*—That is the explanation, then?—It is part of the explanation.

21543. *Colonel Hutcheson Poë.*—It seems strange, in looking at the Board of Trade Returns, that on the united system, for 1905, the permanent way expenditure works out at over £5,000, the locomotives at £7,000, and the repairs to rolling stock £2,400. That is a heavy expenditure in one year?—It is long ago that we did that. If we had started fair, if we had known our business better at the commencement of it, and bought a better permanent way and rolling stock to begin with, the charges would have been very much lighter.

21544. In addition to that guaranteed capital there is a small sum on both lines of ordinary stock, is there not, which pays nothing?—There may be, but it must be so small that I have never heard of it.

21545. £20,000 in the one case, and £16,500 in the other?—I never heard of it.

The Board of Works inquiry into the working of the Clare Railways in 1898

21546. It is in the Board of Trade Returns: there is no interest paid on it, naturally. I think there was an inquiry by the Board of Works under the 7th section of the Act of 1896, at the instance of the ratepayers of West Clare, as to the working of that line, was there not in 1898? They have power under the Act of 1896?—I did not know they had power with regard to railways constructed before 1896.

21547. The Act is retrospective?—I did not know about that, but I know it has been continually talked of, and the matter was before the Lord Lieutenant recently, within the last month or two.

21548. The Board of Works Report for 1902 points out that they held this inquiry at the instance of the ratepayers in 1898, and that the result of that inquiry was that after referring the matter to the West Clare Company they did not consider any further action was necessary, and there the matter ended. It seems curious if there were such grave complaints that apparently the Board of Works were satisfied they were not of such a nature as would necessitate any Report to the Lord Lieutenant. You spoke of the water competition of the Grand Canal as being in the interests of the county, the district, and the whole country. As a matter of fact I suppose you have seen the evidence which was given before the Railway and Canal Commission recently, and also on previous occasions in 1902, as to the agreement between the Great Southern and Western Company and the Grand Canal Company?—When was the agreement made?

The effect of the agreement between the Great Southern and Western Railway Company and the Grand Canal Company on competition discussed.

21549. I do not know when it was made, but it was in existence in 1902, at any rate, and it was referred to again before the Royal Commission on Canals and Waterways last October?—Our railway came forward in 1897.

21550. It is in existence at the present moment: I do not know whether you have seen it?—No, I did not see it.

21551. In return for a payment of £4,000 or £5,000 a year by the Great Southern and Western Company to the Grand Canal Company, the Grand Canal Company forewent a certain traffic; in other words, although ostensibly there was competition between the Canal Company and the Railway Company in respect of certain classes of traffic, that competition was entirely nullified by this agreement?—I should say it is a very unfortunate thing for the districts if that is so.

21552. Where you have agreements of that kind entered into between a water-carrying company and a railway competition disappears?—Obviously.

21553. So that the competition which you refer to as being of such great advantage to your county is rather more of a figure of speech under such circumstances. Further than that, is it not a fact that the canal service on the Shannon and on Lough Derg is considered a very unsatisfactory service?—We think in the Scariff district it might be considered improved, but at the same time we would be in such a miserable condition without it that we make the best of what we have, and are thankful.

21554. Are not the boats often held up for days at a time by high floods?—Not as often as formerly. They used, twenty years ago, to be continually troubled with that.

21555. I saw some evidence about it before the Congested Districts Commission the other day, when Mr. O'Connor, from Scariff, and a gentleman from the Grand Canal Company gave evidence, and I think the evidence of these gentlemen was to the effect that the boats were often held up?—I get a good deal of my own goods for my house and farm over the canal system, and I can only remember once in the last eighteen years that goods of mine were delayed by that cause.

21556. Is it not a fact that inter-communication between the outlet of the canal at Lough Derg and Limerick, is very inefficient, and that practically goods have to be transhipped, and that there is no communication owing to tides and bridges?—I think they break bulk at Killaloe I cannot tell you for certain, but my impression is that there is a main line of goods from Dublin to Limerick, that a certain amount of bulk is broken and sent on to Scariff or Killaloe.

21557. I daresay you are aware that there have been negotiations from time to time between the Board of Works and the Canal Company as to the rates and tolls which they charge?—Yes, the Board of Works have the tolls on Lough Derg.

21558. But there has been some difference of opinion between the two. The Board of Works were appealed to, and they tried to come to some arrangement with the Canal Company as to the tolls which were in force on the Shannon; was that not so?—I have only heard it hearsay; it was not a thing I was much concerned in; I have not a clear recollection of it.

21559. My only object in asking the question was to show that from what I have read of these different reports, and from the evidence that has been given before the Railway and Canal Commissioners, and also on different occasions here, I should have thought that the canal service and the Shannon navigation was not of as much value as it should be to the district?—I think it is quite conceivable that it may be worked up. There is one point of importance on that. You may remember, perhaps, that a few years ago a service of passenger steamers was put on, called the Shannon Development Service. These boats were not allowed to carry small articles, like a pair of tennis shoes, that you might pay threepence on, or something like that; they were only allowed to carry passengers and passengers' luggage.

21560. *Mr. Acworth.*—Who prevented them?—The Canal Company.

21561. *Colonel Hutcheson Poë.*—The Board of Works knew nothing about it. There was an agreement entered into between the Canal Company and

the Shannon Development Company, when the subsidy for the service was given in 1897, that in return for certain facilities which they gave to the Shannon Development Company the latter agreed not to carry goods traffic.

Mr. Acworth.—The Board of Works stipulated a guarantee.

21561. *Colonel Hutcheson Poë.*—It was a subsidy. My whole contention is that where in Ireland you have these agreements, not secretly done, but in the light of open day, the effect of them must be very much to destroy the competition which at first sight appears to exist?—I know in that particular case it was most irritating, for the Development boats were fast traffic and the others were deadly slow. There were lots of small things like parcels which they might, with great advantage, have taken, and helped to earn money which would have kept them going.

21562. You referred to the two services which were established under the second clause of the Act of 1896. One was the service on Lough Derg. That was established for twelve years with a subsidy for seven years?—We gave a five years' guarantee.

21563. The counties gave a subsidy in addition?—Our Grand Jury did—I was one of them.

21564. A subsidy of £1,700 a year?—We gave £250 from Clare.

21565. Seven counties contributed to it?—Yes.

21566. That subsidy has expired now?—It has from Clare, certainly.

21567. They got a guarantee of £1,700 a year, and they further got a subsidy of £10,000 from the Treasury to run over a period of seven years?—Yes.

21568. In return for that, can you tell us what service they performed?—They began with a distinctly defined service.

21569. How often?—They had a daily service.

21570. Where from?—From Athlone to Killaloe, and then they had a cross-lake service, what they called a local service.

21571. I think you will find they went a good deal further than Athlone?—They did; but I do not think it was with the same boat; they had a lighter boat that went on to Carrick-on-Shannon.

21572. They went right up to Carrick-on-Shannon, to Rooskey, Athlone, and so on to Killaloe, with a cross-service on the Lake?—Yes.

21573. That was a daily service in each direction?—Yes.

21574. As a matter of fact, do you know that has not been a great financial success?—Yes.

21575. And that the only portion of that service that is now running is the Killaloe and Athlone portion?—Yes.

21576. The Carrick-on-Shannon and other sections have been discontinued?—To the best of my recollection, they certainly wasted a good deal of money by running bi-weekly services in the winter months when none wanted them at all.

21577. That has been discontinued for some years?—But they began in that way, which was a waste of money. A better summer service would have been much better.

21578. At the present time, the position is that the steamship company is getting no subsidy either from the Treasury or the county?—I think, in effect, it is. I cannot tell you exactly how it happened; anyone from the Board of Works would be able to tell you The Board of Works held up some money, and I remember that the Shannon Development Company were very angry that the Board of Works did not pay it over to them. But the steamers would not have been running now if the Board of Works had not held up that money to help to keep the thing going.

21579. You may rest assured that they are getting nothing. We had evidence from Mr. Stevenson that owing to the expiry of the subsidy, he did not see how it was possible, although they were legally bound to continue the service, that they could do so under the present circumstances. Would it be a very great drawback to your district if the service were discontinued?—Not to my immediate district; but if you take the group of counties that border on it, it would be most unfortunate.

21580. You are referring to East Clare and Killaloe would it seriously affect the interests of East Clare and Galway, the district which you represent, if that Shannon steamship service were discontinued?—It would make no appreciable difference to East Clare, but to Galway, I think it would be most unfortunate distinctly if it were discontinued.

21581. We will now leave the steamship question. You referred to the coach service from Ennistymon to Lisdoonvarna and Ballyvaughan. That was also established under the same Act?—Yes, that was entirely done by the Government; there was no guarantee from the county.

21582. And they gave a subsidy of £2,600 a year to run for seven years; can you say what the result of that service was?—I have been over it myself when it was running. I should call it a distinctly convenient service; but in opening up any new route in backward places like this, it is impossible to judge the thing by the first few years of running, because it takes the tourist public and the public generally some time to get into the way of using new tracks.

The value of the coach services from Ennistymon to Ballyvaughan, and from Listowel to Tarbert, to the districts, and the financial results discussed.

21583. Could you give me any idea of the income that particular coach earned during the seven years or during any year?—No, I have no figures of that kind.

21584. Would you be surprised to learn that the receipts for the whole of the seven years amounted to £420, in other words, an annual sum of £60, and that the coach received a subsidy of £320 annually from the Treasury?—No, I should not.

21585. It may have been a great convenience, but it was not a financial success?—I do not think it was ever intended to be a financial success; it was a development scheme.

21586. I think they had a coach service on the other side, from Listowel to Tarbert, in connection with the steamships there to Kilrush?—I have never been over it.

21587. And the result of all those schemes established under that Act was of such a disappointing nature that when the subsidy expired the service was discontinued; you are aware of that?—Yes.

Discontinuance of the services on the expiration of the subsidy.

21588. I believe one object the Government had in starting those different schemes was to ascertain if there was any necessity for railway extension in that part of the country. Was that not the idea with which the scheme was started?—I never heard that. I thought they were rather started to fill up blanks in places where there was not the slightest prospect of having railways, and as a support to the existing railways. For instance, our West and South Clare lines would have derived distinct assistance from those lines. It would have brought them a certain amount of traffic that would probably not have come to them otherwise—commercial traffic.

21589. At any rate, the service was only a summer service?—That was all.

21590. The coach service did not carry goods at all—small parcels only?—Not as far as I remember. I never saw any goods.

The coach services not considered a proper test as to the desirability of railway extension.

21591. Would you be of opinion that, under such circumstances, no very reliable or just conclusion could be formed from a service running in the summer months only—particularly for tourist traffic—as to whether that negatived the desirability of establishing a light train service?—Oh, no. The two things are not comparable. One is a tourist thing; it is a philanthropic effort, and you cannot draw commercial deductions from that. I do not see how you can.

21592. It did not lend itself to commercial undertakings; it did not give facilities, and so on?—No.

21593. When you say the Grand Jury threw out the proposal for the East Clare Railway, I believe that was at the time when you proposed to make it from Ballinasloe?—That was before the East Clare Railway.

Explanation of the County Clare Grand Jury's action in refusing to entertain the proposal for the East Clare railway.

21594. The time when you were considering it?—When the people of East Clare and East Galway united, and the Ballinasloe people, too, and King's County, we had one common Committee at Scariff; then there were sub-committees, and we took this matter up. I have not the slightest doubt that for opening up that district, and possibly making it a commercial success, a line from Ennis through Scariff to Ballinasloe, crossed by a line from Loughrea to Portumna and Birr at a place called Cloonmoylan, would, beyond all question, be the best thing for that side of the country.

June 10, 1907.

Colonel G. O'Callaghan Westropp, J.P. Coolreagh, Bodyke, County Clare.

21595. It was given in evidence by Mr. Trench that if that Portumna railway should be resuscitated, his opinion and those whom he represented would be to continue that line across the Shannon to Portumna, down the east side of Lough Derg to Scariff; and that would probably meet your views as well as this other line you speak of?—It would indeed really help the matter on one side, and that is the traffic in store cattle, which keeps the North East from us entirely.

21596. At any rate, the Grand Jury, in their wisdom, threw it out?—Yes.

21597. We have had an instance of where the Leitrim County Council have just foregone a grant of £24,000 because they feared they might have to supply some small guarantee. At any rate, the Co. Council of Leitrim in their generation were no wiser than the Grand Jury in their generation, so that human nature is very much the same whether it is exemplified by a Grand Jury or a County Council?—A number of residents in the county, including some County and District Councillors, have been coming to me for the last three months asking if it was possible to revive the Committee and the efforts we made for getting this line built; and that was partly my reason for offering to give evidence when I saw that certain West Clare gentlemen who had no statistics connected with the line and the possibility of its paying had given evidence which was hostile to us.

The necessity for some extension of light railways in the East Clare district strongly urged.

21598. Taking into consideration these experiments on different schemes of coach and steamer services, is it still your opinion that some extension of light railways in this large district of East Clare and Galway would be desirable?—I go further than that. I think it is necessary.

21599. Do you think it is likely to prove remunerative?—I think so to this extent, I think it should certainly pay its working expenses, and it should pay, probably, I should say, 75 per cent. of the dividend on the guaranteed capital. I know estimates were made by very competent people when that line was on before, that in three or four years, when it had established its connection and got its customers, it would be a paying concern. I cannot say that I was positive about that myself, but I know it would have gone so near to paying that with a very small tax on the rates it would have paid.

Willingness of the ratepayers to contribute towards the cost of railway extension

21600. Under these circumstances, do you think the ratepayers would be prepared to guarantee anything towards the capital?—If it had been fully discussed I think they would. It would be most improper to rush them into it now. They would have to have plenty of time to consider.

21601. Apart from any prospect of such a line being remunerative, do you think the conditions of that particular district, its financial state, the poverty of the people, and their dependence largely upon agricultural pursuits, would warrant the expenditure of public funds, even though they might not directly be likely to produce any profitable result?—I can only tell you that Mr. Robertson gave me——

21602. Never mind Mr. Robertson; what is your opinion?—I can only say that Mr. Robertson scolded me for asking for Government help for such a rich district; he said we ought to be able to build a line out of our own pockets. But if it is a rich district here, it is a poor district there (*showing on the map*).

21603. It was represented to us that the whole of that was a poor district?—When you get up *there* it is; but between Ennis and Scariff there is land valued at £1 an acre and upwards.

21604. Have you considered the question of the State acquiring the control of the Irish railways?—I have.

21605. Would you be opposed to that?—I think it will come, and that it ought to come in time.

21606. I am talking now of the State controlling the railways, not of nationalisation of the railways—of the State taking over the whole of the Irish railway systems and putting them under such a Board as they might think fit; in other words, adding one more Department to the number of Departments which we already have in Dublin?—I rather think we cannot do it until we have more sense than we have at present, and until we get the land question out of the way.

21607. I am afraid we shall have to wait till the end of time?—When we get the land question out of the way we will have more sense. There are two very short local grievances I want to mention, which I was asked to state, so that they will appear on the notes. One is that at present a commercial man or a business man cannot go from Ennis to Dublin and return the same day, and that is very hard on a number of men. There are a great many solicitors, land agents, and business people who would like to have that convenience, but now they have to stay out a night. There is no train leaving Dublin later than 3 p.m. by which you can get back to Ennis the same night, and that is rather bad. The other point is with regard to return tickets; it is an absurd anomaly that has only to be mentioned to obtain your sympathy. At present you can get a two months return ticket from Ennis to London, and no more; but if you take a ticket from Euston to Ennis it is available for six months.

21608. *Sir Herbert Jekyll.*—Has this been represented to the railway companies?—It is in course of representation, but I gave it as one of the absurd anomalies we indulge in there.

The Commission adjourned till the following morning, at 11 *o'clock.*

THIRTY-EIGHTH PUBLIC SITTING.—TUESDAY, JUNE 11TH, 1907.

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel WILLIAM HUTCHESON POË, C.B.; and Mr. W. M. ACWORTH;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. Acworth.—Mr. Balfour Browne, that return that you put in yesterday was practically in answer to some questions of mine.

Mr. Balfour Browne, K.C.—It was in answer to what you put to Mr. Carvill, sir.

Mr. Acworth.—What I wanted to suggest before it is formally put in was this—that while it corrects various rates, it really does not deal with the point I was anxious to get explained. Rightly or wrongly, there was a difference of, we will say, 20 per cent.—or there appears to be a difference—in the rate book on the class rates for Class A or Class B, or whatever it be. But when it comes to special rates that distinction has pretty much disappeared, and the difference in percentage is very much smaller. Now, it is quite clear that whether it be a class rate or whether it be a special rate, terminals have got to come off, so that I do not see that the taking off of terminals affects the question of percentage. That return does not answer my question, which is, why is there such a large difference in the percentage in class rates, which are, presumably, not charged, and a small difference in percentage when you come to the special rate, which, in fact, is the rate at which the traffic goes.

Mr. Balfour Browne, K.C.—Of course there shall be an answer to that. This does not answer it.

Mr. Acworth.—You agree with me that it does not?

Mr. Balfour Browne, K.C.—This was intended to answer it, but it does not, and even here there is an error of 7*d.* in the first case—it is clearly a mistake. But this was intended to answer the allegation that on the actual charges Newry was unfairly treated as compared with Belfast. What we did was this—we have taken off the terminals at each end, which are practically the same. That was the idea. Then that left a certain rate to be divided by mileage. But that would not have been fair, because, by the Railway Commissioners' decision, which I had, they said—"In consequence of the incline in the case of Newry, the rate you may charge shall be from 2*d.* to 4*d.*" where it is minerals, we have taken off 2½*d.*; where it is Class C we have taken off 3*d.*; and, doing that, then we have compared the rates with the view of showing that practically they are the same. That was what this was intended to do, but why there should be a greater difference between the two rates when they are merely class rates than in the case of the actual rates, I do not know, except that the actual rates are carrying out the Railway Commissioners' decision. You will remember they complained on the second occasion that we had not differentiated sufficiently. The first allegation was: "You are putting us—Newry—at an undue disadvantage as compared with Belfast." The Commissioners said, "You are," and therefore we had to amend, and we did make a difference of from 2*d.* to 4*d.* Then we went back to the Commissioners, and the Commissioners held that from 2*d.* to 4*d.* was the right difference, and these actual rates are framed upon the Commissioners' decision. *June* 11, 1907.

Mr. Acworth.—Of course you say that you have put that in, as it were, in answer to the witness. I have nothing more to say, as you admit it leaves my question unanswered.

Mr. Balfour Browne, K.C.—We have not answered your question.

Mr. Acworth —Very well; but I think it is right that you should understand that I would like Colonel Plews to deal with that point.

Mr. Balfour Browne, K.C.—I will reserve this, and will not put it in at this instant, not only because it does not answer your point, but also because there is the clerical error which I have already mentioned in the first example. We have taken off 7*d.* in the case of Belfast, which is 2½*d.*, 2½*d.*, and 2*d.*; and we have taken it off the same in both. That is a mistake; I will have that corrected, and at the same time answer your question.

Mr. Acworth.—May I ask you what terminals you have in fact taken off? You, obviously, have not taken off the statutory maximum terminals.

Mr. Balfour Browne, K.C.—We have taken off the statutory, sir, for that class—that is for coal.

Mr. Acworth.—I think you will find you have in some cases taken off 9*d.*, where you were entitled to 1*s.*

Mr. Balfour Browne, K.C.—But, as a fact, sir, we have taken off the same in both cases.

Mr. Acworth.—But I mean it is an imaginary terminal, as all terminals are, no doubt.

Mr. Balfour Browne, K.C.—I think that is right. However, I will get this and have it corrected, and I will have your questions answered as well.

Mr. Acworth.—Thank you.

(The statement was subsequently withdrawn by Mr. Balfour Browne, K.C. The matter will be dealt with in the evidence from the G. N. Ry. (I.) Company).

Mr. EDWARD WATSON, J.P., examined by the CHAIRMAN.

Mr. Edward Watson, J.P., Managing Director, City of Dublin Steam Packet Company.

21609. You are the Managing Director of the City of Dublin Steam Packet Company?—I am one of them; there are two.

21610. How long have you been Manager?—For twenty-four years.

21611. Are you also a Director of any other steamship company trading between Ireland and England?—I am a Director of the British and Irish Steam Packet Company, trading between London and Dublin.

21612. I believe you are also a member of the Dublin Local Marine Board, a magistrate for the County of Wicklow, and a member of the City of Dublin Junction Railways Committee?—Yes.

21613. Therefore, you are generally acquainted, at any rate, with railway matters in Ireland, and with the steam packet service between Ireland and England?—I have some knowledge of them.

21614. Just to get it on the Notes, will you state when was the first date that the English mails were carried from Dublin to Holyhead?—1574.

Date of the starting of the Mail service between Dublin and Holyhead.

21615. And they have practically been carried to Holyhead from that period up to the present time?—Except for a short time, when the Liverpool and Manchester Railway was opened to London and the mails went *via* Liverpool until the line was opened to Holyhead.

21616. At any rate, for a great number of years the mails have been carried in the way you suggest, and

June 11, 1907.

Mr. Edward Watson, J.P., Managing Director, City of Dublin Steam Packet Company.

they have been carried by your company?—My company has carried them for fifty-seven years.

21617. I do not propose to take you through the very interesting account which you have written as to the various changes that have taken place, not only by your company, but also by the Irish railway companies, but I will come now to the present time. At the present time how are the mails from Ireland to England carried?—They are all carried by the regular mail through Holyhead. They are brought to Kingstown and handed over to the London and North-Western Railway at Holyhead.

The Mails contract between the Post Office and the City of Dublin Steam Packet Company, of 1892.

21618. But has there not been some arrangement during the last few years with reference to the rail transit into Kingstown?—Yes; since 1892 the mails to the interior of Ireland are, for the North and for the South, carried through from Kingstown. The mails to the West are carried to Westland-row, and then carted across the town.

Existing arrangements for conveying the Mails across Dublin

21619. Is there any physical connection with the Midland?—Yes.

21620. Then why are they carted?—That is a question that I think should be answered by the Post Office and the Midland Great Western Railway Company. Really there is no reason why it should be so. Passengers are carried through to the West in the same way as they are to the North and to the South; but the mails are not.

The connection made by the construction of the City of Dublin Junction Railways for the transit of the Mails.

21621. There was some new line made recently, which gave you through rail communication to the various parts of Ireland from Kingstown; what was that line?—The City of Dublin Junction Railway, which is a line from Westland-row to Amiens-street, opened in 1892.

21622. Was it an independent company?—Not exactly an independent company, but a separate undertaking. It was a separate undertaking of the Wicklow Company, the company which is now called the Dublin and South-Eastern—they are the working company, and the interest is guaranteed by the South Eastern, the Great Northern, and the City of Dublin Company.

The "Loop" Line worked by the Dublin and South Eastern Company, and guaranteed by the latter and the Great Northern and City of Dublin Company.

21623. By your company?—Yes. It would have been impossible to finance it otherwise without a guarantee.

21624. You could not have raised the money without a guarantee?—It would have been impossible.

21625. I understand that all the mails are carried over that railway direct to various parts of Ireland, except in the districts served by the Midland Great Western?—That is so.

21626. We shall hear, I suppose, why that was excepted. In connection with the British and Irish Steam Packet Company, I presume, you are one of the managing directors?—I am only an ordinary director of that company.

21627. Well, as a director of that company you can probably tell us this—that company, I suppose, is a party to the Traffic Conference?—Yes.

21628. And in that Conference through rates are made between Ireland and England and *vice versa*?—Yes.

21629. And you were a party to that Conference?—Yes.

21630. Have you read the evidence that has been given before this Commission?—Yes, I have read it as it came out.

The existence of preferential cross-Channel through rates in favour of imports to Ireland.

21631. Have you noticed the complaint that has been made that the rates from England to Ireland are considerably less than the rates from Ireland to England?—That the through rates from the English stations to the interior stations in Ireland are less than the sum of the local rates—yes, I have noticed that.

21632. One of the complaints was that the rates from England to Ireland for the same articles were less than the rates from Ireland to England?—I believe that is so, too, in certain cases. That is a thing we as a cross-Channel company have nothing to do with—the fixing of the through rates. We have to agree to what the other companies have agreed to. The North-Western practically have control of the Irish companies.

City of Dublin Company have no voice in the fixing of through rates.

21633. Have you through goods rates by Kingstown to Holyhead?—Well, merchandise cannot be carried by the mail steamers in the same way as passenger traffic.

21634. The through rates in which you are interested are from Liverpool?—Yes.

21635. From Dublin to Liverpool?—Yes, from Dublin to Liverpool.

21636. Can you tell us what was the cost of that railway—that Dublin Junction Railway?—£425,000.

21637. *Mr. Acworth.*—That is the same line that is called the Drumcondra Link, is it not?—No, that is a different line altogether.

21638. *Mr. Belfaur Browne*, K.C.—It joins that at Amiens street?—I sent in a map which shows it. The Drumcondra Link line is coloured vermilion.

21639. *Mr. Acworth.*—I have got it now?—The junction railway is the line that is coloured a sort of orange brown.

21639A. I see; I follow now.

21640. *Chairman.*—Well, now, with regard to the time occupied in the carrying of the mails, I suppose the making of this railway has considerably reduced that?—Very greatly; it has made a difference of at least half an hour in the ordinary connections.

21640A. That, of course, is a commercial advantage?—A very great advantage, because it enables this to be done; the Northern mail now leaves Dublin at five minutes past six, and the London mail is delivered in Belfast in ample time for business purposes on the same day.

21641. What time does the return train leave?—The return train leaves Belfast at five o'clock.

21642. So that there is plenty of time to answer correspondence the same day?—The same day. As far as Belfast is concerned, I think the best has been done with the railway. There is nothing to complain of. As far as the North is concerned, the best has been done with the new facilities.

21643. What about the South?—Well, I think the best has not been done with the South. When the new service was commenced, on the 1st April, 1897, an acceleration was made of forty minutes. That is to say, the train left forty minutes earlier than it did before. That forty minutes was gained by an earlier arrival by ten minutes of the train at Holyhead, and an acceleration of half an hour across the Channel.

21644. *Mr. Acworth.*—Are you talking of the night mail from London?—Yes; that is a typical case I have put here. The night mail was made to leave so as to arrive ten minutes earlier at Holyhead, and with half an hour gained in going across the Channel, that gave forty minutes' acceleration. Now, the night train to Cork—the train leaves Kingsbridge at 6.40 a.m.—that is thirty-five minutes later than the Northern, which leaves for Belfast at 6.5.

21645. *Chairman.*—You think that as far as the Great Southern and Western is concerned, a considerable further saving might be effected?—I do think so, but I do not put that as my own opinion. What I put forward is that the Great Southern and Western have always objected to the junction with Amiens-street, which was used by their carriages. If you look at the map you will find seventeen chains marked "Loop Junction Station" and "Newcomen Bridge Junction." The Great Southern and Western did not consider that good enough, and the result was that the Dublin, Wicklow, and Wexford engined the train the whole way to a point on the other side of the Liffey, where the green joins the vermilion line.

21646. Then it backs into the station?—Yes. The Great Southern engine takes it there and takes it into the station.

21647. The Dublin South-Eastern work it up to the junction?—They did until the 1st of last December; they used to work it up to that junction.

21648. It seems a long way round—I do not know what the distance is?—The run can be done in about fifteen minutes.

21649. *Sir Herbert Jekyll.*—Does it go by the Drumcondra Link?—Since the 1st December it has gone by the Drumcondra Link, and the Great Southern "engine" the train from Amiens street station.

21649A. *Chairman.*—In your judgment, what time should the train leave Kingsbridge?—The train should start for the South, certainly half-an-hour earlier than at present. My reason for making that statement is that that was what was promised when the line was projected—the Drumcondra line that is. The Drumcondra line, the vermilion line, which is practically parallel to the Midland Great Western. When that was projected, a promise was made by the Chairman of the Great Southern and Western

to the shareholders that they would save half-an-hour. When the Act was passed, the same thing was said. There were a great many delays, which I do not think the Great Southern and Western could be blamed for, in opening that line, and instead of being opened in 1900, as it might have been, it was not opened for traffic till the 1st of last December. In the course of the summer, when we found it was going to be opened, we naturally assumed that the Great Southern and Western would give that acceleration. I was in communication with the North Western on the subject, and we all anticipated it, but as a matter of fact the Great Southern and Western now run the train in exactly the same time as before.

21650. When you say the Great Southern and Western promised it, I suppose you mean in evidence before the Committee?—Not exactly to that extent. It never went before an opposed Committee, that particular Bill. It was an unopposed Bill; I shall hand in copies of the two speeches in which the promises I allude to were made (*handing in same*).* I consider that these are promises.

21651. I see this is a speech by the Chairman of the Great Southern and Western, Mr. James Colvill?—Yes; his son is Vice-Chairman at present.

21652. *Mr. Balfour Browne*, K.C.—May I have a copy of that?—Yes (*handing a copy to Mr. Balfour Browne*).

21653. *Colonel Hutcheson Poë.*—What was the date of that speech.

Mr. Balfour Browne, K.C.—It is dated the 15th February, 1896, and it is a statement apparently made by the Chairman to the shareholders.

21654. *Chairman.*—Have you got the date Mr. Browne?

Mr. Balfour Browne, K.C.—Yes; one is the 15th February, 1896, and the other is the 8th August, 1896.

Witness.—One was before the Act was passed; the other after it was passed.

21655. *Chairman.*—Could you just read the particular words in which the promise was made that half an hour would be saved, because I do not see it there?—"It is right that we should inform you what our policy is in going in for the purchase of this Act." Then later, he says this: "Some time ago the plan was proposed for making this line that is now called the Drumcondra and North Dublin Loop Line. That line was made with very favourable gradients, and on a high level. It runs over the roads, and it will enable us, if the Dublin, Wicklow, and Wexford Railway allow us, to work the mails, and I have no doubt they will—it will enable us to run the distance from Kingstown to Inchicore on the way South in little more than half the time that it now occupies." They took more than an hour, at that time, and therefore the contemplated saving was half an hour.

21656. That is the deduction you draw?—That is the deduction I draw; and the same thing practically is mentioned in the second one.

21657. *Colonel Hutcheson Poë.*—You had better read the other?—In the other speech he says: "We will be running on a high level, and hope to use our own carriages and dining cars, and breakfast cars, on this line, so that I certainly feel very sanguine that we will be able to save the better part of half an hour, at any rate." And in replying to a question, Mr. Colvill said: "The delays between Kingstown and Kingsbridge—the backing of the trains, and all the delay that took place there should be, and must be removed."

21658. *Mr. Acworth.*—They still have to back. Is it physically possible to run forward into Kingsbridge? It does not look as if it was on this diagram?—That is a question of working—that is a railway question. Of course, they could not run into Kingsbridge in the same direction, because the train would have to reverse.

21659. Unless they had a curve?—A curve was never projected.

21660. Then, they must back all the same?—It was not necessary to go to Kingsbridge at all. I am not giving any railway information, but I simply say if the Chairman of the Company says it could be done, I am justified in saying it can be done, and if I am allowed, I will hand in a table which shows the way the trains were worked (the time occupied) before the line was made, and the way they are working now. Mr. Balfour Browne would probably like to have one also.

21661. *Mr. Balfour Browne*, K.C.—Have you got the time of working at that date?—Yes; this table shows that.

June 11, 1907.

Mr. Edward Watson, J.P. Managing Director, City of Dublin Steam Packet Company

21662. There has been sixteen minutes saved since this line was made?—No; nothing of the kind. You are in error in that. It has been stated, and I am surprised that it should be stated again, because the Great Southern and Western had a letter from us stating that such was not the case, and I understood they accepted it. There are the times, and anybody is at liberty to try to make it sixteen minutes saved if he can, but they will not find it easy to do so.

21663. *Chairman.*—If you have given a copy to Mr. Balfour Browne, we will put that on the notes.

The Table was handed in, and is as follows:—

COMPARISON between the Running of the Great Southern and Western Railway Company's morning Mail Train from Kingstown before the 1st April, 1897, and after that date.

Comparison of the running of the Great Southern and Western Railway Company's morning Mail between Kingstown and Kingsbridge before 1st April, 1897, and after that date.

—	Before 1st April, 1897.	After 1st April, 1897.
Mail Train due at Holyhead:—		
(Greenwich Time), . .	2 35 a.m.	2 25 a.m.
(Dublin Time), . . .	2 10 a.m.	2 0 a.m.
Cross-Channel Contract Time, .	4 h. 7 m.	3 h. 37 m.
i.e. From arrival of Mail Train at Holyhead until last bag is in train at Kingstown, when train is due to start.		
Departure of train from Kingstown Pier, ...	6 17 a.m.	5 37 a.m.
Departure of train from Kingsbridge, ...	7 20 a.m.	6 40 a.m.
Interval, ...	63 minutes.	63 minutes.

21664. Am I right in assuming that so far as the carriage of mails is concerned, upon the Great Northern Railway Company, you have no improvement whatever to suggest?—Everything of course, can conceivably be improved upon, but I have no fault to find whatever.

21665. No fault to find?—None.

21666. I think we will leave it there. So far as Ireland is concerned, on the whole, the mails both to and from, with this little difference, which you have mentioned, are generally carried in a very satisfactory manner?—The mails to the South and North I do not think anyone has any fault to find with; they are very well done.

The Mail Train services in Ireland generally considered quite satisfactory.

21667. We know the steamboat service is well done?—I do not say anything about that.

21668. I will not ask you about that; we know that?—But I think I should make an observation as regards this side, that I have no doubt the train to Holyhead could be considerably improved.

21669. From London?—From London; certainly. For instance, the North-Western rolling stock and rails, and everything else are quite as good as that of the Great Western, and therefore I have no doubt the North-Western could run a quicker service if they ran at the same speed as the Great Western run on their main lines; it would make a considerable saving between Euston and Holyhead, and that there is no doubt about. Take the speed of the Great Western, and the speed of the North Western, and you will see that the latter could run quicker.

Proposed acceleration of the Irish Mail Train between Euston and Holyhead.

21670. The speed of the Great Western from and to where?—Any of their main line traffic; the Great Western run fifty-eight miles an hour.

21671. That is quite exceptional, is it not?—I have often travelled by their trains at that speed.

21672. *Mr. Acworth.*—The North Western speed to Holyhead is fifty-three miles per hour, is it not—they do the journey in five hours?—Five hours and about twenty-five minutes.

21673. *Lord Pirrie.*—They go to Crewe at full speed, and then have to shorten?—The North-Western road is first-rate; doubtless there is no road better.

21673A. *Chairman.*—We know that, and we know the rolling stock is very good. Personally, I think they run fast enough.

* See Appendix No. 29.

June 11. 1907.

Mr. Edward Watson, J.P., Managing Director, City of Dublin Steam Packet Company.

Lord Pirrie.—So do I.

21674. *Chairman.*—Now, I will just ask you a few general questions, because as we have got you here, with your great experience in business and your knowledge of the trade and commerce of the country, your views will be valuable. I think you said just now that you had made yourself acquainted with the evidence that has been given before this Commission?—Yes, I have read it as it came out; I will not say I have read every word of it, but I have read it generally.

21675. You probably remember that we have had practically three different suggestions made by various witnesses with reference to the Irish railways. First of all, the question of the nationalisation of the railways has been advocated; secondly, the question of State purchase has been advocated, and, thirdly, the question of amalgamation has been suggested?—Yes.

21676. I think that fairly represents the three views that have been placed before this Commission?—I think so.

21677. First of all, let me take the first suggestion about the nationalisation of the railways in Ireland. Do you agree with the evidence that has been given on that point?—No, I do not. It seemed to me, as I understood the question, that as far as I read the evidence, by "nationalisation" the witnesses appeared to mean that the Treasury should purchase the railways, and then hand them over to some popularly-elected body in Ireland to manage; and I should think that would simply mean chaos.

Nationalisation of the Irish Railways disapproved

21678. Therefore, we may take it that you are strongly opposed to the nationalisation of railways, with the Treasury finding the money for the purchase of the railways, to be managed by a local body in Ireland?—I do not feel very strongly about it, because I do not think it is one of those things which there is the remotest probability of ever happening.

21679. At any rate, you would not advocate it?—Certainly, I should not advocate it, and I do not think there is any probability of the Treasury doing it.

21680. If it were advocated, you would oppose it?—I do not suppose my views would be considered, but I certainly should not be in favour of it.

21681. Now upon the next question—the question of the State purchase of the railways—have you formed any opinion about that?—That is a perfectly feasible plan.

21682. *Mr. Acworth.*—May I ask what do you mean by State purchase—after purchase what method of working do you contemplate?—What I understand by State purchase is that the Treasury should be responsible for the Irish railway stock. As far as the shareholders are concerned, I think they would be just as pleased to sell their shares, as the landlords their land, if they could get a decent price, and then practically the Treasury would be responsible for the interest, and the interest would be payable out of the receipts, and there is no doubt that if a scheme of that kind were proposed, something like what the late Mr. Robertson proposed for India, it would be quite feasible; I do not see that there would be any difficulty in carrying it out.

State purchase of the Irish railways, and control by a State Department advocated

21683. The State would work it?—The State would work it as a State Department.

21684. Under the English Treasury, or would it be purely under Irish control?—The State would. I assume, appoint Commissioners who really knew their business, and those Commissioners would carry on the business as a Government Department. I do not see why that could not be carried on in Ireland if desired, as it has been carried on in India.

Appointment of Railway Commissioners same as in Australia and India recommended.

21685. *Chairman.*—The same principle as is adopted in Australia?—Just the same principle as I understand is adopted there.

21686. Your opinion is very clear on these two points; now let us take the third, the amalgamation of railways. Have you anything to say about that—you have read the evidence, and have considered the various suggestions that have been made?—I think that the witnesses who gave evidence about that are not aware of the extent to which railways have been amalgamated of late years.

The alternative proposal to amalgamate the Irish railways discussed.

21687. In Ireland?—Yes. The Great Northern, of course, is an instance of that; that is, several small lines and the Great Northern line were amalgamated, and I do not suppose there is a more satisfactory railway anywhere.

The extent of previous amalgamations of Irish railways.

21688. That is an amalgamation?—That is an amalgamation of several lines. The total mileage (I only give it in round figures—you have the exact figures) of the Irish railways amounts to about 3,120 miles, and there are four railways that have termini in Dublin which have a mileage of 2,383 miles.

21689. Of the four railways having termini in Dublin, what do you say the mileage is?—They own 2,383 miles, and then the Midland of England has about 355 miles.

21690. The Midland of England has 355 miles in Ireland?—Yes; that leaves a balance of 382 miles owned by eight small companies. So for the moment I should like to put aside the four railways with termini in Dublin, and the Midland, and simply come to the 382 miles. Dealing with the 382 miles, I believe before very long the Belfast and County Down will be absorbed by the Great Northern; and the Great Western have acquired a scheme for a junction railway in Cork, so I think it is only a matter of time when the three lines south of the Lee will be absorbed by the Great Southern and Western Railway. That leaves them a number of small lines of railways to be dealt with, and I do not think the welfare of the country depends upon these, whether they are absorbed or not. Then, if I may revert to the four companies with termini in Dublin, and the Midland—I do not suppose the latter company could be amalgamated; the Midland will probably keep it. I simply come now to the four in Dublin—the Great Southern and Western, the Midland Great Western, the Great Northern, and the Dublin South-Eastern. I think with all respect, that it would be a very great disadvantage to the public to amalgamate the Great Southern with the Midland, because there is a certain competition now for traffic, and I think it is a great benefit to have the two companies independent. Parliament thought so when the amalgamation scheme was brought in in 1899, because they gave the Midland Great Western running powers. Then with regard to the Great Northern and the Midland Great Western, for the same reason it would be a mistake to amalgamate them. Now I will take, for example, what I am quite sure you are familiar with, the case of the Chatham and Dover and the South-Eastern of England. I do not think the public have gained very much by that amalgamation, although it has been very good for the shareholders. I have been in the habit of travelling on that line for many years, and I do not think the train service is as good as it used to be.

21691. I do not think it is very good for the shareholders?—At any rate, I do not think the public would gain by the amalgamation of these railways. Now I come to Dublin South-Eastern; the position of that line is entirely different, and I think that great benefit would result if it were amalgamated with the Great Northern Railway.

21692. As Mr. Acworth points out to me, that would take the Great Northern down to Waterford?—Yes, with running powers to Cork. I think the public would gain immensely by this amalgamation. The Dublin South-Eastern is a line which has suffered from serious mistakes in policy ever since it was formed, for many years the plan adopted by the Board has been to go to Parliament to get capital for one purpose, and then when it was obtained, use it for "general purposes." The year before last a Bill was introduced to raise capital on similar lines. The debenture holders, however, took alarm and would not assent to its passing until the capital was ear-marked; so the present position is, if the Dublin and Wicklow want to use the capital for the specific purposes named in the Bill, they can, but not for other things, and the capital has not been raised, nor has there been any attempt to raise it. I am quite satisfied that if the Dublin South-Eastern were handed over to a strong company such as the Great Northern, it would be worked with much more efficiency and greater economy in the working. Now, I take, for example, the Locomotive Department. They have a factory (the Dublin South-Eastern) which the company themselves consider most unsatisfactory. They happen to have a very able locomotive superintendent, who was with the Great Southern and Western Company, and who got a good training there. I do not think anybody could carry on that factory better than he does, but if you take the account for last year, and leave out running expenses and charges for new stock, the cost of working that factory came to

£24,000 in the year. The company themselves, according to their evidence recently, wanted to spend £50,000 on a new factory. In other words, they wanted to charge themselves with £2,000 a year to effect economies in their present working. I think it is quite obvious that if the Dublin and Wicklow factory were got rid of, and the Great Northern had charge of everything, the saving would be immense.

21693. I think we are drifting rather into the advantage which would be to one company to take another; what are the public going to gain by all this?—I was going on to deal with the question of electrification; the public would get a service which would be superior to the present service.

21694. The interests of the public would be better served if this railway were taken over by a larger company?—Yes,, that is the point. I should not wish to take up too much time, but may I refer to the tram competition in answer to the question you put just now?

21695. It is patent to anybody who travels on the railway and sees the tramway running alongside it that it is sure to divert some traffic from the railway whatever they may do?—My point is, if that line were electrified, the service would be infinitely better done, and the public would get a better service. But the thing is to find the capital. Of course to carry out such an idea as I have suggested, the money has got to be found. I might, perhaps, make a suggestion as to how the money could be found without costing anybody anything.

21696. I take it from what you have said that in your judgment if that line were in the hands of a powerful company the whole district would be better served, the public would be benefited, and the shareholders?—My belief is this, that the shareholders—the poor, unfortunate ordinary shareholders—would get a dividend.

21697. With the exception of that particular railway to which you refer, you think the question of amalgamation had better be left alone?—I think it is better. If I might be allowed I should like, before I pass on from that, to make the suggestion in reference to the financing of it, because I should not like it to be supposed that I want the Great Northern shareholders to be charged with the expenses of working the Dublin and Wicklow Railway.

21698. Of course the terms would have to be arranged?—I do not think they could be arranged in any way except in the way I suggest here, because the Great Northern is a line that pays well, and I do not think it would be a just thing to put a line like the Dublin South-Eastern on the Great Northern shareholders; but my suggestion is that if the Great Northern agreed to take it, the Government should advance the Great Northern the capital which would be required to rehabilitate the line, and electrify it, and let the capital be given to the Great Northern at four per cent.—that is, interest at 2½ per cent. the rate Government could raise money at, and 1½ per cent. sinking fund—and my impression is that in a very few years' time the line would be transformed.

21699. That, of course, involves State aid?—Yes, State aid, unquestionably.

21700. I do not think I will ask you any questions with reference to the management of the Irish railways—I think we will leave that?—Very well.

21701. And also as to the constitution of the Irish Railway Boards; I do not think that is necessary. I think the Irish Railway Boards are constituted pretty much the same as the English Railway Boards?—Not altogether the same; there is one difference.

21702. What is it?—On the English Railway Boards the professional element is more represented. It is very usual in England for a general manager to be put on the Board after a time. There is always the professional element, to some extent, on English lines.

21703. Perhaps the Irish general manager refuses to go on the Board?—There are no general managers in Ireland in the same position as in England.

Examined by Mr. Acworth.

21704. Have not the Great Southern got a general manager now?—Not in the same position as an English general manager.

21705. Has he not the title of "general manager"?—Oh, yes.

21706. The title is new, I think?—The title is new.

21707. In speaking of the speed of the North-Western trains, the London mail leaves, does it not, at 8.45 at night?—8.45.

21708. And it gets to Holyhead at 2.25?—Yes.

21709. That is five hours and forty minutes?—Yes.

21710. Am I right in thinking that there are trains running to Holyhead faster for the North Wall service?—The express trains are a little faster, but I think that is because they stop a shorter time; I think the run is about the same, but they do not stop as long.

21711. Of course the mails are obliged to stop if the Post Office want them?—They stop for postal purposes.

21712. In what time does the 10.30 at night get to Holyhead?—In five hours and fifteen minutes. That is, to the station—to be quite fair, you should take off eight minutes off the time of the mail train.

21713. Allowing for the pier, and allowing for the Post Office, I suppose the speed is much the same?—Yes. Then, of course, the mail trains are much heavier—the sorting vans, and so on, are much heavier. The speed is about the same, I should say.

21714. Your point is, judging by the average of the Great Western, they might accelerate the whole lot, if they liked?—I think so.

Proposed acceleration of the London and North-Western Railway trains between London and Holyhead discussed.

21715. Tell me another thing; you have been laying great stress on getting the mail away from Kingsbridge as early as possible in the morning?—Yes.

21716. I think the train from Broadstone does not leave till seven?—Yes, that is open to the same objection.

The question of the hour of departure of the mail train from Kingsbridge discussed.

21717. What I want to ask you is this. The earlier you go in the morning from Dublin, the worse you make it for Dublin people. Very few people want to start at 6.5, or 6.40, or even at 7?—Of course Dublin people would, no doubt, like to stay longer in bed, but if they want to get to their destination earlier, they must go by the earlier train.

21718. If I might ask you to regard the thing from the point of view of the Irish resident in Dublin rather than from the point of view of being interested in the quickness of the mail service, which is the more important—is not the bulk of the traffic in the train going to Cork or going to Belfast, Dublin traffic?—I do not quite follow you; but I take it that if a man in Dublin wants to do business, he ought to be as anxious to get as early to Cork as another going to Belfast is. The people of Belfast who leave at 6.5 in the morning do not make any complaint; if they do not like to go so early as the 6.5 they can go at 9.

21719. Take, for instance, Belfast—do you think any Dublin people (merchants, we will say) really do start at 6.5?—I think they do, if they want to do a day's business.

21720. Then they are more energetic than they are in this country. You do not think that is a serious point—that the earlier you put it, the more you turn Dublin people out of the train?—I do not think it is any more difficult for one town than for another.

21721. You would not consider the comparative convenience to Dublin of a later start?—I do not think so; I think the mail is for the benefit of everybody.

21722. You spoke of the Drumcondra Link. Except for this tale about a somewhat bad curve between Junction Station and Newcomen Bridge Junction, the Drumcondra Link does nothing for the through traffic that could not be done equally well along the line of the Midland Great Western?—I do not think so.

The policy of the expenditure in the construction of the Drumcondra link line.

21723. How much did it cost?—I cannot give the exact figure—not far from £400,000.

21724. It has cost £400,000 to take traffic off the line of the Midland in order to put it on the Great Southern's own line?—Yes.

21725. We may assume that the Midland line was not over-crowded?—It was not.

21726. Does that seem a wise expenditure of money?—It seems strange that such a course should have been adopted.

21727. I wanted to ask you that because you spoke of the advantages of competition. That is a natural result of competition, is it not—that kind of thing?—I do not think that is a result of the competition question at all.

June 11, 1907.

Mr. Edward Watson, J.P., Managing Director, City of Dublin Steam Packet Company.

21728. Taking money out of one person's pocket in order to put it into the pocket of another person?—I do not think that question came into it as far as I know.

21729. Why was it done?—The reason it was done was because the Great Southern and Western said they did not like the Junction—that it was not safe, and they would make the other one. That was the reason given, and any further questions ought to be asked of them.

The policy of the expenditure in the construction of the Drumcondra link line.

21730. Would it not have been cheaper to improve the Junction?—As a member of the Committee, I may say that if the Great Southern and Western and the Midland Great Western had wanted a double junction made, they could have had it at the time the line was being constructed.

21731. I gather you do think it is a pity that that capital was spent?—I like myself the high level line—I think it is rather a nice thing to have, and I think it is an advantage to have it.

21732. A luxury?—A luxury.

21733. Do you think Irish railways can afford to spend £400,000 on luxuries?—That is a question for the Great Southern and Western to answer; they are very rich.

21734. In the long run does it not come out of the pockets of the public—the public have to pay interest on the capital, have they not?—I suppose so.

21735. I gather you want to get competition?—Not in this case; competition does not arise at all.

21736. But your view is that you desire to have competition?—I think there should be some competition.

21737. You desire to have the competition of a strong company down in the South of Ireland against the Great Southern and Western?—Yes.

The desirability of maintaining competition between the different railway systems in Ireland.

21738. I take it, you think the competition from Dublin to Waterford and Wicklow, or even to Cork, would be more effective in the hands of a strong company like the Great Northern than in the hands of a weak company?—Possibly; but I have not looked at it from that point of view; I have only looked at it generally. The Dublin South-Eastern is not worked as it might be, and I think the Great Northern would work it much better.

21739. I want to ask you about the through rates. At any rate, as far as your Liverpool steamers are concerned, you have a great deal of traffic that never touches the railways—that originates in Liverpool and goes to Dublin. Probably there is not so much that originates in Dublin and goes to Liverpool, but there is, of course, some; there is porter, for instance?—Yes, Messrs. Guinness's porter is a very large traffic, and the whiskey trade is large.

21740. We have been told by witnesses who have given evidence before this Commission that there is a tendency to give an advantage to traffic imported from England into Ireland, and not so great an advantage to traffic exported from Ireland to England—what do you say as to that?—It certainly is the case that the through traffic rates from some stations are under the local rates; in other cases it is not so.

The fixing of Cross-channel port to port rates.

21741. Ignoring the question of local rates altogether, have you any idea that you put, for example, your rates from Liverpool to Dublin on a lower scale than the corresponding rates from Dublin to Liverpool?—Oh, no.

21742. Have you any inducement to do that?—No. The local rates across Channel, I may say, are regulated entirely by competition. It is the interest of the companies to get the best rates they can to command the traffic. If the local rates from Liverpool to Dublin were put up, we should be immediately in a position of disadvantage.

21743. And if the local rates from Dublin to Liverpool were put up the same thing would happen?—Exactly the same.

21744. Would you say, speaking of your own Dublin Steam Packet Company, that you put the rates in both directions on the same basis?—On the same basis.

21745. And that you have no interest to do otherwise?—None whatever; our interest is to charge the rate which the traffic can afford to pay, and to develop it.

21746. As far as you know does that apply to all the other cross-Channel traffic?—I think so. The sea is open.

21747. I will not ask you about nationalisation and State purchase—I think I understand what your point of view would be—but I do not gather that you are at all keen for any drastic alteration?—Well, I think people would be greatly disappointed by the result if there were a State Department, because in Ireland they are always finding fault with the State Departments.

21748. As I understand you do not advocate—you distinctly oppose—the idea of handing the railways over to an Irish body to work?—Yes.

21749. You do not advocate the Treasury working them?—No.

21750. Practically you very much want to leave the *status quo*?—I think that is probably the best thing to do.

21751-2. When you speak of amalgamation, I suppose you would sympathise with the desire to amalgamate the little lines?—I think so.

21753. But you would like to leave the main great systems of the country as they are?—I should like the three lines coming into Dublin left alone.

21754. And you have no objection—though we have heard a great deal against it—to the English railways having an interest, as the Midland has in Donegal and the Northern Counties?—I do not think that has been considered generally.

21755. It has been made a grievance on several occasions here?—I could not give any opinion about that; I am not familiar with those Northern lines at all.

21756. But you would desire to see an amalgamation of the little lines?—I think so—yes.

21757. Leaving the main systems as they are?—Yes.

21758. Do you think much money requires to be spent upon the Irish railway system?—Well, the Great Southern and Western and the Great Northern are exceedingly up-to-date lines.

21759. They have the money they need?—As far as my humble judgment goes, I think the Irish railways compare very favourably with the Scotch railways. Of course, the population is about the same as that of Scotland, and as far as dividend-paying is concerned, they compare very well. Take the Great Northern—I do not know any better line.

21760. That compares well from the dividend point of view with the North British for instance?—Yes.

21761. What about the point of view of the public service?—I think the public service is fairly well done.

21762. Do you think there is a claim that either in capital or in income, or in both, Ireland wants substantial help?—How do you mean—a claim?

21763. In your view, is it a reasonable demand that the State should find new capital?—I do not know why there should be a claim in Ireland more than in Scotland or England.

21764. Then you would answer that in the negative both as to capital and as to subsidising income?—I think so.

21765. For example, we have been told that rates are very high, and that they ought to be very largely reduced?—Yes. I know that statements have been made of that kind. I do not mean to say that there are not anomalies.

21766. The claim is not made as to particular rates, but that as a whole the rates are very high and ought to be reduced?—Well, I do not think that is so.

21767. Just one more question; your evidence is a great deal on the same lines in its main points as that of Mr. Goodbody, who came from the Chamber of Commerce?—I can't say this.

21768. Do you think that your view represents the view of the big business men of the country?—As I said, I give my views with great hesitation. I do not consider that I am a person of much influence.

21769. You have had some experience, at any rate?—Yes, some experience.

21770. And you must be, of course, in touch with the big traders of the country; you cannot help being so?—Of course, I have something to do with them.

21771. Do not answer unless you wish to, but do you think those views of yours are substantially the views held by the large traders?—I could not answer for other people at all.

21772. I take it that this subject has been discussed a great deal. However, if you do not wish to answer, I do not want to press you?—I think that a great many traders have ideas of what might be done; but I think they would be disappointed if their ideas were put into practice.

21773. Do I correctly gather that your evidence comes to this; that Ireland does not really require any exceptional treatment?—I think the people in Ireland are quite able to look after themselves. The railways in the last twenty years have been enormously improved, and I think that improvement is still going on. I date that very much from the time that the late Mr. Robertson, a very great friend of mine, came to Ireland; and I think there is very great improvement going on, although it is going on slowly.

21774. Subject to what you have said about comparatively small matters, you would allow the thing to go in its natural course as at present?—I think so.

21775. You would not apply any heroic remedy of any sort or kind?—Certainly, I would not apply any heroic remedy.

21776. *Chairman.*—You have suggested that the English Treasury should find the money for the improvement of the Dublin and South Eastern Railway?—Yes; but I think that would cost them nothing.

21777. You mean that there would not be any loss to the Treasury?—Exactly.

21778. *Mr. Acworth.*—Did I rightly understand you as meaning that the Treasury should only find such additional capital as was necessary for the electrifying and so on?—Exactly.

21779. Not to buy out the line?—Merely that the Great Northern should take it as a separate undertaking, and that they should say to the Government, "We want so much money in order to do these works to the line and bring it up to date"; and, if you find that money by degrees, the line will be security for the money, and I believe that after paying the fixed charges there will be ample security.

21780. You do not propose that the Great Northern or the Government should buy clean out the existing holders of the Dublin, Wicklow, and Wexford Stock?—No; simply take it over as a separate undertaking with its existing liabilities.

21781. Keeping the existing shareholders and putting in new capital guaranteed by the Government?—Yes, with a sinking fund.

Mr. Acworth.—It is not a proposal that the Government should buy the whole concern?——

Chairman.—Oh, no. I said "State aid," and Mr. Watson said so, too.

Examined by Colonel Hutcheson Poë.

21782. With regard to the question of rates, there has been a great deal of evidence here from many witnesses that the local rates in Ireland from station to station are high, relatively speaking, compared with through inland rates across the Channel?—I believe that is so.

21783. Would not the effect of low through rates into Ireland as against, relatively, high local rates be to discourage, and cripple, and in some instances even to destroy, local enterprise and local industry?—That I do not myself understand. I know it is a fact that there are very anomalous rates from England to the interior of Ireland, as compared with local rates, but I do not know the reason; and I do not myself see why there should be such a difference as there is in some instances.

21784. There has been no evidence before us, so far as I understand it, to show that the rates in any case at all exceed what the railway companies have a right to charge?—No.

21785. But the evidence, generally speaking, has been to show that, owing to the conditions of the trade of Ireland, the few industries and so on, rates which are in themselves not unreasonable do press in some cases very heavily?—I believe it is the case that local rates from Dublin are higher than corresponding proportions of through rates from England into Ireland; but I do not know why that is so; it is a question for the railway companies.

21786. At any rate, I suppose, you would agree with this view: that if the local rates were reduced to such a level as to meet the views of the people who complain, that would, for some time at any rate, entail some loss upon the railway companies?—I suppose it would.

21787. And you would probably agree that the railways do not pay extravagant dividends at present?—Yes. I should agree with that.

21788. And that if they were to lose any portion of the revenue they now derive from the local rates it might very seriously affect the dividends they do pay?—I could not answer that, because so much of the traffic comes from the other side. Take, for instance, the iron trade: rates from Dublin are considerably higher, proportionately, compared with the local rates. I do not know why it is so; it is a question for the railway companies to answer.

21789. At any rate, you sympathise with the view which has been put before us, that if there could be some reduction in the local rates it would assist the industries of the country?—Yes, I think so.

21790. As regards through rates, have you any voice in fixing the through rates?—No.

21791. You say "No"?—There is a conference, but the Commission will see that a company like ours, when we compete with the London and North-Western Railway Company across the Channel, is practically powerless. Whatever rates the London and North-Western Railway Company agree to we have to agree to the same.

21792. It is entirely optional with them as to the proportion they assign to you?—The point laid down is this: the London and North-Western would not consent to the rate being less *via* Liverpool than *via* Holyhead; and we get the same proportion as they get. They get their proportion of the mileage, and we get ours.

21793. Is that a satisfactory arrangement with regard to your particular business as a shipping company?—We cannot do better than that; we are not sufficiently strong to say what the railways should do. Taking it all round, I suppose some things might be improved.

21794. At any rate, I think you said, in answer to Mr. Acworth, that the outward through rates were practically the same as the inward through rates?—Yes, across the Channel.

21795. *Chairman.*—That only applies from port to port?—Yes.

Mr. Balfour Browne, K.C.—It also applies from station to station.

Mr. Acworth.—We have had some exceptions.

Mr. Balfour Browne, K.C.—Very few.

Chairman.—What I understand Mr. Watson to say is, that the local rates by his steamers are the same from Dublin to Liverpool as they are from Dublin to Holyhead.

Mr. Balfour Browne, K.C.—That is all he has said.

21796. *Colonel Hutcheson Poë.*—You cannot give any evidence as to the railways?—No.

21797. Now, as regards the amalgamation of the Dublin and South-Eastern with the Great Northern; why do you advocate amalgamation with the Great Northern rather than with the Great Southern and Western?—Because in the one case the line is parallel and there is a certain competition, and in the other case it is continuous. All amalgamations of continuous railways have been a success; and my point is that nothing could be better than an amalgamation with the Great Northern. The Great Northern is a very progressive line, as can be seen if you compare it now with what it was twenty years ago.

21798. Do you not think it possible that the Great Southern and Western would rather jib at the Government coming forward and practically finding the money to take over the Dublin and South-Eastern Railway, putting it into proper condition, and handing it over to the Great Northern. Would it not naturally have the effect of competing more or less, whether to a great degree or a small degree, with the Great Southern and Western. Do you not think the Great Southern and Western would be justified in complaining and saying, "Why did not we get an opportunity of taking over this line and making a success of it"?—No, I do not think so.

21799. Do you not think that the Great Southern and Western would be capable of turning that line into a success just as well as the Great Northern could?—I do not think they would take the same interest in it, because it is parallel to their own line.

21800. Surely, they have the Rosslare route, and so on?—As regards that, I do not myself see what the advantage to the Great Southern would be in diverting the traffic to Rosslare; I do not see what they are to gain by it.

21801. That is, of course, a matter of opinion. Is it more in the interest of the competition that you speak about?—My opinion is that when two parallel lines amalgamate it is not advantageous, but that when two continuous lines amalgamate it is.

21802. Is competition a thing in the interest of the railway company or in the interest of the public generally?—I think it is.

21803. As a matter of fact, where there is so little traffic, and where each company tries to get the

Reduction in local rates as an assistance to Irish industries approved.

The influence of the London and North-Western Company in the fixing of cross-Channel rates with Dublin.

Similar local steamer rates, Liverpool to Dublin and Dublin to Liverpool.

Continuity of line a reason for the suggested amalgamation of the Dublin and South-Eastern Railway with the Great Northern Railway in preference to the Great Southern and Western Railway.

Amalgamation with the Great Southern and Western Railway objected to.

Railway competition considered a desirable thing in the interest of the public.

June 11, 1907.

Mr. Edward Watson, J P, Managing Director, City of Dublin Steam Packet Company.

biggest share of that little traffic, does it not resolve itself more or less into agreements being come to between the different railway companies as to their charges; and in that way competition ceases to exist?—When I say "competition," I assure you it does exist at present.

21804. Rather at the expense of the railway companies; and probably if that competition did not exist, they might be in a position to do more for the carrying of the public, both in the way of passengers and goods?—I do not think the public would be advantaged if they lost the competition there is at present.

21805. I think the Dublin and South-Eastern has something like £2,500,000 of capital, £1,000,000 of which obviously receives nothing?—At the present time there has been a re-shuffling of the capital; but they have only paid on the Debentures and the Guaranteed Stock for some time.

Anticipated advantages to Dublin and South-Eastern Rai way shareholders from an amalgamation with a strong company.

21806. Do you think that any strong company taking that line over would be, after a few years' time, in a position to return some dividend to its unfortunate shareholders who now receive nothing?—I think so, if they got assistance.

21807. As regards the three points you spoke of, I think you said that by nationalisation you understood that the British Treasury should find the money and then hand the railways over to some properly elected body?—Yes.

21808. I think that is only partially the view that was put before us, and I think that we have had evidence to show that many people think that some local authority, assuming of course that nothing is done to disturb the relations now existing between the State and Ireland; apart from that altogether, some local department might be created which would find the money on the security of the railways themselves, and the buildings in Ireland—the local rates of Ireland, and finance the operation themselves. That is the view which was put before us by many people—that a sort of Railway Board should be formed, in any way you like, either from the existing companies or otherwise, and the money floated and financed on the security of the railways themselves?—I do not think that would be practicable. The difficulty is a financial one; and what to anyone in England seems such a very small matter assumes a very different aspect in Ireland. What do people in England think of the £400,000 I referred to? They would not think twice about it.

The financial difficulties in connection with a scheme of nationalisation or State purchase discussed.

21809. You do not think that a local authority would be in a position to finance the operation?—I do not think it is possible.

21810. Did I correctly understand you to say that you were resolutely opposed to the State taking over the railways, and managing them through another Department?—No, I think that is perfectly feasible.

21811. But I understood you to say in reply to Mr. Acworth that you did not approve of another Department being set up?—I did not say that I had any objection to it; but I think the people in Dublin would have. For instance, take the Board of Agriculture; everybody must admit that the Board of Agriculture is doing good work; and that Sir Horace Plunkett has done his best, and has given away every penny of his salary; but there is great dissatisfaction, notwithstanding.

21812. "Gratitude" is a word perhaps not quite known or appreciated in the Irish language; but, if it could be shown that by the acquisition of the railways of Ireland by the State some appreciable benefits in the shape of reduction of rates and charges could be given, and of course no injustice inflicted on the shareholders whose shares would be taken over at their fair valuation, would you see any objection?—I see no objection if the Government choose to make a State Railway Department—no objection and no difficulty.

No difficulty apprehended to State purchase and control by a State Department of the Irish railways.

21813. Would you prefer that to amalgamation or otherwise?—Personally, I should rather object to a general amalgamation; I should prefer to leave the three railways as they are.

21814. Would you be opposed to amalgamation into one system?—I do not think there would be any advantage in that; I do not think there is any halfway house between State purchase and leaving them as they are.

21815. Then, with regard to the obligations of the Great Southern and Western in relation to this mail service, you said those obligations had not been fulfilled, and that acceleration would be desirable; and then Mr. Acworth asked you a question as to whether the convenience of the Dublin people would not be seriously affected by having to start at six o'clock in the morning?—I do not think so.

21816. As a matter of fact, is it not your experience that the great bulk of the passenger traffic by that particular train is through passenger traffic, and that there is very little local passenger traffic?—You probably travel by that line more than I do, and would know better than I. In that case, if very few go at present, the inconvenience which Mr. Acworth pointed out would not exist.

21817. That is the point I wanted to bring out—I only wanted to know whether you had followed that point?—Yes, I followed that.

21818. With regard to the Midland, has there been any acceleration of the mail service?—None since the new service began.

21819. Then the only portion of Ireland benefited by this new service is the North?—Yes, by railway. The people to the West and the South have got the forty minutes, but the Great Northern have got the half-hour by the new line.

Examined by Lord PIRRIE.

21820. There is one question I should like to ask you about the mail train in the morning. You were advocating very strongly that the Broadstone and Kingsbridge people should make their trains earlier?—Yes.

21821. Have you any record of the number of times per week or per month that the mails for the North miss the 6.5 train?—Very seldom.

21822. It is very seldom they catch the train?—They very seldom miss it.

21823. Have you got the record?—I have not the record here, but the service is worked very accurately, I must say. There is a margin.

21824. Would you be amazed if I told you, living in Belfast as I do, that the mails very often miss the connection on three or four days in the week, and that therefore Belfast is in a worse position than Cork?—I think your lordship has overlooked the fact that if the connection is missed a special train is run immediately afterwards.

21825. If it does it stops somewhere?—If they cannot start it at 6.20 they send a special, and the special very often arrives at Belfast immediately after the ordinary mail.

21826. Is not that a new arrangement?—It has been in existence for years.

21287. We frequently do not get our mails in Belfast until eleven or twelve o'clock, and I often think it would be a very great benefit to the merchants of Belfast if there was a greater time allowed from the arrival at Kingstown until they leave the Amiens-street Station. I feel that the certainty of your mails would be very much better for us than the present uncertainty?—I am afraid, my lord, you are not quite right as to your facts. If the mails are late in Belfast, there may be some postal question involved, but as far as the Great Northern Railway is concerned, the service is worked with the greatest accuracy.

21828. I am not speaking of the Great Northern; I think the postal authorities should insist that the mails arrive in Holyhead at the hour they do, or probably earlier, but in case of accident or fog, the mails may miss the connection, and I only wanted to point out that we in Belfast do suffer?—I think your lordship has overlooked one fact—that Belfast has an advantage which other parts of Ireland have not got, and that is this—that if from any cause the connection is missed there is a special train run. In the case of the Midland Great Western, remember, the mails must cross the town, and if they miss there they must go by another train.

21829. If the people going from Dublin to Belfast have to go because the train leaves at 6.5, would it not be well to give them the advantage of the margin, by starting the mail train a little later from Dublin, without, however, slowing the mails from the other side to Kingstown?—I think there are grave mistakes in Belfast, and that the mail is missed a great deal more frequently than you seem to imagine?—I think you will find the Great Northern work the service very regularly.

21830. I am not blaming the Great Northern, but the Great Northern cannot carry the mails if they are not there to be carried—that is all I am pointing out. Whether it is the London and North-Western Railway Company who get delayed in running their train from London to Holyhead, or whether it is the Dublin Steam Packet Company who get delayed owing to fogs I do not know, but I think that extra twenty-five or thirty minutes would be an advantage, that is all.

Cross-examined by Mr. Balfour Browne, K.C.

21831. May I ask a few questions. On the last point Lord Pirrie was asking you about, I think he has shown the importance of a little margin. But on this plan of yours, how do you anticipate that we are to save something like half an hour by going a longer distance?—I do not quite follow you.

21832. Just look at your map. We used to go over the brown line, which is 17 chains?—Pardon me; you did not go over it at all—it was the Dublin and Wicklow. You never went over it.

21833. The mails went over it?—The mails went over it, yes.

21834. Did not the Wicklow engine, with the mails, go over that brown line?—Yes.

21835. It then ran over the yellow line until it came to the green line?—Yes.

21836. It then went over the green to Island Bridge Junction?—Yes.

21837. It then went (back-shunted) into Kingsbridge?—Yes.

21838. Now, as a fact to-day it has to go over the brown line to the Junction, change engines at Amiens-street, go over on the pink and white dotted line?—It is all pink. Yours is an old map.

21839. Very well, it is all pink—until it joins the green, which is a little longer distance, obviously, than the yellow line?—One is on the level, and the other is a steep gradient, which makes up the difference at once.

21840. That is, I think, about a quarter of a mile?—That was one of the complaints—that that caused the delay.

21841. Then it has to go over the green line, and there is the same back-shunt?—Yes.

21842. There does not seem much chance of saving in that?—I put it this way—that if the Great Southern and Western Chairman, with the advice of his officers, came to the conclusion that they could save half an hour, I think that is probably right.

21843. We will deal with that. Do you know that besides the change of engines at Amiens-street there is still the same change of engines at Island Bridge Junction?—The same engine that takes the train from Amiens-street could take it to Cork. That is a railway question, and I am quite sure the railway officials would do anything they were told, and that they thoroughly understand their business.

21844. All that the Chairman said was, "We will be running on a high level, and hope to use our own carriages and dining-cars and breakfast-cars"—(at which there was applause)—"on this line, so that I certainly feel very sanguine that we will be able to save the better part of half an hour, at any rate"?—Yes.

21845. Now, have you got the times before that speech was delivered?—I have handed them in.

21846. Forgive me—those were the times on the 1st April, 1897?—Those were the same times.

21847. Why take the 1st April, 1897?—Because that was the time when the contract began.

21848. I want to see the times before that speech was made?—I will show them to you.

21849 Now I will pass from that. As I understand, you desire that the three railway companies having termini in Dublin should still compete?—I think it better for them to be as they are.

21850. That is incompatible with your view that the State might be the owner of all the railways, because then there would be no competition?—That is not what I said—I said there would be no difficulty in carrying out such a transaction.

21851. But you would lose the benefits of competition if they were all owned by the State?—All I said was that there would be no difficulty in carrying out such a transaction.

21852. You are in favour of competition?—I am in favour of three of the four railways coming to Dublin being left as they are.

21853. First of all, in regard to what you have suggested, that the Great Northern should take over the Dublin, Wicklow and Wexford, as it used to be called—or the Dublin and South-Eastern—do you know that under the amalgamation which took place between the Great Southern and the Waterford and Limerick, the Dublin, Wicklow, and Wexford, because it was a weak company, got very extensive running powers over the Great Southern line?—I know they got them.

21854. All the way to Limerick. Do you know that?—I know that.

Anticipated advantages from an amalgamation of the Dublin and South-Eastern Railway with the Great Northern (Ireland) Railway.

21855. Do you think it would be a fair thing to hand over all those running powers—given because the company was weak—into the hands of a strong company?—That is an assumption. I do not know that the powers were given for that reason; Parliament gave them—I do not know why. You may remember.

21856. I remember why it was?—Quite so.

21857. Colonel Poë was suggesting that the Great Southern might jib. Supposing the Great Southern got amalgamated with the South-Eastern, it would be their tendency, would it not, to develop the Rosslare route more or less?—I do not myself think that it is the interest of the Great Southern and Western to develop that traffic in that way. They know their own business best of course.

21858. There is a beautiful tourist country to be developed between Dublin and Wicklow. Would they not be likely to develop that very much and would that be likely to be of any benefit to Dublin and Holyhead?—I have never heard it suggested before that they have ever contemplated such a thing.

21859. One of the members of the Commission asked you about the shareholders being benefited. How would the shareholders of the Dublin and South-Eastern Company be benefited by having a Government loan put before them?—They are getting nothing now; they could not be worse off than they are at present.

21860. Would they get anything by having another loan put in front of them?—I think they would. I am firmly convinced that that line, in the hands of the Great Northern, could be made to pay all right.

21861. Do you know if there is any instance where the through rate from an Irish internal station to an English internal station is different in either direction? That is to say, I suggest that the rates are the same in each direction—both going and coming?—Knowing that the railways were coming here, I did not go into any question of that kind.

The recent Order as to through rates on the Great Southern and Western Railway of the Railway and Canals Commission.

21862. Then we will leave it. You spoke of the local rates being lower than the through?—I think in some cases some of the locals are less. In some cases they are more, and in some cases less, but I think from England to Ireland the sums of certain locals are less than the corresponding through rates.

21863. Do you know that under the last decision of the Railway Commission, which was only given a month ago, we are compelled to carry from Clonmel to London at a lower rate than from Dublin to London?—The Order is not made out yet.

21864. But the judgment is given—it is in the hands of the Commissioners?—I am waiting with great interest for that Order.

21865. If that is so, what becomes of the local rate between Clonmel and Dublin?—I have not given attention to matters of that kind.

Mr. Acworth.—Is that from Clonmel to London through Dublin?

Mr. Balfour Browne, K.C.—Yes, we are to carry at less than from Dublin to London; that is the Railway Commission's Order.

Lord Pirrie.—Upon what grounds is that decision based, do you know?

Mr. Balfour Browne, K.C.—Well, I am not going to canvass their grounds.

June 11, 1907.

Mr. William T. Watson examined by the Chairman.

Mr. William T. Watson, Representative of the Dublin Mercantile Association.

21866. You are a member of the firm of Paul and Vincent, of Dublin?—I am joint manager.

21867. I think you appear before us on behalf of the Dublin Mercantile Association, of which you are a member?—Yes.

21868. You have been requested to do so?—Yes.

21869. What particular industry do you represent?—The cattle-feeding cake trade and the fertiliser industry; but I am not here as the official representative of the fertiliser industry, which is associated.

Alleged unfair treatment of Irish producers in the matter of local rates for cattle-feeding stuffs.

(See Appendix No. 30.)

21870. What particular district do you refer to in connection with this cattle-feeding cake?—The complaints I wish to bring before you refer mostly to the Midland Great Western Railway; there are a few cases on the Great Southern Railway.

21871. What is the nature of the complaints that you wish to bring before us?—I have sent in, and I have here, copies of thirty-four cases of through rates; in twenty-five of the cases the minimum rate applies to any quantity; that is, anything over 3 cwts.; in seven of the cases the minimum rate is for 3 tons; only one for 5 tons, and one for 6 tons. If a manufacturer in Dublin is to get the minimum rate from Dublin to an inland station he must send a minimum quantity of six tons.

21872. *Mr. Acworth.*—Do you mean that your thirty-four cases of through rates are from England?—From Liverpool; Liverpool is the dominating market for this trade.

21873. And all the Irish minimum rates from Dublin are for six-ton lots?—Yes.

21874. *Chairman.*—Just go on with your statement; what is your complaint?—Well, we think it is unfair that a railway company should take a single ton, or even 4 cwts., from a Liverpool merchant, when they will not take less than six tons from us at the minimum rate.

21875. That is the complaint?—That is the principal complaint.

21876. Can you give us any instances of how that operates—one instance will do, if you can give us one?—There is one instance here, Killucan Station, on the Midland Great Western Railway; the through rate from Liverpool is 10*s.* 5*d.* per ton for any quantity.

21877. When you say "any quantity," do you mean any quantity above 3 cwts.?—Yes. The Dublin producer must send six tons in one lot in order to procure the minimum rate of 5*s.* 8*d.* The cross-Channel rate if we were importing from Liverpool to Dublin is 6*s.* 5*d.*, and from Dublin to Killucan the rate is 6*s.* 11*d.*, transfer to rails in Dublin 1*s.* 6*d.*; that makes a total of 14*s.* 10*d.*, or 4*s.* 5*d.* against the Dublin seller.

Instances of through rates for this traffic disproportionate to the local rates.

21878. *Mr. Acworth.*—Where is Killucan?—On the Midland Great Western, in County Westmeath; 41¾ miles is the distance from Dublin.

21879. *Chairman.*—That is one instance, but your complaint generally is, that whereas traffic, such as feeding-cakes and other things, from Liverpool to inland stations in Ireland can be conveyed at a low rate for any quantity above 3 cwt., if you bring the stuff into Dublin and send it from a depôt there, you are bound, in order to get the low rate, to have a minimum of six tons?—That is right.

21880. And that applies, does it, to all traffic going from Dublin?—It does.

21881. Does it apply in the same manner from other ports in Ireland?—Yes; six tons is the unit in Ireland.

21882. For instance, from Belfast?—Yes, all over Ireland.

21883. Cork, or any other port?—Yes; except on some of the light railways. In England and Scotland the minimum rate applies to two tons in some cases, and in many cases to four tons.

21884. Just give us the rate for feeding-cakes by rail from Dublin to Cork?——

21885. *Colonel Hutcheson Poë.*—What is the distance from Dublin to Cork?—165 miles, I think. Of course we have steamer competition there.

21886. *Chairman.*—Never mind your book; you have your proof?—It is 10*s.* for six tons; and for under six tons it is 13*s.* 4*d.*

21887. That is a low rate; you are not complaining of that rate, I suppose?—No, we are not. Of course we would send by steamer there; the rate by steamer is 8*s.* per ton for six-ton lots.

21888. What have you got to say about the chemical fertiliser; I think that is used for manure?—It is.

21889. Basic slag; is there much of that sent into Ireland?—About 14,000 tons of basic slag comes into Ireland.

21890. For agricultural purposes?—Yes.

21891. What have you to say about the rates for this particular article?—It is in class B, whereas other fertilisers are in class C; consequently the rates are different.

21892. The rate for basic slag is low, is it not?—It is about twenty-two per cent. lower in a number of the cases I have given here.

21893. Is not that right?—Oh, yes; according to classification it is right; but the stuffs are of much the same value.

21894. Are they?—Yes; basic slag is practically of the same value as chemical fertilisers.

21895. Is that so?—Yes.

21896. "Chemical fertilisers" seems to be a very wide term, and might include some things of great value?—Some are, no doubt, but only a small proportion. There are 120,000 or 125,000 tons of chemical fertilisers used in Ireland per annum, and I should say that two-thirds or three-fourths of that is superphosphate. The price of superphosphate is about from £2 10*s.* to £3 6*s.* 3*d.* per ton to the ports; and the price of basic slag is from £2 10*s.* to £3 3*s.* 6*d.*

21897. Both are about the same, weight for weight, in bulk I take it?—No; basic slag is slightly smaller in bulk.

21898. It is heavier?—Yes.

21899. You do not complain of the rates for this being high, do you?—Well, we think it is unfair to superphosphate manufacturers that basic slag, which is used for the same purposes, should be carried at a lower rate.

21900. Have you brought that to the notice of the railway companies?—Yes, it has been brought to their notice.

21901. And have they attempted to make any alteration?—The answer we get is, that it is in class B.

21902. Have you given reasons to the railway companies, the same as you have mentioned here, as to why the fertilisers should be put into the same class with basic slag?—Yes, we have.

Mr. Croker Barrington, Solicitor.—Might I mention that the rate for basic slag was fixed when it had not any value as a bye product? That is the way the difference arises.

Mr. Acworth.—You cannot afford to put the things in class C into class B, and make them all the same rate.

21903. *Chairman.*—That is a matter that could be met in all cases by smaller rates being given by the railway companies, is it not?—Oh, yes, it could.

21904. May I ask if this traffic is sent in large quantities to one particular place, or is it a dribbling quantity throughout the whole of Ireland?—There is very seldom less than a wagon load of six tons sent.

21905. To one place?—Yes.

21906. So that it is an important traffic?—It is.

21907. And, I suppose, it is one of the necessities for the land?—It is, and it is a growing necessity.

21908. Can you tell us the quantity that is used?—About 14,000 tons of basic slag and about from 120,000 to 125,000 tons of other fertilisers.

21909. Which are distributed to various parts of Ireland from various ports?—Yes.

21910. Where from, principally?—Dublin is the principal seat of the industry; but there are factories in Belfast, Cork, and Derry.

21911. Going back for a moment to the low through rates for feeding-cakes, those are for linseed cakes, I suppose?—Linseed and cotton cakes, principally.

21912. Then you think Dublin is prejudiced a great deal in connection with these rates?—Dublin is now a manufacturing port in that business.

21913. You are making the cakes?—Yes.

21914. And therefore you think you ought to be put in the same position with regard to the rates as Liverpool?—Quite so.

21915. Have you represented that to the railway companies?—I have.

21916. And what is the result?—Well, I have had nothing in writing, but I have had an interview with one of the officials, who stated that it was evidently unfair that the Liverpool people should be

able to send two bags at the minimum rate while we must send six tons, and even then pay the railway company more than they get under the through rate.

21917. At any rate, I think that is a matter which you will have to take up with the railway company?—I thought this Commission might have, perhaps, some influence; we do not seem to have much.

21918. Just for information, do you make either cotton cake or linseed cake?—Cotton cake and compound cake.

21919. The raw material comes into Dublin direct, I suppose?—Yes; we import it chiefly from the United States.

21920. Is it really becoming an important industry?—Oh, yes, it is quite a large trade.

21921. How long has it been established?—Within the past twenty or thirty years.

21922. But recently, I suppose, there has been some extra development?—Oh, yes, it has developed considerably within the last ten or fifteen years.

21923. You do not crush your own cotton seed, surely, do you?—No, we import it from America.

21924. You import it with the oil out, and you work it up?—Yes, with the oil partially extracted, same as is done by Liverpool and other manufacturers.

21925. *Chairman.*—At any rate, the complaint is that the Liverpool maker is placed in a better position than you are in?—That is the point.

21926. And, of course, the traffic is sent from Dublin over the various railway companies' lines?—Yes; there is one through rate that I would like to draw attention to, and that is the rate to Tipperary from Liverpool—it is not on the record, but it is 17*s.* 3*d.* for any quantity. I find that the Liverpool people can send "feeding-meal" (whatever that is meant to convey) at 14*s.* 2*d.*; and our competitors are sending a nutted cake under that denomination and at that rate, thus getting an advantage of 3*s.* 1*d.*

21927. They are sending a cake under the rate applicable to what is called "feeding meal"?—Yes, and describing it as "feeding meal." What I particularly wish to draw attention to, however, is, that there is apparently a lower basis for other feeding stuffs, although they are of the same class as feeding-cakes.

21928. That is by the Great Southern?—Yes.

21929. Were you going to make any comparison with Dublin?—No; the point I wished to bring out was the fact that the railway companies seem to have the power to give lower rates.

21930. Of course they have got the power to give any lower rates?—Yes; but these lower rates benefit only the Liverpool man and not the Dublin man.

21931. Have you represented that case to the railway companies?—I have this particular case.

21932. What was the result of it?—They said that they would see that the nutted cake was not carried under the "feeding meal" rate; but I know it is done at present.

21933. Do you think that these apparent anomalies that you have pointed out would be remedied if the railways were the property of the State?—I do not know; that is such a remote contingency, that I have not considered it very much.

21934. Do you think it would be any better if there were a smaller number of railway companies in the country than at present?—I think it would be to the public benefit if some of the smaller railways which are still independent were absorbed by the larger lines.

21935. Beyond that, you are not prepared to give any opinion, I suppose?—No.

21936. You are aware of the various Regulations made by the Board of Agriculture, I suppose, with reference to cattle and other things?—I am not interested in it, but I know that they have taken up that matter.

21937. This particular industry of cattle cakes and feeding stuffs, and all that sort of thing, has nothing whatever to do with them, I suppose?—Well, of course, we are dependent on the cattle trade, but we do not look after their rates.

21938. You have made these suggestions as to what you call unfair treatment of Dublin as compared with Liverpool; what remedy do you suggest, if you cannot get any satisfaction from the railway companies?—I think that the railway companies and the steamship companies should show in their rates what proportion they each get out of the through rates, the same as when the steamers belong to the railway companies. For instance, the London and North Western Railway Company for their own line of steamers must show the proportion; and I do not see why railways running from Dublin should take less from a Liverpool man than from a Dublin man. It is not as if Dublin were merely importing from Liverpool to re-distribute. Dublin, as I have said, is a manufacturing port.

21939. Supposing you have a difference with, say, the Great Southern Railway Company, you know that you can make your complaint to the Board of Trade, if you cannot get satisfaction from the railway company. Do you not know that?—Yes, that is so. I know that.

The resource of an appeal to the Board of Trade in settling disputes with the railway companies.

21940. You can write to the Board of Trade?—Yes.

21941. Have you written to the Board of Trade?—I did, on one occasion. There was a matter of a dispute which we had with the Midland Great Western.

21942. Was that satisfactorily arranged?—The point that was then raised has been since settled. The question was this:—If we sent eight tons in one consignment, they would charge the wagon-load rate on seven tons, because one wagon would hold seven tons; but they would penalise us on the eighth ton and charge us the full ton rate.

21943. And that has been put right, has it?—It has.

21944. *Lord Pirrie.*—The Board of Trade put it right, did they?—They did.

21945. *Chairman.*—Failing the Board of Trade, you know there is an appeal to the Railway Commissioners?—But that is a very expensive procedure.

The resource of appeal to the Railway and Canal Commissioners an expensive and unsatisfactory proceeding.

21946. But you know of it, of course?—Yes.

21947. And you do not think it is a satisfactory Court to go to in order to settle small differences, do you?—No; I think there should be a Court in Dublin to deal with these matters.

21948. Inexpensive, and easy of access, I suppose?—Yes.

21949. So that either you or other traders could, without any great expense, get these matters settled; is that your idea?—That is my idea. But I should not advocate that any complainant should not have to pay his own costs. I think, to prevent frivolous cases being brought up, they should be obliged to pay their own costs.

21950. Of course there must be some protection afforded the railway companies?—Yes, the railway companies are entitled to ordinary protection, I think.

A Dublin tribunal cheaper and more accessible recommended.

21951. I take your evidence to be really to this effect: that you have no particular grievance against the railways in Ireland?—No; they have to earn a dividend, the same as we all have.

21952. The only thing you wish to bring under our notice is the fact that you think that as far as feeding stuffs and chemical fertilisers, which are necessities in Ireland, are concerned, you are not treated quite so fairly as the Liverpool people?—In the case of feeding cakes, the Liverpool people have the advantage in places where these through rates operate.

The Irish feeding stuffs and chemical fertilisers industries handicapped by preferential treatment afforded to Liverpool.

21953. You mean that they have an advantage over you?—They have.

21954. And you think that you ought to be placed in a similar position with regard to rates in order to compete with them?—Yes. We have to pay higher ocean-freight on our raw material coming in than they pay.

21955. It would be more to Dublin than to Liverpool, you mean?—Yes, from 2*s.* 6*d.* to 5*s.* extra, and sometimes more.

Examined by Lord Pirrie.

21956. Do you get your feeding foods direct from America to Dublin, or do you get them *via* Liverpool?—We import them by the "Lord" and "Head" Lines of steamers from America direct.

21957. You import them direct, not through Liverpool and not through Glasgow?—Yes.

21958. You said that goods were sent by the railway under, we will say, a misleading description, such as "feeding meal," so as to get a low rate; is that only in the case of feeding meal, or does it apply in the case of other general goods?—I have no knowledge with regard to general goods; that is the only case of complaint I know of.

June 11, 1907.

Mr. William T. Watson, Representative of the Dublin Mercantile Association.

21959. Do you ever make any special terms with the railway companies for large quantities. We were told by some witnesses from Belfast that they were able to make special arrangements for fifty or sixty or seventy-ton-lots. With such a large quantity as 120,000 tons, do not you ever make any special terms—cheaper than the 6*s.* rate, I mean?—Yes, we have done with the Great Northern Railway; they have met us where there was some steamer competition in regard to the rates to Drogheda, Dundalk, Newry, and Derry.

Temporary low rates for fertilisers granted by the railways where steamer competition exists.

21960. Is that the only company out of Dublin that has met you with special rates?—The Wicklow Railway Company has given us a concession for 2-ton lots to two ports.

21961. If they give you special rates, are those rates entered in their book, or have you to make a special arrangement with them each time?—We have to make a special arrangement each time.

Examined by Sir Herbert Jekyll.

21962. Are you familiar with the powers conferred upon the Board of Trade by Section 31 of the Railway and Canal Traffic Act, 1888, the clause which is commonly called the "Conciliation Clause"?—Yes.

Suggested transfer of the powers of the Board of Trade under the Conciliation Clause of the Railway and Canal Traffic Act, 1888, to the Irish Board of Agriculture.

21963. Do you think it would be an advantage if the powers conferred by that clause were transferred from the Board of Trade to the Board of Agriculture in respect to complaints arising in Ireland?—I think it would be, undoubtedly; because the Board of Agriculture in Dublin is more intimately acquainted with the circumstances.

21964. So that you would favour a transfer of that kind if it could be effected?—I would.

Examined by Colonel Hutcheson Poë.

21965. Do I correctly understand you to say that you do not complain of the minimum rates, for instance, this Killucan rate of 5*s.* 8*d.*?—I do not.

Reduction of the minimum quantity restriction on the low special rates sought.

21966. You would be satisfied if you had the advantage of this minimum rate for a smaller consignment?—I would.

21967. That is your point?—Yes.

21968. And do I correctly understand you to say that the local rate from Dublin to Killucan is 6*s.* 11*d.*?—The rate from Dublin to Killucan for under 2 tons is 6*s.* 11*d.*

21969. But if you were able to get it carried at a rate of 5*s.* 8*d.*, that would meet your point, would it?—It would.

Examined by Mr. Acworth.

The powers of the Irish Board of Agriculture to cite railway companies before the Railway and Canal Commissioners.

21970. Just arising out of the question Sir Herbert Jekyll has put to you, you know that the Board of Agriculture has power, and has exercised it, to act as prosecutors?—Yes.

21971. I dare say you know of the case where they brought an action against the Great Southern before the Railway Commissioners?—Yes.

21972. When you said that you would be quite ready that they should act as arbitrators, had you in your mind that they have also power to act as prosecutors?—No, I had not.

21973. You would not yourself like to go before an arbitrator who was also a prosecutor, would you?—No, I should not.

21974. You give a number of instances here, where you say you cannot send by railway the cake to the various ports unless you send it in 6-ton lots. As I understand, you say 6-ton lots are too big, and that the farmers will not take them?—That is so.

The equity of the rates for feeding-cake in Ireland generally.

21975. And, on the other hand, unless you send in 6-ton lots, the rates are so high that you cannot afford to pay them?—Exactly.

21976. And therefore you send by steamer?—Yes, where possible.

21977. You would not say that 10*s.* for 164 miles was high, would you?—No, I should not.

21978. Feeding-cake is pretty valuable stuff, is it not?—Ten shillings would be more than 5 per cent. on the value.

21979. Yes, I daresay it might be?—About 6¼ per cent.

21980. What is cake worth now?—About £8.

21981. But you would not call that a high rate, would you?—I would not, provided I could not get a lower one by any other route.

21982. But the point is, of course, that steamers are cheaper. I suppose that if you were sending to an inland point, for instance, to Mallow, the rate would not be as low as 10*s.*, would it?—I will tell you that rate in a moment.

21983. Or tell me with regard to any point, it does not matter about Mallow in particular?—From Dublin to Mallow for six-ton lots the rate is 11*s.* 9*d.*

21984. And it is cheaper to Cork, is it not, though Cork is twenty-five miles further?—Yes.

21985. You would not say that even the Mallow rate was an unreasonable rate, would you?—No.

21986. So that your complaint really is that the railways, although they do quote lower rates to seaports, are still not able to get under the steamer rates?—Well, I do not see why the railways in Ireland should not take two-tons at the minimum rate, the same as in England.

21987. I quite follow that point; that is a very good point, and I have no doubt the railway companies will consider it, and that, if they cannot see their way to do it, they will at least explain why they cannot?—I believe it would lead to a large expansion of trade.

21988. Your point is, that it clearly does not seem to be fair that a man in Liverpool can get a two-ton rate and you can only get a six-ton rate. That is quite plain, and I see that point; but the other point was a different one. Now about the classification question; basic slag is in class B, is it not?—Yes.

21989. That is in by Act of Parliament, and the railway companies cannot put it out?—But they can charge the maximum in class B and the minimum in class C.

21990. You have said that basic slag represents only about 14,000 tons as against 120,000 tons?—Yes.

21991. Would you agree that it would not be quite fair to the railway company, supposing they could not put up the 14,000 tons, to expect them to bring the whole 120,000 tons down; that would be a tremendous loss to the railway company, would it not?—I am not suggesting that. I think, if the minimum in class C were charged for fertilisers, that is all we could ask; and I think that would lead to larger business.

21992. Would you think it fair to treat nitrate in that way—nitrate is worth more than basic slag, is it not?—It is.

21993. What you want is, to get superphosphate treated something like basic slag?—Yes.

21994. Though you do know that it is only of recent years that the prices have got to be about the same?—Yes.

21995. As to the "feeding-meal" rate, do you know anything about whether the traffic also goes by Waterford?—Yes, I daresay that is by Waterford.

21996. I expect that is the explanation, is it not—that it is based on the old Limerick and Waterford rate?

Mr. Croker Barrington, Solr.—Yes, that is it.

21997. *Mr. Acworth.*—It probably came in originally as a rebate. Now, just one other thing. You said that you did not think it was fair that the railways from Dublin to, say, Limerick or Galway should carry stuff from Liverpool through Dublin for less than they charge from Dublin to Galway. That is what I understood you to say?—That they should charge the Liverpool man the same rate as the Dublin man.

21998. What you said was this: that it was not fair that the railways should take a less amount out of the through rate than they took from the local rate?—Exactly.

21999. That is from the one point of view. Now look at it from the other point of view; that there is a through steamer from, for instance, Liverpool to Galway, a steamer that goes round?—There is.

22000. Supposing the railway company insisted upon their full rate from Dublin, would they ever get a pennyworth of traffic; would it not all go by steamer?—That is possible; but it would shut out the Dublin producer.

22001. You agree probably that it would in that event be all sent by steamer?—Yes.

22002. What harm does it do you that they get some traffic over the route by charging a lower rate?—Why not give us the same opportunity?

Mr. William T. Watson, Representative of the Dublin Mercantile Association.

22003. That is another matter. The point is, would you be benefited if the railway company gave up that particular traffic?—No, we would not be benefited.

22004. Is it not a benefit to the railway company to be able to get some profit out of the Liverpool man?—Yes.

22005. Does not the fact of their getting that profit enable them to afford to get a little less out of you?—Your argument comes to this; that under existing circumstances the stuff would be most likely shipped from Liverpool by sea; and the consequence would be that a man at, say, Athenry would have his stuff brought from Galway; and the railway company would get only a short mileage; whereas, by getting it through Dublin the railway company would get a long mileage.

22006. I was trying to get at whether you thought it would do you any good if they insisted on getting the full local rate from Dublin to Galway?—They would be sure of getting the traffic if they made their rate from Dublin suitable.

22007. Do you think they could afford to put down all the rates from Dublin?—They can afford to take a lower rate apparently on the through traffic.

22008. But can they afford to take a low rate on all through traffic?—Our point is, that by giving a low rate to Liverpool producers the producer in Dublin is prejudiced.

22009. But does it hurt you if they take the traffic at the lower rate when your rival can get a lower sea rate any way, whether the railways take it at that lower rate or not?—It hurts us in this way: that it prevents us competing.

22010. *Colonel Hutcheson Poë.*—I think your point is, that it does not affect you in the case of the port being near, as is the case with Galway in this particular instance; but if you are half-way between Dublin and Galway, it makes a great difference, because you have no sea competition. If you are close to a sea port, it naturally does not affect you, but with regard to the intermediate places, it affects you very much?—It does, but the through rates I complain of are to inland points and not affected by sea rates to our ports.

22011. *Chairman.*—The traffic carried from Galway by steamer is not from Galway alone; it has to go inland, and thus it competes with you?—It is an advantage to give Dublin producers a low rate, because the railway company gets a longer mileage.

Mr. Croker Barrington, Solicitor.—If Ireland was not an island it would solve most of these questions.

Colonel Hutcheson Poë.—And a great many others, too, Mr. Barrington.

Mr. J. Clarke examined by the Chairman.

Mr. J. Clarke, Secretary, and Representative of the Mayo County Council.

22012. Mr. Clarke, you are a member of the Mayo County Council, are you not?—I am Secretary of the County Council.

22013. And you have been authorised on behalf of the County Council to appear before us?—Yes.

22014. Have the Council at any time given their consideration to the question of the purchase of the Irish railways?—Yes; various resolutions have come from other County Councils to the Mayo County Council, and they have adopted them.

22015. Have they passed any resolutions on the subject?—They have. They have agreed that the railways should be purchased, not by the State but by the General Council of County Councils, pledged on the rates of Ireland.

22016. They passed a resolution in favour of the railways being handed over to some Irish body?—Exactly.

22017. I suppose that is in accordance with the resolution of the General Council of County Councils?—Yes.

22018. And has your Council agreed with the resolution that was passed by the General Council?—They have.

22019. Is there much difference of opinion upon your Council upon the subject?—None whatever.

22020. Then I may take it that so far as the County of Mayo is concerned the County Council are unanimous in favour of the railways being handed over to an Irish body?—Exactly.

22021. What special reasons have you in Mayo that induce the Council to adopt that course?—They think that by having it handed over to a popular body fares would be much cheaper, and things would go a lot better than they do at present.

22022. Have the County Council of Mayo any obligations in connection with guaranteed railways?—Yes; we have a great deal. If you go on with the evidence, you will find that we have considerable obligations.

22023. What is the total amount the County Council have had to pay on guaranteed railways?—They have paid up to the present over £30,000.

22024. Do you know how that amount has been made up?—I do. I have the statistics here, if you would care to go into them.

22025. I think you had better tell us how that amount has been made up?—It is in my proof of evidence.

22026. I suppose that is under the Light Railways Act; to what particular railways do you refer?—I refer to three—the Ballinrobe and Claremorris Railway is one, the Claremorris and Swinford Railway is another, and the third is the Athenry and Tuam extension to Claremorris, but with that we do not deal at present.

22027. Taking the other two you have mentioned, what is the amount that has had to be contributed by the Council?—Some £1,200 a year has to be paid by the County Council on the Ballinrobe and Claremorris Railway.

22028. What is the length of that line?—About twelve miles.

22029. That amount is spread over the whole union?—Over the barony of Kilmaine and the parish of Ballyovey, which is practically the whole union of Ballinrobe.

Amount of baronial guarantees paid in respect of the Ballinrobe and Claremorris, and the Claremorris and Swinford railways.

22030. How long has that payment been going on?—Since the 10th of March, 1892.

22031. Could you tell us what rate in £ that is for the parish?—Something like 6*d.* in £ it would work out at.

22032. I am taking it for the last eight years, and you say that the ratepayers have had to pay about 6*d.* in the £ as their guarantee for this particular railway?—Yes.

22033. And that is going on now?—No; it is less.

Colonel Hutcheson Poë.—It is really 5*d.* in the £.

Chairman.—I am taking the average.

Colonel Hutcheson Poë.—For the last five years it is 5*d.*

22034. *Chairman.*—It is now 5*d.*, but the average for the eight years is about 6*d.*?—Yes. It has come down.

22035. The other railway was the Claremorris and Swinford line?—Yes.

22036. What is the length of that line?—I could not say.

Colonel Hutcheson Poë.—It is 17½ miles.

22037. *Chairman.*—What has been the payment for that railway?—That would be about 1½*d.* in the £ on the guaranteeing area. But what is the total amount paid?——.

Colonel Hutcheson Poë.—They paid, as a matter of fact, £350 for the last five years.

22038. *Chairman.*—Let us take the total amount paid on the Claremorris and Swinford line for eight years. What is the total amount that the barony has had to pay: is it £3,052?—Yes, that would be the amount.

22039. What is the amount on the Athenry and Tuam Extension?—We are not dealing with that case. That passed out of our hands in 1902.

22040. Who work this light railway?—The Athenry and Tuam Extension is now worked by the Great Southern.

The working companies concerned.

22041. Who works the Ballinrobe and Claremorris line?—That is worked by the Midland.

22042. What is the guarantee that the barony has to pay upon that?—About £1,200 a year, roughly speaking.

I have in your proof £1,700 half-yearly?——

Colonel Hutcheson Poë.—That is a mistake. They only pay £1,140 or about £1,200 a year.

22043. *Chairman.*—The Midland Company work that line, do they not?—Yes.

June 11, 1907.

Mr. J. Clarke, Secretary, and Representative of the Mayo County Council.

22044. What is the agreement for working it—do they work it on a percentage of the receipts?—They retain fifty per cent. of the receipts and credit is given for the other fifty per cent. to go to the reduction of the interest, and this usually leaves a deficit of about £1,200 half-yearly.

22045. About £2,400 a year?—Something like that.

22046. *Colonel Hutcheson Poë.*—That is wrong for the last five years?—It is a little lower.

Ballinrobe and Claremorris line worked under agreement at 50 per cent. of receipts.

22047. For the last five years it is just one-half. The barony has only been called upon to pay £1,141.

22048. *Chairman.*—Because one-half of it has been refunded by the Board of Works?—Yes.

22049. *Colonel Hutcheson Poë.*—But there has been a large profit on that section of the line?—You will see in this return that there has been a large profit on that portion of the line.

The Secretary.—The annual baronial contribution was £1,141 for the five years ending 1905.

The annual baronial and Treasury contributions for five years ending 1905.

Colonel Hutcheson Poë.—And the Treasury contribution is the same?

Secretary.—Yes, £1,141.

22050. *Chairman.*—Up to the year 1892 the Athenry and Tuam Railway was guaranteed by the county, was it not?—Yes.

22051. And what alteration has been made?—In the year 1902 the Great Southern line applied for, and was granted, running powers over the Athenry and Tuam Extension to Claremorris line, and since that year the area of charge has been relieved of the guarantee, the Board of Works paying half the cost as in the other lines, and the Great Southern paying the other half.

Baronial guarantee for the Athenry and Tuam railway taken over by the G. S. & W. Company in 1902.

22052. Since the first guarantee was paid, up to October, 1906, how much has been paid by that district in respect of the three railways?—There were £30,005 in respect of the three.

22053. When was this agreement made by the Waterford and Limerick Railway Company to take over the extension from Claremorris to Swinford?—You mean the Athenry and Tuam Extension?

22054. The extension from Claremorris to Swinford; that is in 1891, is it not?—Yes. That is the original presentment.

22055. The Waterford and Limerick Railway Company took that over for a term of years, did they not?—Yes.

22056. For how many years?—It does not state how many.

The agreement under which the late W. & L. Railway Company undertook to work the Claremorris and Swinford line.

22057. They took the line over to work and maintain the line for a period. Was the period fixed?—No. It is an agreed term to maintain the line for a period of fifty years, retaining the gross receipts up to £4 per mile per week as working expenses, and if the gross receipts exceed £4 per mile per week, then one-half of the excess should go to the guaranteeing area, and one-half to the Waterford and Limerick Railway Company, provided, however, that under no circumstances should the guaranteeing area receive less than £400 per half-year.

22058. What has been the result of that arrangement? Can you tell us the gross receipts?—The gross receipts shown amount to £2,965 18*s.*

22059. For what period is that? You say the gross receipts shown amount to £2,965; for what period?—This is the report from the auditor of the railways; that would be for a year.

22060. And the working expenses were fixed at £4 per mile per week?—And they amounted to £1,840.

22061. What was the balance left?—£1,125 18*s.* as excess, one-half of which, £562 19*s.*, together with £1,840 working expenses, make the expenditure £2,402 19*s.*, leaving the other half of excess, £562 19*s.*, to credit of net revenue account, which, deducted from the £800 guaranteed dividend for the half-year, leaves the deficiency £237 1*s.*, which is payable by the guaranteeing area.

Amount paid by the guaranteeing area in respect of Claremorris and Swinford line.

22062. Then £237 is paid by the guaranteeing area?—Yes.

22063. What does the guaranteeing area of the County of Mayo consist of?—It consists of the entire barony of Gallen, that portion of the barony of Costello, consisting of the parishes of Kilmovee, Kilbeagh, Knock, and Aghamore, and also that part of the barony of Clanmorris, consisting of the parish of Kilcolman, all of which have guaranteed payment of four per cent. per annum on £40,000, namely, £1,600 a year. The half-year's interest amounts to £800, and, taking credit from the sum available for net revenue, leaves a deficit which is met by 1½*d.* in the £ to be contributed by the guaranteeing area.

Baronies, &c., comprised in the guaranteeing area.

22064. That is what you explained at the beginning of your evidence?—Yes.

22065. Does your Council consider that if the railways were purchased and put under the control of an elected body this amount would be saved?—They do. I think I allude to that later on in my proof. It has been estimated that it would require about £40,000,000 to purchase all the Irish railways, and this, at 3½ per cent., would amount to £1,400,000 a year.

22066. Your Council is of opinion, speaking generally, that by what I may call the unification of the railways, under one management and one system, a considerable amount would be saved in working expenses?—Yes.

22067. Have you any direct knowledge of the railway rates in operation for goods traffic?—No, I have not.

22068. Then I do not think it would be fair to ask you about them?—I think you are alluding to the carriage of a ladder, are you not?

22069. I do not think it is worth while going into that, because that is a special article that probably required two or three trucks?—Yes, but it appears so extraordinary that for a £3 article you should have to pay £4 3*s.* 6*d.* carriage. But probably there may be reasons.

22070. There are reasons, no doubt?—Of course, I know nothing about that.

22071. I do not think I need refer to that?—I do not suppose you will compare the rates in Canada.

22072. Do you know anything about the rates in Canada?—I happened to be in Canada.

22073. What is the point you wish to raise upon that?—From Peterborough to Montreal, a distance of 263 miles, the carriage of a canoe only cost 13*s.*, while from Sligo to Kiltimagh, a distance of forty-three miles, it cost 13*s.* 6*d.*

22074. You merely mention that as an instance where a little canoe was carried a long distance?—As showing that it actually cost less from Peterborough to Montreal, a distance of 263 miles, than from Sligo to Kiltimagh, a distance of forty-three miles. The difference in rates is what I am referring to.

22075. In Canada, for a long distance, the carriage was less than for a short distance in Ireland?—Yes.

22076. Surely that is not a staple industry of the country?—No, it is simply to show that if we had only one line managed by popular control and a fixed price, we would have to pay much less than we are paying at present.

22077. Of course, that is quite an exceptional thing. Now, let us deal more generally with the rates. You frankly state that you have no personal knowledge of the rates for goods traffic, or mineral traffic, or agricultural traffic in Ireland?—That is so.

22078. You do not know whether the rates are fair or reasonable?—I have stated some cases.

22079. The two extreme cases you give are those of a long ladder which would require three or four trucks, and a small canoe coming from Canada. Surely neither of those articles can be considered a staple industry of the country, can it?—I know that if we got the ladder made in Scotland we could get it sent to Westport by water and get it taken over for 10*s.*

22080. You do not suggest that the railway company should carry at a loss?—No, I do not in the least.

22081. If a ladder occupies two or three trucks, the railway company were justified in charging for it accordingly; there was nothing unreasonable in that, was there?—Except that they said it was £4 3*s.* 6*d.* in the first instance, and we eventually got it for £1 7*s.* 10*d.*

22082. With regard to passenger fares, you know more about passenger traffic and passenger rates than goods rates?—Yes.

22083. What do you say on behalf of your Council in reference to third-class traffic in Ireland?—That it should be very much improved.

22084. You mean the accommodation?—Yes.

22085. Are you alluding to the main line or to branch lines?—Taking the main line as far as Athlone from Castlebar, the accommodation is very bad; after that it is very much improved.

22086. What do you mean by very bad?—I allude to it in my evidence. The seats and the floor are solid hard wood.

22087. What would you have for the floor?—I would have a little matting.

22088. For third-class passengers?—Yes. You have it in the English third-class carriages.

22089. Not any of them, I think, or in very few. I confess I do not often go in one, but I do not remember ever seeing a mat in a third-class carriage on an English railway anywhere?—I think, with all due respect, that there is.

22090. I admit that they have cushioned seats now. At any rate, from what I have seen of Irish railways I may say that the main line accommodation seems to me to be almost equal to the best accommodation in England?—For third-class passengers—I do not know whether you have been down west.

22091. I have not been west lately, I admit. At any rate, I suppose, for the main line traffic of Ireland the rolling stock is practically the same as is used in England?—Yes, practically the same.

22092. Then, really what you refer to more are the branch lines?—It would not be a branch line from Athlone to Castlebar.

22093. No. Is the rolling stock different there from what it is on the main lines? Is it very much different from Castlebar to Athlone than it is from Athlone to Dublin?—Yes, very much different.

22094. Let us see what you have to say with reference to these little railways—the Ballinrobe and Claremorris Railway. Can you tell us the number of passengers that travel first, second, and third-class on that railway?—Yes; first-class passengers, 10,610; second-class, 4,902; third-class, 172,435

22095. For what period is that?—I am taking that for a period of seven years.

22096. That is the total number in seven years?—Yes. For seven years, ending October 31st, 1906.

22097. If you divide that total by seven, it brings the passenger traffic down to a miserably small figure?—It is very small.

22098. *Colonel Hutcheson Poë.*—The third-class passengers were about 25,000 in the year, first-class passengers about 1,500, and second-class passengers about 700.

22099. *Chairman.*—Yes; that is practically nothing. Do you mean to say that if you got your soft seats and matted floors on this particular branch railway more passengers would travel?—I do not think more passengers would travel, but that more would travel at a cheaper rate.

22100. More would travel at a cheaper rate?—Yes.

22101. You would attach more importance to the cheaper fare than to the cushioned seats and so on?—Yes, but I would have both.

22102. Do you know what the fare is per mile?—I think about 1½*d.* a mile.

22103. Third-class?—Yes.

22104. I think not?—1¼*d.*, I think.

Mr. Balfour Browne, K.C.—No; a penny.

22105. *Chairman.*—I see you admit here that on the Great Southern line the carriages are in every way comfortable and convenient—corridor carriages and almost every facility given as given on the English railways?—Yes.

22106. That is what I meant when I said that the main line rolling stock is equal to the rolling stock in England?—I was talking about the Midland.

22107. You mean that the Midland is not up to the standard of the Great Southern?—No; I do not think so.

22108. What do you say with reference to facilities at Clara Junction?—What I meant by that, is that when one railway company embarrasses the other, it is carrying out my argument that there should be only one company all over Ireland at a fixed rate.

22109. Clara Junction Station, I suppose, is used by two railway companies?—It is.

22110. Which are the two?—The Great Southern and the Midland.

22111. Do they both use the same platform?—No, there is a different platform for each.

22112. Do you complain that when passengers get out of the Midland train and want to go to the Great Southern train the porters will not carry their luggage?—Exactly.

22113 Do you know that from your own knowledge?—Yes. But it is about five years ago since I travelled on that line.

Mr. Balfour Browne, K.C.—It is five years since you travelled on the line.

Mr. Neale (*Manager, G. S. & W. Ry.*)—There is an exchange platform.

Lord Pirrie.—You have to go from another platform, have you not? You have not to go over a bridge, I think, but along the same platform.

Chairman.—Have you to go over a bridge?

Mr. Neale.—You have only to carry the luggage up a little bit from one train to another at the same platform.

22114. *Chairman.*—The train comes up to one side of the platform, and the passengers walk to the other side for the other train, but all on the same platform. (*To Witness*).—Your Council appear to make some grievance of this; what is the grievance?—The grievance was that the two companies did not appear to work in harmony.

22115. How do you know that?—Because you could not get a porter to carry your luggage down to the other train.

22116. *Lord Pirrie.*—Do you mean that the porter of one company would not take your luggage down to another train?—Exactly.

22117. *Chairman.*—But it is on the same platform?—There is a distance of about the length of the train for the luggage to be carried.

22118. Then the Athenry and Tuam Extension to Claremorris Railway, I suppose that must be managed well, because I see they have nine directors of that railway; what do you say about that?—We are not dealing with that now, because that has passed away from us. I only brought it in to show how much the County of Mayo had to pay for guarantee. *Personnel* and functions of the Directorate of the Athenry and Tuam line.

22119. That is done with now?—Yes.

22120. You have had under consideration in your Council the question of directors not living in the neighbourhood and not being thoroughly identified with the districts served by the railway?—Yes.

22121. And you think that all that would be remedied if the railways were handed over to one body in Ireland?—Yes.

22122. Surely some of these directors must be members of your Council?—None of them are.

22123. *Mr. Balfour Browne*, K.C.—Four of them are Baronial Directors—Lord Oranmore and Browne, Col. Morris Blake, Mr. Denis, and Lieut.-Col. Saunders?—There are none of them members of the County Council.

22124. *Chairman.*—But they are Baronial Directors?—Yes.

22125. And they are ratepayers in the district?—Yes.

22126. And they have to pay this rate?—Yes, their portion.

Colonel Hutcheson Poë.—The only function of these directors under the Amalgamation Act is to pay the dividends?

Mr. Balfour Browne, K.C.—That is so. On the amalgamation we wanted to get rid of them altogether and to purchase, but we could not, so we arranged a perpetual rent, and these directors only pay over the rent.

Examined by Colonel HUTCHESON POË.

22127. Do I understand that you rather complain of the high rates which you have to pay on account of the railway extensions in County Mayo?—Yes.

22128. Do you know that the County Mayo pays less in respect of light railways under different Acts than any other county in Ireland with the exceptions of Sligo and Cavan, in the North. Every other county that has had the benefit of the Light Railways Act pays considerably more. The poundage in the whole County of Mayo in respect of one of these extensions is 5*d.*, and in respect of another 1¼*d.*, and your liabilities in respect of these two railways are something like £3,000 a year, I think?—Yes, something like that. Comparatively favourable position of Mayo with other counties as regards liability for railway guarantees.

22129. But owing to the profit at which they are worked you are only called upon to pay one-half?—Yes.

22130. And in addition to that you have had the benefit of getting grants of money to the amount of £250,000 in respect of the Ballina and Killala line, the Westport-Malranny line, and the Achill extension?—We have.

22131. Those are all in County Mayo?—Yes.

22132 I should have thought that from the point of view of the County of Mayo ratepayer he is greatly

June 11, 1907.

Mr. J. Clarke, Secretary, and Representative of the Mayo County Council.

benefited from grants of £250,000, especially when he has only to pay Baronial contributions to the extent of about 5*d.* in some baronies and in others of only 1½*d.*?—Yes.

22123. So that compared with the rest of Ireland he is very favourably situated. Is not that so?—As regards the figures of the passenger traffic, the bulk of the traffic is third-class—25,000 passengers a year?—Yes.

Reduction of second-class fares as a means of increasing passenger traffic recommended.

22134. Would your opinion be that if the second-class fares were lowered—there are only a fraction over 1,000 a year at present—any considerable number of passengers who now go third, and have to put up with the inconvenience of which you have spoken, would go in the higher class?—Certainly.

22135. You think they would?—Yes.

22136. It would be to the benefit of the travelling public and also indirectly to the benefit of the railway company if they lowered their second-class fares and gave the people an opportunity of getting better accommodation?—Yes; I believe it would.

22137. And I understand you to say that the want of harmony and co-operation which, in your opinion, is shown by the different railway companies in the matter of through connection, would probably cease to operate if the railways were unified and put under State control?—Yes.

22138. Have the County Council of Mayo, which you represent, considered the question of the acquisition of the railways by any other body apart from a national body, so to speak?—No.

22139. So that you cannot speak upon that point?—No.

22140. Of course, as you are aware, there is not much probability of our getting even the extended powers which we thought we were going to get?—No.

22141. So that there is not much probability of a national authority?—No, I fear.

22142. From your point of view, do you think it would be an improvement on the present system if the State acquired the railways?—I could not give an authoritative opinion.

State-ownership and control of Irish railways preferred to the continuance of present system.

22143. But I only want your own opinion?—No, I think it would be more popular if the General Council of County Councils had the control.

22144. I mean failing that; we cannot always get what we want in this world?—If we do not get that, I would prefer that the State acquired the railways.

22145. You would prefer that the State acquired the railways to the continuance of the present system?—Yes.

22146. In regard to the want of connection between Tuam and Castlebar, how long have you to wait at Claremorris? Supposing one of your County Councillors is coming up from Tuam and wants to get to your county town, Castlebar, to attend a meeting of the County Council; how long has he to wait at Claremorris?—That state of things is bettered.

22147. Then we need not follow that out?—No.

Cross-examined by Mr. Balfour Browne, K.C.

22148. With regard to this want of harmony, I see that our train arrives from Kingsbridge at Clara at 11.8 and stops at the Midland Railway platform at Clara. The train of the Midland, I find from their time table, goes on at 11.35. There is no want of harmony there, is there; that is pretty good, is it not?—I do not mean as regards the time.

22149. Then what do you mean?—I mean as regards the porters and officials.

22150. Are you sure you ever put your hand in the mouth of your pocket? Then, with regard to this little Ballinrobe and Claremorris line, do you know that its earning receipts are less than £5 per mile per week?—No; I'm sure I put my hand further down.

22151. Do you know that the Midland Great Western are working it for 50 per cent. of the receipts?—I know that.

22152. And that it will cost at least £6 a week?—I could not tell you that.

22153. You cannot expect much under those circumstances?—No; if such is the case.

Colonel Hutcheson Poë.—There is a very good profit on that section of the line.

Mr. Balfour Browne, K.C.—Which?

Colonel Hutcheson Poë.—The Ballinrobe and Claremorris there is a large profit on that line.

Mr. Balfour Browne, K.C.—It is a profit because the Midland work it at 50 per cent. of the receipts.

Colonel Hutcheson Poë.—That is it, is it?

Mr. Balfour Browne, K.C.—Yes, it is paid out of the pocket of the Midland Company. It is a profit out of loss, so to speak. It does not nearly pay.

The Commission adjourned till the following morning at 11.15 *o'clock.*

THIRTY-NINTH PUBLIC SITTING.—WEDNESDAY, JUNE 12TH, 1907.

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners present:—Sir CHARLES SCOTTER, Chairman; Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel WILLIAM HUTCHESON POË, C.B.; and Mr. W. M. ACWORTH;

Mr. GEORGE E. SHANAHAN (Secretary).

Sir Herbert Jekyll.—I ask your permission, Mr. Chairman, to put in a Memorandum which has been prepared by the Board of Trade on the inspection of the Tralee and Dingle Railway. Some remarks were made during the examination of Mr. O'Donnell the other day, and he quoted Mr. Justice O'Brien, who made certain observations on the subject to the Grand Jury. I feel there was some misapprehension in the mind of the judge, and it perhaps is best that the matter should be settled and explained. This Memorandum explains the whole subject.

Chairman.—I do not see the slightest objection to that explanation being printed as part of the proceedings, and I think, as a matter of courtesy, if you do not mind, we will send a copy of it to Mr. O'Donnell.

Sir Herbert Jekyll.—Certainly.

The Memorandum was handed in, and is as follows:—

June 12, 1907. Memorandum handed in on behalf of the Board of Trade as to the opening of the Tralee and Dingle Railway.

TRALEE AND DINGLE LIGHT RAILWAY.

This line was authorised by Orders in Council of the Lord Lieutenant of 1888 and 1889 under the Tramways (Ireland) Acts.

It is on a three-feet gauge and its total length is about thirty-seven miles. For a considerable portion of the route it is laid along the side of the public road.

The construction of the line as described in the Orders was, as stated in the preamble thereto, approved in 1884 and 1889 by the Grand Jury of County Kerry and the Tralee Town Commissioners, who had before them the deposited plans and sections, as well as reports by the County Surveyor and the Irish Commissioners of Public Works.

A history of the railway is given on page 1 and the above-mentioned reports on pages 10-12 of the Report on the Accident at Camp in 1893 (*copy herewith*). The Commissioners' report stated, *inter alia*, as follows:—

"Now, we, in pursuance of the Acts hereinbefore "mentioned, do report that, as regards the merits of "the undertaking in an engineering point of view, "the proposed Tralee and Dingle Light Railway "and Tramway can be efficiently constructed and "worked in accordance with the plans and sections "deposited with us."

No approval of the plans, etc., was given or required by the Board of Trade, and it was not until October, 1888, that a plan and map were lodged with the Department in compliance with Section 52 of the Order of that year.

For the curves, gradients, and other features of the undertaking, therefore, the Board of Trade are in no way responsible, and the inspection of the line on the Board's behalf upon the completion of the works was made in pursuance of the Regulations of Railways Act, 1842, which is applicable to Light Railways constructed under the Tramways (Ireland) Acts.

The material sections of the Act of 1842 are given on page 12 of the Camp Accident Report. Their general effect is to enable the Board of Trade to postpone the opening of a line for passenger traffic when they or their inspecting officer are of opinion that such opening would be attended with danger to the public using the railway either by reason of the *incompleteness* of the works or the insufficiency of the establishment for working the line (see Section 6). No power is given to the Department to postpone the opening because authorised curves may be sharp or gradients severe.

In the case of the Tralee and Dingle Light Railway the line was notified as ready for inspection in December, 1890, and was accordingly inspected by Major-General Hutchinson, who made a report enumerating various requirements and expressing the opinion that the line could not be opened without danger to the public owing to the incompleteness of the works.

The opening was therefore formally postponed by the Board from time to time in accordance with the Act of 1842, until, after a re-inspection of the line in March, 1891, it was allowed to be opened, subject to compliance with certain requirements and specified restrictions of speed.

The requirements were afterwards complied with, and the restrictions of speed were embodied in a code of working regulations issued by the Board of Trade on the 13th May, 1891. These restrictions are given on page 4 of the Camp Accident Report.

Both the late Sir Francis Marindin in his report on the Camp Accident (p. 9) and Major Pringle in his report on the recent accident near Lispole Viaduct (see p. 7 of print attached) urge the desirability of improvement of the curves and gradients on the line, but the Board of Trade have no powers in the matter, and the question of giving further financial assistance for such a purpose is entirely one for the Treasury and the Irish Commissioners of Public Works.

It is understood, however, that the Irish Government have decided to give such assistance (see concluding paragraph of the attached report on the Lispole accident).

Alderman HENRY DALE, J.P., examined by the CHAIRMAN.

22154. You are a Justice of the Peace?—Yes.

22155. And I think you appear before us on behalf of the Cork Incorporated Chamber of Commerce and Shipping?—Yes.

22156. Your Chamber has had the question of railway rates and facilities under consideration?—Yes.

22157. And you are generally acquainted with the views of the Chamber?—Yes.

22158. Do you consider that with regard to the rates generally in Ireland—I will speak of goods rates first—there are inequalities which are prejudicial to the interests of the country?—We consider there are.

22159. And do you think that if those inequalities were done away with there would be some expansion of traffic on the Irish railways?—That is our opinion.

22160. We had the evidence of Mr. Green—I

Alderman Henry Dale, J.P., Representative of the Cork Incorporated Chamber of Commerce and Shipping.

Alleged inequalities in goods rates prejudicial to the interests of the country.

June 12, 1906.

Alderman Henry Dale, J.P., Representative of the Cork Incorporated Chamber of Commerce and Shipping.

think he is President of your Chamber?—He is the President—yes.

22161. And I think he gave us some evidence with reference to the disproportion between through and local rates in favour of through rates?—Yes.

22162. Do you remember the evidence he gave on that subject?—Yes, I do, generally.

22163. And you agree with him?—I do.

Alleged disproportion between through and local rates.

22164. Then I do not think it necessary to go through that portion of the evidence again. Now, as far as Cork is concerned, have you any reason to believe that Cork is treated by the railway companies, as compared with other places, in an unfair manner?—Yes; I may say I have some instances here which we were specially requested by the members of our Chamber to bring forward.

Complaint on behalf of Cork brewers of unfair treatment as to rates compared with Dublin brewers.

22165. Take some particular industry—what industry would you like to refer to?—The first one I have in my notes is brewing, which is a very important industry in Cork. The brewers have given us some instances here in which they consider that they were unfairly treated as compared with the Dublin brewers. I have here some rates to certain towns in the South of Ireland from Dublin and from Cork. Sometime ago, before the amalgamation took place of the Waterford and Limerick with the Great Southern and Western, and before the Rosslare Company's Bill became law, certain concessions or reductions were made in favour of places in Kerry, which were not made to the same extent (or, in many instances, to any extent) with respect to Cork.

22166. That is to say, reductions were made in the rates from Dublin?—From Dublin to towns in Kerry, and no proportionate reductions, and in many cases no reductions, were made in similar rates from Cork to these towns. Shall I mention one or two?

22167. If you please?—The first one I have here is Tralee. The rates for ale and porter in casks from Dublin to Tralee were formerly as follows: For six-ton lots, 15*s.* per ton; smaller quantities, 17*s.* 6*d.* per ton. These rates were reduced at the time I mention——

22168. *Mr. Acworth.*—Would you mention when the amalgamation you referred to just now came into operation?—In 1901.

Mr. Croker Barrington, Solr.—It came into operation on the 1st January, 1901.

The rates for porter—Dublin and Tralee and Cork and Tralee.

22169. *Mr. Acworth.*—That is what I thought?—Before this amalgamation these rates were reduced to:—For six-ton lots, from 15*s.* per ton to 9*s.*; for smaller quantities from Dublin to Tralee, from 17*s.* 6*d.* per ton to 12*s.* 6*d.*

22170. *Chairman.*—Just for information, while you are on those rates, have you got the distance from Dublin to Tralee?—Yes, I have.

22171. Will you just give it, to get it on the notes?—The distance from Dublin to Tralee is 205 miles; from Cork to Tralee, 82 miles.

22172. You have not given us the Cork to Tralee rates; would you kindly give us those?—From Cork to Tralee the former rate was 10*s.* 10*d.* per ton for any quantity. For three-ton lots this was reduced to 7*s.* 6*d.*, but for smaller quantities the 10*s.* 10*d.* remained as it had been before.

22173. And that is the rate to-day?—That is the rate to-day.

22174. Then, it is 10*s.* 10*d.* for small quantities for eighty-two miles, and 12*s.* 6*d.* for small quantities for 205 miles?—Yes.

22175. What deduction do you draw from those figures?—Dublin got an advantage over Cork in getting greater concessions.

22176. Yes; I see there was a very large reduction in the Dublin to Tralee rates, and not a proportionate reduction in the other rates?—That is so in regard to the larger quantities, and there was no reduction whatever in the smaller quantities. Then Killarney is the next instance I have on my notes. From Dublin to Killarney is 184 miles; from Cork to Killarney is sixty-one miles. The previous rate for six-ton lots from Dublin to Killarney was 17*s.* 6*d.* a ton; the present rate from Dublin to Killarney for six-ton lots is 9*s.* per ton.

The rates for porter—Dublin and Killarney and Cork and Killarney.

22177. Give us the rates for smaller quantities?—The rates for smaller quantities were, previously—for three-ton lots, 18*s.* per ton, from Dublin; for smaller quantities, 20*s.* per ton, from Dublin.

22178. 18*s.*, did you say, for three-ton lots?—Yes.

22179. Three-ton lots, 18*s.*, and smaller quantities 20*s.*?—Yes; the small quantities now have been all reduced to 12*s.* 6*d.* per ton.

22180. Just give us the Cork rates in comparison?—The Cork rate formerly was 10*s.* per ton for any quantity. The present rates from Cork to Killarney are, for three-ton lots and upwards, 7*s.* 6*d.*; smaller quantities remain as before—10*s.* The wagon-load rate from Dublin has therefore been reduced by 3*s.*

22181. Then, for the smaller quantities the rate is 10*s.* per ton from Cork to Tralee—the same as from Dublin?—Killarney we are on now.

22182. I beg your pardon; I am speaking of Killarney. Is not that so—what is the present rate from Dublin?—12*s.* 6*d.* from Dublin.

22183. There is 2*s.* 6*d.* difference?—2*s.* 6*d.* difference.

22184. What about the wagon-load rate from Dublin?—The wagon-load rate from Dublin has been reduced by 9*s.* per ton.

22185. 8*s.*, is it not?—8*s.*—I beg your pardon—it has been reduced to 9*s.* per ton from 17*s.*, and the smaller quantities have been reduced by 7*s.* 6*d.*

22186. What has been the reduction in the Cork rate?—None on the smaller quantities.

22187. How much on the larger—2*s.* 6*d.*, is it not?—2*s.* 6*d.*

22188. Your contention is, I suppose, that the brewers in Cork are seriously prejudiced in consequence of this?—Well, they say it has seriously prejudiced their trade. Then, I have similar statistics with regard to Castleisland, which is somewhat the same, and Listowel. Listowel is perhaps the more striking instance.

22189. You had better give us the rates to Listowel?—Listowel is 173 miles from Dublin, and ninety-seven miles from Cork. The former rate from Dublin for any quantity to Listowel was 20*s.* 7*d.* per ton. That was reduced to 9*s.* per ton for six-ton lots, while Cork remains as before—15*s.* 1*d.* per ton.

22190. *Mr. Acworth.*—Cork has got no rate except 15*s.* 1*d.*?—None; there was no change made for Cork.

22191. *Chairman.*—And I suppose the traffic is sent from Dublin in such quantities that the senders can avail themselves of the 9*s.* rate?—Mainly, so I am told.

22192. That is to say it would be sent in six-ton lots?—Yes; principally so.

22193. Then, the Dublin rate has been reduced to 9*s.* per ton, but if you send to Listowel from Cork, your rate would be 15*s.* 1*d.*?—That is so.

22194. I do not know that it is necessary to go into all the other instances; I suppose you could name several others if we asked you?—I have several others in my notes.

22195. I do not think it is necessary to go into them?—There is one fact I was asked to mention, and that is, that in 1901 the Great Southern and Western Railway Company proposed, under the Railway and Canal Traffic Act to increase their rates to these places:—Tralee, Croom, Killarney, and Castleisland. They proposed to increase the rates again in the case of Tralee from 12*s.* 6*d.* to 17*s.* 6*d*; Listowel and Killarney they proposed to raise from 9*s.* to 15*s.*; Castleisland, from 12*s.* 6*d* to 17*s.* 6*d.* But their application was refused, I am informed. This is an extract from the *Irish Times* of the 21st December, 1901, containing a notice of their intended application to increase these rates again.

22196. But the application was declined?—Yes.

22197. *Mr. Acworth.*—It was an application to the Railway and Canal Commission?—Yes.

22198. *Chairman.*—You have dealt with ale and porter in casks?—Yes.

22199. Have you got any similar instances with reference to the trade in heavy drapery?—Yes; I have a number of instances here.

22200. Would you just pick out, so as to get them on the notes, two or three instances—you may make your own selection?—Yes; I have before me particulars of the inequality of rates with regard to distances For instance, from Cork to Kilkenny is 143 miles, and the charge per ton is 32*s.* 1*d.* From Cork to Bagnalstown, *via* Kilkenny, which is 157¾ miles, 14¾ miles further, the charge is but 25*s.* per ton.

22201. For the same quantity and under the same conditions?—For the same quantity, the rate for the greater distance is 7*s.* 1*d.* per ton less.

22202. You may give us two or three other illustrations, if you please?—I have just marked a couple that seemed to me to be the most striking. There is,

for example, Cork to Portarlington, which is 123½ miles—29*s.* 8*d.* per ton; Cork to Tullamore, *via* Portarlington, being sixteen miles further off, is but 25*s.* per ton. So that for a journey sixteen miles longer 4*s.* 8*d.* less per ton is charged. The Great Southern and Western, I am advised, have refused to give Cork the benefit of the special rates in existence from Cork to Dublin, or Athlone, to stations beyond these points. For instance, the rate from Cork to Dublin is 25*s.* per ton.

22203. For what?—Drapery goods—25*s.* per ton to Dublin. From Dublin to Drogheda, including cartage across Dublin, the rate, as quoted by the Great Northern Railway, is 11*s.* 8*d.* per ton. The total of these two local rates from Cork to Dublin and Dublin to Drogheda makes 36*s.* 8*d.* per ton; but the through rate from Cork to Drogheda is 44*s.* 1*d.* That is 7*s.* 5*d.* per ton more than the sum of the two local rates. Similarly Cork to Athlone is 25*s.* per ton.

22204. What is the distance?—I have not got the distance of that.

22205. I have it—it is 162½ miles?—From Athlone to Ballinasloe, the rate is 8*s.* 1*d.*—making 33*s.* 1*d.* as the sum of the two local rates (you have not got that on my notes); and the through rate charged from Cork to Ballinasloe is 34*s.* 5*d.*—that is 1*s.* 4*d.* more than the sum of the two local rates. There is the same thing with regard to Athlone and Roscommon. Cork to Athlone is 25*s.*; Athlone to Roscommon is 9*s.* 4*d.*; that makes 34*s.* 4*d.* as the sum of the two local rates, but the through rate from Cork to Roscommon is 39*s.* 8*d.* That is 5*s.* 4*d.* more charged on the through route from Cork to Roscommon than the sum of the two local rates. There are several other points here that I do not think I need trouble you with—similar instances which we have been given, and asked to bring under your notice.

22206. I think those will be sufficient?—I do not wish to trespass on your time unnecessarily.

22207. Have these inequalities been represented to the railway company?—They have, I understand.

22208. And there has been no remedy that you are aware of?—Not that I am aware of.

22209. The railway companies' turn will come by-and-by, and then no doubt we will hear some explanation?—I was going to say that these inequalities cause a great deal of local dissatisfaction wherever they press on the local people, and cause grumbling, which is very natural. The resolution of our Chamber, I think, was asked for when Mr. Greene was here, and he had not a copy of it with him. I have brought a copy of the resolution; the Council of the Chamber appointed a special committee which recommended this resolution, and it was unanimously adopted.

22210. Have you the date of it?—Yes. On the 29th November, 1906, this resolution passed the Council:—"That the committee recommend that the basis of the evidence to be given before the Viceregal Commission on behalf of this Chamber be in favour of State purchase of Irish railways." That was passed unanimously on the 29th November, 1906.

22211. Have you personally considered this question of State purchase?—I have. For a great many years I have taken considerable interest in it.

22212. You told us in the beginning that you concurred in that resolution?—Yes, entirely.

22213. Have you considered it sufficiently to give us your own reasons why you consider that it would be to the advantage of Ireland for the State to purchase the railways?—Well, I consider that the fact that there is room for improvement in the management of Irish railways has been, as far as I can judge, proved up to the hilt. We have the fact that there is dissatisfaction in various quarters, whether rightly or wrongly, with the existing state of affairs. There has also been public evidence afforded of the fact that in many other countries on the Continent and elsewhere, the rates for the transit of both individuals and goods are much lower than they are in Ireland, and, then, we have the fact that Ireland is for some reason in a very unsatisfactory condition economically. There is a large amount of emigration; the country is to a great extent going out of cultivation, and many parts of the country where railway facilities are very much needed are without them.

22214. You think, I suppose, that private enterprise cannot be expected to construct railways?—Quite so; I think it would be not natural to suppose that companies which exist primarily for the purpose of making dividends for their shareholders can be expected to make extensions into districts which, for a long time at any rate, would not pay, nor can they be expected to reduce rates to a point that would enable the Irish producers or manufacturers to compete with their rivals from other countries who have much lower rates to the seaboard, and in many instances much lower through rates than we have in Ireland. The consequence is that at the present day a great part of the agricultural produce consumed in England (especially in London, perhaps) comes from the ends of the earth. We have eggs and other produce coming from places as far off as Siberia, and butter coming from the farthest places of the earth, and a great many other articles of produce that I need not mention particularly, which Ireland could produce if the conditions of the country in various ways, including the means of transit, gave an opening to the Irish producer to compete with other countries. I believe therefore that if in some way (and State purchase appears to me to be the most feasible) the railway facilities in Ireland could be greatly extended, and the rates reduced, it would have the tendency of bringing the land more into tillage again, and I believe that the want of tillage and the extension of grass lands has been one of the great causes of the emigration from the country. It is manifest that if we have no employment for the people at home they must go abroad, and this I believe to be one factor that would at least tend to produce a better state of things in that respect, and to develop to some extent at any rate many of the possible industries of the country.

Chairman.—Your answer has been so explicit and so full that I do not think I need ask you another question.

June 12, 1907.

Alderman Henry Dale, J.P., Representative of the Cork Incorporated Chamber of Commerce and Shipping.

The suitability of a system of State-owned, rather than of privately-owned, railways to the wants of Ireland.

The improved railway facilities to be induced by State purchase would improve tillage and discourage emigration.

Examined by Colonel Hutcheson Poë.

22215. On the last point you said that if the rates were sufficiently reduced it would lead to a large development of both agricultural pursuits and industrial activity?—Certainly; that would be the tendency.

The probability of a large development of agriculture and of industrial enterprises if assisted by low railway rates.

22216. You do not agree with the opinion expressed by a gentleman from Clare who gave evidence a couple of days back—Colonel Westropp—who said he was of opinion that there were no prospects of any great development of either agricultural production or industrial enterprise. I take it you do not agree with him?—I do not.

22217. You know of course that the cost of operation must largely determine the incidence of the rate?—Yes, certainly.

22218. And you referred to the fact that a great portion of the produce—the great bulk of the produce—which we might raise in Ireland is now imported into England from Continental and other countries?—Yes.

22219. You are, of course, aware that where we send our consignments in hundredweights, or perhaps in a few cases in ton lots, they send in ten-ton lots, and often in train loads?—Yes.

22220. And that until we can somewhat approach those conditions, we cannot possibly expect the railway companies to give us anything like corresponding rates?—Certainly not.

22221. Do you not think a good deal might be done by the farmers themselves in assisting the railway companies to give these lower rates—which I fancy they are always prepared to do if they are approached—by means of co-operation and combination?—Of course something might be done in that direction, but the difficulties of getting the people to co-operate and combine in that way are very great.

The advantage of combination in securing low rates for large consignments.

22222. Is not that one of our chief difficulties in Ireland, that the people are so averse to co-operation, and so suspicious of one another, and so averse to letting each other know what traffic they are putting out, either in the shape of manufactures or agricultural production, that they really throw every possible obstacle in the way of co-operation—is not that your experience?—Yes, that may be so, but I think that state of things might be improved if we perfected our arrangements more; I think the more perfect our arrangements the more that suspicion will probably die away gradually.

22223. Can you suggest any means by which the difficulties caused by this attitude on the part of the people themselves who are most interested could be overcome? Assuming that the railway company did

June 12, 1907.

Alderman Henry Dale, J.P., Representative of the Cork Incorporated Chamber of Commerce and Shipping.

give a low railway rate, that would not of itself overcome that difficulty if the people were still averse. We have had in evidence that the railway company, if people would only try to bring in their consignments half-a-dozen at a time so as to make a full load, would be very anxious to give a much lower rate than at present, but the people will not do so?—Yes, but that does not deal with the proposition I mentioned at first, that railway companies have to earn dividends for their shareholders. If the State owned the railways they would simply require to earn as much as would pay working expenses and some reasonable sum for interest on the capital, which would be much less than it is necessary for the railways to earn now in order to pay a reasonable dividend.

A State authority in Ireland the only manner of securing a general reduction of rates involving loss of revenues.

22224. I think everyone is agreed that the only manner of getting a reduction of rates is by some State authority which would be prepared to incur a loss, and could afford to incur it; but even in such an event, if the people did not themselves help the State authority, it would not improve the situation to any great extent. Naturally, the State would give to each individual producer the benefit of the reduced rate and to that extent he would benefit, but the central authority, the central system would not eventually derive very much benefit unless there were co-operation on the part of the individual producer; do you not agree?—I do agree.

22225. I think you said that your Cork Chamber of Commerce passed a resolution in favour of State purchase; did you consider the conditions generally on which that purchase should be carried out? I do not mean the financial conditions?—No, we did not; really we dealt more with the broad principle. We assumed that if the Government decided to purchase the Irish railways, they would do so with knowledge as to how such State management had been conducted elsewhere, and they would adopt what seemed to them the best mode of carrying it into operation. But we really had not information enough to consider that point.

Reasons for preferring State purchase to amalgamation of the railways under present ownership.

22226. Did you discuss the further question: supposing State purchase was not advocated, or supposing, even if advocated, the State were not prepared to entertain it, did you consider the question of amalgamation?—Not definitely—we had some conversation about it, but I think the feeling was that even with amalgamation there would still remain the initial difficulty—that the railways would be still worked for the profit of individual shareholders instead of for the public interest.

22227. But you are aware that when amalgamation was recommended by the Allport Commission one of the conditions upon which it was to be carried out was that it would be subject to Government control, not only with regard to the terms of the amalgamation, but the Government was to have a voice in the rates and charges which were to be levied on that amalgamated system. I suppose amalgamation under these circumstances would not be objectionable in your opinion?—It would be an improvement on the present state of affairs, I think, but would scarcely provide, I imagine, for the extension of railway facilities to districts not likely to be immediately profitable.

22228. That leads one to another question. Do you think there is any great need for a further extension of light railways in the South and West of Ireland, the part with which you are probably most familiar?—I think there are a great many districts cut off from railway communication very much.

The necessity for further extensions of light railways in the South and West of Ireland.

22229. You are aware that the experience of the different railways constructed under various Acts, so far as the return on the capital is concerned, has not been very satisfactory or encouraging?—Not very satisfactory, as a rule.

22230. To what do you attribute that lack of return?—It must naturally be very much to the benefit of the district and of the people who live in the district, in the shape of enabling them to get better prices for their produce and also in putting supplies at their doors at a cheaper rate. It must incidentally be a great benefit in that direction?—Yes.

22231. But apparently it has not led to any great development; there are a few small industries, but it has not led to any development of agriculture to any extent?—Of course there are a number of factors at work in Ireland, and it is very hard to say to what particular circumstances any particular conditions are due; but I do think that, generally speaking, there is a tendency in Ireland now to take more advantage of what is being offered in the way of improved knowledge and so on, and also, I think, that recent changes in the land conditions have produced a desire on the part of a great many people in the country to stay at home and develop the country if they can rather than leave it.

22232. Even assuming that the people have the best inclination to launch out on a new career of industrial activity, still, handicapped as they must be with existing industries in England and the United Kingdom generally, unless there is some very appreciable diminution of the carrying charges in Ireland, you think there is very little hope of that inclination producing its full effect?—That is my opinion.

Examined by Sir Herbert Jekyll.

22233. You have given instances of inequalities in rates which are rather startling, and which on the face of them appear to require some explanation. Have you, or have the industries concerned, ever made representations to the Board of Trade under the Conciliation Clause of the Railway and Canal Traffic Act of 1888?—Well, I am not able to say definitely, but from the conversation I had with the gentleman who compiled these statistics, I am inclined to think they must have done so.

22234. You cannot say definitely whether they have or not?—No.

22235. These are cases of a kind which could easily be dealt with in that way?—Yes.

22236. And without expense to the complainants?—As I say, I did not ask the question, and I was not informed whether they had done so.

Examined by Mr. Acworth.

22237. Have you any personal recollection of the case before the Railway Commissioners that you mentioned—the application to increase the rates to Croom and so on?—No, I have not.

22238. So you personally were not in a position to carry the thing further?—No, I was not.

22239. I suggest to you that the railway company tried to put up the low rates because it was obvious that they could not defend the difference between the two?—I suppose that is possible.

22240. If you had carried it a stage further I do not myself think you would have needed to come here. As far as you know, there is nothing special in the Acts affecting the amalgamations of the Waterford and Limerick and of the Central Ireland that affects these rates?—I am not aware of it.

22241. I will not ask you any further questions about that. The railway companies will know if there is anything, and they will be able to give it. Now, you spoke about the difficulty in getting away your produce. The butter traffic has grown immensely of late years from Cork and Tipperary, has it not?—Tipperary, certainly, but not from Cork. It has decreased from Cork, but from other parts it has grown a good deal.

22242. Eggs, too?—Yes.

22243. But the railway companies have managed to take all you have been able to give them?—I think so.

22244. Do you doubt that if you produced more they would be ready and willing to carry it to the market?—No doubt there is sufficient capacity wherever the railways go.

22245. Your point is that you think you would probably get lower rates, and that is what you want?—And extension of railway facilities.

22246. Now, tell me—suppose, for example—I do not say it is so, I only suggest—suppose it was desirable to put a railway down into the Kenmare Peninsula in order to develop it. There is no railway down there, but suppose it was thought desirable to put a railway down there, would Cork be prepared to be taxed to pay for it?—I have really not considered that question, but if it were done by Government, Cork would be obliged to pay a share of the taxation, I suppose.

22247. Quite so, but Cork says, and everybody says, it wants railway extension into poor districts. We know that railways into those poor districts could not pay, so somebody has got to pay the interest. Now, the question I ask you is—Do you think Cork

Alderman Henry Dale, J.P., Representative of the Cork Incorporated Chamber of Commerce and Shipping.

would be inclined to pay its share of the interest on the capital necessary for developing other districts?—Well, of course, generally speaking, people are never inclined to pay taxes if they can avoid it, but I think it is quite equitable that people should be made to pay their share.

22248. Do you not think they would be inclined to kick when the tax gatherer came round?—They are getting so used to the tax gatherer coming round that I do not think they would be inclined to have that feeling.

22249. They would accept it as inevitable?—The point I have in view is this—that although for a short time it might need some public aid, in a shorter or longer time the development of industries would both directly and indirectly tend to render that public aid unnecessary.

22250. But you know there is a pretty long experience. Some of the railways made under the Act of 1883, which have been opened now for twenty years, are only now paying working expenses, and somebody—the barony, the county, or the Treasury—has got to pay the whole of the interest on the capital, even after twenty years?—Yes. However, that, I suppose, is indispensable of the condition of such extensions.

22251. Who are you contemplating would pay—Ireland?—We have had two theories here—one that Ireland would pay for itself, and the other that the English people ought to pay their share, which would be a large part, of course? Well, of course, I take the view, judging from the disclosures of facts revealed by the Financial Relations Committee Report, that there is a very large sum due to Ireland, some of which might very fairly be applied to railway extensions.

22252. I wondered whether that was the way you put it. Just one other question. You said that there was a great deal of discontent, as shown before this Commission, with the Irish railways under present management?—Yes.

22253. And that that was an argument for State management?—It would be an argument for some change that would remove these causes.

22254. And what you suggested was that the State should take the railways over?—Yes.

22255. Might one ask whether the Irish people were altogether satisfied with the State management of Ireland at the present moment?—Well, I believe there are some people who are not quite satisfied.

22256. So I gather from the newspapers. Are you sure they would all be quite satisfied with the Government management of railways?—I fear that even if the management were transferred to a higher court even than England, they would not all be satisfied.

22257. Do you think that they would even be more than at present satisfied?—It is impossible to say; I can only speak for myself.

22258. You would like to chance it?—I would chance it, certainly.

22259. Mr. Balfour Browne, I do not know whether your attention has been called to these rates?—Yes, sir, and I was going to ask some questions.

Cross-examined by Mr. Balfour Browne, K.C.

(*To Witness*).—You have been complaining, I understand, that there are rates to various places in the South of Ireland which in fact give an undue preference to Dublin as compared with Cork?—Yes.

22260. I am only going to take one just as an illustration. I think, perhaps, you have mentioned it. Porter is carried from Dublin at 9*s*.?—To Tralee?

22261. Yes, to Tralee. That is a low rate?—Nine shillings, yes.

22262. Do you take it from me that is the rate in the meantime?—Yes.

22263. Do you know that the Great Southern and Western were bound under Act of Parliament not to increase any actual charge which was in existence on the 30th day of June, 1900, on any railway heretofore owned by the Waterford and Limerick—did you know that?—I cannot say I did; I may have heard it, possibly.

22264. Do you know that the only way they could increase directly or indirectly was with the consent of the Railway and Canal Commissioners?—Yes, so I gathered.

22265. Do you know that they went to the Railway and Canal Commissioners and sought to raise various rates—among others that one—which we thought did give an undue preference to Dublin—the 9*s*. rate to Tralee?—Yes.

Inability of the Great Southern and Western Railway Company to alter the Dublin and southern stations porter rates discussed.

22266. Do you know that so strong were we that we were even backed by Messrs. Guinness and Company, who appeared by my friend, Mr. Ronan, to support the raising of that rate, they being the only people interested in it—were you aware of that?—No, I was not aware of that.

22267. Do you know that, notwithstanding that, we were opposed by the Board of Agriculture and a great number of local authorities, and the Law Officers appeared against us, and it was refused?—Yes; I mentioned that fact before you came into the room.

Mr. Acworth.—Mr. Browne, the evidence given was that these rates went into force on the amalgamation; I presume you can correct that?

Mr. Balfour Browne, K.C.—It is not so; they were existing before, and were all stereotyped by Clause 29.

Mr. Acworth.—Your explanation is that in all those cases the existing railway arrangements were stereotyped by the Amalgamation Bill.

Mr. Balfour Browne, K.C.—Yes, under Clause 29. We did think them unfair to various districts, and we went to the Commissioners to try and rectify that state of things.

The position of the Great Southern and Western Railway Company as regards rates to certain stations under the Amalgamation Act of 1900.

Mr. Acworth.—I remember the case well. There is another case given here—the rate to Kilkenny, which is higher than the rate forward to Bagnalstown, which is on the Central Ireland.

Mr. Balfour Browne, K.C.—I do not know what the explanation of that is, sir.

Mr. Acworth.—It is probably the same explanation.

Mr. Balfour Browne, K.C.—I am told that one is a class rate and the other an exceptional rate given for large quantities of traffic to that place. We will look into it, and if there is any other explanation we will give it, but I am told that is the case.

Witness.—May I explain to Mr. Balfour Browne that it was before the amalgamation I stated that these reductions had been made.

22268. *Mr. Balfour Browne*, K.C.—Quite so?—What Cork objected to was that proportionate reductions were not made in the case of Cork.

22269. I entirely agree with you in all your statements of fact; I only wanted to get out the fact that we had tried to alter it. I daresay you know this—and that is the last question I want to ask you—that that 9*s*. rate of which you complain was originally put in force in order to meet sea competition?—I gathered that it was.

22270. And then down comes this Act upon us and stereotypes this rate?—But then I referred afterwards to Killarney.

22271. The same principle applies there?—Yes.

Mr. Balfour Browne, K.C.—Mr. Dale has just mentioned the rate to Killarney. Again there is a clause in the Act which says the rates to Killarney are not to be higher than the rates to Tralee; so we are bound hand and foot.

Mr. Acworth.—There is nothing in that Act to prevent you from giving a like rate to Cork.

Mr. Balfour Browne, K.C.—I know that, but 9*s*. will not do.

Chairman.—Mr. Dale, we are much obliged to you.

The Witness withdrew.

Mr. E. J. Long, J.P., City High Sheriff, Limerick, examined by the Chairman.

Mr. E. J. Long, J.P., City High Sheriff, Limerick. Representative of the Limerick Corporation.

22272. Mr. Long, you are High Sheriff of Limerick, and you appear here on behalf of the Limerick Corporation, do you not?—Yes.

22273. Are you a member of the Limerick Corporation?—Yes.

22274. Do you hold any other official position in Limerick?—I am a member of the Harbour Board and of the Chamber of Commerce.

22275. And you are engaged in business there, I think?—Yes, in the leather trade.

22276. Have you been long in business in Limerick?—About thirty years in Limerick, and about fifteen

June 12, 1907.

Mr. E. J. Long, J.P., City High Sheriff, Limerick, Representative of the Limerick Corporation.

years in Dublin. We manufacture leather and send it all over the country.

22277. I suppose your position in Limerick for manufacturing leather is rather favourable than otherwise?—Yes, we find it rather favourable; there are favourable rates, particularly by water, and the position geographically is favourable for distribution purposes to most parts of Ireland, but not to the North of Ireland.

22278. I think you do not wish to complain against any particular railway company, do you, with regard to the way in which they treat you?—No, we have no reason ourselves to complain of the way in which they handle our goods, or of the relations between ourselves and the Great Southern and Western, with which, of course, we are in touch in Limerick; those relations are satisfactory, and we always find them very anxious to meet us with regard to local traffic; we have no serious cause of complaint at all against the company.

Facilities afforded by the Great Southern and Western Railway Company at Limerick to traders considered satisfactory.

22279. What I was going to ask you was this. You do complain, so far as rates are concerned, that manufactured leather outside Ireland is treated in what you consider to be a more favourable way than is the leather that you manufacture in Ireland?—Yes; that is our greatest cause of complaint against the Great Southern and Western Railway Company; and I should think it would also affect, perhaps the Great Northern Railway Company.

Alleged disproportionate through rates for leather as compared with local rates.

22280. Just give us one or two examples of the rates which you consider are unfair so far as your own manufactured article is concerned. Select two or three instances, just to get them on the notes?—The rate from Limerick to Belfast is 40*s.* 2*d.* per ton, with proportionate rates to other towns in the North of Ireland; Lisburn is 38*s.* 2*d.*; Carrickmacross is 33*s.* 8*d.*, and so on; those are the rates from Limerick.

22281. Will you now compare those rates with the rates from Liverpool?—We find that the same class of goods can be brought from the sister country from Liverpool to Belfast for 5*s.* per ton (these are sea rates), Lisburn 22*s.* 6*d.*, Dundalk 15*s.* 5*d.*, and Newry 15*s.* 5*d.* per ton. From Glasgow to Dublin the rate is 17*s.* 6*d.*, to Belfast 16*s.* 8*d.*, to Londonderry 17*s.* 6*d.*, to Coleraine 17*s.* 6*d.*, and to Sligo 18*s.* 4*d.* per ton.

22282. Of course those are nearly all water rates that you have mentioned?—Yes.

22283. And of course you do not expect railway companies to carry goods as cheaply as steamers?—No, we do not.

Necessity for lower rates for leather from Limerick to Irish stations to compete with the foreign trade.

22284. You merely give those figures to show the disadvantage at which you are placed in competing in those particular places in leather as compared with leather manufacturers in England?—Outside of Ireland.

22285. Outside of Ireland I mean?—Yes, that is so. The same complaint exists with regard to the Continental and American leathers; they are imported into Belfast, Glasgow, and elsewhere, and sent into Ireland at very low rates.

22286. You think that cheap transit facilities would be very advantageous to you and others similarly situated in Ireland?—Certainly.

22287. And you think that the absence of those facilities and cheap rates retards the development of traffic?—I do.

American manufacturers the keenest competitors.

22288. Who are your keenest competitors?—The American leather manufacturers are very keen competitors with the leather manufacturers of the United Kingdom; they are our keenest competitors. The English leather manufacturers and ourselves compete very keenly for trade in all the Irish ports and the towns near the ports.

22289. Of course, as far as your business in concerned, you are wholly dependent upon railway transit?—Wholly as far as our manufactured leather is concerned; not as far as our raw material is concerned, which we get in by water mostly.

The system of giving cheap cross-channel through rates into Ireland objected to.

22290. Do you suggest that specially low rates for, say, leather, should be put into operation from Limerick on a somewhat similar basis to the proportion of the through rate charged on the Irish railways for imported traffic?—I do, most certainly; and I should also say that the same should be done with regard to all classes of Irish goods.

22291. Of course, with regard to leather manufactured in America or in England, and sent to Ireland, the railway companies get only the transit of the manufactured article?—Yes.

22292. Whereas you, in Limerick, must import from some place or other your hides and other things for manufacturing leather?—We do.

22293. Therefore, your contention is, that so far as your business is concerned, the Irish railway companies get double carriage, as it were?—Yes, in some cases they get double carriage; we pay them double carriage on a portion of our manufacture.

22294. And do you consider that that should be a factor for the railway company to consider in fixing your rates for the manufactured article?—I certainly do.

22295. That is your idea?—Yes.

22296. I am dealing now exclusively with the leather that you manufacture. You say that low rates are given to those who manufacture and produce leather outside of Ireland; whereas you are charged high rates; that is your statement?—Yes.

22297. Can you give us any examples to prove that statement?—Yes; the through rate from Liverpool to Tralee *via* Cork is 25*s.* a ton; we cart the goods in Cork.

22298. You cart the goods from the steamer to the station in Cork?—Yes; and again, from the station to the stores. The cartage I have put down at 1*s.* per ton—that is the lowest, but in some cases it would be more. The rate from Tralee to Cork is 16*s.* 10*d.* The combined rates are 37*s.* 10*d.* per ton; and the through rate is 25*s.*, making a difference in favour of Liverpool merchants to the extent of 12*s.* 10*d.* per ton. The same refers to the rate from Liverpool to Limerick.

22299. I do not want to get too many instances; we just want to have two or three instances on the notes. Your contention is that there is a difference in favour of Liverpool of 12*s.* 10*d.* per ton in this particular traffic from Liverpool to Tralee?—Yes.

22300. What do you say the Great Southern and Western Railway Company ought to do with reference to your traffic from Cork to Tralee under these circumstances?—Do you suggest that they should charge you the same mileage rate as they charge the Liverpool merchant?—Certainly.

22301. That is your contention?—That is my contention.

22302. Have you formed any idea as to what that proportion would be?—5*s.* 7*d.* per ton I make it—about 5*s.* 7*d.* per ton.

22303. That is what the railway company gets as its proportion of the through rate?—Yes, 5*s.* 7*d.* per ton they charge on our traffic more than they charge on the direct through traffic.

22304. *Mr. Acworth.*—They get 5*s.* 7*d.* more?—Yes.

Colonel Hutcheson Poë.—They got 11*s.* 3*d.* out of the 16*s.* 10*d.*

22305. *Chairman.*—What you say is that, according to what you believe—you do not know it, but you believe—the railway company get 11*s.* 3*d.* per ton as their proportion of the through rate from Liverpool to Tralee; whereas they charge you locally 16*s.* 10*d.*?—That is it.

22306. Those are the figures?—Roughly. To be sure, it is a calculation of my own and I cannot say that it is correct by any means.

22307. We must take it for what it is worth. You may give us one other instance, if you please. Take Liverpool to Limerick *via* Cork?—From Liverpool to Limerick *via* Cork the through rate is 22*s.* 11*d.* per ton; from Liverpool to Cork, the local rate is 20*s.* per ton.

22308 You know that as a fact, I suppose, because you pay it, do you not?—Yes, we pay it. Liverpool to Cork is 20*s.* per ton; the cartage I put down again at 1*s.* per ton. And the rate from Cork to Limerick is 13*s.* 7*d.* The local rates combined amount to 34*s.* 7*d.* per ton, as against 22*s.* 11*d.*; making a difference in favour of Liverpool of 11*s.* 8*d.* per ton

22309. In that case the Great Southern and Western Railway Company charge you about 4*s.* 4*d.* per ton more than they get out of the through rate?—Yes.

22310. You have a great number of instances in your proof, but if you would pick out one more that would be enough. Look through your proof, please, and take out one more—whichever one you like?—Perhaps the next one would suit our purpose as well as any.

22311. Which is that?—Liverpool to Listowel *via* Waterford; the through rate is 38*s.* 4*d.* The local rate is, Liverpool to Waterford, 25*s.*; cartage, I put down again at 1*s.*; and then, from Waterford to Listowel, 22*s.* 3*d.* per ton. That gives a total of 48*s.* 3*d.*, making a difference in favour of Liverpool of 9*s.* 11*d.* per ton.

22312. There again I see, according to your figures, you are placed at a disadvantage to the extent of about 4*s.* 2*d.* per ton?—About that.

22313. *Colonel Hutcheson Poë.*—Might I just ask the witness to call attention to an instance on page 6 of his proof, which seems to me to be rather curious. At the bottom of page 6 there is an instance given of Bristol to Limerick *via* Waterford; and the through rate per ton is 32*s.* 6*d.* Then, you allocate the local rates as follows:—Bristol to Waterford, 25*s.* 10*d.*; cartage, 1*s.*; Waterford to Limerick, 16*s.* 1*d*, total 42*s.* 11*d.* Now, if you allocate that on the same basis as you have done in the cases of the other rates which you have just given us, as to the proportion which the railway company gets out of it, I think you will find yourself in some difficulty. Because, unless the sea-carriage gets nothing at all, the Waterford to Limerick rate, the railway company's rate, must still remain the same figure as at present. On the same basis as you have allocated your proportion of the sea-carriage, the proportion which the railway company gets out of the through rate, Bristol to Waterford, would be 20*s.* 1*d.*; and Waterford to Limerick, in order to make up the through rate of 32*s.* 6*d.*, would have to be 17*s.* 3*d.*?—I do not quite follow.

22314. Let us go back to the second figure you gave us; Liverpool to Cork is 20*s.* on the local rate; cartage, 1*s.*; and the proportion of the railway rate, 13*s.* 7*d.*?—Yes.

22315. To make up the through rate of 22*s.* 11*d.*, you assume that the sea-carriage is 14*s.* 4*d.*; the cartage 1*s.*; and the railway rate 7*s.* 3*d.*; that makes up the 22*s.* 11*d.*; is that not so?—Yes.

22316. Very well. To work on the same basis with regard to the Bristol to Limerick rate, I presume you reduce your sea-carriage proportionately, as you have done in the other cases?—Yes.

22317. And, on the same basis, putting it down at anything you like to put it at—say, 14*s.* 3*d.*—your cartage remains 1*s.*, and your railway rate in that case would have to be 17*s.* 3*d.* But, leaving it at 16*s.* 1*d.*, that would leave your sea-carriage at 15*s.* 6*d.* Are you sure that the Waterford to Limerick rate is 16*s.* 1*d.*?—I do not quite follow your point, because the through rate is lower by 10*s.* 5*d.* There is a proportionate reduction applied to both.

22318. It is all assumption, is it not—You cannot determine what the proportion is for the sea-carriage, or what the railway company gets out of the total rate. But, following it out, in this particular instance, your proportions do not seem to apply. You see my point, Mr. Acworth, do you not?

Mr. Acworth.—I do not see how we are to know in any one case how much comes off the 25*s.* 10*d.*, and how much comes off the 16*s.* 11*d.*

Colonel Hutcheson Poë.—The witness has said that he has assumed that on the railway carriage from Cork to Limerick, the second instance he gave us, instead of charging 13*s.* 7*d.*, they only get 9*s.* 3*d.* out of the through rate.

Mr. Acworth.—Perhaps you would ask the witness whether he has gone on the basis of assuming an equal percentage of reduction both on the sea rate and on the land rate, or how.

22319. *Colonel Hutcheson Poë.*—Will you answer that?—I have taken an equal percentage on both.

22320. *Mr. Acworth.*—And you have assumed that in every case?—Yes, in every case.

22321. Have you any evidence that it is so in either case?—No.

22322. It is an assumption of yours?—It is an assumption of mine which I consider reasonable.

Mr. Acworth.—I am not questioning it in the least.

22323. *Chairman.*—You say, excepting from Liverpool to Cork, that you have paid these charges?—Yes.

22324. And you say that you have a house in Cork and that you pay these rates?—Yes.

Colonel Hutcheson Poë.—If you look at that particular instance you will find that that principle does not apply. He gets no reduction on the railway rate.

22324A. *Chairman.*—We will not take any more instances?—I have them here if you wish to get the figures.

22325. *Mr. Acworth.*—Have you got figures showing the percentages deducted?—Yes, I have them all in a table here.

22326. *Colonel Hutcheson Poë.*—You have got the local rate; the sea rate is 25*s.* 10*d.*—whatever you get, that is your assumed local sea rate from Bristol to Waterford?—From Bristol to Waterford?

22327. Yes. What proportion do you assume the steamer gets out of that on the through rate?—Well, I take them in this way: I put the two combined rates together, and I find they come to 42*s.* 11*d.* per ton; the reduction of the through rate comes to 10*s.* 5*d.* per ton from Bristol to Limerick; that is equal to a deduction of 22½ per cent. on the combined rates; I have worked it out on the mileage. From Waterford to Limerick is 77¼ miles, and the ordinary rate is 16*s.* 1*d.* per ton, or 2½*d.* per ton per mile. Taking 22½ per cent. off that brings it to 3*s.* 8*d.* on the 16*s.* 1*d.*, which would leave 12*s.* 5*d.* per ton, or 2*d.* per ton per mile, which the Great Southern and Western Railway gets, instead of 2½*d.*

22328. That will make your sea rate come to about 20*s.* instead of 25*s.*?—I should have to calculate that.

22329. It would be 19*s.* and something. So that in that particular instance you have not reduced the sea rate. In the instance above that, Bristol to Waterford, you assume that the sea proportion is 15*s.* 2*d.*?—I beg your pardon, I have applied the same deduction to the two rates, inasmuch as the combined rate is 10*s.* 5*d.* lower than the local rate. I applied the same deduction to both.

22330. If you will allow me just one moment. You say at the foot of the note with regard to Bristol to Tralee: "The Great Southern and Western Railway concedes about 8*s.* 6*d.* per ton of their rate Waterford to Tralee to imported goods." Therefore, if you deduct 8*s.* 6*d.* from 23*s.* 3*d.* it leaves you 14*s.* 9*d.* as your assumed proportion of the rate which the railway company derive out of that through rate?—Yes.

22331. 14*s.* 9*d.* and 1*s.* for cartage makes 15*s.* 9*d.* and adding on 14*s.* 3*d.* for sea carriage that makes up your through rate to 30*s.* So that on that sea rate you have reduced your sea rate from 25*s.* 10*d.* to 14*s.* 3*d.* Both the sea rates are the same in these particular cases; but you are assuming that the railway company get 14*s.* 9*d.*, and therefore the steamship company can get only 14*s.* 3*d.*?—I did not apply it in that way.

22332. In the next instance you practically say that the sea carriage is 19*s.* as against 14*s.* in the Bristol to Tralee case, the sea carriage—Bristol to Waterford—being exactly the same in both instances. Both the figures cannot be right?—I will stand by my figures until you prove them to be wrong.

22333. *Chairman.*—I began by saying that we would take the figures for what they are worth. I also began by stating that you could not tell, and could not know, what proportion the railway company got out of these through rates; and therefore that is more or less an assumption on your part?—Yes.

22334. But there is no question about the local rate which you pay?—No.

22335. And no question about the through rate?—No.

22336. But as to the division it is all surmise?—All surmise.

22337. Now, we will leave all the other instances. At any rate, assuming that the railway companies only get what you suggest as their proportion for carrying on their railway out of these through rates, your contention is, that your local rate should be the same?—Yes.

22338. That is what you contend?—Certainly; that is our contention.

22339. But if you found that the railway companies by arrangement with the steam packet companies got the full local rate, then you would have nothing to say about it?—No, we should not have the same complaint.

22340. You are of course in constant communication with the railway company which serves your town, or city, I suppose I ought to call it—the Great Southern and Western Railway?—Yes.

22341. Have you communicated to them with reference to the through rates to stations in the North of Ireland?—Yes, very often.

22342. And what has been the result of your applications to that company with reference to through

June 12, 1907.

Mr. E. J. Long, J.P., City High Sheriff, Limerick, Representative of the Limerick Corporation.

The method of calculating the Irish rail proportion out of the through rates discussed.

The divisions of the rates a matter of assumption.

The right of the Irish local goods traffic to the same mileage charge as the local proportion of the freight on through booked goods.

June 12, 1907.

Mr. E. J. Long, J.P., City High Sheriff, Limerick. Representative of the Limerick Corporation.

rates—have they given you rates which you consider satisfactory?—No; unfortunately they have not been able to meet us, for some reason or another. We have not been able to get to the bottom of it.

22343. Of course they have had to communicate with other companies?—Yes.

22344. You do not, I presume, wish to say whose fault it is?—No.

22345. At any rate, you know that the result to you is that you have not got what you consider favourable through rates from Limerick to the North of Ireland?—We have not; and our trade to those places is injured consequently.

Complaint as to the failure to obtain favourable rates from Limerick to the North.

22346. Your competitors from other countries get into markets which you think you ought to get into?—That is so.

22347. Just in order to see whether your application has been reasonable or not, what rate have you asked for?—A rate of about 25*s.* per ton.

22348. To where?—From Limerick to Belfast, Newry, and similar places in the North of Ireland.

22349. That is your application?—That is our application.

22350. What rate do you pay now?—To Belfast, 40*s.* 2*d.*

22351. With a rate of 40*s.* 2*d.* from Limerick to Belfast I suppose you are really out of the market altogether?—We are practically out of the market.

22352. So that the rate is merely a book rate as far as your business is concerned—little or no traffic is sent?—Very little.

22353. But if a rate of 25*s.* per ton was put into operation, in your opinion, you could then do business there?—Certainly.

Allegation that the existing rates shut out the Belfast and Northern markets generally from the Limerick manufacturers.

22354. You say that you have applied to the railway company?—Yes.

22355. And you have suggested a 25*s.* rate?—Yes, or about that.

22356. But for some reason which you do not know the reduced rate has not yet come into operation?—No. But I think we had a rate of 25*s.* some years ago, and it was raised for some reason or other. Before the amalgamation time, I think, we had a rate of about 25*s.*

22357. Which amalgamation do you refer to?—I mention that, but I do not imply that there is any connection between the raising of the rate and the amalgamation of the Great Southern and Western Railway and the Waterford and Limerick Railway. But, before that time, we had a local rate to the North of Ireland which we found satisfactory.

A lower rate in operation in pre-amalgamation days.

22358. What period are you referring to—are you referring to the amalgamation of the various lines with the Great Northern?—No, to the amalgamation of the Great Southern and Western Railway with the Waterford and Limerick Railway.

22359. Oh, you mean the recent amalgamation?—Yes, the recent amalgamation.

22360. Before that you had a lower rate?—Before that we had a rate which was satisfactory.

Mr. Balfour Browne, K.C.—He is only referring to the amalgamation for the purpose of fixing the date; he says that he does not connect the two things.

22361. *Chairman.*—Oh, yes, I understand that. Now, just take this application which you have made against the 40*s.* 2*d.* rate to Belfast; do you, as a mercantile man suggest that there ought to be some tribunal to which you could go and ask for that rate to be put into operation?—I am strongly of that opinion; some cheap tribunal.

The alleged prohibitive cost of appeal to the Railway Commissioners' Court.

22362. You do not, I suppose, suggest that the 40*s.* 2*d.* is in any way beyond their statutory powers?—No, I do not suggest that.

22363. But you object altogether, do you not, to appealing to the Railway Commissioners' Court?—Yes, it is very much too expensive. Our knowledge, based on the experience of other people who have gone before the Railway Commissioners, is that it is prohibitive on account of the cost.

22364. You want some tribunal set up which would hear evidence from you as a trader, and from the railway companies, and you want to leave the tribunal to settle what the rates shall be; is that your idea?—That is my idea; and I do not know why the County Court should not be used for that purpose.

The County Court suggested as a substitute for the Railway and Canal Commissioners' Court.

22365. The County Court Judges?—I imagine so. Without having given the question very much thought, I do not see why expert witnesses should not appear before a County Court Judge, nor why a County Court Judge should not be able to deal with and settle these questions.

22366. Do you think that the railway management in Ireland generally has seriously attempted to develop agricultural and manufacturing industries?—No, I do not think the railway management in Ireland has ever seriously attempted to develop the country either agriculturally or commercially, from the manufacturing point of view.

22367. I suppose you send small parcels from your works?—Yes; it is not a big traffic with us, but we do have to send small parcels from time to time.

22368. With regard to the rates for parcels from Limerick to stations in Ireland, do they differ in any respect from the rates charged in England?—I believe they are supposed to be the same rates; but in practice they do not work out the same. There are a good many stations in Ireland where, I understand, there is no through traffic for parcels between the companies, and the result is that very high charges are enforced on parcel traffic between some stations in Ireland.

22369. You are aware of the small parcels scale, are you not?—Yes.

22370. And you know that it is uniform in both countries?—It is supposed to be.

22371. Have you any reason for making that remark?—Yes; because I find that parcels sent from Limerick to Cork or Dublin—or some stations in Dublin—are charged two rates.

22372. Do you mean to say that they are charged differently from the scale?—Supposing a parcel goes over two lines of railway, the charges for each company are separate in the bill, and they are much more than the parcel rate—what you call the uniform parcel rate.

22373. Do you mean parcels weighing under four or five or six pounds?—Yes.

22374. Why not send them by parcels post?—I cannot tell you with regard to particular items why not; but there may be some reason sometimes why they are not so sent.

22375. *Mr. Acworth.*—That is a perfectly distinct statement, that you have frequent experience, as I gather, that a parcel going somewhere on the Great Northern or the Midland pays one rate to, we will say, Athenry, or wherever it changes lines, and then another rate beyond?—I would not bind myself to Athenry.

22376. No, I do not want you to. Say Dublin or wherever it is?—That is so.

22377. It pays a certain rate up to the point where it meets the other railway company, and then it begins to pay again. So that there are really two scales in operation with regard to that one parcel?—Yes.

22378. Have you any invoices to show us?—I have sent in some copies.

22379. *Chairman.*—There must be something wrong about this, I think. But give us, if you can, one or two instances of a parcel being charged higher than the published scale?—I sent a parcel from Limerick to Belfast on the 26th November last, weighing 4 lbs.; for that the charge was 2*s.*, which was paid by our customer, and that included a delivery charge of 2*d.* The railway docket, I think, is marked "A" in that case.

22380. *Mr. Acworth.*—There is nothing there showing two charges?—Not on that—I did not say there was.

22381. I am only trying to understand your evidence. This is from Limerick to Belfast; there is a through railway charge of 1*s.* 10*d.*, and delivery 2*d.*?—Yes.

22382. *Chairman.*—That was a 4 lb. parcel?—Yes.

Mr. Balfour Browne, K.C.—He ought to have been charged sixpence, including delivery.

22383. *Chairman.*—That is what I say. There must be some mistake. If that had come from, say, Leicester in England to Limerick in Ireland the charge would have been sixpence?—Yes. In my experience there is never a mistake with regard to English traffic to Ireland, but there are frequent mistakes with regard to traffic in Ireland between different points in the country.

22384. You have given the date as the 26th November, 1906?—Yes.

22385. *Mr. Balfour Browne*, K.C.—Have you got the invoice?—I sent it to the Chairman.

Mr. Acworth.—That must be "goods."

Mr. Balfour Browne, K.C.—The parcels rate certainly is sixpence.

June 12, 1907.

Mr. E. J. Long, J.P., City High Sheriff, Limerick, Representative of the Limerick Corporation.

Mr. Acworth.—It is called "Invoice No. 91," which, I take it, is under "Merchandise" traffic.

22386. *Chairman.*—It must be a mistake, at any rate. I am sure you want to be perfectly fair, and I think you will admit that this may be a mistake?—I quite agree with that; but I am afraid these mistakes occur very often.

22387. Your point is, that they occur a great deal more often than they ought to do?—Certainly.

22388. Can you give us another instance?—A parcel sent from Limerick on 15th November last weighing 3 lbs. to Schull (a station on the Schull and Skibbereen Light Railway) cost eightpence.

22389. From any part of England that would be, how much?—Fivepence.

22390. Is fivepence the parcel post rate?—I think it is the railway rate, too.

22391. Just give us one other instance?—A parcel sent from Limerick to Macroom on 15th November, weighing 3 lbs., cost ninepence, and it should have been only fivepence.

22392. Now, if you will just give us the last one you have got?—A parcel weighing 13 lbs. from Dublin to Limerick on 2nd November last was charged 1*s.* 1*d.* That contrasts unfavourably with a parcel of 7 lbs. weight from London on the same date, for which the charge was only sixpence, and with a parcel of 20 lbs. weight from Dundee to Dublin, which was carried 91¾ miles by railway, and 223 miles by steamer, costing but 11*d.*

22393. *Mr. Balfour Browne,* K.C.—What was the weight of that parcel on 2nd November?—Thirteen pounds from Dublin to Limerick.

22394. *Chairman.*—We will not go into any of the other instances—I see there are several others that you have got in your proof, and there is proof of the charges given also?—In these cases I very much object to delivery charges, amounting sometimes to 30 and 33 per cent. of the whole freight, being charged on parcels.

22395. I thought the rates included delivery?—Not in all cases.

22395A. They do according to the scale.

22396. *Mr. Balfour Browne,* K.C.—All the rates for parcels include delivery?—Parcels are charged separate cartage delivery.

22397. *Chairman.*—I see they are, according to your statement, charged 2*d.* for delivery?—Fourpence, and sometimes more, when the whole railway rate is only 1*s.*, the delivery, which means perhaps cartage for only 100 yards, is charged 4*d.*, which I think is very excessive.

22398. What you say is this: that even these little additional charges operate against the development of the retail trade from Limerick to places in Ireland?—I think they operate very much against the Irish shopkeepers who have a small parcel or retail trade.

22399. And you advocate that the small parcels rates ought to be the same throughout Ireland, and uniform, as they are in England?—As they seem to be in England.

22400. The scale is so; and I do not understand why you are charged differently?—Nor do I; but it is so.

22401. *Mr. Balfour Browne,* K.C.—The scale applies to every railway in Ireland, except the Waterford and Tramore, and the Cork and Macroom?—I am sure that it does not apply to the Listowel and Ballybunion.

22402. That is a mono-rail?—These things affect the traders, and prevent trade from being done, or attempted to be done.

22403. *Chairman.*—Do you think that if those rates were uniform, as suggested, and low, as in England, small parcels of agricultural produce would be distributed over the country?—Yes, I believe that.

22404. And do you believe that these additional charges for delivery operate against the development of the small parcel industry?—I think so very strongly. I know a great many instances where it acts against the Irish farmers and the Irish shopkeepers.

22405. Do you believe that a trade could be developed in small parcels of agricultural produce if the rates were low and uniform?—Yes, I believe it would be developed.

22406. Have you had any experience of the carriage of a parcel of vegetables brought under your notice recently?—Yes; a short time ago I got a parcel of vegetables from Cork, weighing 13 lbs., the railway charge was 1*s.* 2*d.*, and that was almost the entire value of the goods. I have had several experiences such as that.

22407. According to the scale in England, do you know what the rate in that case would have been?—I have calculated it, and I think it is about 1*s.* 1*d.*; it is one penny per lb., I think, up to a certain maximum.

22408. I suppose the parcel you refer to was sent by passenger train?—That, I could not say.

22409. Have you tested it in any other way; have you had other vegetables from Cork delivered?—Yes, I have had several similar parcels of vegetables sent from Cork to me.

22410. What was the weight?—The weight was 56 lbs.

22411. And the charge?—The charge was but 8*d.*

22412. *Mr. Acworth.*—That would be "goods," I suppose?—That I do not know.

22413. The first must have been by passenger train rate, and the other goods' train rate?—That may be the reason, I am not sure.

The distribution of small parcels of agricultural produce restricted owing to excessive rates.

22414. *Chairman.*—At any rate, you are strongly of opinion that vegetables and other produce could and would be distributed in small parcels in Ireland if the rates were low and uniform?—That is my opinion.

22415. Now, with regard to the passenger fares; I suppose you do not consider they are in any way excessive, do you?—No; with the exception of the second-class fares.

Reduction in the 2nd class fares recommended.

22416. And with regard to the second-class fares your views are, I suppose, the same as we have had over and over again expressed here, that the second-class fares should be a small proportion over the third-class, instead of being as now 50 per cent. increase over the third-class fares?—Yes; and perhaps there is a greater reason why it should be so in Ireland than in other countries.

22417. If such a change were made, in your judgment, would it tend to a large development of second-class traffic?—Well, I think it would tend to the development of the second-class traffic.

Comparison of selected 2nd class fares in England and in Ireland.

22418. I do not know that we need go into all these instances of fares which you have prepared, but you might just pick out two. Just take the first two?—From Limerick to Dublin, travelling second-class, a distance of 129 miles, the single ticket costs 17*s.* 8*d.* From Euston to Stafford on the London and North-Western Railway (133½ miles) the cost is but 12*s.* 3*d.*, that is 5*s.* 5*d.* less than the Great Southern and Western Railway charge for a less distance.

22419. I see that you have several other instances?—Yes.

Irish 1st and 3rd class fares considered reasonable.

22420. I think you can put it in two or three words; whereas in England the second-class fare is a small fraction over the third, in Ireland it is 50 per cent. over the third?—Yes.

22421. And your suggestion is that you think that in Ireland, being a poor country, it would be a great advantage to the travelling public, and that more people would travel second-class if the same principle was adopted as in England?—Yes, I believe that would be so.

22422. You have nothing to say about the third-class fares?—Nothing; I think they are reasonable.

22423. Or the first?—Or the first.

22424. With regard to the excursion traffic, I see that you have also nothing to suggest?—No; I think it is pretty well done, except as to the one-day passenger traffic.

Suggested extension of the "market ticket" principle to the large centres.

22425. What is that—the market traffic?—In England it seems to be quite a common experience to be able to get a one-day ticket between large centres, going and returning the same day at any time in the year; whereas in Ireland you can only get such a ticket on Sundays between large centres—generally on Sundays, or whenever there is something particular going on.

22426. You mean a cheap fare?—Yes.

22427. I do not think you are correct with regard to the English custom?—I see these day-trips very often advertised.

22428. The same thing is, I think, done in Ireland—I see bills in Ireland, too?—Yes. Why should not the principle of market tickets be applied between large centres of population in Ireland, say, Limerick and Cork, or Limerick and Dublin.

22429. At any rate, I do not think the practice differs in Ireland very much from that in England

June 12, 1907.

Mr. E. J. Long, J.P., City High Sheriff, Limerick, Representative of the Limerick Corporation.

with regard to those sorts of things. I see that you have, with great pains, taken out the running of various trains; but, on the whole, I do not think I need ask you any questions upon that. With regard to train connections at junctions, your experience is, I suppose, the same as that of everybody else who has had to do with junctions, that some trains fit, and some do not; is not that it?—Yes.

Improvement in the passenger train service between Cork and Limerick necessary.

22430. It is difficult to arrange for all trains?—Yes, I quite agree with that; but I do think that some improvement might reasonably be asked to be made in the train connection between Cork and Limerick.

22431. There is no doubt that improvement might be made between any two places. Now, let us get to something more general, if you please. Your Borough Council, on 11th March, 1907, had this question of railways before them?—Yes.

22432. And they passed certain resolutions?—Yes.

22433. Were you present?—Yes, I was there.

22434. Were the resolutions unanimous; or, was there any difference of opinion with regard to them?—They were unanimous.

22435. Practically unanimous?—They were unanimous.

Resolutions unanimously passed by the Limerick Corporation on Irish railway policy.

22436. In order to get them on the notes, would you be good enough to read those resolutions?—"Resolved: That in the opinion of this Council the policy of Irish railways should be directed more towards developing the agricultural and manufacturing industries of Ireland than has hitherto been their aim. That to us it seems a grave injustice to Irish industry that Irish railways should carry imported goods at lower rates than they carry similar Irish produce, which special treatment amounts to protection in favour of foreign manufacturers. That the Irish railway companies be requested to discontinue this policy, and to give to home produce, as low mileage rates as those at which they now carry imported goods. That we believe the lowering of internal rates between stations in Ireland on all classes of agricultural produce would soon sensibly diminish the amount of such goods imported. That there should be through rates to all stations in Ireland for Irish traffic of all descriptions. That, this being a comparatively poor country, it is most desirable, with a view to the more economical working of several Irish railways, that the unification of all the existing lines under one Board of Management should be brought about, and with effective State or public control."

Unification and State or public control (see appendix, No.).

22437. These are the resolutions passed by the Limerick Council?—Yes.

22438. Is it within your knowledge, that other public bodies have passed similar resolutions?—Yes; I have seen reports of other public bodies passing somewhat similar resolutions.

22439. And do you personally agree with every word of that resolution?—I do.

22440. I think the words of that resolution are so comprehensive that I may pass over three or four sheets of your proof. Are you acquainted with any Continental railways?—No, not personally.

22441. I suppose you know that several countries in Europe have State railways?—Yes.

22442. Do you know anything about these?—I have had no personal experience beyond travelling on some of them.

State purchase of Irish railways advocated.

22443. I will not ask you, then, about them. You consider it would be an advantage to Ireland generally, and would promote industries in Ireland that are now dormant, if the railways in this country were taken over by the State?—Yes, and run with a view to developing the country; I think it would be a great factor in helping the promotion of industry in Ireland.

22444. Not with a view to making any large percentage on the working, but with a view to developing the country, regardless altogether of whether they paid or not?—Yes, I think that should be the case for some years.

The country should pay any deficiency in revenue available for interest in the event of State purchase.

22445. Have you considered who should pay the deficiency—I mean, if the railways did not earn sufficient to pay the interest on the capital outlay—have you considered who should pay that?—The country, I should think.

22446. It should fall on the country?—I think so.

22447. The State should work the railways for the benefit of the people?—Of the whole country.

22448. And you think if the State owned the railways, many districts in the country that be now without railway communication might be provided with railway accommodation, and thus tend to develop the resources of the land, and so on?—That is my view.

22449. And that is the view of the Limerick Borough Council?—That is so.

Examined by Mr. Acworth.

22450. You have been speaking of rates on leather per ton?—Yes.

22451. Leather, as a matter of fact, is bought and sold by the pound, is it not?—By the ton, too.

22452. I mean the quotations one sees in the newspapers—I do not pretend to be a leather merchant myself, but the quotations given in the papers are per pound, are they not?—Yes.

22453. And the quotation per pound seems to be roughly something like 2*s.* a pound for many qualities?—Yes, from that down to 4*d.*

22454. But the normal quality of leather is from 1*s.* 6*d.* to 2*s.* per lb, or something like that, is it not?—About that.

22455. That is what I fancied. Do you not, practically, in buying and selling deal in farthings or something like that?—Yes, and one-eighth of a penny and one-sixteenth of a penny.

22456. Oh, it runs as fine as that, does it?—Yes.

22457. With regard to the rate you spoke of to Belfast the difference is one-twelfth of a penny—the reduction you want per lb.—and that would make a very serious difference?—Yes.

22458. That I can fully believe. But, putting it another way round, £2 per ton on stuff worth 2*s.* per lb. is one per cent. of the value. Now, we had a gentleman here yesterday who represented artificial manures, and he pointed out that the rate was six per cent. and more on the value of his goods. It was a much lower rate than yours, but it was six per cent. on the value instead of one per cent. What I want to ask you is, supposing the State were working the railways, would not the natural thing be to make the reductions on the goods which were heavily taxed already rather than on the high-class goods which were not so heavily taxed?—I could not say that.

22459. Would it not be reasonable to let off the man who was paying six per cent. rather than the man who was paying one per cent.?—If I were the State I should consider the taxable capacity of the goods.

22460. That is what we should all do, I think?—But I do not quite agree that because certain goods would have a high rate the taxable capacity of these goods should not be equal to it.

22461. But surely the goods that are paying one per cent. only can better afford to go on paying one per cent. than the goods paying six per cent. can afford to go on paying six per cent.?—It would depend upon circumstances.

22462. You think so?—I do, most decidedly.

22463. Do you not think it is reasonable to suppose that Glasgow is in effect very much nearer Belfast—I do not say it is in miles, but in economic cost of getting there Glasgow is much nearer to Belfast than you are?—I admit that.

22464. Is it not natural that you should have difficulty in getting into the Belfast market?—Perhaps so.

22465. That is what it seems to me, I confess?—From the Glasgow man's point of view, certainly I agree with you.

22466. Of course the Glasgow man wants to come into yours if he can—I am not taking it that way. Take a number of the rates you gave—you gave us instances where you had very high rates—Dundalk, Listowel, and so on. Supposing you take the rate from Limerick to Glasgow, what is it?—By sea?

22467. Yes?—I think 25*s.*

22468. You can get to Glasgow?—Yes.

22469. Because you say 25*s.* will take you to Glasgow, therefore I suppose you can get to Glasgow?—And we get there.

22470. So that you get the advantage also of the low rates?—I grant you that.

22471. Glasgow has a great advantage over you in Dublin or Belfast?—Yes.

Mr. E. J. Long, J.P., City High Sheriff, Limerick. Representative of the Limerick Corporation.

22472. But supposing you take it from the Glasgow man's point of view, he has to submit to cheap rates from Boston, I suppose?—I do not know what the rates from Boston to Glasgow are.

22473. You may be sure they are pretty low—or from New York to Glasgow?—Probably.

22474. And if the Glasgow man wants to get across the country to a place where he does not get sea competition—say he wants to send from Glasgow to Hull, there, again, he will have to pay a high rate?—Very likely.

22475. So there is nothing exceptional in your condition?—There is the exceptional difficulty in regard to transit facilities from Limerick to get to other ports in Ireland. Give me the same transit facilities for Irish ports that I now have for Glasgow, and then I shall say we are equal. We have not those facilities.

22476. Does it matter to you whether your outlet is to Glasgow or whether it is to Belfast? Have you any special desire to sell to Irishmen rather than to Scotchmen?—Most decidedly.

22477. You have?—Yes, I have, for commercial reasons.

22478. Do let me understand that—I do not quite follow that?—It is easier for us to get to places in Ireland than it is to get to Glasgow. I mean it is easier for us to get there ourselves, if we want to go there. It is much easier for us to control the trade, and it is much easier for us to sell in Ireland than to sell outside of Ireland.

22479. Because of Ireland being more or less an entity by itself—is that the way you put it?—That is a factor—it is an entity in itself.

22480. An Irishman deals more naturally with an Irishman than in a more or less strange country?—No, I do not say that.

22481. I thought that was your point?—I do not agree with that entirely.

22482. How would you put it, then?—As I said before, it is easier for us to get our travellers to places in Ireland; sometimes our travellers are on the border line, and the same thing does not apply to Scotland, nor does it apply to any place which you have difficulty in getting to.

22483. Yes, I follow that?—Communication is easier, and therefore if one is commencing business it is easier to do business in the home market—the places nearest. Business usually commences in that way.

22484. In other words, your own people being able to get communication—personal communication being easier—you would like goods communication to follow?—Supposing you were going into business in Limerick you would naturally look for a market for your goods locally—business expands in that way—but if you have no local market you do not go into business at all; therefore how can you develop?

22485. And you are not prepared to accept Glasgow as your local market?—No, not under the circumstances I have mentioned.

22486. Though, as far as rates are concerned, you can get there?—Yes.

22487. I see. I should like to ask just one question on the proportions of local as compared with through rates. Take the one that Colonel Poë asked you about at some length—Bristol to Waterford. The Bristol steamer does not come to Limerick, does it?—No.

22488. The Bristol steamer would clearly like to get traffic for Limerick, would it not?—Yes, I am sure it would.

22489. But it cannot get it direct, so it must get it by Waterford?—Yes.

22490. Do you not think that it is quite arguable that sooner than lose the traffic to Limerick altogether it would take the whole 10*s.* 5*d.* off its own local rate?—I do not know that.

22491. It is possible, is it not? It might be better worth its while to carry it for 15*s.* 5*d.* than not to carry it at all?—I should think so.

22492. And unless it gets it through Waterford it cannot get it at all?—No.

22493. On the other hand, the Great Southern and Western would equally get the rate on it if it came in by sea to Cork, or to Dublin, or to Rosslare, or to anywhere else, would it not?—Yes.

22494. So that the steamer has more interest in reducing its share of the rates than the Great Southern and Western has in reducing its share?—I do not see that.

22495. Does it not seem to follow?—It would altogether depend on where the goods would be going to. There again I think you must take each case individually.

22496. We will not carry it too far. In some cases, at any rate, it is easy to see that the steamer has more interest in reducing its share of the rate than the railway company has in reducing its share?—I do not quite see that.

22497. But you did see it in the case of Waterford. You agreed with me that the steamer would only get it if it got it through Waterford?—Yes.

22498. Then you agreed that it had a great interest in getting it somehow; but supposing that traffic was going to Limerick, and went by steamer from Bristol to Dublin, the Great Southern would still get it to Limerick?—Yes, if it were going to Dublin.

22499. If it were going to Limerick?—If it were going to Limerick?

22500. Whichever port it went to from Bristol, the Great Southern would still get the carriage?—Yes.

22501. So that it does not matter very much to the Great Southern which port it goes to. It may matter somewhat, but not very much?—Quite so.

22502. Whereas in the case of the Bristol to Waterford steamer it is Waterford or nowhere. Do you see?—Yes.

22503. Just one other thing. You mentioned the Cork and Macroom. I do not in the least wish to suggest that you did it without good grounds, but you did tell us that there were frequent cases of parcels where there was a "paid on" up to the frontier of a second railway, and then a second charge?—As I mentioned before, parcels form a very small proportion of our trade.

The question of rates for small parcels.

22504. I shall only call your attention to this. In the instances you have set out under the letters A, B, and C, and so on, there is only one that shows a "paid on" charge?—I can give you more.

22505. That one is on the Cork and Macroom?—Yes.

22506. Mr. Balfour Browne has just told us that the Waterford and Tramore and the Cork and Macroom are the only railways in Ireland not subject to the small parcel scale?—I think there is a similar one to Kilrush.

Mr. Balfour Browne, K.C.—I am only reading from the book, which shows that this small parcels scale is applicable to every other railway in Ireland.

Mr. Acworth.—No doubt the railway companies will see whether it is more than an accident in particular cases. They are clearly bound to adhere to their terms.

Mr. Balfour Browne, K.C.—This gentleman has our scale in his office, and if we have charged him too much he can, of course, get it back.

22507. *Mr. Acworth.*—I have no doubt the railway companies will treat it in that way. If you think it worth while you will put it to the railway companies. Just one other point. You spoke of the country subsidising railway earnings, so to speak?—Yes.

22508. What do you mean by "the country"? What country?—Ireland.

22509. Are you prepared to say that the Irish people ought to bear extra taxation to reduce the railway rates?—Yes, if it is proved that all our taxation is now spent on the country.

22510. Leave that out, please, if you do not mind. We cannot concern ourselves with that. We have all heard of the Financial Relations Report, but we must leave it out. But supposing you take it the other way round—supposing it were proved that Ireland and England were bearing their fair proportions at present, and supposing that under those conditions you wanted another half million to subsidise railways and reduce rates, would you be prepared to put it on Ireland?—Most certainly.

Reduction of rates, if necessary, even at the expense of the Irish taxpayers recommended.

22511. You believe it would pay to do so?—Most certainly.

22512. I am very much interested in that, because a great many witnesses have answered, "We want to get it out of England." Your view is that it would pay Ireland to do it?—Most decidedly. It would take perhaps ten, twelve, or fifteen years, but I most decidedly think it would be a good investment.

22513. Are you empowered to say that that is the view of the Limerick people?—I believe it is the view of a great number of people in Limerick.

June 12, 1907.

Mr. E. J. Long, J.P., City High Sheriff, Limerick, Representative of the Limerick Corporation.

22514. Do you think it is a view which would commend itself to a sufficient number of Irish people to make it possible to do it?—I think so.

22515. You believe that if they were face to face with the question, "Pay half a million more a year, and put it into railway development—extensions of line, better facilities, and so on"—they would be prepared to face it?—I believe the country could be got to do it.

22516. And you believe that it would pay?—I do believe that it would pay.

22517. You spoke of a tribunal to settle what the rates should be?—Yes.

22518. Of course that would not apply if they were State railways?—I presume not.

22519. I mean, the State would settle what your rates were to be, as it settles what your income tax is to be, and you could not litigate about it?—I daresay public opinion would control the State.

22520. In case it was in private hands, you think there should be a tribunal?—Yes.

22521. The way you put it is this—that there should be a tribunal to settle what the rate was to be?—Yes.

22522. And to say whether a railway company which was charging 10*s.* should only charge 8*s.*, we will suppose?—Yes.

The position of the Irish shareholders and the necessary protection from loss required by them if rates were compulsorily reduced.

22523. Would that be reasonable?—I think so.

22524. That would come out of the pockets of the present shareholders?—Yes.

22525. You are saying that on the assumption that it would ultimately come back?—I am saying that on the assumption that the present shareholders have got a monopoly by Acts of Parliament—special enactments—and I consider the public have a perfect right, and in fact are entitled, to every protection under these monopolies, which I think they have not got at present.

22526. But work that out in another shape. The Great Southern and Western are getting, we will say, $3\frac{3}{4}$ per cent. dividend. Would you consider it reasonable that a tribunal—a cheap, expeditious tribunal—should be able to say, "We will reduce your earnings to $3\frac{1}{4}$ per cent.?—I do not see that a reduction of rate would mean a reduction of dividend at all.

22527. You have agreed that if the State found the money it would take ten years or more before it came back?—When I say that, it is natural, in my mind, that the railway companies would work their business so as not to give such reductions that they would not be able to pay any dividends—that would mean great reductions.

22528. I would not suggest that, but supposing that all over the country these cheap and expeditious tribunals led to the people applying to the judges everywhere to cut down the rates from 16*s.* to 12*s.* 6*d.*, or from 13*s.* down to 11*s.*, and so on?—That is assuming that the rates will allow these reductions.

22529. I will assume that it would be better for Ireland if the rates were lower. We can always assume that?—But there is always a reasonable rate—what the traffic will bear.

22530. I wish you would tell me what it is. I have been hunting it a great many years, and I have never met it yet. However, just answer this question. Supposing the net result of these reasonable reductions was a loss of income to the extent of $\frac{1}{2}$ per cent. or 1 per cent. to the Great Southern, would you think it fair to take that out of the shareholders' pockets?—No, I think not.

22531. I feel sure you would not. But do you not think it does come to that—that if you are going in for any systematic reduction of rates, and are going to leave the railways in private hands, the Government has got to guarantee the shareholders somehow?—Yes, but they must also see that the railways are well worked and properly administered. I think the State should then come in to the relief of the railways.

22532. I only wanted to know whether you carried it so far as to say, "Ireland wants reductions, and must have them out of the pockets of the shareholders"?—No.

Examined by Lord PIRRIE.

22533. You are very strongly in favour of State purchase of the railways?—Not very strongly. I am rather doubtful about it, but I am very strongly in favour of changing the present system.

22534. You mean that in case the State did not do it there should be amalgamation?—With some sort of public control.

22535. So that good management would reduce the rates without taking anything out of the shareholders' pockets?—Yes, better administration and cheaper administration.

22536. The only other question I need ask you is this. Have you no steamer communication between Limerick and Belfast?—Not for some few years; we tried it a couple of times.

22537. And it has been given up?—It has been given up.

22538. Is that because there is no great traffic between Limerick and Belfast?—That is the reason.

22539. Therefore when you are urging for cheaper rates by train to Belfast, that is not very material to the prosperity of Limerick?—But all these things are factors in development.

Cross-examined by Mr. BALFOUR BROWNE, K.C.

22540. What you said in answer to Mr. Acworth was rather consolatory, from my point of view. You said that extra taxation to reduce rates on railways was in your view legitimate?—If necessary.

22541. If necessary, of course. That is to some extent a bounty to trade out of the pockets of the ratepayers, is it not?—But I must also say that that opinion is only given with a view to developing it.

22542. If you thought it was not going to benefit them in future you would not suggest it?—Certainly not.

22543. At the same time, you see it is in the nature of a bounty given to trade out of the pockets of the taxpayers?—Certainly.

22544. Do you think you could persuade the country to protect trade in the way you are speaking of?—I do.

22545. You have complained that by reason of the low sea rates you have difficulty in competing with Belfast and other places?—Yes.

22546. You think the manufacturers of Ireland are therefore put at a disadvantage?—As far as Belfast is concerned.

22547. Quite. The same thing would be done, of course, by a protective tariff as by raising railway rates—the two things are of a similar nature?—I presume so.

22548. Now, you first took the rate from Liverpool to Tralee—25*s.* You know that from Liverpool to Tralee there is a direct steamboat?—Yes, she calls there occasionally.

22549. And railway rates must have some regard to competition?—I suppose they must in the view of the railway companies.

22550. And it is an advantage, of course, to the public to have two means of sending goods. Suppose the railway company did not charge a low rate to Tralee the traffic would all go by steamboat?—Yes.

22551. It would be no benefit to the public to shut up the railway route—it is better for them to have the two routes open?—Yes.

22552. The same with regard to the rate from Liverpool to Limerick—there is a direct boat?—Yes.

22553. With regard to Listowel that does not apply—does it?—At the rate the railway company carry both to Tralee, Limerick, and Listowel I assume they do so at a profit. If they do not do so at a profit, they should not carry at such low rates.

22554. But you do not mean to say that a railway company is bound to get the same profit on every ton of goods delivered?—They should not charge me more than they charge you.

Mr. Acworth.—Under similar circumstances.

22555. *Mr. Balfour Browne*, K.C.—Under similar circumstances—I quite agree?—We are speaking of the circumstances now obtaining in Tralee, Listowel, and Limerick.

22556. But supposing it is necessary to reduce a rate in order to get the traffic at all, surely you would say that a railway company, as a trader, was justified in doing that—to get it out of the hands of the steamboat company?—The policy of the railway companies seems to me to be a policy governed not so much by what is the interest of Ireland in the way of developing the traffic of Ireland as a policy dictated by some other influences.

22557. You tempt me to ask a question. Surely it would be to the benefit of the railway companies to develop the trade of Ireland?—But they do not do so, in my opinion.

22558. But they ought to try. They are carriers, and they depend very largely on the prosperity of the State for their own prosperity?—Decidedly.

22559. Do you know that besides the rate you gave of 40*s.* 2*d.* from Limerick to Belfast there is a rate *via* Waterford of 32*s.* 2*d.*?—To Belfast?

22560. You can send by train to Waterford, and then it goes by the Clyde Steamship Company?—I know there is a lower rate, but we can't avail ourselves of that.

22561. You have been rather puzzled by some of these rates yourself?—I have not seen them for months.

22562. But it is a puzzling question—the question of railway rates?—Very puzzling.

22563. Mr. Acworth and myself have been at it a long time, and have been puzzled very often. Do you think that any ordinary tribunal would be capable of dealing with these very nice questions of railway rates?—I do; I think the railway company would be very well looked after.

22564. *Mr. Acworth.*—Do you think the trader would have a fair chance?—Well, I think he would have the sympathy of the tribunal with him.

22564A. I pity him if that is all he is to get?——

22565. *Mr. Balfour Browne,* K.C.—One or two more questions. With regard to passenger fares, you compared the second class fares in Ireland with the second class fares in England—to Stafford and Crewe and so on on the North-Western?—Yes.

22566. Would you like the third class fares of England put in force in Ireland? Do you know that instead of 18*s.* 1*d.* the charge upon that basis would come to 26*s.* 6*d.*?—I did not deal with that.

22567. No, I know you did not. One more question. Do you know with regard to perishables that there are lower rates in Ireland than in England? I think you gave an illustration of a 56 lbs. lot?—Yes.

22568. Do you know that in England that would be charged 1*s.* 9*d.* as against 1*s.* 2*d.* in Ireland?—I do not know that.

Mr. Balfour Browne, K.C.—That is all I ask.

June 12, 1907.

Mr. E. J. Long, J.P. City High Sheriff, Limerick, Representative of the Limerick Corporation.

Rates for "perishables" in England and in Ireland.

Mr. Henry J. Forde, J.P., examined by Lord Pirrie (in the Chair).

22569. Mr. Forde, you are attending on behalf of the Waterford Chamber of Commerce?—Yes, and also on the Waterford Harbour Board.

22570. You are a Director of the firm of R. and H. Hall, Limited, Corn Merchants?—Yes.

22571. You have been a member of the Waterford Harbour Board for some years?—For fifteen or sixteen years.

22572 Are you also Vice-President of it?—I am Vice-President of the Chamber of Commerce this year, and I am a past President.

22573. Have you been requested by them to give evidence, or are you giving evidence simply on your own behalf?—I have been requested to attend by both bodies.

22574. What position do you look upon Waterford as occupying; is it a large manufacturing town?—Waterford is not a manufacturing town generally speaking; it is more a distributing centre for a considerable portion of the South of Ireland.

22575. For distributing goods coming in from sea?—Yes.

22576. Not from Dublin?—No, from sea.

22577. Do they come to Waterford direct from the Continent or from America, or is it merely a distributing centre for Great Britain?—There is a large cross-Channel traffic from England, and of course there is a trade from foreign parts as well.

22578. Is there a large foreign traffic with Waterford?—There is a large foreign grain trade and timber trade.

22579. Really, Waterford is a shipping centre for the South?—For the South-east of Ireland.

22580. What regular cross-Channel steamers have you trading with Waterford?—We have cross-Channel steamers trading with Liverpool, Bristol, Fishguard, Glasgow, Plymouth, Southampton, Newhaven, Dover, and London.

22581. Are they weekly?—Some bi-weekly, some daily, and others weekly.

22582. The Great Western, of course, is the daily service?—That is the only daily service—to Fishguard.

22583. That is the one you rely on as being the daily service?—The only daily; it used to run to New Milford.

22584. Has Waterford been benefited by the amalgamation of the Great Southern and Western and Waterford and Limerick Railway Companies?—We opposed the amalgamation very keenly in Waterford.

22585. You did?—Yes.

22586. Although you opposed it, has it benefited you; have you changed your minds since, on the subject?—I would not like to say that it has not benefited us since. There was this point in Waterford. At the time of the amalgamation we got a clause inserted in the amalgamation Act which was designed or intended to preserve to Waterford the benefits of its geographical position in regard to through rates to England. That question came before the recent Railway and Canal Commission. The Dublin and South-Eastern Railway preferred a charge against the Great Southern and Western, that they were unduly benefiting Waterford as against Dublin, and the Railway Commission has decided that the same facilities should be given to Dublin as exist at Waterford, Cork, and Rosslare, and it has deprived us in Waterford of what we believed was a valuable clause for our protection, preserving our geographical position which was given to us in the first instance by the Committee of the House of Lords that dealt with the measure. We believe in Waterford that the effect of their decision has been practically to sweep away competitive routes hitherto existing *via* Waterford and Cork.

22587. Therefore facilitating Dublin and Cork?—In favour, of course, of Dublin and Rosslare.

22588. Cork does not compete?—There was an old arrangement. Cork and Waterford have what are known as differentials. These differentials were given by reason of the infrequency of the service between Cork and Waterford to places in England, and those differentials have been upheld by the Commission. But they only exist from three places on the Waterford and Limerick Line, and I think one place on the Waterford and Dungarvan Railway. At these points competition existed before the amalgamation, but, of course, since the amalgamation the competition has been done away with, and we think that the differentials not only should have been maintained, but that they should have been given from other places on the old Waterford and Limerick system.

22589. That does not do away with your great advantage of getting close connection with Wales; you have a monopoly, have you not, through Rosslare?—Anything going through Rosslare does not benefit the port of Waterford. Anything going through Rosslare naturally passes by the port of Waterford.

22590. You gain nothing by the Rosslare route?—No, if the port of Waterford is affected, the interests of the city are affected.

22591. Does it not bring a great deal of passenger and tourist traffic to Waterford?—It may bring tourists, but whether it will bring other traffic remains to be seen. At present Rosslare is not being run much as a goods port; it is being run more for passenger traffic.

22592. As far as the port itself is concerned, it is not affected by the Rosslare route?—We are afraid it will be affected.

22593. You are?—Yes.

22594. What do you object to?—I do not find fault with the Irish railways; we have had grievances, and I have had grievances, but they are incidental to the management of any large concern such as a railway company. But I do not think it was the purpose of this Commission to have brought before it small measures of complaint. But, generally speaking, I think the Irish railways, considering their position and the means at their disposal, and the opportunities that they have had, have been very fairly managed.

Mr. Henry J. Forde, J.P., Representative of the Waterford Chamber of Commerce and Waterford Harbour Board.

Protective clause for Waterford inserted in the Amalgamation Act of 1900 alleged to be nullified by a recent decision of the Railway and Canal Commissioners.

The increased flow of traffic through Rosslare not of any benefit to Waterford.

Irish railway management as a whole considered fairly satisfactory

June 12, 1907.

Mr. Henry J. Forde, J.P., Representative of the Waterford Chamber of Commerce and Waterford Harbour Board.

22595. But, as a member of the Chamber of Commerce and as a Waterford Harbour Commissioner, what particular view do you want to put before us?—The view I have to put forward is, that we regard with apprehension the extension in Ireland of the English railway companies—not only their purchasing of lines, but also the controlling influence which they appear to be getting over Irish railways. We hold that the Great Western Railway Company of England are practically the dominant power in the South of Ireland at present owing to amalgamation—I should not use the word amalgamation, but owing to the agreement between the Great Southern and Western Railway and the Great Western, by means of the Fishguard and Rosslare Company. The Great Western have a majority on the directorate of the Fishguard route, and in that way they can exercise a controlling influence.

The controlling influence of English railways over the Irish lines considered to be to the disadvantage of Ireland and a hindrance to the development of Irish industries.

22596. You have not found that the investments of English companies in Irish railways have reduced the rates for you?—No, certainly not. We would like to see this development of railway influences in Ireland on the part of the English companies stopped. We believe the Irish companies would manage things more sympathetically and from an Irish point of view. Naturally, English companies look at the matter from their point of view, and that would be the encouragement of traffic on their lines to Ireland, and not from Ireland.

22597. How do you view the interests of Ireland as regards the general tendency of these English companies to give you cheap commodities; or, to put it in other words, do you look upon Ireland as a dumping field. Is it not an advantage to the people of Ireland to get their goods in that cheap way?—I am looking at it from the point of view of the necessity in Ireland of encouraging industries. If the population of Ireland is to be maintained or increased, there must be something done for the encouragement of local industries in the interior and elsewhere.

22598. Does not getting your goods very cheaply into Ireland assist the manufacturing industries of Ireland?—I would take the view that the inward through rates should be based in such a way as to assist the Irish manufacturers, if necessary against the English manufacturers—a system of protection.

The system of low cross-Channel through rates into Ireland, and disproportionate local rates condemned

22599. Take the ordinary instance of boots or furniture; they must come into Ireland to the benefit of the manufacturers?—I do not quite understand.

22600. Your objection is that Ireland is turned into a dumping field by getting cheap commodities. But surely, whether it is coal or timber, or whatever it may be, the cheaper you get it into the country, the better it should develop your manufactures, should it not. And the more your town of Waterford would be improved?—What I would say against that is that if you take the case of a through rate from England to some place in the interior of Ireland where there is a boot factory, and we will say the through rate is a £1 a ton, and the proportion from Waterford to that inland town is, say, 5*s.*, whereas the local rate from Waterford might be 7*s.* 6*d.*—we think that the through rates should be based on a different plan; in other words, that if there must be through rates, the local rates should be the same.

22601. In other words, you want to reduce the local rates to the same as the through rates. You do not object to the through rates being as cheap as possible?—I cannot object to that, though I would like to object to it.

22602. You would?—Yes.

22603. I do not think I need argue that because I do not see how you could increase the prosperity of the manufacturers of Ireland by increasing the rates on their goods. Have you anything you would like to say as regards local matters in connection with Waterford as against the Great Southern and Western Railway Company?—I have nothing very special to say in regard to that.

22604. What about the toll?—That has been done away with since I submitted my proof of evidence.

22605. You have nothing to complain of about the toll?—That was a toll put on for admission into their new station, but it was taken off in deference to public opinion.

Improvement in the train service to Waterford called for.

22606. Therefore that disappeared?—Yes. I gave that statement some months ago.

22607. I only wanted to correct it, because I thought it had been put right. Do you complain at all of the train service in connection with Waterford?—We think it might be a little expedited.

22608. Do you mean as regards punctuality or as regards speed?—As regards both punctuality and speed, and more rolling stock would be desirable; but again I say that I think that, on the whole, there is not a great deal to complain of.

22609. Do you, as a Harbour Commissioner, suffer by goods lying on the quay waiting for trucks?—Since the opening of the Rosslare route there has been a considerable disturbance of traffic, but I think that is being gradually got over.

22610. It has been?—It is being gradually got over.

22611. Have any cases come before either the Chamber of Commerce or the Harbour Board in which preference has been given to any traders?—We have no specific cases where it has been done, but it came out in evidence before the Canal Commission that there were such cases.

22612. And you believe there were?—It came out in evidence.

22613. *Mr. Acworth.*—What do you mean by the Canal Commission?—The Railway and Canal Commission.

22614. You do not mean the Royal Commission on Canals?—No.

22615. *Lord Pirrie.*—It is the belief at Waterford that there were such cases, but you have no actual knowledge yourself?—I have heard it stated that goods have been taken at customers own weights.

22616. That is very satisfactory to the customers. Do you believe in the present system of appeal?—I think the present system of appeal to the Railway and Canal Commission is a most cumbrous and costly system, and one which is practically out of the reach of anybody except very large traders, and that it shoud be amended.

22617. Have you any view in your own mind as to the form that amendment should take?—I think there should be a Commission of, say, three experts, one, say, representing the railway companies, one a lawyer, and the other representing the business community; they should be well paid, and they should go round the country hearing appeals and dealing with the instances in the districts in which they arose; they should be there for no other purpose than that.

22618. They should just travel about?—Going round periodically: that could easily be arranged.

22619. You say a Commission of three?—I suggest three.

22620. Should they be really experts?—I would suggest one railway expert, one lawyer, and one business man. Let them be very well paid, and do nothing else.

22621. You have faith in the lawyer; other witnesses have said that that is the one profession which should be excluded from all these measures. But that is your suggestion?—I would not object to having two business men.

22622. I agree we would not get on very well without them, but that is your idea of a Court of Appeal, as it were?—Yes. If they were able to go round the country it would reduce the expense of appearing before them and make it very simple. Let it be a sort of common sense decision on many of the points.

22623. With regard to rates and through traffic?—Everything.

Examined by Mr. Acworth.

22624. With regard to that Commission, do you intend it to have the powers that the present Railway and Canal Commission have, of making peremptory orders?—I would give that power.

22625. That power, of course, may affect vitally the revenue of a railway company?—Naturally, it might.

22626. It might reduce their rates, and that kind of thing. You will agree that this Commission would have to decide according to strict legal proof?—I suppose they should, but I think that in a good many measures in business and otherwise, we get on just as well if we eliminate to a certain extent the legal aspect and deal with them more from a common sense view.

22627. But if they were going to give a legal binding judgment, the Court would have to act strictly on legal evidence, and according to the ordinary rules of evidence. You would have to prove everything strictly and so on?—Certainly.

22628. Then I gather that you would not have lawyers on either side before that tribunal?—You might have solicitors.

22629. Local solicitors?—Yes.

22630. Now, just consider that. I suppose I may safely assume that the average local solicitor in Waterford does not spend much of his time on railway cases?—No.

22631. He cannot be an expert?—No.

22632. Would you yourself like to go to law with the Great Southern resting on the advice and with the help of a local solicitor in Waterford who would have no special knowledge of railways, while the railway company would have their expert managers and a railway solicitor who spends his life in dealing with railway law: do you think you would have a fair chance?—I see your point, and it is an extremely difficult one to answer, and I cannot.

22633. Honestly, I do not think you can. I am afraid that all these proposals for making a cheap expert tribunal are going to break down. That is my belief?—But you will admit the necessity for something of the sort?

22634. I admit I want to see my way, but so far I have not been helped by any evidence. You see the difficulty yourself?—I do.

22635. Then take another thing. There is the same difficulty here. One wants to do something, but what is one to do. You say that there are people who get unfair advantages, or you believe that there are?—Yes, I do. I believe it has been done, but whether it continues I cannot say.

22636. We have had a great many people who believe that there are things of that kind done, but the people who get those advantages are not going to tell?—No.

22637. And the people giving them are not going to tell?—No.

22638. And if you do not know them, and nobody else can tell the controlling authority whatever it is about them, how are they going to be stopped. You see the difficulty is one of evidence?—Yes.

22639. It is illegal now, and it could be stopped tomorrow, if you could prove it?—There again, if it was possible to have some sort of tribunal to deal with the measure easily and cheaply, you would have cases brought before it, and possibly the evidence elicited would result in proving it, whereas when you have to deal with the Railway and Canal Commission you hesitate about taking action.

22640. But if you could prove it; if you had conclusive evidence, no railway company would ever dare to let you take them into Court; they would never venture to go into Court; you would not have to spend any money beyond the filing of an application, which costs, I think, a sovereign. You would not need any counsel or anybody else. If the company knew that you could prove your case they would back down instantly. Do you consider that the Dublin judgment has injured you seriously?—I think it will have that effect.

22641. I have not pretended to follow it; I have it here, but I have not read it except in the newspapers. What is your view—that some of the protection that was given to Waterford by the long and famous clause is gone?—Yes.

22642. I do not know whether you would agree with me that there were sixteen clauses practically to sixteen different people, and that they really were inconsistent one with another, one saying that Dublin should be treated a little better than Waterford, and another saying that Waterford should be treated a little better than Dublin; you really could not reconcile them?—My recollection is that the clause that was given was a clause designed by Sir Henry Oakley for us; we employed him at the time; that clause was given to us. I think the hybrid Committee said "Waterford looks like being hardly treated, and we will see that Waterford is protected," and they gave us the clause. Then in the hurry and skurry of winding up everybody came in and said, "We want this clause," and they got it, and now we will suffer.

22643. And then when each put forward their different view the thing would not work out. But you do think that you are going to suffer. Now tell me what is your scheme precisely. What do you think, under a system administered by people who were perfect, Waterford is entitled to? You clearly would not claim that it was entitled to better treatment than other people?—I think we should have the full benefit of our geographical position.

22644. That is a common phrase?—I think it is unfair—it is hardly within the province of this Commission perhaps—but I think it is unfair, with all respect to the Railway and Canal Commission, to say that if the distance between a place in England *via* Dublin is 100 miles further than *via* Waterford, they are to get the same rate; I do not see how they can reconcile it.

22645. Take it the other way round, Rosslare has got a better geographical position than you?—Yes, they have.

22646. Are you prepared to let Rosslare get better treatment than you?—It is now a case of the lesser of two evils in that way; but we really had no option as the grouping of Rosslare with Waterford was done by a Parliamentary Committee at the instance of the Great Western Railway.

22647. It is really a very difficult position, is it not?—It is.

22648. Do you not think, supposing we had a witness who knew the case from the Rosslare point of view, or from the Dublin point of view, as well as you know it from the Waterford point of view, that he would tell us that Waterford was claiming more than the benefit of its geographical position?—He might.

22649. Are you not really anxious to preserve an old advantage that you got before Rosslare existed?—Naturally we are.

22650. Naturally you are, and that is what it seems to me is a very difficult question. Now tell me this, what do you mean exactly by objecting to the extension of English control. Am I wrong in thinking that in the old days, when the Great Western used to subsidise the Waterford and Limerick line, you welcomed the Great Western of England?—They gave us something then.

22651. Is it not really the fact that your objection to the extension of English control means that it does not suit Waterford; at present one big company is helping Dublin and another is helping Rosslare?—Of course, by helping these places, they are doing it to the detriment of other ports.

22652. Understand that I am not taking sides against you in the least; I only want to see where we are?—It was hardly so pronounced at that time. Before the amalgamation the Great Western gave the Waterford and Limerick and the Dungarvan line certain subsidies.

22653. It is the case that twenty years ago the Cambrian Company used to run steamers to Waterford?—Yes.

22654. If they ran them again, and it brought traffic through Waterford, would you object to the extension of Welsh control?—I suppose we would not.

22655. I do not think you would be wise to do so?—No. But I think you hardly grasp what I was trying to explain. Perhaps I am a little dense about it.

22656. Oh, no?—What we complain of is that the Great Western have really a dominating influence over the Great Southern system by reason of this agreement, by which they are bound to send all the traffic they can control by Rosslare, and if that was pushed to its logical conclusion—I may be wrong, I am only giving you my views and the views of Waterford—if that was pushed to its logical conclusion, it would mean that the Great Western would practically administer the whole South of Ireland through the Great Southern, and that they could do so from their point of view, which, naturally, would be an English point of view as distinct from an Irish. We say that something must be done to promote and encourage the growth of industries in Ireland, and one way we think of doing it is by reduced railway rates, however it may be brought about, but we think that that is not likely to result from the great English companies getting the control of the railways in Ireland. They would say "We are more interested in the traffic we can pour into Ireland than in the traffic we can get out of it."

22657. I am glad you have said that, because that is a point I was coming to. You say that it is to the interest of the English railway companies to encourage traffic to Ireland rather than traffic from Ireland. You were speaking, I suppose, of goods?—Yes.

June 12, 1907.

Mr Henry J. Forde, J.P., Representative of the Waterford Chamber of Commerce and Waterford Harbour Board.

22658. You do not object to English tourists?—No; we are most delighted to see them, and I hope we receive them in every way that they should be. We have improved our hotels in Ireland for their benefit.

22659. I hope you get the benefit, too. But you had goods traffic in your mind?—Yes

22660. What interest has an English railway in encouraging traffic to Ireland rather than from Ireland?—Ireland is more an importing than an exporting country, and the imports will be greater than the exports. Therefore the volume of traffic from that point of view would be worth more to the English company.

22661. That is the present condition?—Yes.

22662. You will agree with me that owning steamers as well as railways it would always be a good thing for them if they could get a full load both ways?—Yes, of course, it would.

The alleged policy of English companies in promoting the flow of traffic to Ireland, rather than from it, discussed.

22663. So that if imports are biggest at present, their interest would be to encourage exports even more than imports?—I do not think they do it.

22664. I quite gather that, but I do not follow why you think it is not to their interest to encourage the traffic from Ireland. The export from Ireland at present is mainly produce, is it not?—Yes.

22665. The imports are mainly manufactures?—Yes.

22666. And manufactures for a given amount of money are a smaller volume than produce?—Yes.

22667. Therefore the produce is the bulkier thing, and there is more railway profit to be made out of carrying bulky stuff than out of carrying valuable stuff in smaller quantities?—I do not think the railway companies carry the produce in the volume that you would infer, for this reason. A large amount of the export from Ireland being produce would be brought down to the ports and shipped direct, and not by the railway steamers.

22668. But by railways?—The Irish railways would get it.

22669. Butter, eggs, poultry, bacon, and so on?—Yes.

22670. I cannot take it further if you are not inclined to tell me your reason for thinking that English railway companies have an interest in doing it. I cannot myself see that they have. It seems to me that their interest is just as much to encourage the traffic one way as the other. But I will leave that and ask you another question. You, like a large number of Irish witnesses, have said that you would like to see Irish manufacturers given an advantage against the Englishman—that the Englishman is so much more powerful that the Irishman ought to be given a benefit. I do not know whether you heard the question which Mr. Balfour Browne put to the last witness when he said that that meant that you would like Protection?—Yes.

The claim of Ireland to special treatment in the matter of railway rates and preferential treatment urged.

22671. I gather that you would like protection as against England: you say it is fair to level up?—The way I look at it is this. Ireland is a country which requires special treatment, and one of the ways of giving special treatment is by a reduction of rates and preferential treatment.

22672. A reduction of rates for Irishmen rather than of the rates for English stuff?—I would not object to the rates for stuff going into England being cheaper.

22673. You would like lower rates for Irish manufactures, but would keep them as high as they are for English manufactures coming into Ireland?—Yes. In other words, it is Protection.

22674. I am not disputing it; but, rightly or wrongly, the policy of the English Government is Free Trade?—Yes, a kind of Free Trade—so-called Free Trade.

22675. I do not want to defend it in the least, but that is what it is commonly called. Would you think it reasonable, when that is the policy of the English Government, that the railways should set themselves up against it and say "we are Protectionists; the Government is Free Trade, but we are going to be Protectionists"?—I think that is being done; at the present moment they are applying the provisions of the Merchandise Marks Act in a way which is almost amounting to Protection. For instance, the other day they brought out an order by which the cases of watches——

22676. But that is not the railway?—No; I mean the Government.

22677. I am not objecting to the Government doing it. What I want to ask is would you think it right that the railway companies should set themselves up against the Government and say "you may want Free Trade, but we are going in for Protection?"—Viewed in the abstract, it would perhaps be peculiar, but, as I say, our reply to that is that Ireland is a country that requires special treatment.

22678. But does it not come to this? If you want to have railway rates worked in a Protectionist direction—and I am not objecting—you have got to convert the public and not only the railway companies; does not that seem so?—It does.

22679. I am not objecting to your doing it in the least, but the railway companies cannot go a different way?—I think I ought to say that we favour the view of a certain amalgamation amongst the Irish railways, with a certain amount of State control, or rather State aid, so that in this way manufacturers might be assisted.

22680. But taking it that way; supposing that happened and the railways were handed over to State control?—I am not in favour of State control—State purchase.

22681. But suppose there was a general control of rates developing then in certain directions; at present that would be the control of a Free Trade State?—Yes.

22682. And it would guide the rates in a Free Trade direction?—Naturally it would.

22683. That is what you do not want?—Yes.

22684. So that this question is bound up with the general question of Free Trade policy or of non-Free Trade policy?—I am afraid it is.

Examined by Colonel Hutcheson Poë.

22685. I understood you to say that previous to amalgamation the Great Western Company paid something like £16,000 a year to the three railway companies that served the port of Waterford?—Yes.

22686. And I suppose that while they paid directly to the railway companies, indirectly the traders who were served by those railways in the districts of Limerick, Maryborough, Lismore, and so on got the benefit of those rebates?—I could not answer that beyond saying that I think the subsidy was paid as a rebate from the rates that they got for the carrying of goods. I do not think the individual trader got any benefit of the subsidy that was paid in the way of reduction. I think it was paid more to encourage railway companies to collect traffic to go by the Milford route.

22687. Naturally, in the first instance; but surely the railway companies gave some portion of the advantage of the rebate which they were given by the Great Western Company to the traders in encouraging the traffic?—I could not answer on that point

22688. Perhaps you can answer it in this way. Can you say yes or no whether since the amalgamation the rates which the traders pay in the districts I have mentioned for the carriage of their produce to Rosslare or Dublin compare favourably or unfavourably with the rates they paid previously?—The rates in existence at present are the same as before the amalgamation, except that in any instance on the Waterford and Central and the Waterford and Limerick Railways, where the rate between two points happened to be greater for the same distance on the Great Southern and Western system it was to be reduced to the rate in force on the Great Southern and Western system; no increase was to be made in the rates existing at the time of the amalgamation, so that I could not answer what you ask me.

22689. So that, so far as you know, they are not affected by the amalgamation, and they do not have to pay any more for sending their goods to Rosslare or Dublin—cross-Channel goods—than formerly for sending them to Waterford?—I do not think so.

22690. *Lord Pirrie.*—Did you not say they pay a lower rate—that if there were two rates in existence they pay the lower?—No. The Amalgamation Act provided that if there was a rate, we will say for twenty miles on the Waterford and Central Railway, which ran between Dublin and Maryborough, and that rate was 5*s.*, and if the rate for the same distance on the Great Southern System between Dublin and somewhere else was 4*s.*, the rate should be reduced after amalgamation to 4*s.*

22691. So that you gained that much?—Yes, in the few instances to which it applied.

22692. *Colonel Hutcheson Poë.*—In other words, the traders were in a better position than before?—To that extent, yes.

22693. I do not see how you could expect them to send their goods *via* Waterford, because you admit that they are in a better position by sending them *via* Rosslare. But, as a matter of fact, the judgment delivered by the Railway and Canal Commission the other day did not interfere with the differentials which were given to Waterford and Cork?—No. If I remember aright, the judgment practically said that the differential which had been accorded to Rosslare previous to the enquiry was not justified.

22694. It was to be taken away?—Yes.

22695. Undoubtedly the differential treatment had been accorded to Rosslare, and the Commission thought that as the steamboat service was practically as good as, if not better than, the London and North Western system, there was no justification for the differential treatment. I think that was the effect of the decision. At any rate, Waterford and Cork were not interfered with in regard to differential treatment?—No, except that we only got differentials where they were in existence before. We did not get any new benefit, though we did claim that we ought to have got them.

22696. Because of the protective clauses?—No, but because all the places on the old Waterford and Limerick line, which now belongs to the Great Southern, were not competitive. There were three places where differentials were given before, and they were competitive points at that time.

22697. You said that if the Dublin and South-Eastern had not taken action and won their case, probably these protective clauses would have afforded you all the protection necessary?—Yes.

22698. That would have been because Dublin would have suffered very much, and was suffering?—I do not think they were suffering.

22699. It was proved to the satisfaction of the Commission that they were, because their judgment practically laid down that in future the rates *via* Dublin were to be the same as *via* Rosslare, so that in the opinion of the Commissioners Dublin was very seriously affected to the advantage of Rosslare. Your contention is that Waterford has been seriously affected to the advantage of Rosslare, and I suppose to a certain extent you consider that Dublin has gained at your expense?—Yes, they have

22700. But, to put it shortly, you are of opinion that in a country like Ireland, with a big seaboard and a number of ports, the smaller ports do not get the benefit of their geographical position?—Yes.

22701. And that under a unified system, with State control, probably there would be no reason for diverting traffic across country to two or three principal ports, but that each port would get the benefit of the trade within a certain radius of its own sphere of influence, so to speak?—Yes.

22702. You consider that the dominating influence which the Great Western Company has acquired in the South of Ireland is not in the interests of the country?—I do not think it is.

22703. As a matter of fact, I think they have a certain voice in the management—I do not know to what extent—of the Waterford and Dungarvan line, and I think, in the Waterford and Wexford line?—The Great Western have an influence in this way, that the board of the Fishguard and Rosslare Railway Company consists of four Great Western directors and three Great Southern directors, so that they have a majority on the board.

22704. In that way they practically carry out their own policy.

22704A. Which may be antagonistic or not, as the case may be, to the interests of the Irish trader?—Yes.

22705. And handicapped as the Irish trader is in every direction you consider that it is of great importance that instead of being accorded, I will not say unfair treatment, but hard treatment in the way of rates, he should be encouraged to develop his particular industry by assistance in the way of low rates and facilities?—I do, generally speaking.

22706. You spoke of a new impost, or duty, or toll being placed on passengers and non-passengers at the Central Station at Waterford?—That has been done away with.

22707. You know that there is a small tax on Continental railways for admission to the platforms?—I am aware of that, but I would be sorry to see Continental methods applied here.

22708. But they do derive a very large revenue from it on the Continent. At any rate, this particular toll gave rise to great complaint, and it has been done away with, so there is no need to go into it?—We do not like new imposts or taxes in Ireland.

22709. Have you considered the question of amalgamation apart from State purchase?—I am not in favour of State purchase.

22710. Are you in favour of amalgamation into one system?—Into one system or three systems, as might be considered advisable when the matter was gone into.

22711. You would not approve of amalgamation unless it were accompanied by some form of State control?—Yes; some form of State aid, and that would involve Treasury control.

Amalgamation of the Irish railways under State control approved.

22712. And having some voice in the management?—Yes.

22713. In the framing of the rates and charges which would be levied?—Co-operation with the directors in the management of the amalgamated system.

22714. Would you be prepared to leave the decision as to any reduction which might be considered advisable in the hands of a Railway Board in Ireland without any interference or any control by the State?—Of course, if they were going to advance the funds, the State should have some control as to how the money should be given and the objects to which it should be applied.

22715. I take it for granted that unless amalgamation can be accompanied by a reduction in rates and fares, and unless it were laid down that that should be a condition of the amalgamation, it would not be worth considering?—No.

A reduction in rates and fares considered a necessary condition of amalgamation.

22716. *Lord Pirrie.*—In answer to Mr. Acworth, you said that you believed that certain traders got a preference. Do I understand that if any preference were given you think those special rates should be published or advertised or entered in the rate book?—I think they should be.

22717. That is what you would like to see done?—I think if preferential treatment is given, it should be available for anybody else.

Equal treatment of all traders as regards rates and concessions advocated.

22718. Do you mean that it should be published in the local paper?—I would not say that.

22719. Would you be satisfied if it was merely entered in the rate book?—Quite satisfied. I think I ought to say that what I have in my head about this preferential treatment has arisen entirely through the competition that took place between the Dublin and South-Eastern Railway and the Great Southern and Western in connection with a matter that was subsequently decided by the Railway and Canal Commission.

22720. Are these special rates given to large traders only and not to small?—What I have heard relates to small traders. It was in the nature of rebates. I have not permission to mention names, and I do not wish to do so. I have no personal experience myself of anything of the sort.

22721. *Mr. Acworth.*—You know that it is absolutely illegal?—I am quite aware that it is absolutely illegal.

22722. You reminded me by something you said in reply to Colonel Doë of a question which I should like to put to you. The Fishguard and Rosslare Company is managed by four Great Western directors and three Irish directors?—Yes.

The *personnel* of the Fishguard and Rosslare Company's Directorate.

22723. Is it within your recollection that less than ten years ago that extra Great Western director was appointed after pressure from the Irish side?—Yes; I must plead guilty to that.

22724. Waterford themselves were partly responsible?—At that time we were suffering.

June 12, 1907.

Mr. Henry J. Forde, J.P., Representative of the Waterford Chamber of Commerce Waterford Harbour Board.

22725. *Mr. Croker Barrington, Solr.*—It was inserted by the committee on pressure from the Irish side, and the committee put it into the Bill of 1898.

22726. *Mr. Acworth.*—You knew how bad the Great Southern was, but you did not know how bad the Great Western was; that is how you would put it?—I am afraid that is the way we must put it.

Growth of the desire of the Irish people to manage their commercial affairs free from outside control.

22727. But, seriously, what I want to ask is this. Is not that feeling which you have given expression to, and which a great many other witnesses have given expression to—the feeling that you want to be allowed to manage your own affairs commercially—of recent growth; there is no doubt that it is a real feeling?—There has been a feeling for a very long time amongst a large section of the community that we should be allowed to manage our own affairs.

22728. But commercially?—In other ways besides, but commercially, I think, it is to a large extent of recent growth.

22729. If I were not trenching on politics, I would be inclined to say that it has rather gone aside from political and taken a commercial form lately; is not that so?—Yes, I wish it were absolutely so.

22730. There is no doubt that the feeling exists now all over Ireland?—I think it does. I think that undoubtedly the people generally are taking more interest in commercial matters than they used to.

22731. And in that way Ireland feels that it ought to be a commercial entity to some extent?—Yes.

The witness withdrew.

Lord Pirrie.—I have been asked by the Chairman to announce that it was decided this morning that the next meetings of the Commission will be held in London on July 3rd, 4th, and 5th, in these rooms, and on the 8th and 9th in Dublin.

The Commission then adjourned till Wednesday, 3rd July.

FORTIETH PUBLIC SITTING—WEDNESDAY, JULY 3RD, 1907,

AT 11.0 O'CLOCK, A.M.,

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners present:—Sir CHARLES SCOTTER, BART. (Chairman); Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Col. WILLIAM HUTCHESON POË, C.B.; Mr. W. M. ACWORTH; Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN, Secretary.

Mr. Croker Barrington, Solicitor.—Sir Charles, before you begin the business of the day, will you allow me on behalf of the Associated Companies to express our heartiest congratulations to you upon the honour that has been conferred upon you by the King since the Commission sat last. *July* 3, 1907.

Chairman.—I am exceedingly obliged to you.

Mr. ST. JOHN HENRY DONOVAN, J.P., examined by the CHAIRMAN.

Mr. St. John Henry Donovan, J.P., Representative of the Kerry County Council, Tralee Harbour Board and Urban District Council, also of the County Councils' General Council.

22732. Mr. Donovan, are you a member of the Kerry County Council?—I am a member of the Kerry County Council, the Tralee Harbour Board, and the Tralee Urban District Council, and a delegate of the County Councils General Council in Dublin.

22733. And you have been asked to give evidence on behalf of the Kerry County Council before this Commission?—Yes.

22734. And the other bodies that you have mentioned?—Yes.

22735. Have they had this particular question under their consideration?—At different times there have been several discussions, both at the County Council, the Harbour Board, and the Urban Council, in connection with it, and they object very strongly to the rates and the way they are worked through Ireland—the local rates.

22736. You mean the way the railways are worked?—Yes; the unevenness of the rates.

22737. Do you think that those inequalities of rates which you have mentioned are detrimental to the prosperity of Ireland?—Certainly; the inequality is most detrimental and affects the trade of the country. It allows outside people to come in and sell their goods where the local man is handicapped by a higher rate to the same point.

22738. Then you think that local industries are damaged by that arrangement?—Yes.

22739. Of course it is easy to say that, but can you illustrate it in any way by giving us some figures?—Well, if you take the case of the through rate, you can get stuff from Liverpool——

22740. First of all, what do you mean by "stuff"?—Flour, or meal, and grain.

22741. Take grain, then; will you illustrate it by giving us the rates for grain?—Yes.

22742. Just give us those?—You get a rate for grain from Liverpool *via* Waterford or Cork for 10*s.*

22743. From Liverpool to where?—To Tralee *via* Cork or Waterford.

22744. How is that traffic carried?—Partly by sea and partly by railway.

22745. What is the distance from Cork to Tralee?—About 80 miles.

22746. Then there is a transit by sea from Liverpool to Waterford, and then a transit of 80 miles by rail?—From Cork to Tralee.

22747. Yes; I should have said Cork—Cork to Tralee. What are the through rates?—10*s.*

22748. What deduction do you draw from that?—Also the same rate is in vogue *via* Waterford, that is, you have sea to Waterford from Liverpool, and from Waterford to Tralee, 138 miles, it is the same rate.

22749. All 10*s.*?—Yes, 10*s.*

22750. Are you sure of that?—Positive; I have paid it.

22751. How does that compare with your local rates?—If you take it over, say, from Tralee to Millstreet, 43 miles (which is on the way from Tralee to Cork), it is 5*s.* 11*d.*, or from Tralee to Rathmore, 36 miles, it is 5*s.* 3*d.* That is, if we import grain direct from the Black Sea, or La Plata, or any portion of America, we have to pay a very large rate in comparison to what the merchants in Liverpool pay, who can, of course, have the liners and a cheaper freight against us. In proportion to the mileage we have to pay a higher amount.

22752. Are you engaged in the grain trade?—Yes.

22753-4. And therefore you know about these figures?—Yes. I am a timber merchant, grain merchant and coal merchant—a general merchant in the district.

22755. Have you got the rate for hardware to Tralee *via* Waterford?—Yes.

Instances of disproportionate local rates between Tralee and certain stations compared with through rates from English stations.

22756. Just give us that figure?—The hardware rate from Tralee to Waterford it should be; it is wrong in that proof before you, because "*via*" was put in; it should be "from Tralee to Waterford, 138 miles, 30*s.*"

22757. That is the railway rate?—Yes, and hardware from Birmingham *via* Dublin or Waterford is 48*s.* 4*d.*, and hardware from Dublin to Tralee, 134 miles, is 38*s.* 5*d.*

22758. Is that by railway?—That is by railway. Since I have sent that proof to you I have got two dockets from another gentleman in Tralee, which I have in my hand here, with regard to the rates.

22759. Tell us what they are and we will see what bearing they have?—For iron bedsteads the rate as quoted here is 38*s.* 5*d.* from Kingsbridge, but from Warrington *via* Kingsbridge and Dublin the rate is only 36*s.* 8*d.*—2*s.* less, although carried over the same line.

22760. Are the quantities the same in each case?—The quantity is 3 cwt. in one, and 5 cwt. in the other. The rate is the same, but of course in the smaller rate they charge scale rate; they charge at the rate of 60*s.* for the smaller lot of 3 cwt.

22761. Is there any difference in the conditions in regard to those; are they in each case company's risk?—The same conditions obtain in each case.

22762. Under the same conditions for the same weight the rate is less from Warrington to Dublin than it is from the port itself?—Than from Dublin to Tralee on the local line alone—only on its own line.

22763. Just give us those figures as clearly as you can, so that we may have them on the notes?—The

July 3, 1907.

Mr. St. John Henry Donovan, J.P., Representative of the Kerry County Council, Tralee Harbour Board and Urban District Council, also of the County Councils' General Council.

rate from Warrington *via* Dublin, for hardware, to Tralee is 36*s*. 8*d*. per ton, and the rate from Dublin to Tralee——

22764. For the same traffic?—For the same traffic, is 38*s*. 5*d*. per ton.

22765. That is clear. You have notes to show that that is so?—I can produce the two dockets—the through rate (*handing in the same*).

22766. Do you consider that that is giving an advantage to outsiders over the Irish traders?—It is virtually 2*s*. less from Warrington.

22767. That is your complaint?—That is one of the chief complaints.

22768. I suppose you are in a position, if we want it, or are you in a position, if we want it, to give any further rates and particulars?—Yes; I have a good many rates. I have only taken a few items, as I have given you there in connection with these, to prove the facts. Those are with regard to through rates. We object a good deal to the local rates to the district. We say that Kerry is injured, as in comparison with Cork, for instance. The rates are grouped in County Cork; three towns are taken specially in Kerry out, and there is a group rate given of 4*s*. 6*d*. per ton for these three towns.

Injury to local industries in Kerry alleged owing to the low rates for grain charged from Mallow to certain Kerry stations compared with the rates from Tralee and other Kerry towns.

22769. From where?—From County Cork—Mallow.

22770. Give us the rate from Mallow?—Mallow, County Cork to Killarney, Castleisland, and Killorglin are all grouped at one rate—4*s*. 6*d*.

22771. That is rather a low rate?—It is a very low rate.

22772. You do not complain of it being too low?—We object to it, because we say it is injuring County Kerry, who guarantee a very large sum in connection with the railways worked by the Great Southern and Western.

22773. Are both districts served by the same railway company?—Yes.

22774. Have you mentioned that particular inequality of rate to the railway company?—Yes.

22775. Has it been brought under their notice?—Yes, but they say they cannot change it, because it is scheduled to the Act of Amalgamation?

22776. That is the low rates?—Yes.

Extent of the guarantees to railways in Kerry.

22777. They cannot raise those?—No, but our reply to that is, if the 4*s*. 6*d*. rate pays you to come into Kerry, we maintain that you should give us a proportionate rate out of Kerry, so as to give the same facilities to the Kerry towns as you give to the Cork towns. If they made a bad bargain, and put in a rate which they now say is entirely too low we maintain we should get the benefit in County Kerry of a similar rate out. That is one of the chief points upon which the County Council is very strong, because of their guarantee, upon which, I think, you had evidence from Mr. Thomas O'Donnell, M.P., and which, therefore I think I need not go into again. You have had those figures with regard to the guarantees for £20,000 a year virtually. Of course there are refunds out of it, but Kerry has guaranteed very largely, and has been a very go-ahead county, I think, in trying to open up the country for the benefit of the ratepayers, and we feel very strongly that another county should be in a position to come into Kerry and injure the ratepayers of that district by having a lower rate against the industries locally in the county.

Rates with Youghal and Templemore quoted.

22778. I think you have made that very clear, and unless you have any particular rate that you wish to mention in connection with the goods traffic, I think we will pass on to another subject?—Unless it would be necessary to point out that in Cork itself, taking Mallow as a distributing centre to other portions of the county—taking Youghal, which is forty-eight miles—they charge 6*s*. 4*d*., although they come into Kerry, over sixty miles, at 4*s*. 6*d*., thereby still showing that they are virtually attacking the county of Kerry. If you take it the other way, towards Tipperary, I may instance Templemore, which is sixty-five miles from Mallow—in that case they charge 7*s*. 9*d*.

22779. *Mr. Acworth.*—These are all grain rates, I suppose?—These are all grain rates—yes.

22780. *Chairman.*—I think those questions are sufficient for our purpose this morning?—I think so. Really there is no necessity to put the matter very fully.

22781. Your evidence is more of a general character, and you give these few instances of what you consider inequalities?—Yes.

22782. *Mr. Acworth.*—Would you tell me where Templemore is?—Templemore; it is on the map there.

22783. *Chairman.*—Do you consider the passenger service of the railway serving your district satisfactory?—No.

22784. Why?—We consider it is neglected, especially in the winter, and in summer local people get no real advantage. The tourists coming in from the big towns will get trains that will bring them into Killarney and down to Kerry at a very reasonable rate; but if we want to leave Kerry the difficulty is such as to make it almost impossible in the winter. It is only for three months in the year that those facilities are given really.

22785. But Kerry is not at all as attractive as Killarney, for instance?—But, of course, Killarney is Kerry.

22786. You are speaking of the county?—Yes; of all the towns.

22787. You are making some comparison with Killarney; you do not complain that sufficient facilities are not given to Killarney?—In the summer, of course, they give good facilities.

22788. Is there any use in giving special facilities in winter?

Lord Pirrie.—He says *from* Killarney.

Witness.—In the summer they give facilities from Killarney, too; they put on an extra train.

22789. *Chairman.*—What I understand you to say is this—that in the summer the arrangements of the railway company with regard to excursion trains, cheap fares, and other facilities are satisfactory?—Yes; from Dublin to Killarney you can get a cheap ticket.

22790. And from any other place?—From the big towns, but coming from Kerry we cannot get up to Dublin. From Tralee, which is twenty miles from Killarney, we cannot get these facilities. There are only two excursions in the month.

22791. I should have thought that quite sufficient. What is the population?—10,000, approximately.

22792. You have two excursions a month?—There are two cheap excursions a month—yes.

22793. What do you suggest?—I think they ought to give the cheap tickets as they do from Dublin—the three-day ticket from Friday to Monday.

22794. Do you think that people would travel?—Certainly, if they have got the facilities; I am confident of it. In the old days people could not travel at all; but when facilities were given you see how the traffic increased.

22795. Of course, I see your point—your point is that the same facilities that are given into Kerry should be given out of Kerry. That is what you mean?—That is so.

22796. And with regard to the summer arrangements, they are on the whole satisfactory to Killarney?—Oh, yes; they are now.

22797. And you think that if those facilities were increased, and if cheap return tickets were more frequently issued from Kerry, a large number of people would be induced to travel?—I am confident of it. Whenever there are facilities, and whenever there is an excursion train, it is always very well patronised, and every excursion train that runs so far has been a paying one.

22798. That is the two a month that you speak of? Yes.

22799. Those trains when run are well patronised?—Yes.

22800. With regard to the service of trains, say, between Tralee and Killarney, have you anything to say about that?—Well, the trains in the evening are rather inconvenient. If a person wants to go to Killarney on business for an hour or two, he can get away, say, in the afternoon at 3.20, and be in Killarney at 4.15. If he has a couple of hours' business to do there he cannot get back until 10.20—that is, arrive back in Tralee.

22801. When is the first train back to Tralee after you arrive at 4.15?—The first train back is 9.30, I think it is, or 9.25, but there is a new train, I believe, put on for this month.—I have not seen the time-table for this month. I think there is another train put on.

22802. Then that meets your complaint?—It would if they continued it all the year round, but they only put it on for the three months.

22803. What is the population of Killarney itself?—About 3,000.

22804. Then, there is a business connection between the two places?—Oh, yes, a very large connection, and it serves a large district—Killarney serves a very large district.

22805. Of course, if the train is on now, we will not say anything more about that, only we will take it for what it is worth that you think that waiting till 10.20 p.m. before you can get away after doing business in Killarney is rather inconvenient?—If they divided their hours better, it would be an improvement.

22806. With regard to the general question that has been brought under our notice by various persons, has your council considered the question of the purchase of the Irish railways by the State?—They have.

22807. Have they passed any resolution on the subject?—No; they have not.

22808. Have you formed any conclusion in your own mind?—There was a general discussion at the County Council, but no formal resolution. There was a resolution of the Urban Council.

22809. Have you got that?—I have not a copy of it here.

22810. What was the purport of it?—The purport of it was that the railways ought to be under one management—the Irish railways. They would not care exactly to make it entirely a Government Department; they would like to have it under certain local bodies, which would each appoint a number of representatives—say the County Councils.

22811. Of course it would have to be purchased by some body?

Mr. Shanahan.—There was a resolution, sir. (*Copy handed to witness by the Secretary.*)*

22812. *Chairman.*—Have you got it?—I have got the resolution in my hand now.

22813. One minute. You are a member of the body that has passed the resolution?—Yes.

22814. Do you remember it?—No. I was not present at the meeting that day.

22815. Would you read it if it is not long?

22816. *Mr. Acworth.*—Is it the County Council?—Kerry County Council, signed by the Secretary. "Irish Railways Resolution, 7th March, from Limerick Corporation. That the policy of Irish railways should be directed more towards developing the agriculture and manufacturing industries of Ireland. It is unjust to carry imported goods at a lower rate than similar Irish produce. The lowering of internal rates between stations in Ireland for all classes of agricultural produce would sensibly diminish the amount of such goods imported. There should be through rates to all stations in Ireland for Irish traffic, and effective State or public control should be introduced." This resolution was adopted on the proposition of Mr. William M'Mahon, and seconded by Mr. William O'Donnell, two members of the County Council. Mr. William O'Donnell is Chairman of the Rural District Council of Tralee.

22817. Are they both prominent men in that county?—Yes.

22818. I think you said that you represented the Irish County Councils' General Council?—Yes. I am on the General Council from Kerry—the General Council meets in Dublin. I am a member of that body, appointed by the County Council of Kerry.

22819. Are you aware of the resolution which they passed?—I am.

22820. Do you agree with it?—I do.

22821. But I think that went for State Purchase?—It went for State purchase with Irish control.

22822. With Irish control?—Yes.

22823. And you agree with that?—Thoroughly—to have the control by Irishmen—a Committee—that the local bodies should have the control up to a certain point. My view of the case would be that each County Council, say, or each province—the County Councils in each province should meet and appoint, say, two to form a central body, and that body then should have three railway experts paid a large sum of money—£1,000 to £1,500 a year each—and assimilate the different lines, so that the interchanging of goods between each would be facilitated. Whereas you have to write to one manager now, and to another manager at another time, and it takes time to get things carried through, if they were all under one control, the management would be facilitated, and the rates would be, in my opinion, more just.

22824. Is it within your own knowledge what the arrangements are with regard to railways in the Colonies?—No.

22825. Or Belgium?—Except what I have seen in the evidence.

22826. You have not made a study of the question?—No, except what I have read of the evidence here.

22827. I really gather that you, as representing these bodies in Kerry, would favour State purchase with Irish control?—Yes.

Examined by Lord PIRRIE.

22828. There is just one question I wanted to ask you to clear up, I think, an answer you gave the Chairman, as I want to be certain that I understand you. Did you mean to convey that the rate for goods from Liverpool *via* Waterford over the train line to Tralee was only 10*s.*?—Yes.

22829. And that the actual rate for the same goods from Tralee to Waterford was 11*s.* 6*d.*?—Yes.

22830. 1*s.* 6*d.* more?—That is so.

22831. That is correct?—That is correct. It is on the rate-book. I copied that out of the rate-book myself.

22832. What is the rate from Waterford to Tralee. You say from Tralee to Waterford it is 11*s.* 6*d.*?—11*s.* 6*d.*

22833. *Chairman.*—Either way?—Either way.

Lord Pirrie.—I only wanted to get that clear.

Chairman.—1*s.* 6*d.* more than the through rate.

22833A. *Lord Pirrie.*—1*s.* 6*d.* more than the through rate from Liverpool.—Yes; that is right.

Chairman.—We have had evidence about the Tralee rate several times before.

Examined by Colonel HUTCHESON POË.

22834. With regard to the facilities which you say are given to tourist traffic to Killarney, very often, I think, those tickets include hotel accommodation, do they not?—Yes.

22835. Would you propose, then, that the facilities which you wish to obtain out of Killarney would also include hotel accommodation in Dublin?—Oh, no.

22836. You simply refer to the actual railway rate?—To the actual railway rate.

22837. You said, I think, that the excursion rate from Dublin to Killarney was 21*s.*—that is, this Friday to Monday ticket?—Yes.

22838. And what is the ordinary return ticket from Killarney to Dublin, which you complain of?—I think it is £2 7*s.* 6*d.*

22839. Against 21*s.*?—Yes.

22840. And in your opinion, if they gave you the same rate from Killarney outwards it would lead to a great development of traffic? In other words, they are carrying only three or four passengers at £2 1*s.*—that is what I believe it is—when they would carry ten or so at least.

22841. Has it ever been represented to the railway company, and have these facilities been asked for?—They have been asked for at different times. We asked to have the rates reduced, and resolutions have been passed in connection with it for the last seven or eight years.

22842. From Killarney and Tralee outwards?—Yes. I speak more for Tralee, because the County Council meet there, and it is with regard to Tralee that we want to get the special rates outwards.

22843. If you did obtain these special rates outwards, it would involve some alteration to the railway service between Tralee and Killarney?—The morning connection is fairly good.

22844. As a matter of fact, it would not involve any great alteration of the through service?—No, not the through service to Dublin.

22845. Which you require?—Yes.

22846. I think you referred to the large liabilities which the County Kerry incurred with respect to those lines in the shape of rates?—That is so.

22847. And, in some cases, as we had from Mr. O'Donnell, they amount to 2*s.* 6*d.* in the £?—Yes; that is correct.

22848. And you consider, therefore, that you are entitled to derive any benefit the railway companies can give you in return for that?—Yes.

22849. Did I understand you to say, in regard to the acquisition by the State of the railways, that you proposed that the controlling authorities should be two members from each County Council, with the assistance of three or four railway experts—or from

The excess of the local grain rate, Waterford and Tralee, over the through rate, Liverpool to Tralee.

Issue of tickets at excursion rates to Dublin from Killarney and Tralee recommended

The taxation in respect of the heavy liabilities of Kerry in the matter of railway guarantees.

Constitution of a Controlling Body under a State Purchase Scheme discussed.

* See Appendix 39, VII.

July 3, 1907.

Mr. St. John Henry Donovan, J.P., Representative of the Kerry County Council, Tralee Harbour Board and Urban District Council, also of the County Councils' General Council,

each province, did you say?—I think that would be rather too large—to have them from each County Council; but to have the County Councils of each province meet, and those County Councils appoint two for the provinces.

22850. That would be eight?—Yes, practically.

22851. *Chairman.*—I am glad you have cleared that up?—Otherwise, it would be a very large body.

22852. *Colonel Hutcheson Poë.*—That is the point—it would be very unwieldy?—You might add the cities. I suppose Dublin would have two extra, and Belfast and Cork.

22853. You would only be in favour of a small body, not a large body, which would be unworkable?—Quite so; and the expense of having to meet in Dublin would be too great to have a large body.

Constitution of a Controlling Body under a State Purchase Scheme discussed.

22854. Do you think it likely, if the State found the money for the acquisition of the railways, that they would consent to Irish local authorities, no matter how perfect they might be, having the ultimate control of those railways? Do you think the State likely to agree to such a suggestion?—That is rather a difficult question to answer.

22855. I only wish to get at your views?—Personally, I think that we in Ireland are thoroughly able to manage our own affairs. We have proved, since we have got the County Councils, that we have improved our country, and helped to keep our rates down; and we have managed our own affairs as far as we were legally entitled to do. If we got more power, I am confident that we would give a return which would be creditable to the Irish people.

22856. I quite agree with you as to the good work which, as a body, the County Councils have done, but my only point is this—do you think the State would be prepared to find the money, and hand over the control of these railways in this particular instance to the County Councils, or to any general body elected by Irishmen?—We are entitled to a sum of money, as you know, from the Report of a Royal Commission.

22857. We had better not go into that question?—It is only a matter of finance.

State Purchase and Control of of Irish Railways preferred to the existing arrangements.

22858. Assuming that the State were willing to find the money, and not to give control, would you be prepared to have that solution of the difficulty? If they said, "We will find the money, but we must have the control"—failing your own suggestion, would that satisfy you?—I think it would be better than the present arrangement.

Purchase and Control of Irish railways by an Irish authority recommended as the best for the country.

22859. Would you be prepared, again, if the Irish authority, whatever it might be (we need not go into the details of it), were prepared to find the money themselves—supposing it were possible for them to raise the money—to finance the purchase of the railways, and so on, would you prefer that solution—that they should find the money and undertake the control?—Oh, yes.

22860. I mean the man who pays the piper generally calls the tune, but assuming the Irish authority could finance the operation, then there would be no objection to that authority having the control of it. But do you think it would be possible for them to finance the operation?—I am afraid not at the moment, because what have we to go on?

22861. You have the security of the railways. Of course you know what the resolution of the General Council of County Councils is?—I have not gone into the evidence.

22862. I am speaking now of the general principle?—I am in favour of the general principle, certainly, if the financial position could be worked out satisfactorily.

22863. Taking your evidence, I suppose the opinion you have formed is that at present, under existing arrangements, there is a want of enterprise on the part of the railway companies in their own interests in not going as far as they might in lowering passenger rates, and so on, which would eventually lead to a great development of passenger traffic?—Yes.

The adoption of the Australian method of management by three Commissioners with absolute control suggested.

22864. And that that want of enterprise would probably be lessened at any rate, if not altogether removed, if the control of the railways were in the hands of some central body?—Yes.

Examined by Mr. Aspinall.

22865. If the railways were put into one organisation, what objection would you have to the Australian method of three Commissioners, who would have absolute control?—Well, virtually, that is what I suggested. I think I said you would have three railway experts working under a body; that body would define the principles and the experts would work them out.

22866. What advantage would there be to those three Commissioners in having to deal with an inexpert body like the County Councils, dealing with a very, very technical matter like the management of a railway?—Well, even although you may not have expert knowledge, there is a certain amount of commonsense which it would be perhaps an advantage to the experts to receive.

22867. Do you not think that if your three Commissioners were readily accessible in Dublin you would be able to make any representations that you wanted in regard to your locality to them?—They would probably be too autocratic if there were not somebody to whom they would be responsible. There is a danger in confining things to too close a body.

22868. But has this particular question of the management of the railways been gone into with any great care in your district?—There have been several meetings, and Committee meetings, and discussions on it at different times. The Chairman of the County Council and two or three others who are interested in the matter have discussed it, and so have the Chairmen of the other Councils in Kerry. They have met and we have had different informal discussions. We had a Committee at the time of the amalgamation, and other Bills have been on in connection with the railway that the Committee have been working on, and they have had discussions without coming to any definite opinion, but the concensus of opinion is that the present management of the railways is conservative and not sufficiently go-ahead.

22869. With regard to some of these rates which you have quoted, you have taken into account the fact, have you not, that they are largely governed by carriage by sea?—Yes.

22870. And that you would always make a difference in railway rates where water carriage has great influence?—Yes. Of course you take the question of Waterford. In that case you have the sea rate from Liverpool to Waterford, and to Tralee. You have also a sea rate from Liverpool direct to Tralee. You have also the sea—it is true there is no service on at present—but you have the sea still from Tralee to Waterford, and yet the rate from Liverpool to Tralee *via* Waterford is 10*s.*, and the rate from Waterford to Tralee is 11*s.* 6*d.*

22871. I suppose that is governed to some extent by one of these Amalgamation Acts that have caused you so much trouble?—I suppose Tralee was responsible for having that rate fixed, because they took a very strong lead in fighting the amalgamation at the time, and got these reduced rates, *e.g.*, this 10*s.* rate.

22872. So that Parliament in its wisdom or unwisdom, has fixed you with rates you do not like?—We say these local rates should be reduced to a certain proportion of what the through rate is. For instance, the through rate is 10*s.*; we say if there is a local rate you should divide the 10*s.*; it is approximately about 4*s.* from Liverpool to Waterford, and it is about 6*s.* that the railway gets out of the through rate.

22873. My point is rather this. Assuming that the railway company were willing to alter that—practically they cannot alter it now on account of their Parliamentary obligations?—They can reduce their rates; they cannot increase them.

22874. *Chairman.*—Is that 10*s.* rate fixed by Act of Parliament?—It is scheduled, I think.

Mr. Acworth.—The Act stereotyped the existing rates; whatever they were they were not to be increased.

Mr. Croker Barrington, Solicitor.—All the existing rates were stereotyped, except with the consent of the Commissioners.

22875. *Mr. Aspinall.*—I suppose the line from Mallow to Killarney is still a single line?—Yes.

22876. And right on from Killarney to Tralee?—Yes.

22877. So that before asking for additional services you have considered the immense difficulty of putting on additional trains with regard to the few passing places there are upon the line?—There are a good many; they occur nearly every ten miles, or less.

22878. But there are comparatively few, unless the place has changed very much since I knew it?—Not few for the distance.

22879. But with the great length of single line

there is a great difficulty in doing that?—The length is about 60 miles.

22880. *Chairman.*—Are there six, or eight, or ten passing places?—There are nine.

22881. Nine in 60 miles?—Yes.

22881A. *Mr. Aspinall.*—With regard to your desire to have more excursion trains, do you really think that in Killarney you would be able to gather up a large number of people—the number of inhabitants there is only about 5,600—and do you think from there you would be able to fill excursion trains to Dublin in the same way that a large collecting centre like Dublin can send them into the country?—No, but if they gave an excursion rate to take them by ordinary morning trains they could do it by putting on an extra carriage or two.

22882. That depletes your revenue?—It increases it another way, for at present they are not getting the traffic.

22883. You think they would get more?—Oh, yes.

Examined by Mr. Acworth.

22884. The last time you and I had the pleasure of meeting was at the time of the Amalgamation Act?—Yes.

22885. That was in 1899, was it not?—1900.

22886. Before that you had three companies into Tralee?—Yes; the Tralee and Dingle, the Kerry Railways, and the Waterford and Limerick.

22887. You have got rid of the Kerry railways—they were amalgamated?—No, the Kerry railways were worked by the Great Southern alone.

22888. But they are now made part of the system?—Yes, and they were part of the system at the time.

22889. I see what you mean. At any rate, the Waterford and Limerick was wiped out?—Yes.

22890. On the whole, do you think that amalgamation has been for your benefit, or the reverse?—It has not given us the same competition as before.

22891. That we know?—We used to get special rates and reductions.

22892. And some of them made inconvenient anomalies, as you have pointed out. But, on the whole, if you could go back again to the competitive system and have the Waterford and Limerick would you do so?—I would rather go back to the old competition.

22893. You would rather go back?—Yes.

22894. Then may I carry it further—may I assume that you would not desire to see further amalgamations if the companies remained?—Yes, I would be against amalgamation if the companies remained.

22895. If the railway companies remained, you would like to have all the competition you could?—Yes.

22896. But you think if they were all amalgamated into a State system you would prefer that?—Yes.

22897. And you are not afraid that the State would go to sleep?—No.

22898. I gather you think that the Great Southern, not having competition, has not improved its facilities?—Where it was bound to by the Amalgamation Act, it has improved its facilities, but we tied them down.

22899. But I understand it has lost the stimulus that it formerly had?—Yes.

22900. The question I want to ask you is, are you quite satisfied that the State, which would have no stimulus of competition, would be go-ahead?—Well, I think the interests would be so broad with the different people, and each person looking after his own district, that the stimulus would be there.

22901. Take the case that you mentioned. You objected to Cork coming into Kerry to compete?—Yes.

22902. And you wanted to get into Cork to compete?—We want equal facilities.

22903. Do you not think under a State system there might be local jealousies?—Oh, no, because the State would deal equally with each district, and the mileage and other matters would be taken into consideration.

22904. Yes, but supposing you and I were both treated equally, I should want a little better than equal treatment, and you would want a little better than equal treatment, too; that would be human nature, would it not?—Yes.

22905. Supposing the State was perfectly fair to everybody?—You would have other parties representing other districts to decide between you, and the decision would then be fairly fair.

22906. But would not each side consider it unfair?—Possibly, if we were too selfish.

22907. To come to another matter, can you tell me what is the grain rate by steamer from Liverpool to Tralee?—It varies from 5*s.* to 7*s.*

22908. So that the man sending grain locally from Waterford, if there is such a man, has always to compete with the 7*s.* rate from Liverpool?—Yes.

22909. Liverpool is always able to compete in the Tralee market cheaper than Waterford?—Yes, but the freight from Waterford by sea to Tralee would be about the same.

22910. But you said there is no service?—There is no service—that is, of course, no regular service (I must correct myself there), but if a merchant charters a vessel of 500 or 600 tons and puts her alongside the liner at Liverpool he can bring her in, whereas if he takes the ordinary service it comes out at about 9*s.*

22911. But it is still lower than the through railway rate?—Yes, it is.

22912. So that the point I want to get out is this, the man sending from Waterford pays 11*s.* 6*d.*?—Yes.

22913. The man sending from Liverpool can send it for 9*s.* by steamer?—By the ordinary steamer—yes.

22914. And even lower if he gets a special steamer; but let us suppose an ordinary regular line, it would be 9*s.* per steamer or 10*s.* by rail?—Yes.

22915. What I want you to tell me is why does the man who sends his stuff from Waterford to Tralee suffer if the railway takes it instead of the steamer; it would go any way at a rate not more than 10*s.*?—The man from Liverpool would lose 1*s.*

22916. I want you to think of the man from Waterford; it would go from Liverpool to Tralee at not more than 10*s.*; what harm would it do the Waterford man if the railway takes it rather than that the steamer takes it?—He could bring a steamer into Waterford.

22917. You are not quite seeing my point—what harm does it do the Waterford man if the Liverpool man sends to Tralee by rail instead of by water all the way?—A higher rate from Waterford to Tralee renders him unable to compete.

22918. Never mind whether he can compete; does it make any difference to him whether it goes by rail instead of going by water? He cannot compete either way—he has got to pay a higher rate either way?—He would get a 5*s.* rate by direct steamer from Waterford to Tralee if he chartered.

22919. If there were one?—He would charter a special boat.

22920. He can do that now?—He can do that now, but of course sometimes it is inconvenient for a merchant to take 200 tons.

22921. I will not ask you any more questions on that. Just tell me this: those exceptional Mallow rates are under the Amalgamation Act, are they not?—Yes.

22922. And they are the result of the competition of the Waterford and Limerick Company, are they not?—No, they have nothing to do with the Waterford and Limerick.

22923. Of course the Waterford and Limerick line did not touch Mallow, but it touched the district?—No, they did not come within twenty miles of any of them; they only came to Tralee. In one case, Castleisland, it came within ten miles.

22924. They were there before the Amalgamation Act?—They were—yes.

22925. And they are fixed by the Amalgamation Act?—Yes.

22926. And on the whole all the people in that part of Ireland thought it better, though they knew they were an anomaly, to fix these low rates than to have them left out?—Oh no, there was competition under that low rate before the amalgamation.

22927. The old rates were stereotyped on the application of the various local authorities?—Yes, or of individuals, more, perhaps, in some cases.

22928. You remember all the clauses in the Act were headed "For the protection of the town of Tralee," "For the protection of the town of Cork," and so on?—Yes.

22929. So they asked for them?—They asked for them, certainly—yes.

22929A. Would you think it reasonable—never mind who owned the railways—supposing the State owned the railways. Here are a number of very low exceptional rates—would you consider it reasonable to bring all the other rates down to that level?—Well, to within a proportion of it, anyway.

22930. To make them on the same scale?—Near the same scale—yes.

July 3, 1907.

Mr. St. John Henry Donovan, J.P., Representative of the Kerry County Council, Tralee Harbour Board and Urban District Council, also of the County Councils' General Council.

The hardship on the local merchants of the high rate for grain between Waterford and Tralee as compared with the Liverpool and Tralee rate.

The reason for the retention of the low Mallow to Kerry stations grain rates.

The justice of enforcing a general reduction of railway rates discussed.

July 8, 1907.

Mr. St. John Henry Donovan, J.P., Representative of the Kerry County Council, Tralee Harbour Board, and Urban District Council, also of the County Councils' General Council.

22931. Where would the money come from?—They might lose a little traffic at one end, but they would gain it at the other.

22932. Do you not think, if they thought it would pay them, they would do it now?—I think it would pay them personally.

22933. But you will admit they have more experience in the matter than you?—Certainly.

22934. They think it would not pay them or they would do it now?—They are afraid of reducing the rates.

22935. Because they do not think it would pay them?—I suppose that is it.

22936. Supposing they are right, and supposing that it would mean a loss of revenue, that would not recover itself for a good long while anyway—where is the money to come from supposing the State take the railways and find that they must level down?—They must level up a wee bit, too.

22937. Would you agree it would be well to allow the companies to level up?—I do not think so.

22938. As long as they are companies you would keep them down, in spite of the fact that they are unremunerative?—It would be too dangerous to give them that power.

22939. You could not give them any such power without control, of course. I wanted to know what your view was. Have you not made a mistake about the cheap fares?—I have got here the Great Southern and Western time-table. Here is a statement which I find in it:—"Saturday or Sunday to Monday cheap bookings. Cheap first, second, and third class tickets are issued by all trains except mails," and so on, to the following stations, and *vice versa*; and here are Tralee and Dublin both——?—Is that this month's?

22940. I suppose it is.

Mr. Croker Barrington, Solicitor.—That is the standard regulation, sir.

Witness.—What was the rate?

22941. *Mr. Acworth.*—Slightly over single fares. "For further particulars apply at the station"?—That is only on two days a month, is it not?

Extension of time of Week-end tickets advocated.

22942. The point is this, that from Dublin to Tralee and from Tralee to Dublin there are cheap week-end tickets in both directions?—Which day is stated there. I said Friday. They gave a ticket on Friday from Dublin available to Monday. If you leave the country on Saturday you cannot do any business on Sunday, whereas if you leave on Friday you can do your business on Saturday and go back on Monday.

22943. I follow. I thought I understood your complaint to be that cheap week-end tickets were not issued from Tralee to Dublin?—That is on the Friday.

22944. The point is this, that from Dublin to Tralee they are issued on Friday?—Yes.

22945. From Tralee to Dublin they are issued only on Saturday?—Yes.

22946. I did not understand that.

22947. *Mr. Aspinall.*—Is that the matter which you say you asked the Great Southern and Western Company to put right?—It was brought under their notice about three years ago. I do not know that it has been brought under their notice lately. I will not say that.

22948. *Mr. Acworth.*—In England those week-end tickets are from Friday to Tuesday?—Yes.

22949. And that, you think, would be a great advantage in Ireland?—Certainly.

The failure of G. S. &W. Co's application to the Railway and Canal Commissioners to increase some through rates in 1901.

22950. *Colonel Hutcheson Poë.*—Arising out of that question of the through rates which were in the interests of Tralee and other towns, I think, as a matter of fact, the Great Southern and Western some years ago, since the amalgamation, applied to the Railway and Canal Commissioners to raise those rates, and they were refused?—Yes.

Resolution of the Kerry County Council complaining of the injury to traders ceused by the discontinuance of parcels conveyance by the express service *via* Rosslare.

22951. So that, as a matter of fact, those rates which were against the interest of the railway company, and in the interests of Tralee, are practically fixed by Act of Parliament and were reduced on the special application of the Great Southern and Western Company to the Commissioners?—Yes. There is one more matter. There was a resolution also passed by the County Council, and sent to me—"Resolved, that we instruct our representatives appointed to give evidence before the Railway Commission to strongly urge on the Commission the great injury and injustice to the traders and agriculturists of the South of Ireland caused by the discontinuance of the carrying of parcels by express trains *via* Rosslare."

Mr. Croker Barrington, Solicitor.—May I say now, that this is a thing under consideration? There is some misunderstanding. I did not know it was going to be mentioned. There is a discussion going on between the Postmaster-General and the Great Southern and Western. As I understand, we have no objection to carrying these parcels if we are properly remunerated for doing so.

22952. *Mr. Acworth.*—It is parcel post parcels, I suppose?

Mr. Croker Barrington.—Yes, parcel post parcels by the mail trains, as to which arrangements have not yet been made.

22952A. *Mr. Acworth.*—You do not refuse to carry your own parcels.

Mr. Croker Barrington, Solicitor.—Certainly not, but we do not like carrying them by parcel post for nothing.

Witness.—We had an interview with Mr. Hartness, who is an inspector of the Post Office, on May 3rd about these parcels, and he stated that the Great Southern said they could not carry them, as there was too large a delay at Mallow transferring them. Mr. Hartness had the time taken for the Rosslare express—he was present himself—and the transfer at Mallow only took two minutes, and the train did not start for two and a half minutes after. It was on May 3rd that Mr. Hartness made that statement.

22953. *Chairman.*—May 3rd of this year?—Yes.

22954. What is the date of that resolution you read?—16th May.

22955. Quite recently?—Quite recently.

22956. *Mr. Acworth.*—Surely, from Limerick to Tralee was worked by the Waterford and Limerick Company before the amalgamation?—Yes.

22957. I think you told me the Great Southern?—I said it did not touch those three towns on the 4*s.* 6*d.* rate.

22958. I think it has got wrong on the notes. I understand you to tell me that from Cork to Limerick, previous to the amalgamation, the line was worked by the Great Southern?—Oh, no.

22959. We will get it corrected on the notes. From Tralee to Limerick was worked by the Waterford and Limerick, and is now worked by the Great Southern?—Certainly.

22960. And you think, on the whole, you had competition that way, of course—the Great Southern by the one route and the Waterford and Limerick by the other?—Yes.

22961. And you think, on the whole, you have lost rather than gained by the amalgamation?—Yes.

22962. Do you think that is a common opinion in the town?—Well, a good many complain with regard to delays—goods coming to them do not turn up—not so keen to have the traffic, and they are not so keen to have the traffic come that way. As regards the traffic out of Tralee, we get very great facilities from the staff at Tralee. They are doing their best; but we get a letter from some of our correspondents, "We could not send you the goods because there was not a wagon."

22963. I think I am right in saying that Tralee is increasing in population?—And increasing in imports, too—they have gone up.

22964. I have been told that is in consequence of these exceptional rates—is that true, do you think?—No; I think it is owing to the keenness and the business ability of Tralee.

22965. But not without help from the railway company?—Not without some help from the railway. I must say that the officials at Tralee do their very utmost to facilitate the merchants. Sometimes they are handicapped, but, on the whole, they have done their best, undoubtedly. There was a letter from Mr. Watson in connection with this business. He was a large creamery man—I do not know whether it is worth while to hand it in.

22966. *Chairman.*—Will you let me look at it?—(*Handing the document*) I have the original; that is a copy of it.

22967. This is the same question you have been raising now?—The same question.

22968. It does refer to small packages of butter and other things which we have had before?—I only wished just to mention the fact.

22968A. I really think you have brought up the whole subject by that resolution of the Council. It all turns upon that question. We are much obliged to you.

Mr. RICHARD W. WALSH, J.P., examined by the CHAIRMAN. *July* 3, 1907.

22969. Mr. Walsh, you are a Justice of the Peace, are you not?—Yes, and late High Sheriff for the County Louth.

22970. And you are a resident in the district served by the Great Northern of Ireland Railway?—Yes.

22971. Will you tell us where you live?—At Williamstown House, Castlebellingham.

22972. In the County of Louth?—Yes. I will hand in a map, if I may.

22973. It is not necessary, thank you, as I know Louth pretty well. I think you appear here in a rather different character from that of the last witness; you represent, or you wish to represent, the views of, what I may call, the small trader?—No, I do not represent the trader at all; I represent the country gentleman.

22974. But you want, do you not, to speak on behalf of the small trader more particularly?—Quite so.

22975. In your district, what is the principal industry?—Growing barley and corn and farm produce generally.

22976. Do you think that the farm produce of your particular district is served in a satisfactory manner by the railway company?—It is not served at all; we cannot use the railway. The only farm produce we can get out of the country is cattle. With regard to the other produce, practically we cannot use the railway.

22977. Do you think that if more facilities were given a trade might be done by those small traders in poultry, butter, and so on?—Certainly.

22978. You would say, I suppose, that there was no encouragement given to those small traders?—No encouragement at all.

22979. And therefore that that particular industry was stifled; is that your view?—That is my view—yes.

22980. Of course that is easy enough to say; but, how do you prove it before this Commission?—For instance, take the small farmers, and take the women who have eggs, butter, and fowl to sell; they are living quite close to the railway, and they get a cheap ticket, a market ticket, into Dundalk, for instance; but they have to go nearly three miles round by the road to get to the railway station, in consequence of the river intervening. I suggested that the railway company might make a footpath along the railway, fencing it off from the line, and in that way enable people to go along the railway, which is not more than a quarter of a mile from the station.

22981. You have not mentioned what place you are talking about?—I am bringing the whole matter down to a local point at Glyde Bridge, opposite Castlebellingham station.

22982. You are talking, first of all, about Castlebellingham station and Dundalk; give us the distance between those two places?—The distance between Castlebellingham and Dundalk is seven miles.

22983. Let us go by steps. You further say, I think, that the people in the Castlebellingham district, in order to get to the railway station, have to walk three miles by road because they cannot get across the river?—Quite so.

22984. And you suggest that that might be got over by the railway company putting up this footpath at a very small cost; and that this would be an enormous convenience to those small people?—Quite so.

22985. How do you suggest it should be done?—By making a footpath along the railway.

22986. But how are the people to get over the river?—A plank on iron brackets would enable them to pass over the river; the railway runs overhead, and an iron or a wooden plank could be put up at a comparatively small cost.

22987. There is a railway bridge over the river?—Yes.

22988. Do you mean that there should be something at the side of the railway bridge to enable people to cross over the river?—Yes.

22989. A cantilever, or something of that sort?—Or a wooden plank underneath the railway bridge.

22990. It is easy to talk about a wooden plank underneath the railway bridge; but, surely, if the railway company made a footpath they would have to make it safe?—It is only required for foot passengers.

22991. But supposing a foot passenger tumbled into the river while crossing over, would the railway company be held responsible—I mean, in case the footpath was defective?—Yes, I suppose so.

22992. Then you must have a proper footpath across this bridge; and your suggestion is, that the railway company ought to provide it?—Yes.

Lord Pirrie.—There would be iron brackets under the bridge.

Chairman.—But the footpath must be protected.

Lord Pirrie.—The railroad would run alongside the planks, and there would be iron brackets underneath the bridge, with a handrail.

22993. *Chairman (to the Witness).*—Your suggestion is, that if this footpath is made, and this plank, which you talk about, is put across the bridge then, instead of these poor people walking three miles they will only have to walk a quarter of a mile?—Yes.

22994. Has your local Council ever approached the railway company with that suggestion?—No.

22995. They have not?—I have asked the railway company to make a footpath or subscribe towards it, but they declined.

22996. How long ago is that?—Two years ago.

22997. And since then, you have done nothing?—Since then, I have done nothing. Allow me one moment, please. The people used to trespass upon the railway until there was a man who wished to commit suicide, and he threw himself on the rails, and a train went over him, naturally; and then the railway company stopped the footpath along the railway.

22998. In other words people trespassed upon the railway?—They did; they always trespassed upon the railway.

22999. Was there never a proper footway?—No, there never was a proper footway.

23000. The line is fenced, and they used to get over the fence and walk along the line of railway?—Quite so.

23001. And they went over the railway bridge, did they?—Yes, over the railway bridge.

23002. What occurs to me about your suggestion is this: Why do not the local authority get permission from the railway company to do this work?—Of course the local authority could not go along the railway.

23003. I mean by arrangement with the railway company. You say that you asked the railway company to contribute towards the cost; but, supposing the local authority agreed to pay the whole of the cost, do not you think the railway company would have allowed it to be done then?—I have no power with the local authority.

23004. What is your local authority?—The Louth County Council.

23005. What you say is this: that if convenient access were made to the railway station those people would be able to get to the market in Dundalk, where they could dispose of their little produce at a profit; whereas now they cannot go there at all; is that your point?—That is my point.

23006. We will leave it there. Have you made any estimate of what it would cost to do this work?—Well, I should think about £50, to do it in an ordinary way; about £50 I think would make a footpath and fence it and put a plank across the river.

23007. *Mr. Acworth.*—What is the length of the bridge?—Only about 30 feet span; the bridge is already there.

23008. *Chairman.*—Just go on a little further, please. I think you complain also that there is a long distance from Drogheda to Dunleer without a railway station at all?—Yes.

23009. What is the distance between those two stations?—Ten miles.

23010. Ten miles without any railway station accommodation?—Yes.

23011. Are there no sidings for goods traffic?—Nothing; and as Drogheda Station is one mile to the south of the town you have to come back one mile to the shops, banks, and shipping, and this has killed the coal trade of the river.

23012. What is the character of the district between Drogheda and Dunleer?—It is an extremely well-wooded district; there is a good deal of agriculture

Mr. Richard W. Walsh, J.P., Castlebellingham, co. Louth.

Gt. Northern Company's refusal to construct a footpath near Castlebellingham station.

Question of action by the local authority.

Estimated cost of the improvement.

Want of a railway station between Drogheda and Dunleer, complained of as an inconvenience to a largely populated district.

July 8, 1907.

Mr. Richard W Walsh, J.P., Castlebellingham, co. Louth.

carried on there, and it is very thickly populated with small farmers.

23013. Have the County Council of Louth ever brought that fact under the notice of the railway company? Is there a town of any kind between the two places you have mentioned?—There are several small villages—Clogher Head, Newtown, Termonfeckin, Cartown. I believe it is the longest distance in Ireland without a railway station.

23014. You mean on an existing railway?—Yes, on an existing railway.

The necessity of a railway station between Drogheda and Dunleer urged to accommodate and develop the villages of Clogher Head, Newtown, Termonfeckin, and Cartown, and the surrounding districts.

23015. But is there population sufficient to justify another station?—Yes. There have been several attempts made to make a light railway to Clogher Head to serve that district.

23016. Although it is at present served by a railway without a station?—As I say, there is a distance of ten miles without a station.

23017. Clogher Head is on the coast, is it not?—Yes; there is a fishing village and a new fishery pier by the Board of Works, and to get their fish to Dublin by train, they have to pass through Drogheda and round the place to the station, which is a mile outside Drogheda town.

23018. Your suggestion is that it would be a great convenience to that district to have a station put down about midway between those two places, which would serve this fishing village as well?—Yes; there are four villages; it is a large district on both sides of the railway.

23019. Are the residents in that district small farmers?—Small farmers and fishermen.

23020. And whatever they have to dispose of has to be carted into Drogheda?—Yes, and through Drogheda to the railway station a mile outside Drogheda; they have to cross over the river.

Inexpensive station without signals suggested.

23021. I see in your proof that you make some suggestion as to how this could be done?—Yes, by sidings, simply sidings on the railway side, and let the milesman's wife look after the goods. My idea would be to have the whole thing simple and cheap, with little expense and no signals.

23022. I am afraid there would have to be signals?—The Board of Trade kill all these wayside stations; they will not allow them to be put up. But I suggest that the thing should be done by sidings, and by allowing the milesman's wife to look after the goods. The Board of Trade have an idea that traffic in Ireland is the same as it is in England, where you have enormously long trains rushing backwards and forwards with goods.

The loss to the barley growers by having to cart their produce to Drogheda and Dundalk for disposal.

23023. How do those people get rid of their produce now?—The only way in which we can get rid of it is by selling it to the local brewers. We have to cart it into Drogheda or Dundalk, cart the barley, and then we are entirely in the hands of the two or three local men who are buying the barley; we cannot get it away out of the district.

23024. Have you any figures just to inform the Commission as to the extent of the growth of barley in that district—I mean, are you telling us merely what might be done, or what is actually done?—What is actually done.

23025. What quantity of barley is produced in that district for brewers?—Last year was rather a good barley year, and there was £15,000 worth of barley grain and potatoes in that particular district.

Year's value of the barley and potatoes produced in the district for which the proposed station is asked.

23026. £15,000 sterling?—Yes, sterling. The year before that the barley all got damaged; the brewers would not buy it at the time, and it was all left on the farmers' hands, and ultimately it was bought as damaged corn. I had a meeting at my house, and they said they had 8,000 barrels of barley on their hands worth over £4,000. I wished to get the Agricultural Board in Dublin to help the farmers to market this corn, but they would not help, as they said it would interfere with local traders.

23027. I do not understand that; but perhaps you will tell us what you mean by a barrel of barley?—A barrel of barley is 16 stones.

Mr. Smyth (G. S. & W. Ry.).—Two cwts.

Chairman.—It is a local denomination, I suppose.

Mr. Smyth (G. S. & W. Ry.).—It is a sack weighing 2 cwts.

Chairman.—Yes, I understand that it is called a "barrel there"; with that explanation that is all right.

Lord Pirrie.—It is a local term.

Chairman.—A barrel is about 2 cwt., is it?

Mr. Smyth (G. S. & W. Ry.).—Yes; it is an Irish term which is used all over the country.

Mr. Acworth.—It is a half-quarter, roughly.

23028. *Chairman.*—Then it is an important industry now in your district?—Barley is the principal agricultural produce.

23029. In consequence of there being no railway station and there being ten miles between those two places which you have named, the grower, or the local farmer—the small farmer—is put to considerable expense in carting his produce to Drogheda?—Quite so.

23030. And your suggestion is, that if there was a siding provided midway between those two places it would be very largely to the advantage of those local growers; is that your point?—Yes.

23031. Does not that express what you have to say without going into further detail?—Yes, quite.

23032. Now, what have you to say about passenger fares?—Before we pass from the produce, there is a curious anomaly I should like to mention. Last year I sent potatoes to the railway station, and I sold them to a dealer in Dundalk. He expected to get those potatoes carried to Dublin from Castlebellingham at the same rate as he got potatoes carried from Dundalk, that is, 4*s.* or 3*s.* 6*d.* But he found that the local rate from Castlebellingham to Dublin was 7*s.* 4*d.* Of course he objected to that—it was rather a surprise to him—but the railway company would not give way; they said that they must have 7*s.* 4*d.*; and he found it would be to his advantage to take the potatoes into the town of Dundalk, leave his wagon in Dundalk station, and from there to send them up to Dublin. By doing that he made 1*s.* on the rate between Castlebellingham and Dundalk and between Dundalk and Dublin. The total of the two rates was less than the rate from Castlebellingham to Dublin.

23033. Let us try and make that clear: Castlebellingham to Dundalk is seven miles?—Yes.

23034. He loaded these potatoes in a wagon at Castlebellingham, and sent them locally from Castlebellingham to Dundalk, and then they were sent from Dundalk to Dublin, and the two rates were less than the through rate from Castlebellingham to Dublin?—Yes, by 1*s.*

23035. That is your statement?—Yes.

23036. That does sound very curious; but are you sure of your facts?—I have it here on the railway invoice. (*Handing invoice to Chairman.*) It is much cheaper for me to do so. I always get my goods now from Dundalk, and I got them back to Castlebellingham for 1*s.* less. Otherwise, in getting feeding stuffs for cattle from Liverpool across to Dundalk, the Dublin rate is prohibitive, 7*s.* 4*d.*

23037. *Colonel Hutcheson Poë.*—From where?—From Dublin to Castlebellingham.

23038. *Chairman.*—Will you just explain how you manage that; take an actual case?—This is an actual case.

23039. What was the quantity of potatoes, one ton, or two tons, or what?—Two tons.

23040. You took two tons of potatoes to Castlebellingham station; where did you consign them to?—To Dublin they were to go.

23041. But where did you consign those two tons?—I put them on the wagons at Castlebellingham to the order of Gray at Dundalk.

23042. You consigned them to the order of some man at Dundalk?—Quite so.

23043. What does this man at Dundalk do?—He takes them down to Dundalk and then sends them to Dublin.

23044. You mean the railway company took them to Dundalk to this man's order?—Yes.

23045. And instead of his unloading them there he then consigns them to Dublin?—Yes.

23046. And by that process you save 1*s.* a ton?—He saves 1*s.* a ton.

23047. You do?—Yes.

23048. *Mr. Acworth.*—You say that you do this frequently?—Yes, with feeding stuffs.

23049. What do you do? Do you consign them to yourself at Dundalk?—I consign them to myself at Dundalk.

23050. And then you get a note from the railway company that they have arrived?—Yes; and I take my time; I want to annoy the railway company, because they give me inconvenience; and then I take them back again to Castlebellingham.

23051. *Lord Pirrie.*—They do that entirely openly with you—Yes; and with coals they charge for the seven miles 2*s.* 4*d.* a ton for coals from Dundalk to

Castlebellingham. They charge for barley from Dunleer to Drogheda 2*s.* 6*d.*—I am constantly sending barley from Dunleer to Drogheda, which is ten miles; I put it on the wagon and take it off the wagon in Drogheda; they have no trouble and no terminal charges or any cartage at all.

23052. *Chairman.*—There is the accommodation at the station?—But there is no handling for them to do.

23053. *Mr. Acworth.*—You say that you are charged 2*s.* 4*d.* a ton for coal for a distance of seven miles?—Yes, seven miles.

23054. Surely there must be some charge for running it from the ship?—No.

23055. Is that coal bought from a local coal merchant?—Yes, bought from a local coal merchant. It is on the rates you have in your hand.

23056. *Mr. Aspinall.*—Did you not also say that they charge 2*s.* 6*d.* for ten miles?—Yes, 2*s.* 6*d.* for ten miles, from Dunleer to Drogheda for barley.

23057. *Mr. Acworth.*—That is not for coal?—No, for barley.

Mr. Acworth.—It is over 3*d.* a mile; there must be something wrong.

Mr. Smyth (G. S. & W. Ry.).—I believe there is a haulage charge.

Mr. Acworth.—There must be something wrong, because the railway clearly has no power to charge 3*d.* a mile.

23058. *Chairman.*—I think there is something wrong about this. You say that the rate from Dundalk to Castlebellingham is 2*s.* 4*d.* a ton for barley?—Yes.

23059. On this Note, which I have before me, it says, "Rates between Castlebellingham and Dundalk for coal in 6-ton lots 1*s.* 4*d.* per ton?"—Yes; but I do not get it in large lots like that.

23060. Let me go on: "Coal in 4-ton lots, 1*s.* 6*d.* per ton." Where do you get your 2*s.* 4*d.* from?—It is marked there for potatoes.

23061. But you said for coal?—It is for barley.

23062. *Mr. Acworth.*—You said "coal," and I took it down?—It was barley that I meant.

23063. For barley, you said 2*s.* 6*d.*, I think?—Oh, no, it was barley.

23064. *Colonel Hutcheson Poë.*—You said for ten miles from Drogheda 2*s.* 6*d.* a ton; that was for barley, was it?—eYs.

23065. *Chairman.*—I am rather glad Mr. Acworth raised that question, because it puts it right?—It is for barley.

23066. But you said coal, and we took it down "coal"?—It was a mistake.

23067. The railway rates that you have given me here, which is a quotation from the Great Northern Railway Company, Ireland, seem to me to be very reasonable for coal rates?—I think them very dear.

23068. It is 1*s.* 4*d.* a ton for 6-ton lots?—Yes.

23069. That is, a wagon of coal; and in 4-ton lots it is only 1*s.* 6*d.* a ton?—But it is the barley I mean.

23070. Barley has to be covered, I suppose, with sheets?—Yes.

23071. I mean they cannot send barley in the same way as they send coal, can they?—They have no further trouble with the barley.

23072. But they have to cover it to keep the rain off, I suppose?—Oh, yes.

23073. They have to sheet it?—Yes.

23074. Have you asked the railway company to give you an analysis of that rate—how the rate is made up?—No, I have always sent my barley that way for the last three or four years, from Dunleer to Drogheda; and it is always the same price, 2*s.* 6*d.* a ton.

23075. And you object to it?—Yes, I object to it.

23076. Have you asked the railway company to give you any explanation of the rate?—They will not take it for less.

23077. You have not asked them how they make up the rate. Do you allege that that rate is beyond their powers?—No.

23078. You have no reason to believe it is?—They would charge me 6*s.* 6*d.* to Dublin—forty-one miles; that is the rate to Dublin for barley.

23079. From Dunleer?—Yes, forty-one miles.

23080. What is it from Dundalk?—I do not know what is the rate for barley.

23081. *Lord Pirrie.*—It gives 3*s.* 6*d.* here in the proof.

23082. *Chairman.*—Is it 3*s.* 6*d.* from Dundalk?—Yes.

23082A. And 6*s.* 6*d.* from Dunleer?—6*s.* 6*d.*, yes.

23083. *Lord Pirrie.*—Which is only forty-one miles.

23083A. *Chairman.*—Make that clear for the notes, will you?—It is quite clear in my proof.

23084. But it may not be clear on the notes?—The railway rate from Dublin to Dunleer, forty-one miles, is 6*s.* 6*d.*; from Dundalk to Dublin, fifty-four miles, it is 3*s.* 6*d.* per ton for corn.

23084A. *Lord Pirrie.*—"Corn, manures, and potatoes," I think you will find it is.

23085. *Chairman.*—What are those rates for?—Corn and potatoes.

Mr. Croker Barrington, Solicitor.—There is a sort of war of rates going on between Dundalk and Dublin by steamer.

The Witness.—I have paid those rates for the last three years.

23085A. *Mr. Acworth.*—You do not, I suppose, know what the Drogheda rate from Dublin was two years ago?—I do not; I only know my own local rates.

23086. *Chairman.*—Now, leaving the question of goods rates, have you anything to say with regard to passenger fares?—Yes, the passenger fare from Castlebellingham to Dublin first-class is 12*s.* 6*d.* return, the distance is forty-one miles.

23087. What is the third-class fare?—I do not know about the third-class.

23088. Most of the people travel third-class, I suppose?—I only know from my own knowledge, and I am speaking now from my own knowledge. But what I wish to call attention to is the number of different fares from the same station in the same train and in the same class. There are eight different tickets, first-class tickets, at different fares; the ordinary return fare to Dublin is 12*s.* 6*d.*, then there is a fare and a quarter as they call it; that comes to 9*s.* 3½*d.*, that is on a Saturday.

23089. That is the week-end ticket?—Yes, the week-end ticket. Then, on Sunday, it is 7*s.* 6*d.* return.

23090. That is the day ticket?—Yes. Then an excursion ticket is 6*s.*; another excursion ticket is 5*s.* 8*d.*; and another excursion ticket is 5*s.* 3*d.*; and the last one, which they gave the other day, is 5*s.*

23091. Those are for advertised excursions on some particular day?—Some of them are fixed excursion tickets, and others are special excursions. And what I was saying was that the people from Ardee come into the train and sit down in the same carriage with me; they pay 6*s.* from Ardee, but the railway company make me pay 12*s.* 6*d.* in the same train and in the same carriage.

23092. *Mr. Acworth.*—Are you north, south, east, or west from Castlebellingham?—Two or three miles south from Castlebellingham. I beg your pardon. I am just half way between the three stations—Dunleer, Castlebellingham, and Dromin.

23093. Then you are south of Castlebellingham?—Yes, I am to the south of Castlebellingham.

23094. *Chairman.*—Just let us have this perfectly clear. You come from Castlebellingham and you want to go from Castlebellingham to Dublin?—Yes.

23095. And you pay for a return ticket, what?—I beg your pardon. It is Dunleer I am talking of now; I want to go from Dunleer to Dublin, and I have to pay 12*s.* 6*d.* for a 1st class return ticket.

23096. That is an ordinary 1st class return ticket that you can get at any time?—Yes.

23097. Then you say that the people from Ardee, with their cheap tickets, can ride in the same carriage with you on any day, do you?—Oh, no, only on excursion days.

23098. I see. Then the excursion days are not the same from Dunleer as from Ardee. (*The witness produced a placard and explained it to the Chairman.*)

23099. Those tickets are issued on certain dates at special fares by special trains, and you must travel by those special trains to get the benefit of those cheap fares?—Yes.

23100. There is no hardship in that, is there?—It is a hardship on me in having a man sitting beside me paying 6*s.* while I have to pay 12*s.* 6*d.*

23101. But he cannot be sitting alongside of you. If you travel by the special train, you leave Dunleer at 11.10, and he leaves Ardee at 8.45?—That is the train I go by.

23102. It is not a special train for you from Dunleer; it is an ordinary train?—It is an ordinary train for him also.

23103. It says here "special"?—But it is the ordinary train.

23104. We do not want to labour this too much. You seem to have a variety of fares; and a good

July 3, 1907.

Mr. Richard W Walsh, J.P., Castlebellingham, co. Louth.

Rates for grain, etc., Dunleer and Dublin, compared with the Dundalk and Dublin rates.

Complaint as to anomalies in connection with passenger fares.

July 8, 1907.

Mr. Richard W. Walsh, J.P., Castlebellingham, co. Louth.

many of them are very low and very reasonable?—Very reasonable.

23105. But of course you can pick out one or two anomalies of this kind by getting into the same train, where the Ardee passenger is allowed to travel at this cheap fare?—But it is in the ordinary train.

23106. His cheap ticket is issued by the ordinary train?—Yes.

23107. But you could pay the same low fare if you travelled by the advertised train from Dunleer?—Quite so. The first class return fare to Dublin is 12*s.* 6*d.* from Dunleer; Dunleer to Drogheda 3*s.* 6*d.*; Drogheda to Dublin after 12 o'clock is 5*s.* 6*d.* That is 9*s.*; but you cannot re-book in Drogheda because the train is at the station, so you lose 3*s.* 6*d.*

23108. Have you been to the railway station to examine the rate books?—I have.

23109. And have you looked at them?—Yes, I have looked at the rate books, and there are forty columns of figures in all, and those eight different tickets have to be put down in all the different columns.

23110. Now you are talking about passenger fares?—Yes; there are all those tickets in the different groups, and naturally there is a lot of trouble connected with them.

The issue of mileage coupons in lieu of present railway tickets recommended.

23111. I see in your proof a great number of suggestions, but I think I will put it very broadly to you: Have you considered what is the best remedy for all your grievances?—I would suggest that it should be done by not having any railway tickets, but by having coupons, and grouping all the different stations, and having reasonable rates for all the railway stations. It is of very little consequence to a railway company whether the passenger travels a mile more or less one way or the other; and if they had the same rate for groups of stations, and carried you at any time you wished, I think it would be much better. We are troubled with tickets expiring at different dates—sometimes you have to come back the same day, sometimes you can stay an extra day or two days, and so on. But my suggestion would be that the time should be unlimited, and that at any time you wished to come back you should be able to return with your return ticket. In Scotland all tickets are available for six months.

Proposed extension of time for return tickets

23112. All ordinary return tickets, do you mean?—Yes.

23113. What are they in Ireland—the ordinary return tickets?——

Mr. Smyth (G. S. & W. Ry.).—They are available for a month.

Mr. Shanahan.—It depends on the distance.

The Witness.—For a short distance the ticket is only available for the day of issue.

Mr. Smyth (G. S. & W. Ry.).—It is a month generally.

Mr. Shanahan.—Yes, for 25 miles.

23114. *Chairman.*—I do not know whether the witness is exactly right about Scotland. Do you mean to say that an ordinary return ticket for, say, seven miles in Scotland would be available for six months?—From Carnoustie to Dundee is only eight miles, and the return ticket is available for six months.

23115. You know that, do you?—I do.

23116. I am not questioning your accuracy, but I do not know it, and that is why I ask you?—It is so.

23117. Ordinary return tickets are available for six months, you say?—Yes.

23118. And in Ireland they are only available for one month for long distances?—Yes.

23119. For under fifty miles you say the period varies?—Yes.

23120. Some tickets are available for seven days, and some for one day?—Yes. And I saw by the local paper the other day that some people wanted to get up to the Exhibition from a long distance, from Cookstown, and they wished to go to Dublin, to stop the night and come back the next day; but the railway company would not allow an extension of time, and they had to come back on the same day by the eleven o'clock train at night.

Lord Pirrie.—The distance is over fifty miles?—Yes, it is sixty or seventy miles.

23121. *Chairman.*—Was that an excursion train?—Yes.

23122. And it was one of the conditions of the excursion that the ticket was issued available for the day only?—Yes.

23123. There is nothing unreasonable in that if that was the condition. I mean it is a cheap fare for which a day ticket is issued. A passenger could stay a week or a month, I suppose, if he took an ordinary ticket?—Yes, he could.

23124. You are in favour, I see, of coupons—blocks of tickets, at so much a mile, with which the passenger should be allowed to travel anywhere at any time, and to give up his coupons whenever he travelled?—Yes.

23125. That would, of course, have to be a uniform fare?—Yes.

23126. Then you would do away with all these cheap excursion fares?—Yes, I think they are only irritating; and I think it would be much better to be without them.

23127. Do you think people would go to Dublin, if they did not have these cheap excursion tickets?—Yes.

23128. And pay the ordinary fare?—Yes, a reasonable fare.

23129. For instance, what is the day excursion ticket from your district to Dublin for the Exhibition now?—With the ordinary excursion ticket they gave us the other day, they take you up to Dublin at half-past twelve in the day—that is the excursion bill which they are issuing now (*producing bill*), and that is to be continued during the summer, and it is a very cheap excursion; but we arrived in Dublin late, so that we could not go anywhere. It was twenty minutes past two when we got up the other day; and by the time we had had something to eat in Dublin, and we got to the Exhibition—it takes you half an hour to get out there—we could not see much of the Exhibition. Then we had to get home again by the eight o'clock train; so that we had only three or four hours at the Exhibition; and we did not get back before 11.30 p.m., which was too late for country life.

23130. Looking at this bill, have you, what we call early closing days in those towns?—No, none.

23131. Why is Thursday selected?—I do not know.

23132. It is not a kind of half-holiday for tradesmen?—No, there is no closing day in the country.

23133. It seems to be a very cheap fare?—Very cheap.

23134. But you would do away with all these, according to what you say?—Yes, it is too late. In starting it should be 9 a.m.

23135. I suppose a lot of people travel by these excursion trains?—Very few. I wanted our workmen to go up, but they said it would not be worth their while, because it would be so late when they arrived in Dublin, that it would be nearly four o'clock before they got to the Exhibition; and then they had to come home, and it would be twelve or one o'clock before they could return to their homes.

23136. Are you a shareholder in the railway company?—I am.

23137. As a shareholder, do you consider it would be an advantage to the country for the State to purchase the railways?—I think that in a way it would be, but I would certainly not agree to the local Councils having anything to say to it.

23138. Do you mean the County Councils?—The County Councils, yes.

23139. How do you suggest they should be managed?—By their present boards amalgamating in Dublin, and working them all from Dublin by the present boards; and they should have a representative of the Government. They are all experts in Dublin, the different boards are all composed of experts; and they would manage them in the way to suit the country best.

23140. The State is to buy the railways, and the railways are to be managed by the existing railway directors; is that your idea?—Yes, for the benefit of the country. The drawback to a large central body having to do with it is that they would kill all further enterprise in making small railways. I promoted some small railways, and we had all the large railway companies in opposition. And they kill the tramways, of course; for instance, the Dublin and Kingstown Tramway would never have been heard of if the railway companies could have killed it; and the same thing in Cork.

23141. It seems to me that the tramway is killing the railway there?—Yes, it is the tramway killing the railway now, but it is because the railways are not progressive; they are too tied up with red tape and expense and wasted capital and labour on their system in working.

23142. At any rate, you favour State purchase with Irish management?—Quite so.

23143. Is that, in a few words, what you mean?—Yes.

23144. As to the details, you have not gone into that?—No.

Examined by Mr. Acworth.

23145. I would just like to ask you one or two questions. Does it not seem to you, with regard to your bridge, that it would be reasonable that the people should pay for the use of the railway bridge?—Yes; they would be only too pleased.

23146. Have you ever asked the railway company to allow you to put a footpath at your own expense?—I asked the railway company to make a footpath.

23147. Their business is not to carry foot passengers but railway passengers?—They would all be railway passengers.

23148. Have you ever offered to pay the expense of making a footpath if they would allow you to use the girders of their bridge to carry it?—No, it was only in connection with the railway and its passengers that I wished to ask the railway company to carry them.

23149. You would not allow other people to use it, except people going to and from the station; you would not allow the general traffic to use it?—No.

23150. Now, tell me about the Board of Trade. Have you ever asked the Board of Trade, or ever approached them, on the subject of allowing cheaper stations to be made?—No, I have never done that.

23151. Just one other thing. I see in your proof that you point out the difference between the railway and the hatter; you say the hatter always charges the same price?—He should. If an article is worth the same money, one ought always to pay the same price.

23152. If you go up Regent-street, London, now, you will see "After Season's Sale," and you can buy a hat for one guinea for which you would have had to pay perhaps three guineas had you bought it a fortnight before. Is not that rather like the railway?—But the hatter would not have different prices upon the same day, or within one week.

23153. Is it not rather like the railway? If you want to go at your own time they charge you 12*s.* 6*d.*?—Yes.

23154. But if you are willing to go at a time that suits them, they charge you 5*s.* 8*d.*?—Yes.

23155. If you want to buy a hat for your wife at your own time the hatter makes you pay three guineas, but if you take the same hat when he has not been able to sell it to anybody else, he will sell it to you for one guinea?—Yes, that is so.

23156. Is not that much the same as the railway? Do you not think that a railway company ought to act as an ordinary trader?—Yes; but they do not; the ordinary trader gets all the trade he possibly can along his line; but the railway company does not take the ordinary traffic; it all goes along the roads in the farm carts. You will see numbers of them always on the road to Dundalk, which is eight to ten miles off; and they will carry barley ten miles along the road. There are long strings of farm carts to be seen there.

23157. You have never tried to help the railway company by going with them to the Board of Trade and saying, "Make easier regulations." You have not done anything of that kind, have you?—It would be no use for a private individual to do so. I am simply here on my own behalf.

23158. Are you not a member of the local authority?—Gentlemen and large ratepayers are not elected on the local authority now; they are absolutely debarred.

23159. Do they not sympathise with your view that they would like a station?—No.

23160. *Chairman.*—I do not think you understand that question—you answered that they did not want a station; but I understood you to tell me that they did want a station between these two places?—I think local boards are rather objecting to railway facilities, because through not having them the people are being kept at home. The shopkeepers, who are now the local boards, approve of the present state of things, because it keeps the people at home and they have to buy stuff locally. For instance, we have got a co-operative society in Dublin selling farm manures; and the people of whom I have been speaking do not like that, because the local trader sells manures.

23161. *Mr. Acworth.*—If the railways were managed by the State, would you have them managed on the opinion of the Irish people that it is desirable to keep the people at home, or on your opinion that it is desirable to let them travel?—It would be a very risky experiment.

23162. But I thought you wanted to hand the railways over to the State?—I want the State to have the purchase of them, because I think it would lower the rates very much through all the railways being amalgamated, and thus do away with a great deal of the present expense.

State purchase of the Irish railways recommended in the interets of economy in working.

Examined by Mr. Aspinall.

23163. With regard to the carting in that district, how far do you find it is economical for the people in the district to cart as against the railway rates?—They cart barley nearly eleven miles into Drogheda and hay to Dublin from Slane, 26 miles, by road.

23164. Anything else?—And they cart coals.

23165. But do you look upon ten or eleven miles as the limit beyond which it is not economical to cart?—It depends very much upon the value of labour in the district, and upon what the farmers are going to do with their horses.

Suggestion that competitive carting should be abolished by reduced rates.

23166. I rather wanted to get at what you were driving. Do you suggest that the railway rates should be lowered, so as to abolish carting?—Yes.

23167. Therefore your desire would extend for a distance of about ten miles?—About ten miles, yes.

23168. *Mr. Acworth.*—I think we had better get this right on the Notes. Return tickets are available, as I understand, for a distance not exceeding twenty-five miles for one week, and exceeding twenty-five miles for one month?—Yes.

Time of availability of ordinary return tickets in Ireland.

23169. But that is different from what you said?—I said that some of the excursion tickets are available for only the day of issue.

23170. But the ordinary tickets, I thought you said, were available for only a day for short distances?—Not the ordinary tickets.

23171. Under twenty-five miles it is available for one week, and over twenty-five miles it is available for one month—is not that so?—Yes.

Examined by Colonel Hutcheson Poë.

23172. With regard to the rate on agricultural produce, without going into details, I suppose your contention, broadly, is that as the value of any commodity must largely depend, not only on the actual cost of its production, but on the additional cost involved in putting it on the market, it is of very great importance to you to have the costs of placing the goods on the market reduced to the lowest possible minimum, and you think that under present circumstances they are not reduced to such a point, or rather that they are fixed at such a rate as very considerably to add to the cost of production, and do away with any good which the agriculturists of Ireland have derived from the lower rents which they pay in virtue of land purchase and other matters—that those effects are nullified to a large extent by the high rates for getting their goods to market?—Yes.

23173. Would you go so far as to advocate the adoption of the Continental system. You know, of course, that in most of the Continental countries the rates for export, especially in the case of agricultural produce, are very substantially lower than for the same class of produce which remains in the country. Would you be in favour of that policy?—I think so. In Ireland we cannot get rid of our farm produce.

23174. Because the cost involved is so great?—Yes, the cost is killing in the case of, for instance, turnips and hay. To give an instance, hay will be 1*s.* 6*d.* per cwt. down in Castlebellingham, while it is 6*s.* in Dublin, and you cannot send hay to Dublin from Castlebellingham.

Alleged injury to agricultural producers by excessive rates for conveyance of such goods to market.

23175. You spoke of barley, and I think you said the rate was 6*s.* 6*d.*?—Yes.

23176. And I think about ten barrels go to a ton?—Yes.

23177. The value per ton would be about £6, I suppose?—Not so much.

23178. You get 10*s.* to 14*s.* a barrel, do you not?—Yes, about that.

23179. At 10*s.* per barrel it would be £5 a ton and at 12*s.* it would be £6. In other words, you consider that the proportion of the rate to the value is too great?—Very much. Potatoes again are only about £2 10*s.* a ton, and the rate is almost the same.

23180. We all know that one of the largest industries in Dublin, and perhaps in the whole of Ireland, is Guinness's Brewery, and there, I believe, it is the case that owing to the prohibitive railway rates they

July 3, 1907.

Mr. Richard W. Walsh, J.P., Castlebellingham, co. Louth.

are getting a large quantity of their barley from abroad?—Yes.

23181. And, as we all know, there has been an agitation among Irish agriculturists to bring pressure to bear upon Messrs. Guinness to take the barley produced in the country?—Exactly. With regard to potatoes, a couple of years ago I tried to sell potatoes, but I found the cost of transit destroyed all the profit, and I gave them to cattle.

23182. I was rather surprised to hear you say, as I understood you, that local authorities are opposed to railway facilities and extra railway siding accommodation and other advantages of that kind?—I would not go so far as that; but I have heard several traders in the towns say that they rather disapprove of railway facilities, because when the people are at home dealing in their own shops locally they are able to make more money than when the people go to Dublin and shop.

The advantage to the community at large of extended railway facilities.

23183. There may be something in that; but I certainly do not think the experience of the country generally, judging from the evidence we have had from different parts of the country, has been in the direction that you suggest, quite apart from the gentry and men of your class being excluded from the local authority?—I have heard several people in Drogheda complain about the cheap tickets which the people get to go to Dublin, whereby they can now go and shop in Dublin instead of locally, as they used to do.

23184. That might prejudice the local shopkeeper perhaps, but he is only one of a small class as compared with the people who depend upon the shopkeeper or depend upon outside sources for supplies?—Quite so.

23185. So that for the benefit of the greater number the argument is in favour of railway facilities, naturally?—Yes.

23186. You spoke about railway facilities and excursions, of course the particular excursion you mentioned to the Dublin Exhibition seems to start very late. Has it ever been represented to the railway company that they might with advantage start at an earlier hour?—I wrote to the railway company asking them to start the train earlier, and they said that it would interfere too much with their other arrangements to let us go by the ordinary train at 9 o'clock in the morning and so have all the day in Dublin. They said it would interfere with their other arrangements, but there are three hours during which there is no passenger train running on the line at all.

Complaint as to inconvenient excursion train arrangements on G. N. (I.) Ry.

23187. I was rather surprised at what you said, because in the part of the country where I live the Great Southern and Western Railway Company give a very good excursion train at an early hour in the morning, which practically gives the people the whole day, and they have seven or eight hours at the Exhibition?—I wrote to the manager in Dublin and asked him to let us come up early in the morning, but he declined, and said that he could not do it as it would interfere with his traffic arrangements. And, of course, when we got up so late as that it meant that we could not get back until 12 o'clock or 1 o'clock, and then we had a long drive, and the people in the house, the servants and so on, were kept up and the whole place was upset.

Colonel Hutcheson Poë.—I agree with you that it seems to be a very late hour.

Examined by LORD PIRRIE.

23188. Just one question as regards your view about the train starting from Ardee with passengers in it who have paid 6*s.* for a return ticket; when that train stops at Dunleer, you consider that you should get your ticket at the same rate as from Ardee?—Yes.

23189. You meant to convey that it was not a special train, but the ordinary train stopping at your station, and therefore you complained that you did not get your ticket at the same rate as the Ardee people did?—Yes.

23190. In a case of that sort, is it not very customary and is it not in fact an ordinary thing on the Great Northern line that, although the cheap tickets are not issued at your station, the guard will give you a ticket as if you had got in at Ardee?—No; the stationmaster declined to do so.

23191. I understood that on the Great Northern line, when there were excursion trains of that sort and people wanted to get in at intermediate stations, they were always allowed to do so on paying the same price as from the original starting place, and that, as I understand you, is all you want?—Yes; that is what I want. The stationmaster said that if I wished to book by the excursion I could wait till 11 o'clock.

23192. I am speaking of that one train which started from Ardee at 8.45 and stopped at your station—I only want to get it clear?—The stationmaster declined to allow us to travel on that at the cheap rate.

23193. *Chairman.*—A man from Ardee can leave a little after 8 o'clock in the morning, and have a whole day in Dublin for 6*s.*?—Yes.

23194. Whereas, if you want to go by that same train it costs you double that amount?—Quite so.

23195. You go in the same train and you come back in the same train?—Yes; there is no excursion train from Ardee; it is the ordinary train.

23196. The Ardee excursion passenger is allowed to travel by the ordinary train?—Yes.

Mr. Croker Barrington, Solicitor.—It is a privilege which is granted to that small branch at Ardee to avoid the necessity of a special excursion train. If the witness waited he could go by the regular excursion train. In the case of the Ardee train a privilege is granted to that little branch which is only four miles long.

The Witness.—It is six miles long, and we pay a county rate for it, a guarantee rate.

Mr. Croker Barrington, Solicitor.—That privilege is granted to that short length of line.

The Witness.—I pay 4*d.* in the pound for that Ardee branch.

23197. *Colonel Hutcheson Poë.*—That is a guaranteed railway?—Yes; the Great Northern Railway Company made that branch on condition of the Barony paying the guarantee.

Chairman.—We are much obliged to you, Mr. Walsh.

Mr. MICHAEL LYNCH, J.P., examined by the CHAIRMAN.

Mr. Michael Lynch, J.P., Representative of the Urban District Council and of the Chamber of Commerce, Omagh.

23198. Mr. Lynch, you are a Justice of the Peace?—Yes.

23199. And you appear on behalf of the Omagh Urban District Council and of the Chamber of Commerce of that place?—Yes.

23200. Have you been deputed by them to give evidence before us?—Yes.

23201. What part of the case do you wish to bring before our notice?—In the first place I wish to advocate the construction of more light railways in the County of Tyrone.

23202. More light railways?—Yes.

Construction of a light railway between Cookstown and Strabane advocated.

23203. Are there any light railways there now?—Yes, surely, there are two. There is the Clogher Valley Railway and the Castlederg and Victoria Bridge Tramway.

23204. Between what particular points do you consider that it would be an advantage to have these additional light railways?—In the northern portion of the county there is a very large district that is entirely without railway facilities, and I suggest that there should be a light railway starting from Cookstown and going on by Greencastle, Rooskey, Gortin, Plumbridge, to Strabane.

23205. What distance would that be?—About thirty-five miles.

23206. And the whole of the district that you have mentioned is now without any railway communication of any kind?—Yes.

23207. What other districts do you suggest?—That would not be sufficient for the requirements of the locality. There would be required a branch line from about the middle of the suggested line connecting with Omagh.

23208. Omagh to Greencastle?—Yes.

23209. *Mr. Acworth.*—From Cookstown to Strabane is the first you suggest?—Yes.

23210. And a branch from Greencastle down to Omagh?—Yes.

Mr. Michael Lynch, J.P., Representative of the Urban District Council and of the Chamber of Commerce, Omagh.

The probabilities of the proposed new railways :—Cookstown to Strabane Greencastle to Omagh, and Clogher to Omagh, being a financial success.

Complaints of insufficient and inconvenient passenger train service between Omagh and intermediate stations to Dungannon.

23211. *Chairman.*—What other part of the district do you suggest?—That would be sufficient for that district. Then, in the southern portion of the county the Clogher Valley Railway does not serve the locality in the way it should.

23212. There is a station at Clogher, is there not?—From Clogher direct to Omagh.

23213. *Mr. Acworth.*—Not to use the existing line to Fintona?—No.

23214. *Chairman.*—Why not use the existing line?—There is a pretty mountainous district lying between Fintona and Fivemiletown.

23215. Have you ascertained what population would be served by these suggested light railways?—I cannot give you the figures of the population of these particular localities. The reason I suggest these lines is that when this line was made——

23216. Which line?—The Clogher Valley line. It led nowhere in particular. The place where the people of the district would come to in the ordinary way for business would be Omagh. Omagh is also the capital of the county, and all the local business of the county is done there. It is an Assize town; the official business is done there. The County Council meetings are held there, and there is also a large rural district whose Council meet at Omagh. The Tyrone County Asylum (in which there are 800 persons) is situated in Omagh, as also is the County Hospital. In addition to that there are four secondary schools in the town.

23217. That is at Omagh?—Yes, All these things bring a large number of people from other portions of the county, and there are not at present sufficient travelling facilities. For instance, when people at Auchnacloy, Ballygawley, or Clogher find it necessary to go to Omagh, instead of availing themselves of the railway they drive—a distance of twelve or fifteen miles.

23218. From Ballygawley to Omagh it would be the shortest way to drive, would it not?—Yes, but there is a station on the Clogher Valley Railway at Ballygawley and also at Auchnacloy, and if they went by rail they would require to go round by Portadown, which is a very long distance, and would occupy half a day or more in travelling to and fro.

23219. The various districts in which you have suggested that it would be an advantage to have light railways are they composed of agricultural land?—Yes.

23220. Anything else?—No.

23221. *Mr. Acworth.*—Are there no minerals?—No.

23222. *Chairman.*—Is it good agricultural land?—The Clogher Valley is the best land in Tyrone.

23223. Take the districts where you suggest it would be an advantage to have a light railway, is the land well under cultivation there now?—Yes. In the Clogher Valley it is, but in the other districts—in the northern portion of the county, where I suggest a line from Cookstown to Strabane, the land is rather poor, and the district is rather congested.

23224. It would be the advantage of only the agricultural industry of that part of the county that this particular railway would serve?—Yes. It would also serve as a through line from Donegal to Belfast; it would shorten the distance considerably.

23225. In fact it would be practically a straight line?—Yes.

23226. Instead of going round?—Yes, from Strabane to Belfast. That would be of assistance in making the line a paying one, but it would not serve the people of the locality unless there was a branch line to Omagh. I might point out in reference to the Clogher Valley Railway that it is significant that the receipts from goods are larger than the receipts from passengers. I take the figures issued in June, 1906

23227. Is this on the Clogher Valley line?—Yes; the receipts from passengers were £3,846.

23228. For what period?—Six months. For goods the receipts were £4,462. I would point out that in the ordinary course the receipts from passengers would be more than the receipts from goods traffic if the railway did serve the people of the locality. I should also say that the Clogher Valley Railway was made under a baronial guarantee, and there is still a charge on the rates in the guaranteeing portion of the county.

23229. Do you suggest that these light railways should be made under a similar arrangement to that of the Clogher Valley Railway?—I think the ratepayers of the county, after their experience of the Clogher Valley, would hardly be likely to sanction the making of fresh railways—I mean under baronial guarantees.

23230. Your idea is that there should be a free grant in these particular districts for making the railways?—I do not think a free grant would be necessary in this particular case, because I believe the extra traffic that would accrue from the making of the branch line which I suggest would pay the requisite amount of interest on the outlay.

23231. Then why does not private enterprise do it if there is a reasonable prospect of its paying?—I am afraid there is not sufficient enterprise.

23232. What have you to say about the train service betwen Omagh and Dungannon and Omagh and Enniskillen?—In Omagh we complain that we have no slow train leaving Omagh in the Dungannon and Belfast direction between 1.10 and 5.55 p.m.

23233. How many trains have you in the day, do you remember?—We have four trains and the limited mail.

23234. Four trains during the day?—Yes. One of the trains is at 11 at night, so that you may say we have only three.

23235. Three trains during the day?—Yes.

23236. Do you suggest that the traffic would justify additional trains?—Yes; I think it would. We also complain that there is no local train arriving in Omagh earlier that 10.45.

23237. That is arriving at Omagh?—Yes; there is no train earlier than 10.45 from Dungannon.

23238. Omagh is a market town, is it not?—Yes.

23239. What is the population of Omagh?—About 5,000.

23240. Do you mean to say that from any point north or south there is no train arrives before that time?—Oh, no. From Dungannon there is an earlier train arriving at Omagh at 9.20, but it is the limited mail which stops only at Dungannon.

23241. What about the passenger fares in operation there?—Before I pass to that I should like to say that this is a great disadvantage to the people at the intermediate stations between Dungannon and Omagh.

23242. What is a disadvantage?—The fact that there is no slow train either in the morning or in the afternoon at a convenient time for pupils attending school or for people travelling to Omagh on business. There would be a considerable number of pupils attending the secondary schools in Omagh.

23243. Would they come from the district between Dungannon and Omagh?—Yes; from the intermediate villages, such as Beragh, Sixmilecross, and Carrickmore.

23244. You do not suggest another train; you suggest the alteration of the times, so that the trains should arrive earlier at Omagh; is that what you mean?—Yes; that would do. If this 10.45 train arrived at, say, 9.30 or thereabouts it would serve.

23245. What do you mean by that?—If the limited mail, which arrives at 9.20 or any other train arriving before ten o'clock, was a slow train which would accommodate the intermediate stations, that would answer the purpose. In the same way, in the afternoon, from Omagh. If the limited mail was a slow local train between Omagh and Dungannon it would answer the purpose.

23246. You are talking about the school children?—If the children have to go from any station between Dungannon to Omagh they do not get to Omagh until 10.45.

23247. And what time have they to leave in the afternoon?—They cannot leave until 5.55.

23248. They arrive too late and they leave too late?—Yes. Other lines are all right in that respect. The Enniskillen line has a very good train, and quite a number of pupils come.

23249. Because they arrive earlier and leave earlier?—Yes; they get suitable trains.

23250. Is that a real grievance, do you think?—It is a real grievance.

23251. You think so?—I am quite sure it is.

23252. Has this been represented to the railway company?—It has.

Insufficient facilities with Dublin alleged.

23253. The very point which you have just brought before us?—Yes. I should also say with regard to Dublin that we complain that we have not sufficient facilities.

July 3, 1907.

Mr. Michael Lynch, J.P., Representative of the Urban District Council and of the Chamber of Commerce, Omagh.

Complaint as to inconvenient passenger train service between Omagh and Dublin

23254. Between Omagh and Dublin?—Yes.

23255. What do you mean by insufficient facilities?—I mean to say as compared with other towns. It is impossible to go from Omagh to Dublin and return in the same day and do any business in Dublin. The first train we can get from Omagh to Dublin is 8.32, arriving in Dublin at 1 o'clock, whereas from Cookstown they get a train at 7 in the morning and from Enniskillen at 6.40, which arrives in Dublin at 10.30. In order to reach Omagh the same night it is necessary to leave Dublin at 3 o'clock unless you go by the night mail.

23256. That gives you only two or three hours in Dublin?—Barley two hours, whereas from Enniskillen or Cookstown, which are almost as far as Omagh, they can have several hours there.

23257. In that respect you think Omagh is at a disadvantage as compared with Cookstown?—Yes, with either Cookstown, Dungannon, or Enniskillen.

23258. With either of those places?—Yes.

23259. They are all on the same railway?—Yes, they are all on the same railway—the Great Northern. We also say that it would be quite possible and practicable to have a connection for Omagh and Derry with the 5.50 from Dublin for Portadown and Belfast.

23260. It runs to Portadown now, does it not?—Yes, and it goes on to Belfast.

23261. Does it go to Dungannon?—No.

23262. It goes on to Portadown and Belfast?—Yes.

23263. And you think it would be an advantage to the district if there was an extension from Portadown to Omagh in connection with the train?—Yes.

23264. That would be an additional train?—Yes, or it might be that the train arriving at Omagh at 7 o'clock could be altered.

23265. To make that connection?—Yes.

Suggested extension of the excursion ticket system.

23266. Then what about passenger fares?—I think think there is not so much to complain of in regard to passenger fares, except that the excursions might be a little extended, particularly over other lines. The general tendency seems to be on all the railways in Ireland to boom the places of interest on their own line. There may be places of equal interest which happen to be off their own line and on another line, but they will give no facilities at all for reaching them.

23267. You believe that in that respect there might be some improvement?—I think there is room for a great deal of improvement in that respect.

23268. At Omagh you have no competition whatever?—None whatever.

23269. It is all served by the Great Northern?—By the Great Northern. There is no competition either for goods or for passengers.

Goods rates said to be detrimental to the development of the industries of the district.

23270. With regard to the goods rates. Have you any complaint to make with regard to the rates that are charged. When I say complaint, are there any rates in operation which you think are detrimental to the development of the industries of the district?—Yes.

23271. First of all, tell us what industries there are besides agriculture?—Before I pass to that I should like to mention one point that the business people of Omagh complain of. They complain that undue preference in many respects is given to large centres of population. There are weekly excursions from Omagh to Belfast and also to Derry at a low rate, but there are no weekly excursions into Omagh. The result is that a lot of people from the town and the locality go to Belfast and Derry to do their shoping. The railway company were approached on this point some years ago, and the reply was that if they gave Omagh facilities of that kind every other town similarly situated would want like facilities.

23272. You are on the question now of special excursion fares from these other places as compared with Omagh?—Yes.

23273. But I was on the question of rates for goods—I had left the question of passenger fares?—I am coming to that now.

Staple industries of Omagh District.

23274. Is there any linen industry in the district?—No, not in Omagh.

23275. Or in the district?—No.

23276. Is there anything but agriculture?—There is. There is some shirt-making carried on, and also the manufacture of ladies' underclothing.

23277. That is rather a large industry in Ireland, is it not?—Yes, in the north-west.

23278. Are you satisfied with the rates that are in operation for that particular traffic?—No; we complain that there again undue preference is given to Derry.

23279. Can you give us some figures?—I have some figures here.

23280. Take the rates for shirts and underclothing?—The rate for shirts and underclothing from Omagh to London is 55*s.* a ton.

23281. I apprehend that for these shirts and underclothing the principal market is London?—Yes.

23282. And the through rate from Omagh to London is 55*s.* a ton?—Yes.

23283. And you say that that is unfair as compared with Derry?—Yes.

23284. What is the Derry rate?—43*s.* 4*d.*

23285. What is the distance?—Thirty-four miles longer.

25256. From Derry to London?—Yes.

23287. Thirty-four miles longer than from Omagh?—Yes.

23288. You know, I suppose, that what may give that low rate is the sea competition?—To some extent, it may be; but I think it is very unfair, seeing that the bulk of the goods are carried past Omagh.

23289. You mean that they go through Omagh station?—Yes; practically none of the goods go by sea from Derry to London.

23290. None of this shirt and underclothing traffic?—No.

23291. *Mr. Acworth.*—Surely it goes largely by sea from Derry to Heysham?—No; a small part of the traffic is carried by the Midland Railway; some by the Midland to Belfast, and some by the Great Northern, *via* Belfast or Greenore and Holyhead.

23292. Are you sure that a good deal of the traffic does not go *via* Heysham—that is, on the Midland?—No; not direct. I am quite sure that the bulk of the traffic goes *via* Belfast.

23293. *Chairman.*—But you are also certain, I suppose—I may put it to you—that the traffic does go from Derry through Omagh to London at a less rate than the Omagh rate?—Oh, yes.

23294. There is no doubt about that?—No doubt whatever.

23295. And that the traffic is carried from Omagh by rail?—That is so.

23296. *Lord Pirrie.*—It must go through Omagh by the Great Northern?—Yes. And the Great Northern, as far as they can, favour the ports of Greenore and Holyhead, because, presumably, they get larger terminal on the through rate.

23297. I suppose they carry to Greenore from Omagh?—Yes. I would say, in connection with that, that I think it is very unfair that preference of that sort should be given. I think a very reasonable check on it would be that where any special rate is given to a competitive point, the railway company should not be allowed to charge a higher rate to intermediate points.

23298. *Chairman.*—We have had a good deal of evidence on that particular point. Have you any other rates? Can you give us the rate for drapery goods, for instance, sent into the country?—Yes.

23299. Sent from England—say, from Manchester?—Yes, I can.

23300. Can you give us the rates from Manchester *via* Belfast for drapery goods to Omagh?—The rate from Manchester *via* Belfast is 43*s.* 4*d.* per ton.

23301. To Omagh?—Yes.

23302. That is, *via* Belfast?—Yes.

23303. What is it to Strabane?—To Strabane it is 34*s.* 4*d.*

23304. And to Derry?—To Derry, 35*s.*; that is third class. Then there is second-class.

23305. Which way does the traffic go to Derry from Belfast—it does not go by the Great Northern, does it?—Some of it does.

23306. Then, again, it goes through Omagh?—Yes.

23307. *Colonel Hutcheson Poë.*—I suppose a lot goes by the Midland?—Yes; but all for Strabane goes through Omagh.

23308. *Chairman.*—That is drapery goods in class three of the classification?—Yes. Then there is the second class.

23309. What is the second class rate?—The second class rate is 50*s.* to Omagh.

23310. *Chairman.*—How do you run your classes in Ireland? Surely it is the other way?

Mr. Smyth (G. S. & W. Ry.).—We reun them the same way as you do, sir—ascending first, second, third, etc.

23311. *Chairman.*—But the second class apparently is higher than the third?

Mr. Smyth (G. S. & W. Ry.).—That is wrong; that must be a mistake. We have the very same order as you have in England.

Witness.—That is a mistake. The finer class of goods of course has the higher rate. The figures should be transposed.

Mr. Smyth (G. S. & W. Ry.).—Heavy drapery is third class and light drapery fourth.

Mr. Acworth.—Then this ought to be fourth class?

The Secretary.—The word "second" in the proof should be "fourth."

23312. *Chairman.*—Will you give us the fourth class rate between the same places?—To Omagh it is 50*s.*, to Strabane, 45*s.* 10*d.*, and to Derry, 40*s.*

23313. Now give us the local rates from Belfast to those places?—I have a few figures here.

23314. You might give us the rate for bacon?—From Belfast to Omagh it is 15*s.* 4*d.*

23315. Is that station to station?—That is station to station rate. To Strabane it is 13*s.* 4*d.* carted rate, and to Derry, 10*s.* 10*d.* station to station rate. It must always be remembered that Strabane is fifteen miles further from Belfast than Omagh.

23316. It depends upon which way you go, does it not?—Not from Belfast.

23317. Suppose you go from Belfast round by Derry?—Then it is much farther still.

23318. In actual distance, is it?—Yes; very much farther.

23319. Is the shortest way from Belfast to Strabane through Omagh?—Yes; by the Great Northern. Then the flour rate from Belfast to Omagh is 8*s.* 4*d.*, that is station to station; to Strabane, 7*s.*, and to Derry, 5*s.*

23320. You know the reason of the 5*s.* rate to Derry?—Yes.

23321. But you do not see why Strabane should be better treated than Omagh?—No.

23322. That is your point?—We cannot see why it should be. I should say in connection with that, there is another point in connection with which the bakers of Omagh think they have a grievance against the railway company. The railway company carry baked bread from Belfast at a special rate for the large bakeries in Belfast. I am unable to give you the figures, because these are special rates which are known only to the railway company and the senders of the bread.

23323. But the rates are in the Rate Book, are they not?—These are special rates.

23324. But special rates are in the Rates Book?—They may be, but I have not had access to the figures.

23325. You could have had. However, you do not know the figures?—No.

23326. They are for baked bread?—Yes.

23327. Is that a daily traffic?—Yes, a daily traffic.

23328. Competing with the bakers at Omagh?—Yes.

23329. *Lord Pirrie.*—But the railway company do not carry it at a lower rate than that at which they carry flour, do they?—I would not say that, but it should be a great deal higher.

23330. No doubt it is a great deal higher than the rate for flour?—It may be something higher.

23331. But you do not know?—No; I cannot give the figures for that. I tried to get them, but the local bakers could not give them to me. The result of the competition is that there are not one-half the number of bakers in Omagh now that there were a few years ago.

23332. *Chairman.*—This is all within your own knowledge?—Yes, within my own knowledge and memory.

23333. That this particular industry in Omagh has been crippled and partly destroyed by the low favourable rates from Belfast, is that what you say?—Yes, for bread.

23334. Is it carried by goods or passenger train?—Mostly by goods train, but some by passenger train.

23335. *Lord Pirrie.*—It is the early train in the morning, I suppose?—I am informed that they receive it at night. They have a special arrangement for receiving it at 2 or 3 o'clock in the morning. As a matter of fact, there are now only five bakers in Omagh, while a few years ago there were twelve.

23336. *Chairman.*—You surprise me at any rate. Judging from what you have said, your opinion is not a favourable one in regard to the treatment you have received on the Irish railways?—We think, in Omagh, that we receive exceptionally bad treatment.

23337. And you have laid all these particular grievances before the railway company?—I cannot say that with regard to the question of bread. I am not concerned in that industry, and I am not aware that it has been formally put before them.

23338. Neither are you aware of what rate they charge?—No—not further than the rates for flour.

23339. You are of opinion, I see, that there should be through rates from station to station—from any station to any station in Ireland?—I am.

23340. For Goods and parcels?—Yes.

23341. Is not the small parcels scale in Ireland available for any station in Ireland?—It is, to some extent.

23342. *Chairman.*—Is it not to every extent; is there any limitation?

Mr. Smyth (G. S. & W. Ry.).—There are two exceptions—the Waterford and Tramore and the Cork and Macroom Railways.

23343. *Chairman.*—With those two exceptions, the small parcels' scale is available?

Mr. Smyth (G. S. & W. Ry.).—I thought you were speaking of the scale for parcels by passenger train, sir.

Chairman.—I am—the sm all parcels' scale.

Mr. Smyth (G. S. & W. Ry.).—It applies between all the railways in Ireland with those two exceptions.

23344. *Chairman.*—With those two exceptions?—(*Witness*).—There are exceptions to that which I want to point out.

23345. We have a positive statement; what is your correction?—My correction is with regard to the carriage over the railway system of newspapers and printed matter from the publishing office to newsagents. What I complain about is this. I happen to be a director of a printing and publishing company, and we are charged higher rates for the carriage of newspapers than the published rates for parcels, although newspapers are generally supposed to be carried at very low rates; but the railway refuse to carry them at the ordinary parcels' rates.

23346. Is that from Omagh?—Yes.

23347. *Lord Pirrie.*—Do they carry them into Omagh at the regular rates?—They carry them from Dublin and Belfast at rates which we do not know.

23348. And at rates at which they will not carry your newspapers from Omagh?—I am not in a position to say, but they charge us special rates, which we consider very high.

23349. *Chairman.*—More than the small parcels' scale?—Yes.

23350. Can you give us one or two instances?—Yes, I will give you the particulars of this. They mark out a rate at ½*d.* per lb., and they give 33 per cent. off that for payment for twelve months in advance; they do not book the papers and they will not guarantee the delivery, nor will they be responsible for loss or non-delivery.

23351. You are speaking of newspapers?—Yes.

23352. *Chairman.*—I think there is a general scale in England for newspapers somewhat similar to that?

Mr. Croker Barrington, Solicitor.—We understand that they are sent at special rates for printed matter. It is the same as in England; there are special rates for printed matter—for newspapers.

Witness.—We have had to do with other railways also. For instance, the Donegal Railway, before it was taken over by the Midland and the Great Northern charged us at a rate which amounted to something less than ¼*d.* per lb. Immediately the Donegal Railway was taken over by the Great Northern and the Midland the rates were increased to about double what they were before. In other words, they put on the same rate for the Donegal Railway that they were charging us on the Great Northern.

23353. *Mr. Acworth.*—Surely you never got 4lbs. carried for a penny; you said ¼*d.* a pound?—It worked out at something less than that. It was a contract.

23354. For what size of parcel?—For all sizes.

23355. You do not suggest that if you sent a 2lb. parcel you would be charged less that ½*d.*?—No, I do not suggest that. They do not book in parcels—they do not make any note whatever of them. The parcels are simply handed in with the addresses printed on them; they are thrown into the van, and then they

July 3, 1907.

Mr. Michael Lynch, J.P., Representative of the Urban District Council and of the Chamber of Commerce, Omagh.

Through rates from and to all stations in Ireland advocated.

Complaint of excessive charges for the conveyance of newspapers and printed matter from Omagh to stations in the district.

July 3, 1907.

Mr. Michael Lynch, J.P., Representative of the Urban District Council and of the Chamber of Commerce, Omagh.

are thrown out again at the station to which they are addressed. The average quantity is weighed, and on the basis of the weight they charge. The result is that sending parcels of newspapers from Omagh to Stranorlar or Donegal, a distance of thirty or thirty-eight miles, the net rate that we pay would be about ¾*d.* per lb.

23356. *Chairman.*—The rates of which you are now complaining are the same, I understand, by other railway companies as well as the Great Northern?—No; they are not the same.

23357. Do the Midland Railway Company of England own the Donegal Railway exclusively?—We have not much to do with the Midland. Our transactions with them are very small, and I cannot speak as to their rates.

23358. You say that when they took over the Donegal Railway the rates were advanced to the same scale as was in operation on the Great Northern?—Yes, on the Donegal Railway.

23359. Therefore it would look as if some general scale is applicable to the whole of Ireland?—It had not been in operation on the Donegal Railway certainly.

23360. That might have been an exception?—We complain that for short distances, such as from Omagh to the villages and towns where all our newspapers are sent—the distance is so short as compared with the distance, say, from Dublin to the same towns—we complain that we should be charged even the same rates.

23361. Is it not like the penny post—whatever the distance the rate is the same?—No. That does not follow either.

The general scale of charges for conveyance of newspapers on Irish railways.

23362. *Chairman.*—Have you a newspaper scale, Mr. Smyth?

Mr. Smyth (G. S. & W. Ry.).—It is different. We charge a special rate in Ireland; it depends very largely on the quantity of newspapers sent. It is a special arrangement altogether. We will be able to give you particulars later on.

23363. *Chairman.*—Is it not in your books?

Mr. Smyth (G. S. & W. Ry.).—It is not in our public time table.

23364. *Chairman.*—You do not charge each newspaper separately?

Mr. Smyth (G. S. & W. Ry.).—Not at all; it is a general contract.

23365. *Mr. Acworth.*—It is a contract made with each individual newspaper centre?

Mr. Smyth (G. S. & W. Ry.).—It is a contract applicable to each different town. For instance, with Dublin and Cork and large centres, where newspapers are published, we have a certain rate.

23366. *Mr. Acworth.*—If there were two rival newspapers in Omagh they would get the same terms?

Mr. Smyth (G. S. & W. Ry.).—Yes.

23367. *Mr. Acworth.*—But they would not get the same terms necessarily as newspapers in Enniskillen?

Mr. Smyth (G. S. & W. Ry.).—They probably would, but they would not get the same terms as Dublin, where they send such large quantities.

Complaint as to increased charges on parcels of newspapers owing to absence of through booking to all stations.

Witness.—What we complain of is that in sending newspapers, say, 12 miles, if they have to go over two railway lines a double charge is made, and we have to pay the full rate to each company—for instance, to the Clogher Valley Company and the Sligo and Leitrim Company and the Donegal Company.

23367A. *Lord Pirrie.*—There would be three rates there.

23368. *Chairman.*—If there were three companies there would be three rates?—If there happened to be three companies it would be so, but I do not know any case where there are more than two companies concerned. The rates run up to over ¾*d.* per lb., which is considerably higher than the ordinary parcels scale.

23369. With regard to the rates for agricultural produce in the district, have you anything particular to mention?—No, except that it is generally believed that it would largely increase the income of the farmers if they had better facilities for sending their produce to market.

Lower rates for conveyance of agricultural produce recommended.

23370. Do you agree with some of the evidence we have had that it would be an advantage if the agricultural produce was charged at a less rate for exported traffic than the rates for imported traffic?—I think it would certainly be to the advantage of the senders of produce.

23371. Take grain, for instance. Do you export grain?—No; not from Omagh.

23372. No, I suppose not. I suppose Ireland itself does not grow sufficient grain for the food of the people?—No.

23373. It has to be imported; an enormous quantity must be imported into Ireland?—A considerable quantity is imported.

23374. Then it must be to the general advantage of the consumers to have as low a rate as possible inland?—Yes.

23375. What is your point with regard to agricultural rates then?—My point is that if the rates for flax, butter, potatoes, and produce like that, which the farmers have to sell, were lower, and there were better facilities given for sending small quantities, it would be a great advantage.

23376. You mean low local rates?—Yes.

23377. In Ireland?—Yes.

23378. You think that it would tend to encourage the growth of those particular articles in your district?—Yes. For instance, in regard to articles like potatoes which have small value as compared with their weight, a low rate would encourage the export of them. At present a man in a remote locality might have a fine crop of potatoes, but when he takes into account the cost of exporting them he would have nothing left.

23379. Do you think that the railway companies as at present owned and managed would seriously reduce their revenue if they made these reductions?—No; I think not. I think that substantial reductions could be made in local rates on goods of all kinds without seriously decreasing the revenue. When we take into account the fact that passenger traffic is perhaps 55 per cent. of the total receipts of railways in Ireland, I think that in regard to the particular classes of traffic, such as agricultural produce, the rates could be substantially reduced without materially affecting the total receipts.

23380. And have your Council considered the question as to what would be the remedy for these complaints which you have been making?—Generally the opinion in the locality is that no remedy would be sufficient short of taking over all the railways and running them under one management. Whatever the management might be, the impression is that it should be subject to public opinion in Ireland.

23381. In other words, that the State should purchase the railways and that they should be managed by some central body in Ireland?—Yes.

23382. Is that what you mean?—Yes.

23383. I suppose you have not considered as to how it is to be done?—Well, we have considered it——

23384. Have you considered it personally?—Yes.

23385. Have you formed any opinion upon it?—Yes. My opinion is that some elected body would be the best to control the railways. It would be more likely to meet public opinion. I think that if the railways were run under one central management a good deal of the grievances would remain unredressed; we think that if there was a little mixture, so to speak, in the management, it would be better. At present nearly all the railway directors reside in the large cities of Dublin and Belfast; their interests are there, and the interests of the smaller towns in the country are entirely neglected. I think it would be an advantage to the railways generally to develop the inland towns; by so doing they would be sending increased traffic over the lines. But at present they do not do so. A great many of the directors of Irish railways have not much experience of business of any kind.

23386. That is your view?—Yes.

Examined by Mr. Acworth.

23387. You complain, I notice, that you get worse treated than Enniskillen in the matter of trains. Do you know that Enniskillen has been before us to tell us how badly they are treated?—No doubt they know their local grievances best.

23388. Just so. Do you not think that other towns would like more and better accommodation if they could get it?—I presume they would.

23389. You say that there are only four trains all day. Those trains are not over full, are they?—In what direction do you mean?

23390. I am speaking generally. The trains that come in and go out of Omagh station—they are not crowded, are they?—Sometimes they are.

23391. But generally they are pretty thin, are they not?—As a rule, they are not overcrowded.

23392. Perhaps thirty or forty passengers?—Considerably more than that.

Mr Michael Lynch, J.P., Representative of the Urban District Council and of the Chamber of Commerce, Omagh.

23393. Fifty?—It would be more.

23394. You could not expect the railway companies to run many more trains, could you?—No; I do not think it would be reasonable to expect them to do so.

23395. Suppose there are only four or five trains; is it really possible to make them run just at the time when everybody wants them?—No; I do not think it is

23396. Take, for instance, the train which you say gets in at 10.40. I daresay it is true that it would suit the school children if it could get in at 9.40, but how about the people who start from Belfast? That train comes from Belfast. What is to happen to them?—They might do with that as they do with other express trains from Belfast, and make it a slow train between Dungannon and Omagh. They have done that with one train: they have made it a slow train between Dungannon and Omagh, calling at intermediate stations.

23397. They have done that to please you?—Not exactly.

23398. But it does please you?—Yes.

23399. You agree that they could not make all their express trains stop at every station?—No; it would not be possible.

23400. You see the difficulty. You cannot get as good a service out of five trains a day as you could out of fifty?—No.

23401. And you cannot hope to run fifty?—No. But there is no reason why there should not be as good a service between Dungannon and Omagh as between Enniskillen and Omagh.

23402. Now tell me about the Clogher Valley line. What is the assessment in the £ now?—I could not say at present what is it; it was as high as 8*d.* at one time.

Colonel Hutcheson Poë.—It is 9¾*d.*

23403. *Mr. Acworth.*—That line has been built twenty years, has it not?—Over twenty years.

23404. That line just about pays its working expenses?—About that. And the whole of the interest on the capital has to be paid by the baronies and the Treasury.

23405. You have said that this is the best line in the county?—No; I say it is badly constructed and badly laid out. It starts from a small station on the Great Northern and ends at another small station on the same line, neither of which is a place to which anybody wants to go.

23406. I was not meaning that. It is the best line in the country?—Yes; it is a very good line, that is, it passes through a good agricultural district.

23407. Though it may not run in the best direction, still it serves a very good district—you have told us that?—That is what we complain of—that it does not serve the district at all.

23408. You told us that this district up above Greencastle is poorer land?—It is very much poorer.

23409. And, of course, as far as through passengers are concerned, between Strabane and Cookstown you would be taking passengers off the existing line, would you not?—Yes, but the public would be served better.

23410. So that we must not say much about that. The through passengers would not help the earnings, taking the line as a whole. These places that you mention are very small—Newtown Saville is one of them?—That would be on the Clogher Valley system—from Clogher to Omagh.

23411. Do you know what the population of Newtown Saville is?—As a matter of fact, it has not a defined population at all; it is simply a village, part of a townland.

23412. It has a population of 121, according to the official guide, which I have here. Then Ballygawley is another place?—That is really a station on the Clogher Valley line.

23413. That has only 350 people?—There is a very good district around Ballygawley.

23414. What population has Greencastle got—I cannot find it in this book at all?—It is the centre of a thickly populated district; it is not what you can call a village.

23415. But is as thickly populated as an agricultural district in poor land can be?—Yes.

23416. Do you think it is possible that any of these new lines if they were made could pay better than the Clogher Valley line?—I would not say at all that the line I suggest from Cookstown to Strabane would pay depending on local traffic; in fact, I do not think it would pay more than working expenses.

23417. Then where is the money to come from; you say that the baronies do not want to pay any more?—At present they are endeavouring to get the locality scheduled as a congested district.

23418. That is to say, to get the national purse to pay?—Quite so.

23419. What you really suggest is this, that you would like a railway which you admit would not pay provided you could get it given to you gratis; but you would not pay anything towards it yourselves?—What I say is that I do not think the ratepayers of the county generally would consent, but if the capital was found between the through traffic and the local traffic the line should pay.

23420. I am not blaming you in the least, but you would like to get it gratis if you could?—Yes.

24321. You think that you have just as good a right as anybody else to get it for nothing if there is anything going?—Quite so.

The probability of increased traffic resulting from cheaper fares.

23422. I am not blaming you in the least; I only want to understand your position. You spoke about excursion trains. You said that there were excursion fares from Omagh to Belfast, but none from Belfast to Omagh?—No, not so much that, as that there are no excursion fares from surrounding towns to Omagh.

23423. You want excursions from smaller places into Omagh?—Yes.

23424. Is there enough population to justify that?—I do not see that population affects it very much. There would be a larger number of people, I should say, travelling from the surrounding districts into Omagh than from Omagh to Belfast.

23425. You are not asking for special trains, but only for cheap fares by ordinary trains?—Yes, excursion fares only.

23426. Now, about the bread. Why do the people in Omagh buy the bread sent from Belfast?—They buy it because it is brought there in competition with the local bread.

23427. It is either cheaper or better at the same price, or they think so?—It is not anything cheaper; it is quite as good.

Belfast competition with the Omagh bakeries discussed.

23428. Why do they buy it unless they think it is better in some way?—The bread is retailed by different shop-keepers. The retailer is not a baker himself. The Belfast merchant comes to him and induces him to take an agency for his bread, and the shopkeeper sees an opportunity for increasing his trade.

23429. And the people buy it because they like it better than the Omagh bread at the same price?—I would not say that.

23430. Then, why do they buy it?—Because it is taken up and pushed by certain people.

23431. They are made to like it then; I do not say they ought to like it?—The man they happen to deal with supplies it, and they take it from him.

23432. The people think it is an advantage to buy it in the same shop as their other goods instead of going to another shop?—It is quite open for them to do so.

23433. Do you think the railway company ought to put up its rates in order to stop that trade?—No I would not say that they should put up their rates. I say they should make the rates reasonable in comparision with the charges for flour.

23434. But you do not know what the rates are; for all we know they are reasonable?—They may be, but I am giving you what is alleged by the local bakers—that they are not reasonable.

23435. If other men are getting the local baker's trade, he is not likely to think the rates are reasonable, is he?—Quite so.

The alleged excessive rates charged for Omagh newspapers.

23436. We will not say anything more about that. Then, with regard to your newspapers, I do not understand the position at all. You said that in some cases it came to ¾*d.* a lb., and that that was considerably higher than the ordinary parcels scale?—Yes.

23437. But the ordinary parcels scale begins at 4*d.* for 1 lb.?—Yes, but that is taking the lowest. If you go up the scale it averages about ¼*d.* a pound.

23438. It all depends on the size of the parcel, does it not?—Yes; but in this case the parcels are all bulked together.

23439. With regard to your parcels, do they go in separate newspapers or in bundles?—In bundles.

23440. How large is the average bundle?—That depends on the locality. Some would be twenty or thirty pounds.

23441. That is the biggest?—Others might be only two or three pounds.

July 3, 1907.

Mr. Michael Lynch, J.P. Representative of the Urban District Council and Chamber of Commerce, Omagh.

The alleged excessive railway charges for carriage of Omagh newspapers.

23442. If it was three pounds weight it would cost 5*d.* on the ordinary parcels scale. I have it before me—it is on page 57 of the guide. Three pounds for any distance is 5*d.*?—According to the table I have here from one to three pounds is 4*d.*

23443. I was taking the through scale. Let us take it at the table you have. From one to three pounds is 4*d.*; for three pounds, that is 1½*d.* a pound?—Yes.

23444. Thirty pounds would be 8*d.* That is just over ¼*d.* per lb.?—Yes.

23445. Suppose you put those two together—three pounds for 4*d.* and thirty pounds for 8*d.*, that would make 33 pounds for 1*s.*, if you sent one parcel of three pounds and one of thirty pounds. What would, say, ¾*d.* a pound come to?—2*s.* 0¾*d.*

23446. So that it really depends on the average size of your parcel, does it not?—No, it does not.

23447. Supposing your parcels were all three pound parcels?—It would not make any difference whatever in this rate.

23448. If your newspaper parcels were all three pound parcels it would be a great deal cheaper than the scale, because for three pound parcels the scale is over 1*d.* a pound?—Yes, but that would be assuming they were all three pounds.

23449. If you assume that they are all thirty pound parcels, you are charged much higher than the scale?—Yes, whether they are large or small.

23450. So that whether you are charged higher or lower than the ordinary parcel scale depends on the size of your average parcel?—No, it does not at all. You are assuming that the parcels were taken singly and booked, but they are not.

23451. Really, whether the charge for your newspapers is higher or lower than the charge for ordinary parcels depends upon what the ordinary size of your newspaper bundle is?—No; not quite that. You are assuming that parcels would be sent singly and weighed singly.

23452. But they must be sent singly if they are single parcels, must they not?—If they are sent at ordinary parcels rate they would be booked singly.

23453. They are all thrown into the van and they have all to be taken out separately for the different people at the different stations, have they not?—They are thrown out of the van on to the platform, and people go and take them away. But I quite follow what you are trying to convey—that if the parcels were all sent and booked at the ordinary rates, perhaps the average would not be so much higher. But it would be considerably higher considering the average size of the parcels. Further than that, the company would be responsible, and they would have all the trouble of booking the parcels. At present they have no such trouble, and they take no responsibility whatever, and yet they charge considerably more than the ordinary parcel rate for a thing that has very little intrinsic value.

23454. I think I see your point?—We send out considerably over a ton a week of parcels.

23455. A ton a week?—Yes, of weekly newspapers.

23456. I suppose they go out pretty much at the same time—on Friday morning, or whenever it is?—Towards the end of the week.

23457. And pretty much within an hour or two, I suppose?—No; on three different days.

Examined by Colonel Hutcheson Poë.

The route traversed by the Clogher Valley Railway. Proposals for extension to Bawnboy Road and Cavan and Leitrim Railway.

23458. With regard to the Clogher Valley Railway, am I right in saying that it is little more than a common tramway; it runs along the public road for the greater portion of the district?—Yes.

23459. What is the length of the line?—I have not the exact figures.

23460. About 37 miles, is it not?—Yes.

23461. I think you said that its utility was largely impaired by the fact that its terminal points landed you nowhere?—Quite so.

23462. Is there not a proposition, and has it not been proposed on more than one occasion in the last few years to connect Maguire's Bridge with Bawnboy Road on the Cavan and Leitrim system, and then, on the other hand, to connect with Newry *via* Keady?—That will not alter the local position in the least; it will not be any advantage so far as local traffic is concerned.

23463. You spoke just now of the importance of promoting the development of small inland towns, did you not?—Yes.

23464. And I suppose you would go so far as to say that it would also be desirable to promote the development of the smaller ports, such as Newry?—Yes.

23465. At all events, not to sacrifice them?—Quite so.

23466. If you linked up the Clogher Valley and the Cavan and Leitrim system you would have a through connection right away from Cavan and Leitrim along the Clogher Valley Railway to the Port of Newry on the three-foot system?—I think that would be an advantage to Newry.

23467. I suppose you will admit that it is desirable?—I think so.

23468. And also bring the Clogher Valley, which you say does really pass through a very fertile district, into connection with the Cavan and Leitrim system, which is one of the best paying lines of light railways in Ireland?—I think it would be desirable.

23469. I am glad you admit that. I think there is a proposal, too, on the part of the Government to make a grant from the Development Grant of £75,000 for the Newry, Keady, and Tynan Railway, provided the company can raise the rest of the capital?—Yes; I understand that is so.

23470. Are any steps being taken in regard to the construction of that line?—Yes; I think it is under construction at present.

23471. And, as a matter of fact, I think £12,500 are in the estimates for the present year?—I believe so.

23472. I notice that the Clogher Valley Railway serves a very considerable district in County Tyrone and Fermanagh?—It serves it, but very badly. It does not bring the people where they have business, or where they want to go.

23473. How would their interests be better served by some of these extensions that you have spoken of?—The extension that I suggested would give a branch line from Clogher to Omagh direct.

23474. Would not that be gained by this other proposal?—That would not be served so well, because it would mean a junction and you would have to get connecting trains. There is a valley that runs for pretty much all the way from Omagh to Clogher.

23475. You consider that Omagh is a town of such importance in the county that it would be a great advantage to the people in the district if they were put into touch with it?—There would be sure to be a larger passenger traffic over the line.

23476. With regard to these rates to Strabane which you say prejudicially affect you, I suppose the reason that Strabane gets a lower rate as compared with Omagh is due to the fact that if it did not get that rate the traffic would go either *via* Belfast and the Northern Counties to Derry, and it is only a short distance on the Great Northern from Derry to Strabane?—And there is also the fact that they have the canal there.

23477. So that in every way they are very happily situated?—Yes.

23478. At any rate, the fact is that in the matter of shirts, Omagh is placed at a disadvantage of 11*s.* 8*d.* a ton as against Strabane?—That is so.

23479. Is there a shirt industry in Omagh?—Yes.

23480. That means a very serious matter to you?—As a matter of fact, it would mean in some cases 2*d.* a dozen on the freight from Omagh to London.

23481. There is only one other question I wish to put to you. You said that the Irish railways should be compulsorily amalgamated. Would that answer imply necessarily State purchase, or would you be in favour of the railways being amalgamated under the control of one big railway company?—It would mean a State guarantee.

23482. That is another point. You do not confine your remark to saying that the railways should be placed under the State; you would not oppose their being amalgamated in the hands of one powerful railway company?—Our experience of amalgamation has always been unfavourable. For instance, when the old railway from Omagh to Belfast was in existence there were considerably lower rates, but as soon as the amalgamation was carried out the rates went up—in many cases by 20 per cent.

23483. That might be guarded against by having a Bill for the amalgamation of the railways into one system, accompanied by a Bill providing for a uniform scale of rates and charges over the whole system?—Yes. That would be an improvement, but I think it would be still better if there were some Government or popular control.

23484. That might also be provided for by having a Government representative, and probably it would be if the railways were amalgamated. The Central Board, however constituted, would probably be assisted by some Government representative, who would see that the interests of the public generally were safeguarded, and that the centralised railway system should not unduly penalise the public?—Quite so. Anything that would prevent the possibility of the management of the railways trying to earn big dividends at the expense of the public would be an improvement.

23485. Your idea is generally that railways should be worked in the interests of the public?—Quite so.

23486. And that their dividends should be only such as would give a reasonable return on the capital outlay and the cost of renewals?—Yes.

23487. Failing the State acquiring the railways and supervising them entirely, would you be in favour of the railways generally in Ireland being placed in the hands of some one Railway Board, subject to Government control and subject to a scale of uniform rates and charges for the whole of Ireland, and perhaps also, to cover the further point which you raise, subject to the shareholders in the amalgamated system being guaranteed against any loss which they might suffer from a general reduction of rates and fares by a guarantee of the gross receipts of which they have been in possession for the last five years—something of that kind?—I believe that would be a very great improvement on the present system.

23488. You would favour that in the event of the State not being prepared to take them over?—Yes; certainly.

Examined by Lord Pirrie.

23489. You complained a good deal of the railway companies not giving facilities for cheap trains into Omagh?—Yes.

23490. Is that the opinion of the shopkeepers or of the people in the surrounding district? I see you represent the Urban District Council and the Chamber of Commerce?—Yes.

23491. Therefore, it is on behalf of the shop-keepers that you say that, and not on behalf of the people in the outside districts. Are the shops sufficiently good in Omagh to induce the people to come to Omagh rather than to Belfast, where they have, I presume, a much larger number of shops from which they can buy their articles whether of a dear or cheap quality?—Omagh is a very good town and has very good shops.

23492. Could the articles be sold as cheaply in Omagh as in Belfast?—Yes, more cheaply.

23493. I do not see how they could be sold more cheaply if they have to pay the railway rates from Belfast, or from Greenore, or from Dublin, to Omagh?—It is quite true. As a rule the rate of profit put on by shopkeepers in towns of the size of Omagh, where rents are low and expenses generally lower than in a large town, are considerably smaller than in Belfast.

23494. Because the trader in Omagh has to pay a low rent he can afford to sell at small profits?—Yes. You ask me whom the complaint comes from. It comes from the shop-keepers of Omagh in the first instance.

23495. I can quite imagine the shop-keepers saying so, but I should have thought that the people of the district would have preferred getting a cheap train to Belfast, where they can go from one shop to another and see what the prices are, and then come back to one and say, "I will give you so much for this if you will let me have it." Is not that done frequently?—There is not much of that now, I believe. There would be an inducement to go to Omagh if there were proportionately cheap fares given, because the distance would be shorter and the travelling cheaper.

23496. Then, take the question of bread. Have the bakers not lost their trade in Omagh, as in many other towns in the North of Ireland, because the bakers would not give the shopkeepers a commission? As I understand it, the bread from Belfast is sold at exactly the same price as that of the local baker, and the Belfast baker gives a commission to the man who sells it, but the bakers in Omagh will not give the shopkeepers a commission—they want the people to buy the bread direct from themselves?—They do give a commission.

Belfast competition with the Omagh bakeries discussed.

23497. To the shopkeepers?—Yes, but not in every case. Most of the bakers bake for their own consumption solely, but there are several who bake for the district.

23498. But the majority bake for their own customers, and get the full price for their bread, whereas the Belfast baker sells it through the shopkeeper, and gets a commission?—Quite so. But it is really a question of dumping on the part of the Belfast bakers, to some extent. They want to get rid of their surplus production. They have their machinery going, and they put on a shift of men at night, so that they reduce the average cost.

23499. *Mr. Acworth.*—You call it dumping, but it must be a permanent dumping; it cannot be an occasional surplus, that they wish to get rid of, can it?—It has become constant.

23500. You do not want bread one week and none the next?—No; that would not do.

Examined by Mr. Aspinall.

23501. Have you reckoned the mileage of the proposed new lines of light railway which you have suggested?—No.

The effect of the sea rates on the freights by rail from Belfast to Derry.

23502. With regard to the question of Colonel Poë, as to the traffic passing over the Great Northern system going that way on account of the cheap rates as against Belfast and the Northern Counties, you must be aware that as far as Londonderry is concerned, all the rates, whether the goods travel over the Great Northern or the Belfast and Northern Counties, are governed by the sea rates either from Derry to Scotland or from Derry to Heysham. The sea rates settle what the rates shall be to Derry. You understand that, do you not?—The sea rate is not the same; there is a margin between them. The sea rate is less still.

23503. But the sea rate is the competitive rate against which the railways have to work; that is the thing which decides in their mind at what rate they can carry goods so as to get some share of the traffic. You follow that, do you not?—Yes, that is quite true. But what I complain of is that an identical industry, because it happens to be thirty miles up the line from Derry, should be penalised by an extra 15*s.* a ton, although it deals with exactly the same class of goods, which go to the same market, and are carried a shorter distance by the same railway company.

The Commission adjourned till the following morning at 11 *o'clock.*

FORTY-FIRST PUBLIC SITTING—THURSDAY, JULY 4TH, 1907,

AT 11.0 O'CLOCK, A.M.

In the Board Room of the Lancashire and Yorkshire Railway Offices, Westminster, London.

Commissioners present:—Sir CHARLES SCOTTER, BART. (Chairman); Right Hon. LORD PIRRIE, P.C.; Sir HERBERT JEKYLL, K.C.M.G.; Lieut.-Colonel WILLIAM HUTCHESON POË, C.B.; Mr. W. M. ACWORTH; and Mr. JOHN AUDLEY FREDERICK ASPINALL;

Mr. GEORGE E. SHANAHAN (Secretary).

Mr. ANTHONY MACKEY examined by the CHAIRMAN.

July 4, 1907.

Mr. Anthony Mackey, Castleconnell, Representative of the Inland Fisheries Board (Ireland).

23504. You appear on behalf of the Inland Fisheries Board?—Yes, and on my own behalf also as a fishery proprietor.

23505. What district do you come from?—From the Shannon. I am the lessee of the eel fisheries of the Shannon under the Board of Works.

23506. Are you satisfied with the arrangements made for the transit of fish to the English market?—Yes; the company is certainly doing its very best to facilitate the expeditious carrying of our fish, especially since the amalgamation.

23507. Then, with regard to the railway companies you are not here to make any complaint against them either as regards facilities or as regards rates?—Yes, I have something to state as regards rates; but you asked me the question as regards carrying the fish expeditiously, and I answered you in the affirmative—that I think the company is doing its best to expedite the carrying of the fish.

Complaint as to high rate for eels to the London market from Killaloe.

23508. Just tell us in your own words what it is you wish to mention with regard to the rates?—Well, with regard to my own fish—eels principally—I have to send them to London. I should rather say that London is my principal market. I have to compete here against the Danes particularly—the Dutch a good deal, but of late years the Danes, because prior to a few years ago the system that then prevailed was that the Dutchmen bought all the Danish catch and brought them here in their vessels to the Thames, but by the cleverness of the Danes they instituted a form of box which enabled them to send their fish overland. It was from that time that the Danish trade has struck against the Irish eels in the trade in London. The rate from Denmark to London is £1 per ton.

Rate for eels from Denmark to London, and the extent of the Danish competition with the Irish trade

23509. Direct by sea?—And rail—the rate by sea and by rail. They come to Harwich by steamer from Ejsberg, and then from Harwich to London. That is where they are principally gathered in Denmark; they are brought from different points of the country to this particular port, so as to suit the markets; they get the fish together there, and they are brought from there to Harwich and from Harwich to London by express train, the same as we are now getting from the company in Ireland. The rate right through from Ejsberg to London is £1 per ton. My rate from Castleconnell to London is 4*s.* 9*d.* per cwt. My rate from Killaloe is 4*s.* 9*d.* per cwt., and from Athlone I have not got the exact rate.

Mr. Smyth (G. S. & W. Ry.).—3*s.* 9*d.*

Witness.—3*s.* 9*d.*—Yes.

23510. *Chairman.*—4*s.* 9*d.* per cwt. would be 95*s.* per ton?—Yes. That is the rate to London as against the Danish £1.

23511. That is 95*s.* per ton against £1 per ton?—Yes.

Mr. Smyth (G. S & W. Ry.).—It is 4*s.* 9*d.* per cwt. by passenger train.

Mr. Croker Barrington, Solicitor.—The other is by ship from Denmark.

Witness.—The ship traffic is both ways—both from Ejsberg to Harwich and from North Wall to Holyhead.

23512. *Chairman.*—Your rate, whatever it is—4*s.* 9*d.* per cwt.—from those stations which you mentioned to London is by passenger train to Dublin, I suppose?—By passenger train—yes.

23513. And by passenger train on the English side?—Yes, and in the case of the Danes it is the same.

23514. Are you sure of that?—I spent a little time yesterday in making myself certain on that point. I made inquiries, so that I could answer you affirmatively or otherwise.

23515. Now, what quantity do you send, as compared with the Danes?—Well, I do not think I can answer that. We send large quantities. My fisheries are perhaps the largest, or the second largest in all Ireland, but I cannot give you the exact figures.

23516. Could you give us any idea of your own figures independently of any others?—I do not know that I can give you any, and I do not think that if I could, any fishery proprietor ever cares to say within reason what he is doing. All I can tell you is this—that it takes me all my time because of the heavy charges I have to meet—I do not say the railway charges are the only ones, but there are other charges such as rent and taxes—to cover my liabilities.

23517. What is about the average consignment?—I could not tell you that at all. The catching of eels is rather different from salmon. Salmon is a fish which must be sent away as it is caught, whereas eels are not treated in that way, because we tank the eels and endeavour to get them away according as the market requires them. That is done in all countries.

23518. *Mr. Aspinall.*—From Ejsberg to Harwich do not the consignments of perishables, including fish, amount to 300 tons?—I am not able to answer you, but that information is very easily ascertained if you wish to have it. I am sorry I cannot give it to you. Do you mean to say 300 tons daily?

23519. A full steamer load per week?—I do not think so. I think it is on the mail boat that they are carried. I am informed that it is on the mail boats they are brought. It would be impossible for them to keep back their goods until such time as they could get a special steamer. Eels cannot be handled in that way.

23520. You do not know of your own knowledge exactly what the figure is?—I know it is never the case that 300 tons of Danish eels arrive in London. I have been in London many a time on their arrival, and I never heard of or saw anything of the kind, and I know the Danes would not do it, as it would ruin their trade, because they must be sold on the day of arrival or the day after.

23521. *Mr. Acworth.*—You can surely tell us whether you only send one box, or two boxes, or twenty boxes—you can give us some idea?—I remember one day having to send eleven tons of eels.

23522. That is a very big consignment?—That was an excessive consignment, and that happened because the eels could not be kept alive owing to the very low water that prevailed, and they had to be sent away to all the different markets all over England.

23523. What is the common amount you send away at a time?—Every day from each station we send some eels—one box, two boxes, five boxes, or ten boxes, according to the order. If I can I will have my goods ordered.

23524. A box weighs one hundredweight?—Approximately—about that.

23525. Then the fish sometimes, at any rate, goes away one box at a time?—Sometimes we will send one box off at a time. Sometimes the trade is bad, and some must be sent away, because they must be kept every day in the tanks to keep them in good health. All large fishery proprietors endeavour to do that, but small proprietors get out their eels first, because the fishing is generally at the same time all over the country. It is the result of excessive rains which brings the fishing at certain times of the year, and the smaller men get out of their goods first.

23526. *Chairman.*—Is there a close season for eels?—Yes.

23527. When is that?—There is a close season against catching. There is no close season against selling; but against catching it lasts from January 31st to July 1st in the Shannon. It varies in different parts of the country.

23528. We have had the rates. Now, is there anything you have to suggest that the railway companies might do which they do not do at present?—No. I should like to give you some idea of the salmon rates as representing the Limerick Fishery Board. The rate on salmon from Glynn to London, and from Limerick to London, I am informed, is £5 per ton, and the rate on salmon, I am told, from Kilrush to London (that is, on the other side of the Shannon—I am speaking now of the tidal portion of the Shannon) comes out at about £5 10*s.* to London.

23529. Those are the rates for salmon?—Yes.

23530. Are there any other rates you wish to mention?—The rate from Denmark to London is 27*s.* per ton.

23531. But is there any salmon that comes from Denmark?—Yes; I was informed so yesterday. The rate is 27*s.* per ton. Salmon also comes from Norway.

23532. Yes, from Norway there is a lot of salmon of course?—The rate from Trondhjem (which is the starting point) *via* Newcastle is 3*s.* 6*d.* per cwt., or £3 10*s.* per ton. That is from Trondhjem *via* Newcastle-on-Tyne.

23533. *Mr. Aspinall.*—By sea all the way?—No; by rail from Newcastle-on-Tyne.

23534. *Mr. Acworth.*—Where to?—To London. That is the information which was given me yesterday. If you like I will give you the name of the firm who gave me the information.

23535. *Colonel Hutcheson Poë.*—None comes directly by sea from Trondhjem to London?—Never, except under frozen conditions. Every sender of salmon endeavours to get as quickly as possible to market. Salmon will not stand much of a sea journey.

23536. *Chairman.*—Are there any other rates you desire to call attention to?—There is a complaint which I have been asked to bring before you with regard to the transit of salmon to London from different points in Ireland. An empty box weighs about 60 lbs. The ice required for that would be about 20 to 28 lbs., or a quarter of a hundredweight—that would be the amount some people put into their salmon boxes. Then they pay on the gross weight rate for salmon. Have I conveyed myself clearly on that point?

23537. Oh, yes?—That is a very great hardship; so the salmon senders tell me, especially when salmon falls in price, as it very often does. Oftentimes salmon is sold at 10*d.* per lb. in London if the fish is plentiful, and even at 9*d.*; it is sold at a comparatively low price in London, and they have of course to fight against competition from all parts of the world—from Europe and from other parts of Ireland—and it tells, they inform me, very heavily on them, because of the weight of the box, which they have to pay for as if it were salmon, and also the weight of the ice.

23538. *Mr. Acworth.*—How many pounds of salmon are there in a box?—About 140 lbs.

23539. *Chairman.*—Is there anything else in the shape of rates you desire to allude to?—There is another little point as regards my own business. If my boxes average, say, beyond 1 cwt.——

23540. You mean when the box is full?—Yes; when they have the fish in them—if they exceed 1 cwt., say, by 10 lbs., then I do not get that extra weight charged at the rate of 4*s.* 9*d.* per cwt.; I will have to pay an excessive rate then.

23541. Please make that a little more clear?—If I send a box of eels, say, weighing 1 cwt. 0 qrs. 10 lbs., my rate for that would be 4*s.* 9*d.* per cwt., that is the railway rate. Then for the 10 lbs. extra I sometimes would be charged considerably beyond 4*s.* 9*d.* per cwt. for the additional weight in pounds—as much sometimes as 1*s.* for 10 or 12 lbs. extra on the box.

23542. Have you represented that to the railway companies?—I cannot say that I have done my business thoroughly in that direction. Some time ago, I did, I believe, call the railway company's attention to it, but on investigation this year, when I knew I would be coming to give evidence before you, I found that condition of things to prevail, with the result that I had my own business gone through carefully to see how it worked out. I do not particularly mention any railway company, because the railway companies have been very fair to me in many ways, but, still, I think that is unfair.

23543. But is it not possible that that may be a clerical error?—It has gone on through a whole season, and I have got the sheets here. I have had the whole season examined throughout, and any time that it prevailed it is the case all through. The sheets are here to be seen by any railway man in this room who would like to see them.

23544. Is this the minimum charge upon a hundredweight?—The minimum would be one hundredweight; even if I sent under one hundredweight in a box I would have to pay 4*s.* 9*d.* I have understood that always.

23545. Are there any other rates or particulars you wish to mention in connection with this fishery business?—No; I think not. Those are the two principal fish that we export.

23546. I will repeat the question I put just now. Have you any other suggestion—or any suggestion—to make as to what in your opinion the railway companies ought to do that they do not do at present?—In the abstract that I sent to your secretary I mentioned that the railway companies might attend to the question of icing fish sent by small senders. But I am aware that if the summer is warm, or the autumn, we cannot export from Ireland at all, practically, many of the fish that are often wanted in England for want of ice.

23547. Is not that putting something on the railway company altogether beyond their business as carriers?—You asked me if I had any suggestion to make, and I thought I might submit that to you.

23548. But do you think that is a reasonable suggestion?—When I am aware of the fact, sir, that the Danish railway people do it, and take a good deal of trouble to facilitate the export of fish from Denmark, I think that our Irish railway companies ought to try and do something also, because every extra ton of fish that goes means that they have a certain freight on that ton of fish; therefore I think it would be a reasonable thing to do.

Mr. Croker Barrington, Solicitor.—I am informed that the Great Northern do it at Derry, and I think the Great Southern and Western do it at another place.

23549. *Chairman.*—We will take the suggestion from you, Mr. Mackey, but you tell us—I suppose from information you have got—that it is done in Denmark?—Yes.

23550. At the ports?—Along the route over the interior of the country.

23551. But are you sure that there is salmon sent from Denmark at all?—That is my information, received yesterday from Messrs. Forbes Stewart, who are the biggest fish salesmen in London. I had that from their representative yesterday.

23552. That is one suggestion. Now, what other suggestion have you?—I thought, with great respect to you, sir, that you might take me along the suggestions made in my abstract of evidence.

23553. I am looking now at what you say here in reference to the terminals. Have you a copy of this proof?—Yes, I have it before me.

23554. You suggest that the railway companies should have the means of weighing at both ends?—Yes, I suggest that.

23555. Have they not got weighing machines at both ends?—I was not aware of that. I heard yesterday something to that effect for the first time, and the reason I made the suggestion was this: that a great deal of trouble arises from time to time as between the

Mr. Anthony Mackey, Castleconnell, Representative of the Inland Fisheries Board, (Ireland)

Complaint as to extra charges on any weight over 1 cwt. in boxes of salmon

The icing of small senders' consignments of fish by the railway companies suggested.

Prevalence of this practice in Denmark.

The necessity for weighing consignment of fish at both forwarding and receiving stations urged.

July 4, 1907.

Mr. Anthony Mackey, Castleconnell, Representative of the Inland Fisheries Board, (Ireland.)

senders and the salesmen who receive the goods respecting the weights. That is one trouble that we had to contend with.

23556. Take London. Supposing every railway company had to weigh all the fish in London before it was delivered to the market, do you not think the fish would very often miss the market?—They might if it was done at the market. I said the terminals.

23557. The railway company would have to do it at the terminal?—If there was a system like this brought into existence, it would of course only be brought into use when necessary. I cannot afford, nor can any other centre afford, to have an agent at the point of destination to look after matters of that kind. The Danish Government have an agent to look after their goods, whereas, so far as I know, we have no direct representative from Ireland in the market, and consequently the only party to take the place of the representative, in my opinion, would be the railway company, who take the goods from me in Ireland weighed in, because if they did not weigh them, they would not know the charges, and therefore I think it is the same people who ought to see them weighed out in case there is a difference as between the weight I put in and that received, or said to be received, by the salesman.

Agent employed by Danish Government in England to look after exports.

23558. But the weight received in all cases where ice is packed with the fish must be considerably less than the weight when sent away?—I do not use ice with eels except in warm weather. The Danes use it, and we may when we adopt the same system of icing. But at present I do not use ice, because I keep my fish as much as possible for the cold weather, which enables them to come in good condition to the market.

23559. What have you to say about the railway companies assisting the senders and consignees in cultivating this business?—Do you mean with regard to the propagation?

The desirability of the railway companies supplying information to senders of traffic as to suggested suitable markets and consignees.

23560. No, I mean as regards communications between the senders and the salesmen?—Oh, yes; it is very often hard for people like myself to find out responsible—I do not like to say respectable, but responsible people—people whom we can depend upon to pay for the fish received. Sometimes we meet with people who do not pay, and I would suggest that the railway companies (and I think they would be inclined to do it from what I have heard recently) should name salesmen in different towns in England to whom fish senders in Ireland do not at present send fish. I suggest that the railway agents might name certain parties in certain towns to whom fish could be sent, and who would pay for the fish. The railway companies would serve their own interests by serving the senders in that way also. The more the fish is spread, and the greater the price we get, the more it would induce the spirit of production and the greater would be the advantage to the railway companies.

23561. You mean the representatives of the railways in London, for instance, would be more likely to know whether a salesman is substantial, and to be trusted, than you in Ireland could know who know nothing whatever about them?—Yes; and in addition to that there are fish salesmen in London who would not perhaps trade at all with one special kind of fish. He might be good for one kind of fish, and not for salmon or for eels, and I would want to know what particular man would best know my class of business.

23562. That is a suggestion which you make, and you think that if that were acted upon, it would tend to increase the business from Ireland to the London market?—I do, and not only in London, but in all the markets over England.

23563. But London is the principal market?—London is my principal market, but perhaps it would not be the principal market for other people. Liverpool is a good market, and so is Birmingham, and so is Manchester. I send to about twenty different markets.

23564. *Mr. Aspinall.*—The biggest market is London, I suppose?—Yes; and then there are Wolverhampton, Sheffield, Leeds, and Bristol, and other places.

Free railway travelling for representatives of the fishing industry suggested.

23565. *Chairman.*—I see you make another suggestion in reference to people engaged in the fishing industry being allowed to travel free over the railways?—Yes, I do, because in developing the fish business it is very hard for those in that industry—I feel it so myself—very hard indeed to be paying their railway fare.

23566. But why confine it to the fish business? Why not boldly make the suggestion that everybody engaged in business should travel free?—No, if I did that I might be scouted out of court. I tell you the reason why I suggested that in regard to fish. The fish business, so far as I know, is more scattered and more difficult than any other business as far as railways are concerned. Take the west coast of Ireland; if a man wants to travel, say, from the mouth of the Shannon, and he wants to get to Galway, perhaps, or some other point, he may have to go to the interior of the country before he can get about. The railway companies will benefit as I say—they must benefit materially, because of the higher rate we pay, and if we send extra quantities of fish, they will reap the benefit. Why should we have the entire development thrown upon us? There are hotel expenses, and there are many other expenses besides railways in connection with the development of the business, and why the railway companies should not help us in developing it, I cannot see. They will get the goods. We cannot send them except over the railways. There are one hundred and one things to be done in connection with the development of the business which I know is very different from any other class of business in the country. Therefore I venture to make that suggestion.

23567. Is there not a system of traders' season tickets on the railways in Ireland?—I believe there is, but I have not participated in it, and if I had, it would only refer to myself so far as I am personally concerned.

23568. Persons engaged in any trade paying so much a year to the railway companies are entitled to tickets at greatly reduced rates?—A fishery proprietor would have different managers besides himself engaged in the development of the trade, and as far as I am aware (perhaps I am wrong in this) it would only refer to one individual concerned—this means of travelling at a cheap rate.

23569. May I ask if you have in Ireland a system of traders' tickets such as we have in England?—All I have to say is that the benefit of the traders' ticket has in no way reached me at this time in the developing or carrying on of my fisheries.

23570. Were you aware that there was such a ticket issued?—Well, I have not personally participated in it. I have heard some rumour of the kind, but I am not really aware of it, and I have never participated in it. It has not reached me up to this time, though I am all my life in the business, and my ancestors before me, and I have always had to pay my own way, and the way of every man that I have had to send here and there about in connection with my fisheries up to this date. I am fully aware of that.

23571. Your next suggestion is with reference to pilferage. Of course railway companies, we know ought to take every possible precaution to prevent that?—Yes.

23572. And I suppose they do really, do they not?—They have not been successful in preventing it.

23573. Is that a general complaint?—It has been, so far as I am personally concerned. It has very largely occurred year after year, and I have done my best to bring it to the knowledge of the railway companies through their agents in London, and that is one of the chief reasons why I suggested in reply to the other question that you put to me that the means of weighing out should be provided at the terminals, so that the railway companies could see for themselves what happened.

23574. But I put to you the other fact, because I happened to know that in the case of fish arriving in London the object of the railway company is to deliver it in the market with the least possible delay. You know that, of course?—I do.

23575. And often it makes a vast difference whether the fish reaches the market to-day instead of to-morrow?—Quite so—a material difference

23576. And if fish had to be weighed in London, it would create a very great delay?—I do not think it need be done daily at all. If it once was established, it need only be done when necessary, because when I advise my goods to a salesman, and they have come to his stand, and he says that the box does not weigh that which I had advised him, and there is a third party who can see what the state of things is.

23577. I suppose they are weighed when sent away?—In every case they are weighed by me at my fish stations, and they are weighed again at the railway stations. Last year I asked the railway companies to mark the weight at our end, so that they would know what they had received as they came along. That is, the London and North Western

Railway would know the weight they received when the goods arrived at North Wall.

23578. You mean, marking the weight on the label, or on the box?—On the box, generally—with a blue pencil on the wood.

23579. You said you did not ice eels?—No, I do not ice eels.

23580. I think we have practically exhausted the question of fisheries?—No, there is No. 8, I would ask your attention to, about the propagation of fishes.

23581. Oh, yes, you have got a suggestion to make with reference to that?—Yes, I have—that it is within the power of any fishery proprietor to increase the quantities of any fish in his rivers or lakes, as the case may be, provided it is worth his while doing so, by the importation of fishes from other directions—say, from the North of Ireland to the South, if you like, or from England. I myself once imported live eels from London, which came from the Continent.

23582. You brought the live fish from the Continent, and put them into your rivers?—Yes, they came from the Continent, on board a ship, and I got them from London to Ireland, and put them into the River Shannon, and I considered that if I could do that with advantage, at least the railway company ought only to claim the price of bringing the fish back again when they had grown, and that they ought to do something to take them over free while they are in a condition in which they are not fit for market.

23583. What you suggest is that for propagation purposes that particular traffic should be carried free by the railway companies?—Yes.

23584. Because, when the fish has matured, and is sent away, they would get the full benefit of that traffic?—Yes, and I will prove it in this way, if you will permit me. Say it takes twenty small eels to make a pound in their immature condition. If those twenty eels live for, say, two years—it is very hard to prove the growth of them—but if they grow, say, to twenty lbs. instead of one lb., the railway companies would get the advantage of carrying them back again, and they at least ought to participate with us to that extent in endeavouring to develop the business.

23585. Is the rate the same for these small fish?—Just the same, I think.

23586. No difference is made?—No difference.

23587. But that is not a regular traffic?—No. I would repeat the experiment, but it is too expensive to do so, or I would have done it again and again.

23588. Was your experiment successful?—Well, I got the eels grown, and some salesmen here in London did the same, I think. So that it would be worth while for the railway company, I think, to entertain that idea.

23589. What have you to say in reference to the sheep and swine traffic?—I do something in the farming as well as in the fishing business, and that is why I have some knowledge of that in addition to fisheries. I think there is a very great expense thrown upon a man in the exportation of sheep. A wagon of cattle is worth considerably more than a wagon of sheep. A man has to pay practically for a wagon-load in the case of sheep as much as he would in the case of cattle, whereas the weight might not be more than a fourth in the case of the sheep; I do not see why the railway companies could not put in a partition. The one tier of sheep will not be more than two feet six inches in height on the average from the bottom of the wagon, so that there may be four or five feet overhead, which is not used for the time being, and I do not see why a partition could not be put over the lower tier, leaving, of course, sufficient area for their requirements and carrying another tier overhead.

23590. A double-decker, in fact?—Yes.

23591. Two-decked wagons?—Quite so. I do not see why that could not be done, and if it was done, let there be a proportionate charge put on for the extra quantity of sheep carried, because we do not want, of course, the railway companies to carry these extra sheep for nothing.

23592. *Lord Pirrie.*—It is done in England, is it not?—I have not seen it in England, but speaking with regard to Ireland, I have never seen it there, and I think it might be done in connection with the sheep, and that by doing that, the railway companies would help to make trade progressive.

23593. *Chairman.*—Even with the double-decker wagon, the load for sheep would not then be, as far as weight is concerned, the same as a load of cattle?—It would not. I never saw a wagon yet that was not stipulated to carry six tons, so far as those big wagons that carry sheep and cattle are concerned. Well, of course, thirty sheep is about the average number that can go into one of these wagons, and thirty sheep, at an average of eighty lbs. a sheep, would give you a weight very different from the carrying capacity of a six-ton wagon. The lambs and swine would be treated in the same way, of course.

23594. Have you considered the question of State purchase of railways?—In reading over some of the matter that has been referred to by your Commission for the time being, I have done so, but not beyond that.

The amalgamation of the smaller Irish lines with the greater railways recommended.

23595. But I think you have formed some conclusion in your own mind as to what the Government ought to do in reference to certain railways in Ireland?—Yes; I have stated in my abstract of evidence that I thought it would be a benefit to the country if the smaller railways were amalgamated. I have come to that conclusion from the fact of observing that amalgamation, so far as I can perceive, in the South has been beneficial to us, because of the amalgamation with the Great Southern and Western. We were on the Waterford and Limerick system before the time of the amalgamation, and although other representatives may not perhaps agree with me, so far as I am personally concerned I have come to the conclusion that amalgamation has been a benefit. We have better trains to Dublin; we have our system improved very much through it; therefore if it has been beneficial to us, I consider it would be equally beneficial elsewhere. I take the case of the West Clare Railway for instance; perhaps the narrow gauge there would prevent the transhipment of perishables, because of the smallness of their wagons, but if it was a broad gauge I am quite sure it would be of as much benefit to the people in that district if they could send their goods right through, and book right through, and have the same authority right through from the starting point, as it has been to me in the case of the amalgamation with the Great Southern and Western.

23596. We had evidence with reference to that West Clare Railway?—Yes, I saw it some time ago.

The granting of State subsidies towards the reduction of rates to encourage local industries suggested.

23597. Do you think the Government should subsidise any of the railways?—I think so, where they could afford it.

23598. I do not quite understand—where who could afford it? You suggest that the Government should subsidise certain companies?—I do, and the reason that I think they ought to subsidise is that I know there are some systems which can't afford to be very generous towards us. They are not able to pay very large dividends as it is.

23599. Some pay none at all?—Some pay none at all, and therefore I think it would be very unfair for me to come here and make a suggestion to you that the railway companies ought to be generous when they can't afford it.

23600. I think what you say, very fairly, is that you can't expect the railway companies to sacrifice their revenue for the benefit of the trade of the country, and that it ought to be done by some Government subsidy?—That is the essence of my intention. Of course I must say this much to the railway companies: If you can increase your traffic by lowering the rates in certain directions you might do so; but I could not ask the railway companies to lower the rates when they can't afford to do so, when there is not a prospect of that kind so far as increase goes.

The lowering of rates would induce development of stagnant industries.

23601. But you are strongly of opinion that if the rates were lowered a great many industries which are now in a stagnant state might be developed?—I believe so; that is certainly my belief.

23602. Particularly with regard to the fisheries—I suppose you have no doubt as to that, and no hesitation?—No.

23603. You have no doubt that lower rates would develop a great deal more of that particular traffic?—I believe so.

23604. But you do not blame the railway companies for what they are doing?—No; I have received a great deal of kindness from the railway companies, and whenever I have had an application to make to the Great Southern and Western, and

July 4, 1907.

Mr. Anthony Mackey, Castleconnell, Representative of the Inland Fisheries Board, (Ireland.)

London and North Western Companies, they have always met me very reasonably. I believe they are inclined to do the best they can, but I know the way they are hampered—because, perhaps, of the over-capitalisation of the companies, amongst other things, especially the Irish lines.

23605. You are of opinion that the amalgamation of the Waterford and Limerick with the Great Southern and Western Railway has been of direct advantage to the district?—That is my personal experience.

Advantages alleged to have resulted from the amalgamation of the G. S. & W. and W. & L. Ry. Cos.

23606. We have had rather more evidence to the contrary, but that is your opinion?—If you will pardon me for a moment, I would say this much with regard to the Limerick County Council. When the question of amalgamation came before that Council I supported it, and I am not sorry to this day for having done so.

23607. With regard to the through rates between England and Ireland, I think you are of opinion that they should be the same both ways?—I am, because I have read, during the course of your inquiry, of the extraordinary differences which prevail in connection with many manufactured articles—that a man manufacturing certain articles in London may be competing with a man in Ireland manufacturing the same articles, and the man manufacturing in London (I do not, of course, speak of London alone, but only use that for the sake of illustration) can send his goods to Ireland at a lesser rate than the man manufacturing in Ireland, even though the distance in the latter case is sometimes not half the distance in the former case.

Equality of rates for inwards and outwards cross-channel traffic advocated.

23608. Then, again, local rates in Ireland are, in your judgment, out of proportion to the through rates?—Altogether so, in many cases which I have seen mentioned in the course of the proceedings of this Commission.

Local Irish railway rates alleged to be excessive.

23609. Do you think that if the Irish railways were taken over by the State and managed by some local authority, or authorities, in Ireland, these anomalies might be corrected?—I believe they would be.

23610. And are you of opinion that that would be the best remedy?—I am of opinion that a remedy of some kind is needed, and that that might be the remedy if it could be brought about. But I want to come to the question of nationalisation, and I say that the authority that would manage the railways—if such a solution did come about—should be an Irish one. I want to make that clear.

State ownership of and control by an Irish authority with safeguards for vested interests advocated.

23611. That was my question—that they should be managed by a central authority in Ireland?—Yes, and let the conditions then be arranged so as to satisfy the people who invested the money.

23612. You are of opinion that many industries might be further developed if this took place?—Of that I have not the least doubt in the world—not the least.

Examined by Lord Pirrie.

Double-decked wagons not considered a necessity for poultry traffic.

23613. You have been speaking of the great advantage—and I quite agree with you—of having double-decked wagons for sheep and so on. Would it not be equally advantageous to the great poultry farms, which I suppose you have in the South of Ireland? The poultry are sent alive, are they not—they are not killed and sent to market?—Well, in connection with fowl, they are all sent in packages.

23614. But they cannot put one on the top of the other, can they?—Oh, yes, up to the top of the wagon.

23615. How do the poor things get air?—It comes in at the sides of the wagon; the sides are perforated; and then again, the top is all open.

23616. Then, for poultry, these double-decked wagons are not essential?—Not so essential, because you can get plenty of poultry into a wagon.

Complaint as to the charging of a minimum weight of 1 cwt. for each fish package.

23617. Did I correctly understand you to say that if you sent a package weighing ½ cwt. you were charged for a full cwt., or is it merely that you do not get the low rate?—I have sent packages under one cwt.

23618. But assuming a packet weighing ½ cwt.?—I do not think I have sent a package of ½ cwt. That sheet which I have handed in will show some under one cwt.

23619. Then if the package is 8 lbs. or 9 lbs. under 1 cwt., they charge you the higher rate?—Yes.

23619A. He pays for 1 cwt. whether he sends the full cwt. or whether he sends only 70 lbs. or 80 lbs.

23620. *Mr. Acworth.*—I have been trying to make something out of this document. I find here four consignments of the same weight all going from Killaloe to London, and charged, one of them, £1 10*s.* 9*d.*, another £1 10*s.* 2*d.*, and so on?—Not one package.

23621. No; four consignments of the same weight and to and from the same places; in one case, the charge is £1 10*s.* 9*d.*, in another, £1 10*s.* 2*d.*, in another, £1 9*s.* 9*d.*, and in another, £1 10*s.* 10*d.* It seems to me that somebody wants to go to school and learn arithmetic?—Those figures are taken from the sale notes that come across.

Mr. Smyth (G. S. & W. Ry.).—Those are taken from the salesman's bills; we are not in any way responsible for those figures.

23622. *Mr. Acworth.*—They are not the weights which the railway companies recognise?—If you will allow me to explain it, it is at this side (in England) that the charges are paid; there are a couple of senders in Ireland who prepay, but my system is not to prepay; and any time when I have ever asked a salesman to send me the pay note to compare with what he has charged me in the pay sheet, it has always corresponded.

23623. *Chairman.*—The salesman pays the carriage?—Yes.

23624. Then he sends you an account of the railway carriage which is, so much; market dues, so much; commission, so much; and that is the account which you have handed in?—Quite so.

23625. And his commission is upon the amount of the sale?—He makes all the charges, but each one is separate and distinct from the other.

23626. Therefore, if the price of the fish varies, those amounts would vary too?—Oh, no.

23627. This is not the railway charge, is it?—Yes, it is the railway charge.

23628. *Mr. Acworth.*—The commission merchant takes off so much for railway carriage; but clearly the weight which the commission merchant acknowledges to have received will have varied something from what the railway company acknowledges to have received at the other end, that is, in Ireland, because the water will have drained out and that sort of thing; more or less water will of course have drained out?—We generally drain off the water; that is the system.

23629. But it must lose a little in weight in transit, clearly?—Yes.

23630. Probably those packages were all the same weight when they left Killaloe?—Yes.

23631. *Lord Pirrie.*—Is the payment on the parcel as it arrives at its destination, or when it leaves. Supposing you put three-quarters cwt. of fish in, and one quarter cwt. of ice in, the box then contains one cwt. when it starts?—I have explained to the chairman that I do not put ice in.

23632. I was not speaking of your particular case, but of what is the rule in the fishing industry. If ice is packed with the fish, and the package is weighed with the ice in it when it leaves, is the charge made on that, or is it weighed when it gets to London, when the ice has all disappeared?—It is weighed with the ice at our own end.

23633. At the sending end?—Yes.

23634. Therefore the railway company are gaining all the time by the reduction in weight, are they not?—That would be so; they would have less weight to give out.

23635. *Chairman.*—Do you mind my giving these sheets to the railway company to look at?—Not a bit, you are quite welcome to do so.

Chairman (to Mr. Croker Barrington).—As Mr. Acworth has pointed out, there are four consignments here of the same weight all differently charged, and it rather points to some error somewhere (*handing document to Mr. Croker Barrington*).

23636. *Mr. Acworth.*—That is the weight the salesman acknowledges to have received, but it is not the weight the railway company acknowledges at Killaloe?—It is the salesman who weighs.

23637. *Lord Pirrie.*—In one of your answers to the chairman you said that you weighed it before it left your station?—Yes; and the railway company weigh it also when they receive it, and the salesman weighs it at the other end.

23638. I thought that was what you wanted the railway company to do?—I want the railway company, when I think it necessary when there is a difference between my weight and the salesman's weight—a difference between what he says he has received, and what I state I have sent him—then I

want that a third party should be there; and I consider that no other party ought to be more interested than the railway company which carries the goods.

23639. You have spoken about ice, or refrigerating, for the wagons, but have you any steamers running from Ireland to any of the English ports with refrigerating space, so that the fish are put on board under proper conditions as to refrigeration?—I am not aware of any.

23640. Would that not be very important?—I know that in the mackerel trade, which is a very heavy business, and in the herring trade, the English companies who purchase from a certain number of boats that go to fish, or perhaps they purchase generally, hire steamers of their own to Milford.

23641. They do that because the regular steamers from Irish ports to English ports do not put refrigerating machinery in their steamers?—It is all done by ice.

23642. Would it not facilitate the Irish fish traffic, and the butter traffic, and all that sort of thing, if the steamers trading to those ports were refrigerated, or if ice were used, or however you like to put it?—Anything in that direction would be very beneficial to us. We have no steamers of that kind; and our small senders must send overland. The best fishing is done on the west or north-west coast.

23643. That fish goes to Dublin I suppose?—A fair share goes to Dublin, but a great deal goes to England.

23644. You go to England?—From Greenore to Dublin, or from North Wall to Holyhead; and then there is the Great Western route also.

23645. Have the fishing people ever made an application to the various steamship companies pointing out the great importance of having refrigerating space on board?—This is the first time I have ever had an opportunity of expressing myself upon this matter generally; I have never had an opportunity before; and therefore this is the first time, I may say, I have ever given it as evidence.

23646. For the benefit of the fishing industry, you would advocate that being done by the companies?—The railway companies have not steamers in Ireland, only the English companies.

23647. But they work in conjunction?—Let them do the work in conjunction, and I think it would be good for all.

Examined by Sir Herbert Jekyll.

23648. I understand that you would like to see powers conferred on the Board of Agriculture, or on some other public body in Ireland with regard to complaints and disputes between the traders and the railway companies?—I think that would be very beneficial; and my reason is, that no individual like myself could take it upon himself at all to face the Board of Trade.

23649. You know, of course, that the Board of Agriculture is now empowered to take up complaints of traders before the Railway and Canal Commissioners?—I did not know that they would do so and bear the expense of it.

23650. It is a heavy expense, as you know?—That is the reason why we fight shy of it, because it is such a heavy expense.

23651. Are you aware that there is a cheap procedure of complaint to the Board of Trade?—No; I am not aware of it.

23652. It is not, I understand, taken much advantage of in Ireland?—We do not know of it. I, at least, for one, did not know of it.

23653. Would you favour the transfer of such powers as are conferred by the Railway and Canal Traffic Act, 1888, upon the Board of Trade in that respect to the Board of Agriculture in respect of Irish complaints?—If the Board of Agriculture could become the central authority, and if it could be done free of charge to people like myself, and would help to facilitate business and bring about the settlement of such disputes as may be a cause of complaint, then I think it would be a good thing if the Board of Agriculture had it in hand.

23654. The same powers as the Board of Trade now possess?—I thought you said as an intermediary between the sender and the party who made the complaint to the Board of Trade.

23655. No. What I want to know is, whether you would be in favour of the Board of Agriculture in Ireland possessing the same powers with regard to complaints and disputes as between traders and railway companies that the Board of Trade possesses in England?—Well, of course I am entirely in favour of having authority centralised in Ireland.

Examined by Colonel Hutcheson Poë.

23656. I think you said that the weight of salmon in a box was about 7 cwt.?—No, about 140 lbs.

23657. About 1½ cwt.?—Yes.

The hardship of having to pay on the gross weight of fish packages at the contents rate.

23658. And that, in addition to the actual weight of fish sent in the box, you were charged on practically what amounted to nearly another hundredweight in the shape of the box itself and the ice?—Yes.

23659. So that, speaking approximately, you are charged 4*s.* 9*d.* for dead weight and 4*s.* 9*d.* for the actual weight of the fish?—Yes, about 2 cwts. almost.

23660. Which, of course, is practically anything you like from 70 to 100 per cent. on the value of the fish?—Quite so.

23661. Then, I think you said that you sustained considerable loss occasionally in the value of the fish or the weight of the fish as received in London, we will say?—Yes; oftentimes 20 lbs. are abstracted from a box of fish on the way.

The question of pilferage of fish in transit and the means of checking the evil.

23662. The salesmen on the other side receive 20 lbs. short?—Yes; and in some cases it has been proved. When boxes have been broken open, it often happened that the boxes were so well opened that the salesman could not say positively whether they had been tampered with or not. We found out subsequently that there were appliances in the hands of the servants of the railway company by means of which they were able to open the boxes in such a way as not to be discovered. The boxes are made in such a way, with light nails and so on, that they can easily be opened by means of proper implements. But in the case of a broken box which had been roughly opened it was found that as much as 20 lbs. had been abstracted from a box of fish on the journey.

23663. And does such loss occur in the case of other fish besides salmon; does it occur in the case of eels and other fish?—Well, salmon are different from eels; we never count our eels, whereas a man always counts his salmon. It would take only seven salmon of 20 lbs. weight each to make 140 lbs., whereas of course in the case of eels the average weight may not be one pound. So that they are never counted at all, but only weighed.

23664. But in regard to the actual weight of eels received, is there any complaint on the other side?—Yes, oftentimes.

23665. You consider that if the railway company at the receiving end, were to weigh the boxes as received, then, in the event of a complaint being preferred by the salesman, they would be in a position to check the weight, and to corroborate your statement?—That is my position. A salesman and myself in many cases have fallen out over the question of weights, which was against the interest of both parties, because I would not wish to lose a good salesman, and he, doubtless, would not wish to lose me as a sender. Then, I say that the railway company ought to be the third party, there being no other authority representing the country in the market to check the matter.

The extent of the fishing industry in Limerick and Castleconnell districts.

23666. Are you in a position to give the Commission any idea as to the value of the fish sent by yourself and other small traders in your own district to the London market—the annual value?—I will give you one answer to the question. In sixteen years I paid a rent of something like £35,000 for eel-fisheries.

23667. That is about £2,000 a year?—Over that.

23668. For the rent of eel-fisheries?—I paid considerably over £2,000 a year for the eel-fisheries which I rented during the sixteen years.

23669. That is your own particular industry?—That is my own particular industry, yes.

23670. Are there any number of industries at all approaching the magnitude of yours in that district?—Not in that district. But on the Bann there is another. Of course the salmon industries are very much on the Shannon.

23671. Could you give the Commission any idea on this point: you say that the rent

July 4, 1907.

Mr. Anthony Mackey, Castleconnell, Representative of the Inland Fisheries Board (Ireland).

you pay in respect of your industry is, roughly, £2,000 a year. Could you give us any idea as to the total figure for the whole industry?—The Laxweir Fishery at Limerick is an old fishery which has been in existence since the time of the Danes—"Lax," I believe, is Danish for salmon. That fishery is still carried on, and that fishery last year, or the year before, was formed into a limited company of £9,000. I was present in the Four Courts at Dublin when five salmon weirs on the Lower Shannon were sold to a Mr. M'Auliffe for £7,500 about two years ago. And there are larger industries than that on the Lower Shannon.

Increased Statutory powers for the Irish Fishery Board as to the preservation of Salmon throughout the Shannon district suggested.

23672. At any rate, the figures you have given show that the fishing industry in your district is a very important one?—I know that it is important, and I know that it ought to be of far greater importance; only, unfortunately, we cannot do that which is essential in order to enable us to make it far more important; that is, to have far greater quantities of fish in the Shannon. We had a meeting the other day in Dublin of the Amalgamated Boards of Ireland; and about three-quarters of them attended from the North of Ireland to the South; and we are endeavouring to get a short Bill passed through Parliament. The reason why I mention that now is that I think the railway companies should help us to get Bills. The essence of this Bill would be to prevent the country people from killing the salmon within a few weeks of spawning, when they are unmarketable and uneatable, and when no man, who knows what fish ought to be, would think of eating such salmon. Yet, throughout the entire Shannon district, which would mean about 2,000 miles of river and tributaries, those fish can be killed on 31st October, the last day of the season; and yet many of those fish which come into the Shannon in the month of January cannot be touched when they are worth 4*s*. a lb. Now, we have been endeavouring to get a Bill passed through the House of Commons for years which would enable our Inspectors of Fisheries to inquire into the matter and to get the Fishing Laws altered when and where necessary. We asked Mr. Bryce when Chief Secretary, as also Mr. Birrell, to receive a deputation, and we subsequently conveyed to each in turn an explanation of our requirements. We also had the matter before former Chief Secretaries, and we held that amalgamated meeting the other day, with Lord Massey in the chair; but nothing has yet been done.

23673. But surely the power of the Fishery Board in Ireland is sufficient to deal with those points?—They cannot touch them at all; there is no authority in Ireland which can cut off the month of October when all this damage is done. The laying powers of the salmon are equivalent to 1,000 eggs to the lb. weight of fish; almost all the small-sized fish leave the main river and go to the tributaries in the month of September or October; and then they are making good their beds and arranging their grounds. And they go sometimes up the very sides of the mountains; and, when the water subsides, no protection can be afforded. Our annual income is about £2,400 per annum, made up of licence duty, 10 per cent. rate, and some few small contributions. Otherwise we would require fully double that sum to give anything like adequate protection.

23674. Unless I am mistaken, the Irish Fishery Board has power to deal with all these matters of which you are speaking, and to make recommendations?—They have not.

23765. Have they no power over inland fisheries?—I do not say none; because we can collect £2,000 and we can carry on prosecutions, and we can employ bailiffs so far as we can pay them. But we cannot do all that is necessary, neither can the Department of Agriculture, which is the head authority in Ireland on fishery questions.

The assistance afforded by the Department of Agriculture in developing the Irish fishing industries discussed.

23676. Under the Act establishing the Department of Agriculture certain powers were transferred to it from the Board of Works in regard to fisheries?—I am aware that the Board of Works were able to transfer some of their powers to the Board of Agriculture; they were two distinct bodies.

23677. Certain funds which were administered under the Board of Works in respect to the sea-coast fisheries were subsequently transferred to the Department of Agriculture?—We got one grant of £900 in order to relieve us from an immense liability to the Bank; they gave us £900 in order to wipe off that debt. That is all that we have seen from the alterations which you have referred to.

23678. They have power to administer certain funds which are not perhaps very large, but they have power under the Act. Further than that, do you receive any assistance or instruction in the way of the points which you mentioned just now as to the best methods of packing your fish or sending it to market, and the nature of the boxes in which you send them, or as to the propagation of the fish? Do you get any instruction or assistance in those matters?—The Department, I think, are very anxious to improve every industry that they come in contact with.

23679. We have had evidence that they have given a great deal of valuable information and assistance to the agricultural producers in the way of specifying the boxes in which butter, eggs, and so on should be sent?—And they have done a good deal with reference to agriculture, too.

23680. Have they done anything in regard to your industry?—No, we have never called upon them to do so; we have only called upon them to analyse waters which we thought were doing harm in the river and matters of that kind.

23681. *Lord Pirrie.*—Did they help you in that?—Yes, they did; I have nothing to say against the Board of Agriculture. The chief difficulty is that on the River Shannon the most valuable fish in Ireland, or perhaps in England or any other country—the salmon—can be killed indiscriminately in the month of October when they are in the small rivers, and we are not able to prevent it, because we cannot afford to pay bailiffs; and we only begin our duties of protection really on the day on which the season closes, the 31st October. But those rivers are left open for the destruction of those fish: and appeal after appeal on our part has been disregarded.

23682. *Colonel Hutcheson Poë.*—It is a very extraordinary state of things?—The Board have no power.

23683. But they could bring it before the notice of the Legislature if they thought it advisable. At any rate, the trade is such a valuable one that you consider the railway companies ought to give you every assistance in the way of weighing goods at the other end, so that there might be a check?—Yes. But that is not the most serious part of the matter. I have been friendly towards the railway company, and they have been friendly towards me.

23684. Then you said that something might be done by the railway companies in the way of bringing you and other traders into closer touch with the salesmen?—Yes, I think it would be a benefit to both of us.

23685. You are aware, of course, that the Great Western Railway Company, to speak of only one of the English Railway Companies, issue pamphlets in which they give information with regard to butter, fruit, vegetables, and so on, and that they give lists of traders and salesmen with whom producers can be put into touch; and you think that something of that kind might be done to the advantage both of the traders and the railway companies?—Yes, and of the consumers. The more we get to the consumers the better.

23686. With regard to amalgamation, do I correctly understand you to say that your experience of the pre-existing state of things, that is to say, the state of things which existed prior to the amalgamation of the Waterford and Limerick with the Great Southern, is that there was a certain antagonism of interests, that the identity of interests was not the same when the railways were in the hands of two or three companies?—Yes. I found that the Waterford and Limerick could never help us in the sending of our fish from Castleconnell and other stations which were on the Waterford system, in the manner in which the Great Southern and Western do and are inclined to do.

23687. The conclusion you draw, confining yourself to your own district, is that if the West and South Clare system were amalgamated with the large railway company nearest to it, that would be an advantage?—Yes; and it is not alone fish, but seaweed and many other things could be brought to the interior from the coast if that business were developed as it might be and if the companies were amalgamated and through rates given, which could be taken advantage of.

23688. Then I think you said that it would be good policy for the Government to subsidise to some extent the railways?—The reason why I said that was because the Danes carry eels at £1 a ton. Honestly, I could not ask the railway companies to carry my eels at £1 a ton; I do not think they could afford to do so; and I have to sell my eels against the Danes, and they have the advantage over me of something like £3 or £4 in the carriage alone, which is of course almost sufficient to knock me out

23689. If such a subsidy were given by the State it would naturally entail some expense upon the general taxpayer, would it not?—If I am driven out of the trade, the general taxpayer has to pay a considerably higher price for his eels. If we are driven out, then the consumer, who is also the taxpayer, would have to pay a higher price for his goods.

23690. And do you think it would be good policy for the State to make concessions also in the interests of the manufacturing industries of the country, even though some expense were incurred and it fell upon the general taxpayer?—Quite so. When we, in the development of our industry, have to meet this extraordinary competition, I think that somebody should step in; and I suppose the State is the only body that could help in a matter of that kind.

23691. Then you say you would not be satisfied with the nationalization of the railways, unless it were accompanied by control in the hands of an Irish authority?—Yes, that is my opinion—that we have not in Ireland been trusted to the extent to which we are capable of carrying on our business generally. I do not want to enter into the political aspects of the matter at all, but I think we have men in Ireland and, unfortunately, men who have gone out of Ireland, who have been able to help in the development and control of other countries, England included, and who have done it to the satisfaction of all those countries; and I think that we in Ireland, with the same material, would be able to do our own business equally well.

23692. Failing the State allowing such a controlling authority to be established, would you be in favour, rather than see the existing state of things continued, of allowing the State to administer the railways?—I think I would prefer the existing order to continue until the other can come about.

Examined by Mr. ASPINALL.

23693. Sir Herbert Jekyll asked you with regard to the Agricultural Department being applied to rather than the Board of Trade if some arrangement could be made to give them the necessary powers. I wanted to put it in a little different way. Would the people whom you have come in contact with in connection with fisheries be quite satisfied if the Agricultural Department were the party to be appealed to in the event of disputes with the railway companies?—I think so.

23694. With regard to the transit of Irish perishable goods on the English side, do you make use, for fisheries purposes, of the Inspectors from the Agricultural Department who are sent over to England to inquire into all kinds of matters relating to transit?—No, I have not done that.

23695. Were you aware that there is resident, or has been resident, in Manchester until quite recently, even if he is not resident there now, a gentleman who represents the Agricultural Department, and looks after all the details of transit—sees how Irish butter, for instance, is dealt with in the Manchester market, how it is handled on the railways, and how it is handled as compared with foreign butter and foreign perishables—were you aware of that?—Yes, I am aware that that has been the case recently; I think it has been so only within a year.

23696. My object in asking that is really to ask whether it would not be an advantage to you to get this gentleman to co-operate with regard to the fish traffic as well as with regard to the other traffic?—Yes, that might be done profitably, but I was only aware that that institution which you referred to took place last year, in the selection of some gentleman for that purpose, and then I considered it was chiefly relative to butter. I believe the butter business—and properly so—is receiving a good deal of attention, but I did not know, and I am still not aware, that that gentleman's authority at all referred to the question of fish.

23697. But would it not be an advantage to get that gentleman to co-operate with your section of the work, so as to see that you get all the advantages that are to be got out of personal inspection of what is going on?—I have no objection at all, from whatever quarter the relief will come, but I mentioned the railways as I thought that in my case they were really more concerned, because it would prevent my making complaints and claims on them for losses on fish, and would stop a good deal of the communications which embarrass me a great deal, or any other fishery proprietor who has his work to attend to. I would prefer the railways doing it, but if some other authority did it equally well, that of course would satisfy me.

23698. With regard to Limerick traffic, is there a large importation direct into Limerick of American bacon?—There is importation direct to Limerick, as far as I know, from Liverpool.

23699. I do not mean from Liverpool; is there not importation direct from America into Limerick?—I have never heard of it.

23700. Is there any direct importation of margarine into Limerick?—I am not in that line myself, but a boat does come from Holland, or Antwerp, or some of those places.

The effect of direct foreign imports to Irish ports on home industries.

23701. There is a large exportation of margarine from Limerick, is there not?—Yes, there is a gentleman there with the repute of making margarine.

23702. So that in speaking of competition with the home industries, it must not be forgotten that those things come in some cases direct into Limerick by sea from the port of origin?—I wish to convey to you that I have no connection with the margarine business, and I am not here to offer an opinion on that subject. If I had evidence to give, and it would serve my country, I would be happy to give it, but I have no evidence worth mentioning to give upon that subject.

Examined by Mr. ACWORTH.

23703. You spoke of a rate from Trondhjem through Newcastle for salmon of £3 10s. per ton?—Yes.

23704. Are you sure as to that?—I have given you the name of the biggest firm in London from whom I received that information; I went down last evening to get that information, and I took it down on the spot. I can only say that that is the information that I have received.

The question of the alleged excess of the Irish rates to London over the Norwegian and Danish rates for fish traffic.

23705. The local rate for salmon, unless I am mistaken, from Newcastle to London would be 70s., so that it would look as if the steamer got nothing?—I am only given you what has been given to me.

23706. You have no consignment note?—No.

23707. You do not know whether it is a through rate, or one charge of the steamer and another of the railway company?—It must be a through rate.

23708. It must be a through rate of the steamer then, because the railway company would not quote a through rate?—Yes, they would, just as I have from Castleconnell.

23709. But you can't find an English railway company who will quote a through rate to or from most foreign places?—I will give you a point which may throw some light upon your question. A tradesman told me with regard to the Danish eels, that it would cost a man more to send his goods from Harwich to London than it would cost him to send the goods from Ejsberg through Harwich. That may be analogous to your question.

23710. Now, I want to ask you this. You mentioned that the Ejsberg rate was so much a ton?—Yes.

23711. Your rate is so much a hundredweight?—Yes; it is the same thing.

23712. The rate is quoted to you per cwt.?—It is an advantage to the Danish man to send per cwt., because in my case it used to be that I would get more concession if I sent a big quantity than if I sent a smaller quantity, whereas I found on making inquiries that the Danish man has the same advantage whether he sends one box or fifty boxes.

23713. You think the Danish man can send for 1s. per cwt.?—He can send one box and get the same advantage as if he sent 1,000 boxes.

23714. Are you quite sure that he can get a rate from Ejsberg to London of 1s. per cwt.?—I know

July 4, 1907.

Mr. Anthony Mackey, Castleconnell, Representative of the Inland Fisheries Board (Ireland).

there is never a hundredweight sent at all; a box contains five draughts of eels, which is about 1½ cwt.

23715. Are you sure that he can send that box for 1*s.* 6*d.*?—I am quite sure that he can send one box at the same rate as fifty tons.

23716. Are you sure of that?—That is the information that I have received.

23717. Can you tell me this? The eels do not grow in Ejsberg, of course, any more than they grow in London; they are brought into Ejsberg from other places?—I have never been in Denmark.

23718. Ejsberg is a shipping town, of course, and the eels are sent there from other places where they are caught. You do not know, I suppose, what they have to pay before they get to Ejsberg?—I am told they are brought across the country from where they are caught, and that the Government do what is possible to bring them in good condition, and that the railways—which I believe are Governmental—afford every opportunity and help to bring the fish to London in good condition.

23719. You do not know the charge for bringing them to Ejsberg?—No, I have no idea of the rates in the interior of Denmark; I can only give you the information which I have received here in London.

23720. You see what I mean—that it is not fair to speak as though the eels only paid £1 a ton, because they have got to pay to get to Ejsberg; they have to pay something obviously, though what it is I do not know, and apparently you do not?—I have told you so far as I know.

The suggested suitability of double-decked wagons for pig traffic.

23721. Now, will you tell me this? In speaking of these double-decked wagons, you mentioned swine?—And sheep and lambs.

23722. I have seen them very often used for sheep in Scotland, but I have never seen them used for pigs. Would you get a pig to walk up a steep ladder?—It would be very easy for the railway companies to arrange a means. I know that they can so arrange a sort of platform from the wagon, and extend it to the land, as to make it quite easy for the animals to be driven up it.

23723. It would add to the expense, would it not?—I suppose it would add some little expense.

23724. Do you think it could be used for pigs as well as for sheep?—I believe it could be used for pigs.

The suggestions that the railway companies should ice fish and supply traders with information.

23725. Now, I want to ask you another sort of question. You want the railway company to do a good many things for you that they do not do at present. You want them to do the icing, and to do some more weighing?—I do not ask it for myself.

23726. I quite understand—it is for the fish industry?—For small senders particularly.

23727. And you want them to find buyers for you?—No, I do not.

23728. Well, to put you in communication with buyers?—Yes, to put me in communication, or to put my countrymen in communication, with the people who would be best for the particular trade of the different senders.

23729. You do not, I suppose, expect that they should warrant them?—No, I do not. I do not ask them to do that at all—only that they would use reasonable diligence, because of course a station-master or a railway agent in any great centre knows pretty well the men who are well in business, and are carrying on such a trade as to justify a sender in dealing with them.

23730. And you want them to carry the people concerned in the industry specially cheap?—I do. I suggest that to them. I suggest that that would be a benefit to the railway companies themselves, as well as a benefit to many poor men, because we are not very rich in Ireland, and many a man has to stop at home who would otherwise be able to get about and help to develop trade simply because he cannot afford to pay to travel about.

The proposal as to free travelling for representatives of the fishing industry and free conveyance of young fish for propagation.

23731. And you want them also to bring in the young fish at a particularly cheap rate, or at no rate at all?—I do, where it can be done.

23732. Now, fishing is only one of the industries of Ireland. Supposing I am in the horse-raising line; do you think it would be reasonable that a railway company should be asked to bring in a stallion free to enable me to improve the breed of my horses?—I know that in the case of shows, if a man has poultry, for instance, to show in any part of Ireland, the railways will take them free one way; they will bring them back from the show free. I am told that that privilege is given already in many businesses.

23733. I only want to see whether you are of opinion that what you think should be done for the fisheries should be done all round?—A ton of immature fishes might weigh, say 20 tons when matured. They do not all live, of course; but supposing they all lived, the railway company then would get 20 tons of produce which would pay high rates, and which would very well repay them for bringing the one ton free.

23734. Might not the same be said of the other industries?—Let every man look after himself; I am looking after this business which I know most about.

23735. Would you think it fair for a man who was in the poultry line to ask to have pedigree cocks brought in free?—I think that that poultryman might make a suggestion of the same nature as I am making. If the railway company carried in a ton of eggs free, and afterwards got 20 tons of eggs as ordinary freight at regular rates, they would be very well repaid. I think the poultryman would have a good argument if he could prove that that would be the result, as I have proved in my own case.

23736. Then you would be prepared to advocate the same principle all round, and apply it to the bringing in of pedigree stock, and so on?—My chief business is in connection with the fishery business in Ireland, and I am here more in connection with the fisheries than anything else; but if I had thought that it was necessary for me to give evidence upon the general products of my country, I would have made up my mind in that direction; but I have not done so, and therefore it would not be fair for me to enter into suggestions that I have not considered the possibility of.

23737. As you know, we are here to consider not the question of fisheries alone, or of cattle alone, but everything in connection with the railways of Ireland; we have to consider the matter all round?—I know, but you take each witness as he presents himself, and question him upon his own special subject, and it would be unfair for me to make suggestions with regard to everything.

23738. I will not press you beyond the point you wish to go to?—I would give you the evidence freely, if I had considered the matter.

23739. Now you mentioned a thing which interested me, and which I did not know. The Danish Government, you say, has a representative in London. Is that at Billingsgate?—Yes.

23740. A representative solely for the fishing industry?—Yes, I have been told so, and I have been introduced to him. That was some time ago. I do not know that he has any other occupation.

23741. Would not the right thing be, not for the Irish railway companies to undertake to represent you in London—which is not their business—but for the Irish fisheries to have a representative in London? Would not that be the reasonable thing?—I do not care from what body the relief comes, but I say it is necessary and fair to me and the salesmen, in the case of disputes, that there should be some third party to refer to, and I will repeat again that so far as I have considered the question, the railway companies are the most concerned to be that third party. They must lose if robbery takes place, and if there is a charge of abstraction by the salesmen, the proper third party to step in, it seems to me, would naturally be the railway company who would have to pay for that abstraction if it were proved.

23742. I was not thinking so much of the abstraction as of the question generally?—I do not think the railway company ought to have anything at all to say on the general question of the fisheries, or the reports of markets, or the like of that. I say a Governmental authority of some kind ought to be there—some authority from the Board of Agriculture in Ireland, or some other such body.

23743. You would like to have some representative of your industry at the buying end?—At the selling end.

23744. Well, at the consuming end?—Yes. I think we ought to have that, because I know salesmen in London and other markets whom no man could make a charge against—men of undoubted respectability—but, unfortunately, it often happens that things will occur, and they will say the fault is at my end, and

I say it is at their end. We are separated by 500 or 600 miles. That is a difficulty I have been in, and I told someone to-day that I was going to give this evidence here, and they were very pleased to hear it.

23745. What you really want is someone to act impartially, so you suggested the railway, because they were the first people who occurred to you. But you would be quite satisfied to have it in the hands of a Government representative, representing the industry?—Quite so.

23746. About icing—do you suggest that the companies should supply the ice for nothing?—No, not for nothing at all. I am aware that in connection with many parts of the coast (I am not referring now to myself at all) little fisheries spring up at times when there cannot be buyers. I have seen soles lost practically for want of ice, and many other classes of fish, and the poor people could not send them for want of ice, and I suggest it would be a good thing to supply them with ice, and I do not see whom it concerns more than the railway companies, because they are bound to get their freights, and consequently I consider the railway companies ought to be interested in developing the industries of the country as they must be developed in accordance with the policy which I have suggested.

July 4, 1907.

Mr. Anthony Mackey, Castleconnell, Representative of the Inland Fisheries Board (Ireland).

The provision of ice for sale by the railway companies at certain depots, recommended.

23747. You suggest that at convenient places the railway companies should have ice depôts, and should sell ice?—Yes. I am not pointing out any particular places, of course; the railway companies could very well settle that question themselves.

23748. I only wanted to know whether you think they should charge for the ice or not?—I would not ask them to do it for nothing. They could amalgamate all these small people at one given point and they would lose nothing by it. The ice would be paid for, and they would get the freight on the fish, which would never be sent at all but for that ice being supplied.

23749. *Chairman.*—In fact it would be additional traffic for the railway companies?—Yes, it would help to bring about additional traffic.

Mr. W. A. Lindsay examined by the Chairman.

23750. You come before us on behalf of the Belfast Chamber of Commerce?—And the Royal Ulster Agricultural Society also.

23751. Are you engaged in business in Belfast?—Yes, I am a managing director of Lindsay Brothers, Limited. We are wholesale dry goods merchants, and have been in business in Belfast between eighty and ninety years.

23752. Of course as wholesale merchants you import and export, and send traffic all over the country?—Yes, we import goods from Great Britain and various markets, and sell them to traders throughout Ireland, and we export Irish goods to Great Britain, Australia, South Africa, and so on.

23753. One of my colleagues would like to know what "dry goods" are?—Dry goods is really an American term; we are wholesale drapers, and we sell to drapers, and tailors, and so on.

23754. *Mr. Acworth.*—You are warehousemen?—Warehousemen—precisely. Perhaps before I go any further, I may be allowed to say that I am not interested directly or indirectly in any Irish railway company.

23755. *Chairman.*—You appear absolutely in the interests of the trade of the country?—Yes.

23756. I suppose you are a member of both the Chamber of Commerce and the Royal Ulster Agricultural Society?—I am a member of the Councils of both.

23757. And you are pretty well acquainted with the railways in Ireland and also in England?—Yes. Perhaps I might say that I have studied railway matters since I came of age, twenty years ago, and I always watch the working of them both in this country and in Ireland. I may add that I have lived in England more than in Ireland.

23578. You do not propose to go into any detail with regard to rates and charges and general complaints against the railway companies, do you?—Well, I propose to offer some evidence under your heading of evidence, 3 (*a*) with regard to one or two matters.

23759. 3 (*a*) deals with local goods, mineral and live-stock rates, and their effect generally on trade and on the development of industries. Do you propose to make any remark on that particular clause?—Yes, I do.

23760. Let us have it in your own words?—I wanted to mention how the railways in Ireland treated shows. I am giving this evidence on behalf of the Royal Ulster Agricultural Society. But, first, there is another point with regard to that Society. I have the report here of that Society, which has 1,000 members, 150 of them being *bona fide* farmers. In order to obtain information for you I requested the Secretary of the Society to communicate with all the farmer members, pointing out to them that the Society was being represented before this Commission, and asking them to communicate with regard to any points which they wished brought before you. We only received three replies. We did not communicate with the whole 1,000 members, but with the 150 farmers, because if we had communicated with the whole 1,000 members it would have been rather duplicating what the Chamber of Commerce had done.

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce and of the Royal Ulster Agricultural Society.

No complaints of any consequence against the Irish railways received from the farming community.

23761. You sent out 150 invitations to *bona fide* farmers in the country, asking them what they had to say on that particular clause, and you only received three replies?—We did not confine them to that particular clause; we asked them generally if they had any complaints which they wished to bring before this Commission.

23762. And you only received three replies?—Yes.

23763. What was the tenor of those replies?—They were all trivial. One member suggested that the time-tables of the Clogher Valley Railway might be improved; the second suggestion was that there was a shortage of wagons at Lurgan; the third complaint was that the rate for potatoes from Moira to Balbriggan was too high. They are all trivial, and that would appear to me to indicate that there was no very widespread dissatisfaction amongst our members at any rate.

23764. The complaints are very trivial, as you say, and we will leave them alone?—Yes. You had the same evidence given by the Belfast Chamber—that they only got some three or four replies.

23765. Yes, we had the same evidence?—I would like to mention how the Irish railways treat the traffic in connection with shows. They treat us much more generously than the English railways treat show traffic on this side.

23766. I do not know that we need go into that?—They carry back stock free of charge.

23767. Can you tell us one or two of the differences between the English and the Irish system in favour of Ireland?—Yes, this is one; they carry back stock free from all shows on the signing of an indemnity note. That is not the practice in England.

Show traffic treated more generously by the Irish railways than by the English.

23768. I rather think it is?—It is not in the case of some things I am interested in. Taking the question of dogs, I happen to be a member of the Kennel Club, and the Kennel Club presented a petition to the Clearing House in February last, asking not even to have the dogs carried back free from the shows, but asking to have exhibitors' tickets issued at a fare and a quarter like golfers and fishermen, and the Clearing House absolutely refused to grant that concession. Now, in Ireland the railway companies always give tickets at a fare and a quarter as the maximum, and very often they are issued at single fares for the return journey.

23769. With regard to the arrangements with reference to agricultural shows in Ireland, I understand that those arrangements have been very fair and reasonable and more generous than in England?—Yes.

23770. Then we will pass on from that?—I did not know exactly what detail you wanted me to go into. As to the question of railway rates, I have some instances here which seem to me to be reasonable. Of course it is rather difficult for an outsider to say

July 4, 1907.

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce and of the Royal Ulster Agricultural Society.

what is a reasonable railway rate, but I have one before me, for instance, where the linen rate from Belfast to Cork, a distance of 280 miles, is 25*s*., and another to Dublin, 113 miles, 10*s*. 9*d*. As I say, it is difficult for an outsider to say what is a reasonable rate, but these rates strike me as being fair.

The Irish railway rates alleged to be reasonable.

23771. I think we would rather hear—at least, not rather hear, but we are here to consider what you regard as unreasonable. We must begin by assuming that the bulk of the rates are reasonable and fair, but that there are instances of unfair and unreasonable rates which perhaps have never been brought under the notice of the railway companies. You have no cases of that kind to bring under our notice, I take it?—No, as far as I have seen, the rates are fair enough. I have had opportunities of reading the evidence which has been given before you, and I have noticed that most of the people who are in favour of nationalisation have given evidence with regard to what they consider unreasonable rates, and I, who am not in favour of nationalisation, rather thought that I might give some rebutting evidence.

23772. But you have done that by stating that in your judgment the rates are fair and reasonable?—I only thought that an instance or two might strengthen my position.

23773. We assume, as I have said, that the bulk of the rates are fair and reasonable?—I may say with regard to the linen rate to Cork it was put on really at the request of the Cork people, who wanted to have a market in Belfast. I am making that point, because in the case of one of your members at all events he appears to think Belfast unduly favoured.

23774. Is your opinion the same with reference to passenger fares?—Yes. But, first, there is the question of inward and outward rates.

The alleged disparity between the Belfast to Strabane and Belfast to Omagh rates.

23775. I had overlooked that. We should like to hear you upon that question?—There was one other point which I might mention—that is the question of differential rates. That is to say, there was one instance brought before you which affected me, because I have customers in both places. I refer to the statement that the rate from Belfast to Strabane was less than the rate from Belfast to Omagh, although Omagh is nearer to Belfast. I discussed that question with traders there, and they wanted the rate to Strabane taken as the basis of the Omagh rate. I pointed out that the rate to Strabane was probably too cheap on account of the water competition, and asked them if they would be satisfied if the Strabane rate was raised to the Omagh rate. Of course they said that would not help then in any way. It seems to me that all the traders want the railway company to do their business at the cheapest possible rate.

23776. Is not that a natural thing on the part of traders?—It may be, but I am afraid it is not very paying for the railway companies.

23777. We quite appreciate that everybody wants the lowest rate?—Whether that rate is remunerative or not they do not seem to mind.

Contention that all cross channel through rates apply equally to "inwards" and "outwards" traffic.

23778. The public do not consider that. Of course we have not heard the railway companies' case yet?—I made some inquiry with regard to the allegation that the inward rates in Ireland in many cases were less than the outward rates. We discussed this matter at the Chamber of Commerce when we were arranging to send representatives to you, and we all agreed that it was a very improper state of affairs if it were in existence. I applied to Mr. Gamble, the Goods Manager of the Great Northern, and to Mr. Cowie, the Local Manager of the Midland at Belfast, and both those gentlemen assured me that there was no instance in which the inward rates were less than the outward ones. I could find no such instance myself.

23779. We shall get all this from the railway companies, you know—I mean to say your evidence is secondhand in that respect. You have inquired from the railway companies, and you are giving evidence upon their assurance. Now, you are in business in Belfast—have you any instances within your own business?—No, but there is one instance which I think was brought before you, and upon which I have a letter here. It was alleged that the Midland Great Western only got 15*s*. on the through rate to Galway for chairs from Bavaria, but that the rate was 50*s*. if the chairs were sent from Dublin to Galway. Mr. Heyn, who was giving evidence at that particular sitting (the matter had been mentioned by Mr. Wood, the Secretary of the Irish Reform Association) made inquiries of the people who are the agents in Dublin of the shipping company, and his letter which I have here shows that what the railway company get from Dublin to Galway is 46*s*. 5*d*., and not 15*s*.

23780. There again we shall have that from the railway companies direct?—Well, here is evidence that even the railway company is not concerned with. I have one instance of interest here. The linen rate from Belfast to London is 41*s*. 9*d*., but the linens coming from London to Belfast pay 60*s*., and of course the reason is that there is a special linen rate from Belfast to London, and if linens come from London to Belfast as they do sometimes—German things, and so on—they go, I think, as heavy drapery, or something like that.

23781. *Lord Pirrie.*—What do they charge?—60*s*.

23782. And 41*s*. to London?—41*s*. 9*d*.

23783. *Chairman.*—That is a case quite in the opposite direction to the evidence we heard that the inward rates were less than the outward?—That is the reason I instance it.

23784. Belfast being a manufacturing centre, there are special rates for linen from Belfast to various places. London is not a special manufacturing place for linen, and it tumbles into the ordinary classification, and is charged accordingly?—That is so.

23785. *Mr. Acworth.*—You have never taken the trouble to apply to the company about that?—No, the traffic is so small.

23786. *Colonel Hutcheson Poë.*—It would be against your interests to do so.—Well, we are merchants, but it would be against the interests of the Belfast manufacturers.

23787. *Chairman.*—Are there any other instances that you wished to mention?—No. The only thing that occurs to me is that the outward rates do not seem unreasonable when £4,000,000 of eggs are sent out yearly according to the Agricultural Returns.

23788. What have you to say to passenger fares?—I notice that many witnesses allege that passenger fares are higher in Ireland than in England, and I have got a few comparisons before me, but perhaps you do not care for them. I have taken roughly the same distances on certain Irish lines and on certain English lines. From Belfast to Dublin is 113 miles, and from Euston to Birmingham is the same. The first-class single fare from Belfast to Dublin is 20*s*.; the first-class single fare from Euston to Birmingham is 17*s*. 4*d*. The first return from Belfast to Dublin is 30*s*., and the first return from Euston to Birmingham is 33*s*. However, perhaps the third-class fares would be more interesting.

23789. Can you tell us just in a few words what is the average rate per mile which a first-class passenger is charged in Ireland—is it 2*d*., 3*d*., or what?

Mr. Smyth (G. S. & W. Ry.).—2*d*.

Chairman.—And the second-class?

Mr. Smyth (G. S. & W. Ry.).—1½*d*.

Chairman.—And the third-class?

Mr. Smyth (G. S. & W. Ry.).—1*d*.

Witness.—The return fare in Ireland is not nearly so largely in excess of the single as it is in England.

23790. *Chairman.*—It varies considerably in England. On the Midland, for instance, the return fare is double the single fare, but on the South-Western the return fare is practically a fare and a half?—I have an instance here of Waterloo to Exeter. Waterloo to Exeter is 171½ miles, and the third return is exactly double the single—28*s*. 7*d*. From Dublin to Cork is 165½ miles, and the return fare is 23*s*. You see, it is six miles shorter, but the return fare is 5*s*. 7*d*. less. The fares, I may say, on the Midland Great Western are rather higher than in the case of the other principal companies in Ireland.

23791. On the whole, from your knowledge of the fares in Ireland and of the fares in England, you are inclined to think there is no great cause for complaint against the ordinary passenger fares in Ireland?—I do not think so; but it is very difficult to say what is a reasonable fare.

23792. We must judge of the reasonableness by comparing the actual fares with the powers of the railway companies. Are the fares fair and reasonable within the powers that they are allowed to charge? Do you know what they are allowed to charge?—No, I do not.

23793. *Chairman.*—I take it that it is 1*d.*, 2*d.*, and 3*d.* by Act of Parliament.

Mr. Shanahan (*Secretary*).—Yes.

23794. *Chairman.*—The Act authorises them to charge 1*d.*, 2*d.*, and 3*d.*?

Mr. Shanahan (*Secretary*).—Yes.

23795. (*To Witness*).—To your knowledge, are there any 3*d.* a mile fares in Ireland for 1st class passengers?—Not that I am aware of. But the only way in which one can do these things is to compare them with the fares in other countries; it may be a rough method, but it seems to me to be a reasonable one. There is one other instance I was going to give you which is rather interesting, because it is the Midland Company in each case. From Belfast to Londonderry by the Midland is 95 miles; and from St. Pancras to Leicester is 99½ miles.

23796. That is the Midland Company in both cases?—Yes; and in both cases the traffic is pretty keenly competitive. It is one instance in which we have effective competition in Ireland. The 3rd class return fare from Belfast to Londonderry is 13*s.*; and from St. Pancras to Leicester, 16*s.* 1*d.* There is a difference in the distance, of course, of eight miles.

23797. In favour of Ireland?—The Irish distance is eight miles shorter; but 3*s.* 1*d.* is the difference in the fares.

23798. Broadly speaking, judging from the figures you have mentioned and the experience you have had, the fares in Ireland compare with those in England in a favourable manner?—Yes.

23799. And with the fares in Scotland, too?—Yes.

23800. Practically the fares in Scotland are the same as those in England, are they not?—Yes; I think in every instance the 3rd class return fare is higher in Great Britain than in Ireland.

23801. Of course we know that other witnesses could get out other instances which would tell the other way; for instance, there are the London and North-Western Railway 2nd class fares?—Oh, yes. I know the 2nd class fares in Ireland are always higher than the 2nd class fares in England; but then the 3rd class traffic is so much greater in proportion that it seems more important to show the third class than the second class fares.

23802. Then, of course, there are special fares, such as week-end fares, and all that sort of thing?—I have a note on those later.

23803. So much for the fares?—Well, there was something more I wanted to say about them. I made some comparisons with Belgium, for instance, because I noticed the last time I was at one of your sittings that Colonel Poë referred to Belgium as a cheap country. If you take into consideration that practically there is no free allowance for luggage there, the difference between the 3rd class fare in Belgium and the 3rd class fare in Ireland is not so very marked. They only allow hand luggage free in Belgium.

23804. They only allow you to take what you can carry in the carriage?—Yes; and they charge, I think, a centime and a half each 55lbs. per kilometre. So that if a man has any luggage and travels any distance at all, a 3rd class passenger would pay as much in Belgium as he would in Ireland.

23805. *Colonel Hutcheson Poë.*—The third class passenger is not, as a rule, much encumbered with luggage.

23806. *Chairman.*—What about the man without luggage?—Of course he has an enormous pull, I quite admit. But the Belgian train service on the whole is not so good as the train service in Ireland—I mean the speeds are not so great.

23807. Do you know that?—Yes, from the Continental Bradshaw, which I have always found fairly reliable. I have some instances of that in my Notes. Of course, Belgium is the most densely populated country in the world, as you are aware. I take the instance of Brussels to Antwerp, in which two places there are nearly a million of people. The distance is nearly 27½ miles, and their fastest train takes 42 minutes. Of course, that train does not stop, and one train takes as long as 1 hour 39 minutes. Now, we would not regard that as satisfactory in Ireland. It is only fair to compare what is given in return for the money. The fastest train in the Belfast to Dublin service travels 43 miles an hour, although it makes three stops; and there are a great many others which make six stops and which travel at 38 miles an hour inclusive speed.

23808. I do not think we have had any complaints at all with reference to the speed of the express trains in Ireland?—No; but the Belgian system has been held up as to cheapness, and the point I am making is this—Is it not reasonable to compare the services rendered?—You cannot, of course, have a 60 h.p. motor car at the same price as a 20 h.p. one.

23809. You have not given us at all the Belgian fares?—The Belgian third class fare is 3-5*d.* per mile.

23810. If you have it accurately we had better have it on the Notes?—There is no first class fare for Belgian passengers, except upon through trains going to and from other countries. But the second class fare is just over 1*d.*, and the third class is 3-5*d.* per English mile.

Comparison of the fares and services on the Belgian railways with the Irish.

23811. What do you mean by saying that there are no first class fares on the Belgian railway system? Surely there are first class carriages between Antwerp and Brussels?—Only on international trains. I may say that they do run what is called a Voiture Salon; but there is no first class, strictly speaking, except where the carriage comes through from other countries.

23812. *Mr. Acworth.*—The passengers there pay excess, just as we do when we get into a Pullman car?—Precisely.

23813. *Chairman.*—At any rate, what you have called their second-class is really their first-class?—Yes.

23814. They have two classes?—Yes.

23815. In the one case they are called second and third, while in the other case they are called first and third?—There is a difficulty of comparison when you have to compare two classes with three—that difficulty always does arise of course in those cases.

23816. But the accommodation in those coaches is much the same as that of the first-class in this country?—I have not been in Belgium for some little time, but certainly when I was there last the first-class accommodation was not as good as our first-class. I only referred to the speeds for the reason I explained to you.

Speed of Continental trains.

23817. I know. We must take all these things into consideration in comparing the figures of the fares?—I have come here rather to stick up for the Irish railways; and I think it is only reasonable to put before you anything in their favour. The question of speeds, of course, is a matter which ought to have a great deal of consideration. I have before me the instance of the Brussels-Paris express, which travels only at the rate of forty miles an hour to the frontier with a non-stop run. Now, in Ireland we have an express train—it is a tourist train from Dublin to Mallow—which travels a distance of 144 miles at 48 miles an hour.

23818. *Mr. Acworth.*—Can you tell us how fast the Brussels-Paris express travels as soon as it gets on to the French railway?—No.

32819. It is, I think, sixty miles an hour?—I know the French train is much faster, but I was taking the Belgian only.

Comparison of Australian and Irish passenger fares.

23820. *Chairman.*—So much for the passenger service?—There was another instance which I have thought it proper to bring up, because it is in connection with the fares in Australia. They are mainly State lines there; and I thought, as many people advocate nationalisation in Ireland, it was only fair to point out what they are doing there. I have here the six time tables of the Australian Colonies (I have not got the New Zealand) which I happened to get accidentally, and not for the purpose of this Commission. I have run through them all, and I do not think their fares compare so very favourably with ours. Of course, there again they have only two classes, first and second, in the Australian Colonies, so I presume you would have to compare their second with our third.

23821. No?—Well it is the lowest class.

23822. I have, perhaps, misunderstood you?—They have only two classes in Australia; and I have compared their second class fare with our third class.

23823. That is the only thing you can do, of course; that is quite right?—I take from Melbourne to Albury, which, I am afraid, is not a very good example, but the Victorian time tables do not give proper particulars as to fares, like those of the other five Colonies do; and this was the only one I could pick out. The distance is 190½ miles, and the fares are:—First, single, 34*s.* 1*d.*;

July 4, 1907.

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce and of the Royal Ulster Agricultural Society.

return, 51*s.* 3*d.*; second, single, 22*s.* 8*d.*; return, 34*s.* 1*d.* With that, I compare Dublin to Killarney in Ireland, where the distance is 185¼ miles, slightly less than the Australian distance I have given you, and there the fares are:—First, single, 32*s.* 6*d.*; return, 54*s.* 3*d.*; Third, single, 15*s.* 5*d.*; return, 25*s.* 9*d.*

23824. 25*s.* 9*d.* as against what?—As against 34*s.* 1*d.* The Melbourne to Albury train takes 5 hours 38 minutes, as against 4 hours 10 minutes—Dublin to Killarney. The New South Wales instance which I have taken is from Sydney to a place called Mullion Creek, a distance of 207 miles, which is practically the same distance as from Dublin to Tralee. The fare there was commented upon, I noticed, at one of your previous sittings by Mr. Sixsmith, one of the witnesses who gave evidence before you, and who was a commercial traveller.

Comparison of Australian and Irish passenger fares.

23825. *Mr. Acworth.*—Is the distance the same?—It is the same within a mile; 207 miles is the Australian distance, and 206 is the Irish distance. From Dublin to Tralee the first class single fare is 36*s.*, and the return fare is 60*s.*; the third, single, is 16*s.* 7*d.*, and the third, return, 27*s.* 9*d.* Now, the Sydney to Mullion Creek first, single fare, is 41*s.*, and the first, return, 61*s.* 3*d.*; while the second, single, is 27*s.* 3*d.*, and the second, return, 41*s.* So that there is a difference there on the return fares of the cheapest class in each case of 13*s.* 3*d.*, or just about 50 per cent. more.

23826. *Chairman.*—We have had no evidence really as to the passenger fares in Ireland, except from New Zealand. I do not think it was ever represented that the passenger fares on the Colonial railways would compare favourably with the Irish fares?—No; but it was represented, as far as I remember from reading, I think, Sir Joseph Ward's evidence, that nationalisation was a great thing.

23827. That was for New Zealand?—I presumed that the remark applied to the Australian Colonies as well.

23828. No; I think not; I think it was confined to New Zealand?—Well, Mr. Sexton has always held the Australian Colonies up as a good instance of the State management of railways.

23829. We have had no evidence really that passengers fares were considerably lower, or at all lower, in the Colonies than in this country?—But if I could show you that they were considerably greater, would not that rather make a case against the nationalisation of railways.

Colonel Hutcheson Poë.—I think the last witness who gave evidence here admitted that the Australian fares were higher.

23830. *Chairman.*—The evidence given was far more in relation to the development of industries, and not so much with reference to passengers. Then, there were a lot of concessions which were mentioned, where they gave special rates, and where they carried children free, and that sort of thing?—I see, in these Australian time tables, they show all kinds of holiday fares. There is another Australian instance which I should like to give, if I am not boring you. I want to bring it before you, because it shows how a State-managed line acts when it is brought face to face with competition. Newcastle is 104 miles from Sydney, and the fares are:—First, single, 12*s.* 6*d.*; return, 20*s.*; second, single, 8*s.*; return, 12*s.* 6*d.* Those really seem very cheap for the distance. When they are brought into contact with water competition, the steamer traffic from Sydney to Newcastle cuts them down; and then what they do is this: the fares to stations nearly thirty miles nearer to Sydney than is Newcastle are practically the same. That is, practically, the Omagh and Strabane instance over again, or the Navan case, which was before you. There, the point I make is that, even the Government has to face competition at times and to act like an ordinary company. The same thing takes place in the case of Sydney to Melbourne. For instance, the fare from Sydney to Seymour is the same as to Melbourne, although it is sixty miles nearer to Sydney. I am rather giving this evidence, because I happened to be present when the Secretary of the Irish Reform Association gave evidence; and he rather suggested that State ownership would mean equal mileage rates; and I am drawing attention to that, because the Australian experience does not bear his contention out.

23831. We do not place any great value upon equal mileage rates; in fact, I think that in his cross-examination the witness you refer to admitted that it could not be carried out?—But he was a direct advocate of nationalisation; and I am only trying to bring anything I can to prove that he was not correct.

23832. *Mr. Acworth.*—Who was the witness you are speaking of?—Mr. Wood.

23833. *Chairman.*—I think he modified his views with reference to equal mileage rates?—He did, if I correctly remember his cross-examination. There is only one fair thing to say about Australian fares, that you cannot compare Ireland with Australia, any more than you can compare Ireland with Belgium, because the density of the population is so different. I would like to say something, if I am not detaining you too much, about the excursion rates in Ireland; because you have asked the question in your Heads of Evidence. I have here one or two instances: Belfast to Portrush, for example, the return, excursion fares, are:—First class, 5*s.*; second class, 2*s.* 6*d.*; and the distance is 67½ miles. Those fares are in force every day during July and August, and for two or three days of the week during the other summer months. The excursion trains only run in June on three days, but in July and August every day. During those months of the year they run an express at noon from Belfast, with a luncheon car attached, at those fares, and back, with a dining car. It is really for golf they do this—67½ miles, as I say, is the distance, and a man gets carried that distance twice; he goes down in a luncheon car, and comes back in a dining car at 8 o'clock, and the railway company do that for 5*s.* I might say that it is as if you were to carry a man from Waterloo to Winchester and back in a dining-car at that price, and I do not know whether you would consider that remunerative. That is an instance of a cheap fare in Ireland.

23834. I daresay you could give us plenty of evidence of that kind—in fact, we had instances on the West Clare, where very cheap tickets were issued to golfers?—I know of no similar instance in England. I used to go to Littlestone, in Kent, to play golf, and I think that distance is eight miles further, from Charing Cross, than the distance from Belfast to Portrush. As a special concession to members only, they gave us a first class return for 13*s.* 6*d.* Now, proportionately, that is a great deal more than we are accustomed to pay in Ireland. There are a great many other cases I could give you; for instance, Belfast to Newcastle, County Down.

23835. That, again, is golf, is it not?—Yes; the first class return fare is 3*s.*, the distance being thirty-six miles, by the shorter route. Then, there are other instances, such as, Belfast to Dublin; they have constant excursions there, and the distance is 113 miles, and the third excursion return fare is 4*s.* I am only giving you these trivial instances because it seems to me that, if the railway companies act generously in these small matters, they are not, perhaps, the extortioners they have been held up to be by some people.

23836. We have had no evidence of that kind. Sitting here, I have never heard anybody complain anything about the railways at all, except isolated cases?—Mr. William Field, who gave evidence before you, is very strong against the railway companies in his pamphlets.

23837. You must not judge him by his pamphlets. His evidence before us was very reasonable indeed. We must not deal with pamphlets, which are quite outside this Inquiry. I gather from what you say that, so far as your experience goes, in Ireland, on the whole, not only ordinary passenger fares, but excursion fares are just as favourable as they are in England, or in other countries?—Certainly, compared with England, the Irish fares are much the cheaper.

23838. Take it on that broad issue—I do not think we need have any more instances?—There is a question about commercial travellers.

23839. But we have had the commercial travellers before us?—What I have been able to find out is rather opposed to the evidence they gave.

23840. We have had the representative of the commercial travellers here. What particular statement of his do you wish to controvert?—Well, generally as to the way they are treated. I read Mr. Sixsmith's evidence. My own firm would have between thirty and forty travellers out at different times, and I asked them, for the purposes of this Commission, how the railway companies treated them, and they all said that they treated them exceedingly well. The only

thing they complain about is, that sometimes the railway companies are a little too strict in the matter of luggage, and that a little laxness would not be amiss. That is mainly on the southern lines; but they have no complaint to make such as I saw made by the commercial travellers' representative before this Commission.

23841. What is the particular evidence you object to, the particular point—is it important?

Colonel Hutcheson Poë.—He said that he was up to his knees in water.

23841A. *Mr. Acworth.*—He represented, I suppose, the whole Commercial Travellers' interests?—He said here that he considered that the first-class fares should be brought down to the level of the first-class fares in England. Well, they cannot be brought down to the level of the first-class fares in England because they are below them already, as a rule. I was only taking that as an instance of his inaccuracy.

23842. *Chairman.*—You are aware, I suppose, that the first-class fares on the Midland Railway in England are 1½*d.* per mile?—Yes.

23843. Are there any such fares in Ireland?—I have already given you the comparison.

23844. Those are special cases?—I picked them out from three big Irish companies and three big English companies.

23845. But you know that the first-class fares in England on the Midland Railway are 1½*d.* per mile?—Yes.

23846. In Ireland, I understood, generally they were 2*d.*?—Well, from Belfast to Dublin, 113 miles, the fare is 20*s.*

23847. That is an exception. Take two inland places. Do not take instances where there is water competition——

23848. *Colonel Hutcheson Poë.*—I should like, too, to remind Mr. Lindsay that the limited mail fare from Belfast to Dublin is 2*s.* 6*d.* more?—The water competition to Dublin does not affect the passenger fares. No one goes from Belfast to Dublin by water. It does affect the goods rates, of course, but not the passenger fares.

23849. *Chairman.*—I do not suppose that anyone ever goes from Belfast to Dublin by water. Let us confine ourselves to that statement; there is nothing really to contradict it, is there?—No, except that he is inaccurate in stating that on the whole the first-class Irish fares are higher than in England.

23850. They are in some places. We do not place any particular weight upon that. We know what the fares are, or we can easily ascertain them. In some cases they are higher, and in some cases they are lower?—He made the statement generally.

23851. But you cannot contradict it generally, because, as I tell you, in England the Midland Railway Company charge 1½*d.* per mile first-class, and other companies competing with them charge the same?—But one of the cases that I took was a comparison of the Midland in both countries.

23852. That is a special fare. But, speaking generally, that is what he meant?—But there is no special competition at all.

23853. *Mr. Acworth.*—Can you give me the reference to that question?—It was question 9097.

23854. Yes, I have it. He says, "I consider that if the first-class fares were brought down to the level of the first-class fares in England, a great many people who now travel second-class would travel first-class." He made a quite general statement?—I could not compare every instance, but those I have compared show that he was wrong.

Mr. Croker Barrington, Solicitor.—Before the adjournment for lunch, sir, I should like to say this. You handed to us some papers this morning in the course of Mr. Mackey's evidence with regard to inequalities in payments on certain consignments of eels from Castleconnel to Euston. We sent up to Euston and had this document compared with the actual way-bills; and we find that in every case there has been added the market toll and delivery charge, in every single case the railway rates are all right.

Chairman.—That is exactly what I thought.

Mr. Acworth.—Of course it is quite fair from the salesman's point of view.

Mr. Croker Barrington, Solicitor.—Oh, yes.

Chairman.—That explains what looked like apparent anomalies in four consignments of the same weight from the same place to the same place being charged for differently. But, if you remember, I did point out to Mr. Mackey that it must be the market toll and other things added; and now you have proved that that is so.

Mr. Croker Barrington, Solicitor.—Yes, sir.

23855. *Chairman (to Witness).*—Perhaps you are aware that it has been represented to us by many witnesses that a general reduction of rates and fares in Ireland would considerably increase the prosperity of that country? What have you to say upon that?—Before I go to that, might I put in a ticket which I got from a member of a Commercial Travellers' Association, showing the prices at which yearly tickets are issued to all centres on the Midland and Great Northern? It only bears out that the railway companies in Ireland are very reasonable in their charges. (*Ticket handed in*).

The issue of cheap yearly tickets to commercial travellers by the Irish companies.

23856. *Lord Pirrie.*—This is a Commercial Traveller's ticket, is it?—Yes. I got it from a member of a Commercial Travellers' Association.

23857. You call that a traveller's ticket, do you?—No, that is a membership ticket of the Commercial Travellers' Association, and you will see that the Great Northern and Northern Counties Companies issue yearly tickets to these people exceptionally cheaply.

23858. Available on each other's lines?—No, separately. With regard to what you were saying, if you have noticed, in my proof I do not propose to give any evidence on that point. It is rather a difficult thing to say, and, after all, it is only a crude opinion.

The extension of the existing arrangements for running through carriages over the Irish lines recommended.

23859. *Chairman.*—Then let us go on to the next subject with regard to the local services of the railway companies?—They are really very trivial things. Simply some small complaints about the train service to a place called Bangor, in County Down. The trains, on the whole, are very good, except that the connections south and west are not quite what one might desire, and there are delays at Cavan and Mullingar. So much so that it is almost as well for a man travelling to Galway to go *via* Dublin as *via* Cavan. There are quite considerable delays in each direction, but I need not bother you with particulars of those. I think if I might suggest it, it would be a good thing if the Great Northern could be given running powers to Mullingar. I have heard some rumours that they were thinking of applying for them. I think that would probably do away with considerable delay there. But what I wanted rather to draw your attention to is absence of through carriages in Ireland. You will see that I have mentioned that subject in my proof. They are practically unknown. Almost the only instances are the three principal companies that run into Dublin. Through carriages are run down to Kingstown Pier, but that is a very short distance. The Great Northern works a train from Newry to Greenore over the North Western line, and the North-Western run a through carriage from Greenore to Londonderry. I think those are the only instances in Ireland of any companies working on a foreign line. What I would suggest is that some pressure should be brought to bear upon railway companies to run through carriages each way every day between Belfast and Cork, and between Belfast and Galway; I suggest that they should do that as a start to see how the thing would work out.

23860. *Mr. Acworth.*—*Via* Mullingar—that would improve the train service if they run the through carriage *via* Cavan?—If you travel *via* Dublin you travel *via* Mullingar.

23861. I meant *via* Cavan?—Yes.

23862. *Chairman.*—Your opinion is that the system in operation in England of running through carriages between certain centres is a great advantage to travellers, and you think that the same result would follow if a similar system were established in Ireland?—Yes. As regards Dublin, there was a difficulty, because the communication between Amiens-street and Kingsbridge was very bad until recently, but now that the Great Southern and Western line enters Amiens-street they have a regular service there, and there does not seem any difficulty in running through carriages at all.

23863. Are you of opinion that some of these small, unremunerative railways should be absorbed by the larger ones?—I was about to make a remark in regard to goods. There is a question about goods in the same paragraph of my proof.

July 4, 1907.

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce and of the Royal Ulster Agricultural Society.

23864. I do not want to overload your evidence with what I may call immaterial points?—It is a matter of railway working. There are considerable delays in the sending of goods from Belfast to the south and west, but I now understand you do not want any details.

23865. I think we will go on to the subject of amalgamation. Is it your opinion that the interests of the country would be served if these small independent lines were absorbed by the larger companies and worked as part of their systems?—I think there is a question of subsidies you were asking me about?

The amalgamation of the smaller Irish railways with the greater suggested.

23866. No?—I have a note of subsidies down before the point to which you were referring. But I certainly think the lines of the smaller companies ought to be amalgamated. It is only following out the tendency which has gone on in Ireland in the past.

Four separate companies proposed.

23867. Then you would compel the smaller companies to sell their undertakings to the larger companies?—Yes; but I do not see how you can compel the larger companies to buy. My idea is that all the smaller lines about Cork and in the South and South-West generally should be absorbed by the Great Southern; that the County Down, the Sligo and Leitrim, and the Cavan and Leitrim should be absorbed by the Great Northern; that the Ballycastle line should be absorbed by the Midland; that the Lough Swilly should become part of the Donegal joint lines, and so on; and I think it might be a good thing if the Great Northern bought the Dublin and South Eastern as well. What I mean is that practically there should be four companies in Ireland.

23868. Your idea is that four large companies would be better for the country than the large number of independent companies which now exist?—Yes; because the four large companies would leave you practically the existing competition.

The granting of subsidies by the State disapproved.

23869. You are opposed to subsidies being granted to railway companies?—Yes; I do not think it is a reasonable thing. The general question of subsidies was reported on, you may or may not know, in connection with the Financial Relations question, and in a report signed by Lord Farrer, Lord Welby, and Mr. Currie, I think, the granting of subsidies was utterly opposed. They said that they thought subsidies were always misapplied. I think the subsidy business has been rather overdone, and it practically tends to pauperise the people.

State ownership and control of trading concerns objected to.

23870. Then I gather that you are in favour of the railway system being concentrated into four or five large companies, and you are opposed to any question of State ownership?—Yes; I am decidedly opposed to State ownership. I oppose State ownership, first, generally speaking, and then specially as regards Ireland. I do not think a State department ever manages a trading concern well. The Post Office, of course, is the great instance we have of assumed success. Although it is always held out as making some £4,000,000 a year one is never told what capital it takes to earn that money. So that whether it is properly remunerative or not one has no means of ascertaining.

23871. Now we may take it shortly that you are in favour of four or five large systems as against the present system, and that you are opposed to State ownership or State management of the Irish railways?—Yes; but I thought you would want to have some reasons why I arrived at that conclusion.

The necessity for further railway extensions in Ireland.

23872. No. Your opinion seems to be very emphatic upon the point. I do not think we need have the reasons for it. I suppose you would agree that there are large portions of Ireland without any railway communication at all, and that it would be in the interests of those particular districts if light railways or other railway communication were provided?—Certainly it would be; but at whose expense?

23873. But if railways could be provided it would tend to develop the agricultural districts that are now unprovided with any means of communication?—I should think so; but I have no particular knowledge on the point. These are matters for the people in the particular districts.

23874. We have had considerable evidence before us on the point?—I should think it probable.

23875. Do you not think that the railways play a very important part in the agricultural development of a country?—Undoubtedly.

23876. But is the state of the agricultural development of the country any better or worse than what you know it to be in England?—I do not think so. It is a question with which I do not profess to be particularly conversant—I am a trader, I am not an agriculturist. I think there are agricultural districts in England that have periods of depression, just as they have in Ireland. I think they run together pretty well. I always understood that Lincolnshire was an instance of an agricultural district having chronic depression.

23877. I may just take it in this way, that you are very strongly opposed to the nationalisation of railways or to State purchase, or to State management of the railways in Ireland?—Yes.

23878. But you rather favour some system, if it could be adopted, whereby there should be four or five large independent systems controlling the whole of the railways in Ireland?—Yes.

23879. That is, generally, your view?—I have gone further than that. I am an advocate of English purchase if possible—the purchase of Irish lines by English companies.

23880. Do you think, in those cases where Irish lines have been absorbed by English companies, the policy has been beneficial on the whole?—The only instance we have is the Midland and Northern Counties line, and I think that that unquestionably has been an advantage.

23881. We have had evidence to the contrary?—So I have seen; but the witnesses have not given any instances in support of their opinion, and the reason I wanted to give some instances in support of my opinion is that unsupported opinions are not, I think, very satisfying. For instance, you had a witness, a Rev. Mr. Stack, from County Tyrone. I think it was his opinion that the purchase of Irish lines by English companies ought to be stopped, but he did not give any reason why he thought so. I can give a definite reason for my opinion that it was a desirable thing for the Midland to have acquired the Northern Counties line.

23882. This is a case brought before us yesterday. It was stated in regard to the acquisition of the Donegal line by the Midland Company that immediately it was done the rates were raised?—That is a joint line.

23883. But it was given in evidence here that as soon as the acquisition took place certain rates were advanced. Surely that cannot be to the interests of the district?—No; but I have seen so many wild statements that I should like to have that corroborated.

Mr. Acworth.—I think the statement was that the rates were raised up to the level which existed on the Great Northern before.

Chairman.—But they were raised on the Donegal line.

Mr. Acworth.—Because the Irish Great Northern got hold of it, not the English company.

Witness.—Of course that is a hardship on the face of it; but perhaps they paid too little before.

23884. *Chairman.*—If you were in the district, and that result followed, naturally you would think that the purchase of the Donegal railway by the English and the Irish companies had not been a very great benefit to the district?—There is another aspect. Surely some, at all events, of the lines that were acquired had some sort of subsidies. I do not know the precise terms on which the two companies took over the Donegal line, but I should imagine that some of the subsidies have been done away with; and, if so, if you are charging people more for the carriage of their goods you are taxing them less.

23885. At any rate you are strongly in favour of the capital of English railway companies being spent in Ireland for the purpose of acquiring existing Irish railways?—Yes.

23886. *Mr. Acworth.*—I think the Donegal Railway was a pure Balfour line; it was built free gratis and for nothing, and presented to the district?—No; some of it was made before the days of Mr. Balfour.

Colonel Hutcheson Poë.—I think Mr. Acworth is right, and that there are no subsidies paid by the county at present.

Witness.—The Donegal Railway originally ran from Strabane to Stranorlar.

23887. *Mr. Acworth.*—But not onwards?—It ran to within four miles of the town of Donegal, and then stopped.

23888. All the new additions were given by Mr. Balfour?—You mean Killybegs and Glenties.

23889. Yes?—I think they were.

23890. A little bit from Strabane to Derry was

built by themselves because it paid them?—Yes; that is so far as I know; I cannot give any precise information upon it.

Mr. Acworth.—I do not think there were any subsidies.

23891. *Colonel Hutcheson Poë.*—And the loans they had incurred were paid off some time ago?—Possibly.

Examined by Mr. Acworth.

23892. Of course we do not know the average rate received for passengers either in England or Ireland, but I gather that your view is this: that the first class fares in Ireland are much the same as on the English lines—that is 2*d.* a mile first class single, and it is roughly 2*d.* in England?—Yes.

23893. It is roughly 2*d.* in England, except on the Midland and places influenced by the Midland?—Yes.

23894. Your 17*s.* 4*d.* to Birmingham is lower than 2*d.* because the Midland runs to Birmingham, and their route is not much longer?—It is a little longer.

23895. But the Midland at 1½*d.* would be lower than the North Western at 2*d.*?—Yes.

23896. On the other hand, your evidence is that the Irish reduction in return fares, first class, is bigger than the ordinary English reduction?—Yes.

23897. It seems to be on the basis of one-half as against two-thirds or three-fifths?—Yes. That hardly applies altogether to the Midland and Great Western; they are rather higher.

23898. As for the third class, I gather it is universal to make considerable reductions on the two single fares in Ireland?—Yes; it is about one-half as much again.

23899. Whereas in England the universal practice, except on the North Eastern, is to charge two full single fares?—I think it is.

23900. So that the third class return in Ireland is markedly cheaper than in England?—Yes.

23901. Cheaper even than the North Eastern, because the North Eastern is one and two-thirds, while the Irish is one and a-half fares?—Yes.

23902. Then you refer to Brussels and Antwerp. You have commented on the very slow running between two large towns with trains not stopping between, but simply trotting along at about 38 miles an hour?—Yes.

23903. I daresay you know that the Belgian people do not like it either, and private enterprise proposed to construct an electric line, but the Government declined to be competed with, and would not allow the scheme to pass?—I have heard of that.

23904. I gather that if that were the attitude of a State-owned railway you do not like it; you want competition, as I understand?—Certainly; I am an absolute believer in competition.

23905. Dealing with Ulster, as you said, the great instance is Derry and Belfast?—Yes.

23906. There you no doubt get a competitive service and a very good service?—Yes; there was an instance of very fast running last year.

23907. Yes, we know that is a very good service, but I want to take you to a general question. Ulster is pretty rich and progressive, and may fairly be compared with England; it can afford competition. But take your mind away from Ulster to the poorer parts of the country. Are you satisfied that it is in the interests of the poorer parts of the country to have competition?—What parts were you thinking of, particularly?

23908. For instance, you know that within the last few years the Great Southern have got into Sligo and compete for traffic all across the Midland Great Western district, and take it round to Rosslare or Dublin?—Yes.

23909. That of course has weakened the Midland Great Western. I cannot blame the Great Southern. It is their business; that is what they are there for, to make money if they can; but are you sure it is in the interests of the district?—I cannot see why it is not.

23910. You would agree that it is in the interests of the district to be served by a reasonably strong company?—Yes.

23911. A company that can afford to spend money?—Yes.

23912. If the Midland dividend has gone down and the security has gone down, are they not less likely to spend money?—That is so, but will not competition force them into spending it rather. Practically you are asking me to say whether I would rather have a strong non-competitive company not likely to spend money——

23913. Or a weak competitive company which does not spend money, because it cannot get it?—But will it not be driven to spend money by competition.

23914. Can it get the money?—I think so.

23915. With shares at 60 it is an expensive thing to raise money?—The Great Central is an instance in point; they raised money.

23916. I will not discuss the Great Central. You have called attention to another thing—to the fact that in Australia a State railway can exclude competition inside its own ring fence, but it has got to face water competition?—Yes.

23917. You have instanced Sydney and Newcastle?—Yes.

23918. How do you apply that to Ireland?—If you nationalise the Irish railways, taking Belfast, which I know best, you would still have carting on the roads. They cart out for a distance of thirty miles. You would still have the water competition, and so on.

23919. And the competition of the different ports?—Certainly. I was only taking the immediate district.

23920. Would it not be that the State would have keen competition, and have to do its business at a very low rate in those districts; would not that rather excite the feelings of the people in the non-competitive districts, and would there not be all sorts of pressure on members of Parliament to have their rates brought down to the rate fixed by the keen competition—brought down to the level of the competitive rates?—Yes, and would not that practically mean that the railways would be worked at a loss?

23921. In other words, I gather your attitude to be this—that it would not be possible to avoid special low rates where you have water competition?—Yes, or else give up the business.

23922. And you might not be able, commercially, to afford—whatever you might by taxation—to reduce your non-competitive prices to the prices which would be forced in competitive cases?—Political pressure would be brought to bear; the people would not be satisfied. The Omagh and Strabane case would be dealt with in a different way by a State line.

23923. That is a railway only, and you would adjust your railways on the basis of advancing up to a certain point by both routes, and then overlapping between Strabane and Omagh?—There is an instance in connection with the Dublin and South Eastern charging some quite small return fares inside the tramway competition. For nine and three-quarter miles they charge 10*d.* return, but when they get to nineteen miles, or just double the distance, they charge 2*s.* 8*d.* The distance was doubled, but the price was increased more than three times. My opinion is that if that was an instance of a State-owned railway the people at a longer distance would complain effectively.

23923A. That would mean, as you say, either giving up the competitive business or reducing the non-competitive rates to the competitive level, and making up the difference by taxation?—Precisely. The point I was wanting to make is that railways would not be put in the position which the Post Office is in; they would not have an absolute monopoly.

23924. I see you say in your proof that you do not think any general reduction in rates and fares would result in a remunerative increase of traffic?—I went on to say that I had only formed a crude opinion on the subject.

23925. I do not know how much importance you attach to the word "general." You spoke of carting for thirty miles?—Yes.

23926. Do you not think it would be business to try and get the traffic on to the railways?—I think it would. But there are special circumstances. Sometimes they can cart more cheaply than the railway company could possibly do it because they would have to cart to and from stations.

23927. It is a common thing to say that the railways cannot touch the distributing traffic within twenty miles of London?—Yes.

23928. But there are cases—taking the case which we have heard of again and again—of men driving ten miles along a railway in a car rather than pay the fares?—In Ireland you mean?

July 4, 1907.

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce, and of the Royal Ulster Agricultural Society.

The possibility of competition under State ownership of Irish railways.

The probability of a remunerative increase of traffic resulting from general reduction in rates and fares

July 4, 1907.

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce, and of the Royal Ulster Agricultural Society:

23929. Yes; would it not be better to get those passengers at ¾*d.* than not get them at all at 1*d.*?—Yes, undoubtedly. The train is there.

23930. Is your objection to subsidies so strong that you would object to something of the nature of a temporary guarantee against loss of revenue, to try the effect of a reduction of fares?—The difficulty I have about subsidies is this. I do not see why I or any other man should want to travel at somebody else's expense. If a man is a pauper, and you take the thing away from business lines altogether, you go into sentiment. I have no claim to travel at the expense of the State or of the community.

The desirability of the State guaranteeing railways against a temporary loss of revenue resulting from reduced rates and fares.

23931. But you are in a big way of business, and you can afford to start a new branch and lose a thousand a year for a time, if you think it will pay you in the long run. That is business, is it not?—Yes.

23932. But a little man could not do that; he could not raise the thousand; he could not afford to stand the racket?—That is so.

23933. Does not something of the same kind apply to the State. Would it not be worth the State's while to cast its bread upon the waters, if it was likely to find it again after many days?—Yes, but you assume an increase of traffic.

23934. Assuming you have reason to think that in the long run it will pay?—You are assuming that where you have three men travelling alongside the railway, you will increase those three to a dozen by reducing the fares.

23935. I am assuming that it is a case of putting out £1,000 which you think will be well invested in the long run. Assuming that is the position, would you object to a State subsidy?—But the railway companies are in a large way of business. Why should they not make the speculation?

23936. Could any chairman face his shareholders if he said "We are paying 6 per cent. now, but for the next half-year we propose to pay 4 per cent., because we are going to make an experiment with passenger fares"?—I quite see the difficulty, but I do not see why I or any other taxpayer should be called upon to interfere so much in the internal affairs of a railway company. They have to do their business on the lines of an ordinary business man.

23937. I hope it will not be a reflection upon you to say that the prosperity of Messrs. Lindsay and Co. is not so important to the country as the prosperity of the railways?—Quite so.

23938. I think there is a difference?—There is an entire difference, of course.

The anticipated effect of the acquisition of the Irish lines by English companies.

23939. Now, another matter. You spoke about the English companies coming in and taking over the Irish railways to a considerable extent. I suppose your view is that that would be generally welcomed in Ulster?—I think so.

23940. There is no feeling of national self-consciousness being injured, or anything of that kind?—No; not at all; in fact, as far as Unionist people (to use a political term) are concerned, they think it tends to make for unionism. But I have not considered that point particularly myself.

23941. I think the position taken before us has been, not that the service would be worse, but that Ireland wanted to paddle its own canoe?—That is where Irish provincialism comes out at times.

23942. We will not discuss that?—Why should a man who lives in Wexford object to the railway by which he travels being run from Paddington any more than a man who lives in Pembrokeshire?

Suggested method for the amalgamation of the Irish railway.

23943. I see you would compel the smaller companies to sell, if necessary, but you would not compel the larger companies to buy?—That is so.

23944. Now, carry that a little further. You will not compel the smaller companies to sell except on what we call compulsory terms?—Yes.

23945. What they can show to an arbitrator their line is worth, and perhaps a little more?—Just the same as if a railway company were acquiring land.

23946. We will say full value, plus 10 per cent. Now we know where we are. That is the price which you think the purchaser ought to pay?—Yes, if he is willing to pay it.

23947. You think, for instance, that the Schull and Skibbereen line ought to be taken over on those terms?—Do not make me entirely agree with you; I do not say it ought to be taken over on those terms; that is a matter for the Great Southern and Western.

23948. I think I understand your point now. I do not think I did before. What you mean is that if the Great Southern and Western is willing to give Lands Clauses terms, it ought to be entitled to take the line?—Precisely.

23949. I did not follow your point before. If, on the other hand, the Great Southern and Western is not willing to give those terms the Schull and Skibbereen line must go on to the end of time?—I am quite aware that you put me in an awkward position. I quite see the difficulty; but there is such a difference between compelling a man to sell, and compelling a man to buy. You cannot say to the Great Southern and Western Company, "You must buy this railway," because Sir Wm. Goulding may say: "I have not the money." As a matter of fact, I do not think the difficulty would arise; I think it could be got over amicably enough. I think most of the smaller companies would sell.

23950. On Lands Clauses terms?—No, not necessarily.

23951. You think they would be rather glad to get rid of their undertakings?—I think a great many would. It is only a thing which has been going on in both Ireland and England as well—amalgamation.

23952. You will remember Sir James Allport's report of twenty years ago. There has not been very much amalgamation of railway companies since then?—No, not much.

23953. The little odds and ends are still lying about?—Yes.

23954. The Waterford and Limerick, which was a fairly strong concern, has been taken over, but the tiny things are still there?—Yes.

23955. You have had a precedent in Ireland lately; I do not know whether you think it a good one. A tenant pays so many years' purchase and the landlord receives so many years' more, and the State makes up the difference. Do you think that is a good precedent?—I do not. I am afraid I am rather out of sympathy with that.

23956. Then your last point was that you do not think the depression of Irish agriculture is more than the depression of English agriculture?—I think it is rather difficult to give an answer, as I am not an agriculturalist.

23957. It is of the same class and of the same kind, and probably brought about by the same causes?—I do not want to go into the fiscal question at all; I did not mean to do so when I mentioned the Corn Laws. It is not because Ireland is Ireland; it is simply because Ireland is the agricultural portion of the United Kingdom.

23958. It is the agricultural portion of the United Kingdom, subject to the same fiscal legislation as the rest of the United Kingdom?—Precisely.

23959. If the problem of agricultural depression is to be tackled, your view is that it wants tackling on the lines of fiscal legislation, and not on the lines of railway legislation. Is that what it comes to?—I do not think the railways have anything to do with it.

23960. Take Lincolnshire, for example. You do not consider that the depression in some parts of Lincolnshire is due to the default of the Great Northern Railway of England?—Certainly not.

23961. And you say the same of the depression in Ireland—that it is not due to the Great Northern of Ireland?—Probably if one could make sufficient investigations he would find that in the agricultural portions of England the decrease of prosperity began before they had railways at all to affect them. When the Corn Laws were repealed there were very few railways in England.

Examined by Mr. ASPINALL.

23962. You spoke of desiring that the railways should be divided amongst five of the largest companies?—I think I said four.

23963. Four or five, and you went on to say that you thought it very desirable that there should be some better through communication across country along routes which might be said now to be not the recognised routes?—Not entirely. The principal thing I wanted to see were through carriages from Belfast to Cork, and that is a recognised route.

23964. I quite understand, but my point is this: would it not be much more likely that you could get through communication from Belfast to Cork or from

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce and of the Royal Ulster Agricultural Society.

some other town across country, if the railways were in one hand rather than in four or five?—Undoubtedly.

23965. So far as that is concerned, you would gain more by amalgamation of the railways into one than into four companies?—I had rather in view, in suggesting four companies, that the Great Northern and the Great Southern should not amalgamate; I am hoping eventually that the Great Western will buy the Great Southern and the North-Western the Great Northern.

23966. You would agree surely that cross country routes would be much more likely to be opened by one great company than by several companies?—If the companies were not the same between Dublin and Cork, it would not do away with my through carriages. It is the same in England, is it not? You can get plenty of through carriages, and they travel over foreign lines.

23967. But through carriages mean great co-operation between interests which may possibly be diverse?—Yes; but has that not been successfully overcome in England?

23968. I think not. Having expressed this view about the four or five companies, have you at all considered the other view—although I quite understand you would not agree with it—of the amalgamation of the railways into one great company and their management as a commercial company in some way or other controlled by the Government?—Yes, I have to some extent, but not very closely.

23969. I only want to ask you one question upon that. If you have considered such an arrangement, have you at all thought out how it could be managed with advantage to the country, retaining the commercial points of the railway, but still controlling it by some form of Government control?—Is not that rather an unheard of thing as far as this country is concerned; there is no instance of anything like it at present. It is hard for me to bring my mind to appreciate such a state of affairs. There is no instance of a commercial concern here being controlled by the State in some more or less direct way. That is the difficulty of answering your question, and then it would do away with any competition that we have in Ireland.

23970. For competition you would substitute some form of control which would take care that there was no unfairness?—I am afraid some form of control will not give the effective train service that competition does produce occasionally.

23971. You do not look forward to that as being a good thing?—No.

23972. *Mr. Acworth.*—You mentioned that you have been appointed to give evidence on behalf of the Chamber of Commerce and of the Royal Ulster Agricultural Society. I take it that the details of your evidence are your own, of course?—Absolutely.

23973. It has not been submitted in any way?—No. In connection with the Chamber of Commerce we had a small committee and discussed it. Then as regards the Royal Ulster Agricultural Society, they simply left it to me.

23974. You do not, of course, claim that every word you have said is authorised as you said it, but I gather that you feel that you are representing their general attitude of mind towards these questions?—I can certainly say this, that I think both bodies would be practically unanimous against nationalisation. The details of such evidence you cannot submit.

23975. Would they be in favour of your view as to competition, do you think?—I think the bulk of them would.

23976. Ulster believes in competition?—Yes.

Examined by Colonel Hutcheson Poë.

23977. With regard to State ownership, I think you have said that you anticipate that the probable effect of State ownership in Ireland would be that owing to the railway fares having to be reduced where they had to face competition, the State would probably be called upon to reduce the fares in other directions, and thereby to incur a loss?—I would not say that that would certainly be the case, but it is possible.

23978. You spoke generally as to State ownership in Australia and New Zealand. I daresay you know that Sir Joseph Ward and other gentlemen who gave evidence on behalf of those States said that the policy in New Zealand and Australia was openly and avowedly to incur loss in the development of certain districts, provided there was a net gain on the whole system of railways; what they lost in one direction they covered in another?—Yes.

The Australian policy of using the net gain on the whole railway system to help the poorer districts.

23979. And that the State was perfectly willing to incur such a loss?—Yes. Of course, the New Zealand State railways, if you take interest into consideration, do not show a profit.

23980. I think the evidence we have had and what we have seen for ourselves is to the effect that of late years they have paid a fair return on the capital invested. They do not wish to earn anything more than will pay a fair rate of interest on the capital outlay?—But the point I was making is rather this. New Zealand has borrowed its money practically from England at 4 per cent.

23981. *Chairman.*—Less than 4 per cent., is it not?—I think the average will be about 4 per cent.

23982. I think the average is 3½ per cent.?—Some of the older loans bear a higher rate of interest.

23983. I think Sir Joseph Ward said that the average rate was 3½ per cent.—that the State was paying 3½ per cent. for its borrowed money?—I see according to the last report that the New Zealand railways were really paying just about 3½ per cent.

The policy of granting public money to reduce rates and thereby relieve the depression in Irish agricultural districts.

23984. *Colonel Hutcheson Poë.*—You admit that the State has made large grants of public money for the development of railways in the North and West of Ireland?—Yes.

23985. Of course, these grants have been at the expense of the general taxpayer?—Yes.

23986. What objection is there to incurring an expenditure which will involve taxation if it can be shown that by so doing the development of the agriculture of the country, which is the main industry of Ireland, would be promoted?—Surely these grants were made to poor districts.

23987. Certainly; but is it not unfortunately the fact that the greater portion of Ireland is very poor?—I do not think so. The grants were made practically to congested districts, and avowedly as charitable contributions. If you put it on the basis of charity, I do not mind, but I do not think you should tax the taxpayers additionally to enable a man who can afford to pay his proper fare to pay a smaller fare.

23988. I agree, but the bulk of the evidence we have had has been to show that the rates, while not in themselves unreasonable, owing to the nature of the traffic, which is so small, and in the hands of a number of small people, do certainly tend to keep the industries in a depressed condition, and that anything that would materially reduce the rates would lead to a large increase in those particular industries?—I would answer your question by instancing the witness who was here this morning, who wanted the State to give a bounty to the railway companies to enable him to put his goods in the London market to compete with the Danes. If you are going into the bounty system is is perfectly right, but——

23989. You thought the same causes as contributed to the depression in England had led to the agricultural depression in Ireland, and I think that probably most people would agree with you. At the same time you will admit that the effect of that depression is very much more severely felt in a purely agricultural country like Ireland than in a country like England, which has large manufactures to rely upon?—That is taking Ireland as a separate entity. But if you take it as part of the United Kingdom——

23990. Is not that the misfortune of it, that we are circumstanced in such a way that we must be considered as a separate entity?—Irish people can go to Liverpool or Glasgow if necessary.

23991. Oh, if you think it is for the benefit of the country to expropriate the people?—If you are going to take it in any other way you are going into sentiment purely. A man must be prepared to go where he can earn his living.

23992. Ireland, as you know, must be more or less dependent upon its one industry of agriculture?—Yes.

23993. And, therefore, while we have such competition from Denmark and America, and elsewhere, we must take exceptional measures to try and put the agriculturist in Ireland on fairly level terms with his competitor on the Continent. How can we do that but by some—I do not say subsidies; I quite admit

July 4, 1907.

Mr. W. A. Lindsay, Representative of the Belfast Chamber of Commerce, and of the Royal Ulster Agricultural Society.

that subsidies are demoralising to a certain extent—but if you had State ownership and a uniform scale of rates and charges over the whole of Ireland considerably lower than the rates at present, it would not be a subsidy. You and I and everybody else in the country would have the benefit of it. It would not be demoralising to a poor man any more than it would be to you. It is not putting a dole into his pocket. Pending any change in the fiscal policy, do you not think that might be desirable?—If the State bought the railways it would require a certain capital sum, and the interest would have to be paid on that. If you reduce the rates in order to allow the Irish people to compete with their competitors on the Continent, and so on, you should not reduce them below the point which will enable them to pay that interest on capital, otherwise you will be paying a bounty.

Reduction of rates below the point enabling interest on capital to be paid, objected to.

23994. That might be, but it would be a bounty to three-fourths of the people of Ireland for the time being, until the effect of the reduction began to yield results. Would it not be the same thing if you went in for Protection straight away, and avowedly protected a man against his competitor?—Why bring it in in a side way?

Comparison between Belgium and Irish railway fares and facilities.

23995. We will not follow that. With regard to Belgium, you rather criticised my point as to the cheap rates at which a Belgian traveller was able to get about the country?—I did not mean to criticise.

23996. You spoke of their being subject to penalties for luggage. You are aware, I suppose, that every passenger can carry 56 pounds of luggage free?—Yes, in the carriage with him; but I am told it is very inconvenient in practice for the passengers.

23997. As a matter of fact, the luggage of a third class passenger does not often exceed 56 pounds, so that he would not be any the worse off. But even assuming he had to pay ½*d.* per mile per cwt. The third class passenger fare is five-eighths of a penny, so that he could take 1½ cwts. of luggage, ½ cwt. in the carriage and a cwt. in the goods van, and the whole charge that he would be called upon to pay would be only a fraction over a penny?—I admit that he pays less, but the discomfort of having all this luggage in the carriage might outweigh the economy to some effect.

23998. The accommodation and the speed, and so on, are not on the same footing as in Ireland, I agree?—And there is the question of population.

23999. I am not saying it is a fair comparison, but I think it is the fact that the Belgian rates are very much lower than the rates in Ireland?—Certainly. But we cannot get a fair comparison between Belgium and Ireland.

Reduction of second class fares in Ireland.

24000. With regard to second class fares, do you not think it would lead to a great development if the second class fares were lower in Ireland; they are 1½*d.* a mile; in some cases rather more. On the Midland and Great Western they are a little more?—I entirely agree; I think the second class fares are too high.

24001. And then, generally speaking, you think the intervention of the English companies is for the benefit of Ireland?—The Midland is the one instance we have. The tourist traffic is what I have in my mind, and it seems to me to be obvious that the Midland Railway have a greater interest in getting people into Donegal than into Ross-shire. They would rather take a passenger from London to Londonderry than to Perth, and they do that wherever they can by extensive advertising. Surely if that were extended, if the North Western had some interest in taking people from Euston to Donegal in the same way, it would be beneficial to the country.

The effect of the English acquisition of Irish lines on the flow of traffic.

24002. Possibly. But we have had a good deal of evidence to show that the effect of this large intervention of the English railways has been rather to kill the smaller ports, Londonderry, Drogheda, and Dundalk?—I have some evidence on that point. It was alleged at the last sitting that I was at, when there was not time to take my evidence, that Belfast was unreasonable with regard to taking traffic from Dundalk and Greenore. It was said that the Meath and Louth cattle traffic, instead of being shipped from Dundalk or Greenore, came to Belfast. But there was a perfectly good reason for that. When you get to Belfast you have five different routes daily to distribute the cattle over. From Dundalk you have only two, and from Greenore one. As a matter of fact, the cattle were mainly intended for Scotland. I do not want you to go away with the idea that we are unreasonable, grasping people.

24003. I suppose every railway likes to get the longest haulage it possibly can?—Undoubtedly. I had a letter from the Great Northern saying that the steamship companies running into Dublin were giving preferential rates with regard to cattle. So that Dublin, instead of Belfast, was rather grasping in that case.

24004. Broadly speaking, you do not think that the interests of the small ports round the coast of Ireland, which are fairly numerous, are to be taken into consideration as against the greater interests of the larger ports?—I do not think the English companies are hurting them. Take Greenore, which is a small port. Surely if the North Western acquired the Great Northern of Ireland it would not injure Greenore in any way?

24005. Naturally you must admit that the effect of the Midland coming in has been to take traffic from Londonderry which formerly went to Belfast, and the effect of the amalgamation in the South has been to divert traffic which went from Waterford and Cork to Rosslare and Dublin; I think that is admitted?—I do not see how the Midland can divert the traffic very much, because there are steamers running from Fleetwood and from Liverpool into Londonderry. The competition remains there. The mere fact that the Midland Company instead of the Northern Counties own the line will not enable them to divert the traffic from the natural routes.

24006. I am only taking the evidence which has been given by traders from Londonderry and Sligo and other parts, showing that this has been the effect?—I have read a great deal of the evidence, and I think a great many of the witnesses have given opinions without substantiating them in any way.

24007. But these are facts in regard to which figures were given?—On man came from Limavady and he made a statement which he did not substantiate; he was a man who was against the Midland, and he said that Belfast was very grasping. But he merely made the statement without giving any reasons.

24008. I did not refer to that kind of statement, but to the evidence of actual traders, who gave figures to show that trade had declined?—Yes.

Examined by Sir Herbert Jekyll.

24009. I think you are in favour of the action of the Board of Agriculture in settling disputes between traders and the railway companies?—Yes. I have read the report and it seems to me to be a splendid thing they were doing, because they were doing it in an amicable way.

24010. You think that that action might be extended?—I should like to see it extended very much.

24011. You are familiar, no doubt, with what is called the conciliation clause of the Railway and Canal Traffic Act, 1888?—I am not.

24012. It is a clause which confers powers upon the Board of Trade to hear complaints of traders and to endeavour to bring about an amicable settlement. Do you think it would be advantageous if those powers were conferred upon the Board of Agriculture in respect of complaints made in Ireland?—If it would extend their powers and improve their position, yes. But they seem to have done very well under existing conditions.

24013. Without any powers at all?—Virtually without any powers at all. I think perhaps if you give people power they are more inclined to shake their fist at the railway companies, so to speak.

24014. There are no powers except to bring the parties together; there is no compulsion at all?—That being the case, the Board of Agriculture would be practically in the same position as now, would they not, because they do approach the companies, as this report shows? The report shows that the complaints were mainly trivial, and that, as a rule, when the railway companies gave an explanation there was no further reply, which seems to show that the complaints were made without proper knowledge.

Mr. JAMES M. BURKE, J.P., examined by LORD PIRRIE (in the chair). *July* 4, 1907.

24015. You are a magistrate in County Cork?—Yes.

24016. And a member of the Cork County Council?—Yes.

24017. And you propose to give evidence in connection with the Baltimore Extension Railway?—Yes, and the Schull and Skibbereen Tramway.

Mr. James M. Burke, J.P., Representative of the Skibbereen Urban District Council, Baltimore and Skibbereen Harbour Board, and the Committee of Management, Schull and Skibbereen Light Railway.

24018. You propose to tell us something about the proposed extension of the Baltimore and Skibbereen Railway?—Yes. The Baltimore and Skibbereen Railway was one of the Balfour railways. It was made at the expense of the State, but for two reasons it has not been a success. In the first place, on account of the fact that the railways in Cork were not linked up. You may say that the west of County Cork at present is land locked and cut off from the rest of Ireland. Now you are aware a Bill has passed the House of Commons authorising the linking up of the various railways in the City of Cork. In the second place, it is felt that inasmuch as the railway was not carried out to the deep water pier, it was of no advantage to the fishermen for whom it was primarily intended. At the present moment the pier is a very long distance away from the railway station.

24019. What do you call a long distance?—A quarter of a mile, and the worst road in the whole of Ireland.

24020. About 440 yards?—Yes.

24021. And you say that it is a bad road?—Fearfully bad.

24022. Is it because it is in holes or because it is not macadamised?—It is bad in every possible way it can be. The result is that people will not unload their fish at the pier on account of the expense of carrying it from the pier to the railway station. As a result of that, there are four or five large fish merchants, who can afford to hire steamers, and these have practically a monopoly of the fish trade, and they put on the price not according to the market value, but according to what they think it is themselves. They form a regular ring for the purpose of keeping the price according to their own ideas.

24023. What have the Cork County Council done?—They have done nothing in the matter of the Baltimore Harbour pier. We have been for years trying to get a grant from the Treasury.

24024. But you have done nothing yourselves?—We have done nothing, because we could not do anything.

24025. Is it not in your own district?—It is; but we have no power to do anything.

24026. You have no power to make good your own road?—I am sure the Cork County Council would be satisfied to give a grant if they had power to do so.

24027. They would?—I have no doubt whatsoever.

24028. Have you made an offer to the Congested Districts Board?—They are perfectly satisfied to give £3,500.

24029. Who prevents it being done?—The Treasury.

24030. It is the Treasury who refuse to make the grant?—The Treasury refuse to make the grant. The Congested Districts Board are satisfied to give £3,500. The Cork and Bandon Railway would give £3,500, and in addition to giving that sum they would work the line which will connect the present station with the deep-water pier.

24031. You are putting your view before the Commission to see whether we can do anything with the Treasury to assist you?—Yes; to assist us in getting the remaining £3,000.
